THE GRAPE STRIKE in Delano, California. Some of you may have read or in other ways learned of the grape strike in Delano, California. (Those who participated in the Sunday morning "Mass Movements" session at Round-up heard Bard McAllister's brief report on the strike.) The National Farm Workers Association (mostly Mexican Americans) and the Agricultural Workers Organizing Committee (mostly Filipinos), jointly struck the vineyards and grape growers in September, 1965. The basic issues involve raising wages from $1.20 to $1.40 guaranteed minimum plus 25¢ a box, better working conditions, and the right of the above organizations to serve as the collective bargaining agents of the workers.

AFSC, through the Northern California and Pacific Southwest Regional Offices, has committed $11,300 for the relief of the families involved in the strike. This means covering expenses for rent, utilities and drugs. The regional offices are seeking further funds.

In addition to the strike, a 300 mile walk from Delano to Sacramento began March 21 and will end Easter day. This penetential march, called "Peregrinacion, Penitencia, Revolucion," involves approximately 150 strikers. The walk or pilgrimage is an attempt to draw the attention of the general public to the plight of the worker, and to make collective bargaining a political necessity in agriculture. It is also a time for the workers to examine their own minds on the issues of the strike.

A further development of the strike involves a national movement to boycott grapes and grape products from the stricken area. Some AFSC regional offices, in addition to being approached for financial support, have been asked to endorse the boycott.

A special memo is being sent to the regional offices by the Community Relations Division, drafted after consultation with the two regional offices closest to the situation and after lengthy discussions with the Rural Affairs Committee. This memo suggests possible AFSC roles in the boycott and on other matters involved in the strike.

Should any of you care to learn more about the strike, the Farm Worker Press, Inc. (P.O. Box 1060, Delano, California) has published Huelga The First Hundred Days of the Great Delano Grape Strike. This book describes the background of the huelga (the word meaning strike which has become the rallying cry of the workers) and the details the personal experiences and the human elements of the strike. The Middle Atlantic Regional Office is selling the book and using the proceeds for the relief of the striking families. (We have not been able to determine if any other regional offices are doing this.)

A smaller, more concise pamphlet on the strike, Huelga, has been published by the National Advisory Committee on Farm Labor, 112 Eighth Street, New York 10003.

MIGRANT LEADERSHIP EDUCATION PROJECT. This pilot project in educating seasonal farm laborers in leadership training has been operating on the east coast of Florida since November, 1965. Developed by the Southeastern Regional Office and financed under Title III B of the Economic Opportunity Act, the program is designed to work with approximately 15 seasonal farm laborers, or program aides. These will be chosen from different crews working in the East Coast Migratory stream. This project will educate these workers in their rights under federal and state laws and assist them in securing those rights and services for their fellow workers.

William Channel, the director, has established an office in the West Palm Beach area, between the Rangeline and the Belle Glade section of Florida. This territory has a heavy concentration of migrant labor camps.

While AFSC's project does not attempt to tackle all the problems of the seasonal farm laborer -- inadequate income, sub-standard housing owned by growers, lack of organization -- the project will attempt to aid the workers in acquiring information and skills that will enable them to help themselves.

The first training sessions, meeting once a week, have begun. This set-up will allow the aides to use their day haul crews as a "laboratory" for the methods of leadership and selection of issues they are learning. The aides will also learn about those sections of federal and state laws, such as the Manpower Development and Training Act, Economic Opportunity Act, Crew Leader Registration Act, Social Security regulations, minimum wage laws, school attendance laws, etc., which pertain to migratory workers.

When the crews begin moving north, the program aides will receive more specific information on the communities they will be working in. Part-time community associates will be located in these areas to assist the aides, supply more detailed information, and to help individual families who may choose to settle in the community.

In addition to Bill Channel, three field workers are attached to the program -- Sam Jackson, James Pollard, and Clarence "Hank" Meyer. Since November, the staff have been meeting and establishing working relationships with crew members, crew leaders, and community people who can lead them to key people in migrant crews. This has involved working as day haul workers, picking beans and tomatoes while talking to crew members, and weekend meetings with workers in their homes and in labor camps.

Getting into labor camps has proved difficult in some cases. Bill Channel learned that, in one instance, members of the public health service were refused entrance to a camp. The camp administrators are suspicious of strangers who visit the camps too frequently. And if the visitor is white and the camp Negro the suspicion develops that much quicker. But the AFSC field workers have been able to gain the confidence of the workers and have been able to "blend in" to the camps.

The Community Action Fund in Florida has proved cooperative and, by the nature of its work in literacy, health education, food management, etc., has complemented AFSC's work. The CAF was formerly the migrant project of the Community Services Foundation, but it is now a separate organization.

One recent outgrowth of a staff-crew leader discussion has been an attempt by the crew leaders to organize and present a united front concerning working conditions and piece work rates when the farm representatives from the north come to Florida for the annual "pooled interviews". AFSC staff is endeavoring to keep the crew workers and their needs in the picture.

AFSC field workers and the community associates will keep in contact with the program aides, who will come from different crews, when they travel north. It is expected that every one involved in the program will closely report and record his experiences, which is an important part of this pilot project.

In the course of the program we hope to learn whether the program aides, after training, will remain seasonal farm workers or choose another line of work; how crew leaders will react to trained workers -- will they resent them and consider them a threat to authority? Welcome their help?; how effective will the program aides be in the various communities in which they will work, as leaders and as migratory farm workers?

LEADERSHIP AND COMMUNITY DEVELOPMENT TRAINING FOR INDIAN YOUTH. AFSC's American Indian Program has developed a proposal for training Indian youths in leadership and in community development. The purpose of the program is two-fold: (1) to prepare Indian youths for positions of responsibility in Indian communities or in urban social agencies working with Indians; and (2) to give them training to help them bridge the existing gap in communication and experience between the local reservation and the federal government and the urban, non-Indian world.

The program would involve three groups of approximately eight Indian young people, with either a college education or equivalent experience, in two years of work and learning experience. The training would include rural community development experiences in AFSC summer service project; experience working with a social agency in a city to which Indian people have relocated in considerable numbers; an intensive two-month seminar in Washington, D.C. to consider the meaning of these two experiences and to study the workings of the federal government; and a year's training in a community development project in an Indian community under the supervision of a skilled community development worker.

AFSC has found that the community development approach is effective in encouraging the development of the skills of self-determination and yet minimizes the threat to further undermining the little security left most Indian communities. The community development approach involves a strong insistence on the ability and need of all people to identify their own needs and work to meet them in ways which make sense to them.

We are hoping to work with other agencies concerned with Indian youths in implementing this program. June 1, 1966 is the proposed starting date pending full funding, which is now being sought.

TASK FORCE for School Desegregation. The 1966 School Desegregation Task Force has swung into operation. This year's program will cover those seven states involved last year (Georgia, Alabama, Mississippi, Louisiana, North Carolina, Virginia, South Carolina) and will be extended to Arkansas and northern Florida. Work will be coordinated from Atlanta as a program of the Southeastern Regional Office.

So far, full time staff include Constance Curry, the program coordinator, and Addie Ringfield, administrative assistant, working out of Atlanta; Winifred Falls in Alabama; and Bayes Mizell in South Carolina. A third full time staff person is being sought for Georgia and part time associates are being lined up.

As last year, the task force is a joint effort of AFSC and the NAACP Legal Defense and Educational Fund, Inc. An Inc. Fund staff person will supervise their work, but reports will come to the Atlanta Office and become part of the overall picture. A "panel" of AFSC and Legal Defense Fund staff will meet from time to time to review the work and make sure we are using all our resources.

In addition to last year's goal of achieving desegregation of as many school districts on as extensive a basis as possible, there is another dimension to the 1966 program. Phase II of this year's efforts involves an experimental program in South Carolina which would work toward one educational system for all, and a quality educational experience.

On March 12, 1966, a week after issuance of the new guidelines by the Office of Education, a state-wide leadership conference on school desegregation was held in Montgomery, Alabama. Sponsored by AFSC, SCLC, SNCC, NAACP Legal Defense Fund, Alabama Council on Human Relations and Alabama branches of the NAACP, the conference was intended to inform citizens of their rights under the new guidelines and to identify local people interested in organizing their community for maximum desegregation. Informing citizens and using local people as part time associates are two important aims of the task force.

The Alabama conference was attended by 280 people from 64 communities and 34 counties. Representatives of the Equal Educational Opportunities Program of HEW, the U.S. Civil Rights Commission, National Education Association, Southern Christian Leadership Conference and NAACP Legal Defense and Educational Fund, Inc., addressed the conference. They covered the new guidelines, the progress of Title VI compliance, integration of faculties, local action program procedures, and the importance of an integrated quality education.

Speaking of the new guidelines, AFSC and NAACP Inc. Fund sent a report to John W. Gardner, Secretary of HEW, last fall which included 20 recommendations for revision of the guidelines for 1966 and improvement in implementation. (Many of you picked up the report at the round-up.) This move too is an important function of the task force -- to develop working relationships with federal officials and give them the benefit of our experience in the field. We estimate that our "batting average" on this report was close to 50%. This year's guidelines show some real improvements, but there are also some major disappointments.

In a mid-March meeting in Atlanta of AFSC and Legal Defense Fund staff, the new guidelines were discussed, with special consideration of their implications for the work of the task force. As school boards are asked to act between now and the end of April on a transfer period, the importance of timing is evident.

REPORT OF MEETING

Southern Programs and Rural Affairs Committees

Held at
Penn Community Services
St. Helena Island
Frogmore, South Carolina

April 29,
30,
May 1, 1966

Friday evening, April 29 - Session I, "Economic and Political Developments in the South."

Chairman, Mabel Jessee - Chairman. Southern Programs Committee

Mabel reviewed the rationale for holding this joint meeting. She pointed out the overlapping interests of the two committees in rural poverty and civil rights. Traditionally, the Southern Programs Committee holds its last meeting of the year in the South in order to have a first hand look at a situation or program of interest. Frogmore was convenient to staff from two key programs operating in the South.

One of the major purposes of the meeting was to explore in detail the experiences of staff from the Task Force and the Migrant Leadership Training Programs, drawing implications for future programs and American Friends Service Committee roles. Reviewing our thoughts on the long range roles and consideration of new initiatives rather than direct guidance of program are the appropriate roles of these committees. In particular, Session V would ask the committees to contribute to the further development of the South Carolina Program (Phase II of the Task Force operation), proposed by the Southeastern Regional Office.

Courtney Siceloff, director of Penn Community Services, reviewed the history of the Sea Islands and the development of Penn. Then he introduced Joe McDomick, a community development worker at Penn.

Joe explained that getting people organized to act is what he considers community development. Staff make daily visits to each of nine communities, offering assistance on problems ranging from helping people file for social security to helping them fill out birth certificates. They also try to keep abreast of new federal programs and pass this information on to the people. The daytime visits are supplemented by evening meetings so working people can also be contacted.

Currently, staff at Penn are working on three projects: writing a proposal to the Office of Economic Opportunity (OEO) for day care centers; preparing to approach the Farmers Home Administration (FHA) for the financing of a water system; and introducing the concept of self-help housing to the communities.

Following a round of self-introductions (a list of participants is attached), Mabel Jessee asked Emory Via, who is with the Southern Regional Council, to share his thoughts on what's happening in the South - economically, politically, and socially.

Emory began by saying that, not only was he not an expert on these aspects of the South, but no one else was either. The proliferation of data indicating the constantly and rapidly changing scene effectively hinder the development of experts.

First off, the South is not, if it ever was, the "Old South" of wealth, mansions and content Negroes. Nor is it any longer "poor" in the same way, though it is still the poorest region in the country. There are and there have been many Souths. In the 1930's it was the practice to divide the South into geographia sub-regions - the mountain areas, piedmont, plains, and coastal lands. It is true that these sub-regions developed along different lines. And this has influenced the current situation in these areas. But the South has changed and is still changing. The question is, what is the direction of this change? Is the change a positive, "good" one?

Perhaps it is an optimistic view, but some changes may indicate a positive shift. The tradition of democratic institutions is growing. Negroes are beginning to be included in most important areas of life, except employment. True, this is mainly a move from exclusion to grudging token inclusion, but it is a move.

Emory felt that the handicapping mores of the South have been breached permanently. The economy is on an upward trend. It is possible that the negative aspects, the violence, are the South's last gasp of defiance before accepting the inevitable. And, though it may not seem much of an improvement, the South no longer lynches people, but rather kills them by other means. This is a qualitative change.

Only 10 years ago, Negroes felt they could not tell anyone how they felt, what their life was like. Even to talk to sympathetic people outside their own community of such things was a matter of secrecy and jeopardy. Today, Negroes know they can get press coverage, that civil rights groups will not only listen but do something to help. They feel freer. Where once there was submission, now there is smoldering resistance. But, can this change be directed to good ends?

In the area of race relations, the South <u>is</u> a distinct separate region. The rest of the country recognizes this, and the South recognizes this distinction. But, again, this may be developed into a positive element.

The Southern "liberals" were presented with a strong challenge to their liberalism in 1954 when, by law, it was made clear that all things public should be desegregated. In some areas of the South, such as Tennessee and Kentucky, this brought about grudging acceptance. In other areas, like South Carolina, the reaction was to delay as much as possible. And in places like Mississippi and Alabama, there was all-out resistance.

Today there is a general malaise. Violence is still a part of the reaction to desegregation. And there are new forms of Negro discontent combined with disagreements within the Negro community. White and Negro poor lack economic and personal security and leadership. The poor whites, who outnumber Negroes, lack even the new hope of the Negroes, having no organization, no "movement" to champion their cause. Their only hope is the hope of resistence. The legal aspects of discrimination may be remedied, but the problems are not solved.

There are strong economic forces at work in the South. And these are the real actors in the drama. There are few examples of a small group which could act as a causative force in society. But such groups as the AFSC can have something to say about the character and the pace of change.

Emory began by saying that, not only was he not an expert on these aspects of the South, but no one else was either. The proliferation of data indicating the constantly and rapidly changing scene effectively hinder the development of experts.

And, though it may not seem much of an improvement, the South no longer lynches people, but rather kills them by other means. This is a qualitative change.

Only 10 years ago, Negroes felt they could not tell anyone how they felt, what their life was like. Even to talk to sympathetic people outside their own community of such things was a matter of secrecy and jeopardy. Today, Negroes know they can get press coverage, that civil rights groups will not only listen but do something to help. They feel freer. Where once there was submission, now there is smoldering resistance. But, can this change be directed to good ends?

In the area of race relations, the South <u>is</u> a distinct separate region. The rest of the country recognizes this, and the South recognizes this distinction. But, again, this may be developed into a positive element.

The Southern "liberals" were presented with a strong challenge to their liberalism in 1954 when, by law, it was made clear that all things public should be desegregated. In some areas of the South, such as Tennessee and Kentucky, this brought about grudging acceptance. In other areas, like South Carolina, the reaction was to delay as much as possible. And in places like Mississippi and Alabama, there was all-out resistance.

Today there is a general malaise. Violence is still a part of the reaction to desegregation. And there are new forms of Negro discontent combined with disagreements within the Negro community. White and Negro poor lack economic and personal security and leadership. The poor whites, who outnumber Negroes, lack even the new hope of the Negroes, having no organization, no "movement" to champion their cause. Their only hope is the hope of resistence. The legal aspects of discrimination may be remedied, but the problems are not solved.

There are strong economic forces at work in the South. And these are the real actors in the drama. There are few examples of a small group which could act as a causative force in society. But such groups as the AFSC can have something to say about the character and the pace of change.

Briefly, Emory cited some of the changes in economy of the South: 1) population shifts. Almost all the Southern states have experienced heavy losses in Negro population, both numerically and proportionally, except for Louisiana and Florida. There has also been a loss of white population, though fewer states show it. In 1940, 77% of all Negroes in the U.S. were in the South. By 1960, the proportion was about 50/50. People move to economic opportunity, or are chased out. But they move. And this also affects the areas to which they move;

2) the patterns of urban growth in the South are spread out, but are mainly concentrated in the piedmont and coastal areas; 3) the South has become a part of the national scene, of the national economy. This is recognized by Southerners and by the rest of the country too; 4) the concept of a "cash crop" has disappeared. Cotton is no longer King; 5) industry has increased and diversified in the South, even though the average number of persons at the poverty level is still higher than that of the country generally. There has been a three-fold increase in the value added in the economy. But this is spread over 11 states, and is not as good as the upsurge in the North. Textile is still the key industry. (North Carolina, because of the dominance of woodworking and textile industries ranks 50th in the Union in average hourly wage and is least organized by labor having only 7% of the organizable work force organized).

To go back for a minute to cotton. What happened? There was the onslaught of the boll weevil; market shifts; introduction of mechanization and new strains of cotton. The combination of all these helped dethrone cotton. And the same end may be in store for tobacco. This has left many of the one-skill workers without jobs. The most vulnerable appear to be the cotton choppers, with either no cotton to chop, or with their job absorbed by machines.

The politics of the South, too, have been influenced by many factors - reapportionment, the death of the poll tax, increased Negro voter registration. In addition, the concept of forming coalitions is developing in many areas.

The Negro is beginning to realize the power of his numbers. He is running for political office, being wooed by politicians. Yet they are not a solid front. There is fractionalization of Negro leadership when the issue is not strictly one of race. And racism, as a political issue, is lessening in elections.

(In Alabama, 85 Negro candidates are running in primaries. In Florida the most conservative candidates have appealed for the Negro vote. An unemployment insurance bill and a wage compensation bill have been passed in Virginia. Both are weak, but an improvement.)

What are the implications for AFSC? There are no simple solutions, for both the long range and the short range needs of the poor and the Negro must be met. While only 15% of the South's population will be on farms in the future, as opposed to the 50% now there, those who choose to stay will need help. The unskilled and uneducated need economic assistance now. But they will also need skills, skills so they can work now and skills which will retain their usefulness in the future. Where do you start, where do you concentrate your efforts? AFSC must try to meet both needs - the long and the short. And we must continue the job of building bridges between class, color, culture - between people.

Saturday morning, - Session II, School Desegregation Task Force
Chairman, Mabel Jessee

Constance Curry, director of the Task Force based in Atlanta, reported on the overall effort. Staff waited through February for issuance of the new guidelines by the Department of Health, Education and Welfare. When they finally appeared the Task Force staff felt that many loopholes had been filled. Then the staff set out to hold state-wide meetings to inform parents and interested citizens about the guidelines.

The first state-wide meeting was in Montogomery, Alabama, March 12; the next in Georgia, March 17. The parents and others attending, mostly rural people, were interested, serious and they left the meetings to go home and organize for compliance.

The Civil Rights Commission, along about this time, began holding state-wide meetings. They invited the task force to participate. These meetings included leaders and officials of the states and localities in the morning sessions, and concentrated on parents and interested citizens in the afternoon sessions. These were held in Louisiana, South Carolina, Mississippi and Virginia. AFSC also held a state meeting in Florida, which is not organized, has been generally ignored and is still in the grip of fear.

Additional meetings are planned for North Carolina, Georgia and Alabama. These will be mainly to discover how things are going because, presumably, the deadline for filing compliance plans will be past. Often, the reaction of state officials and local superintendents has been - what is the minimum we can get away with, the minumum amount of compliance.

At all these meetings, AFSC's desegregation packets have been handed out. And, from what staff have been able to observe, they are read and used. Around April 1, field operations were started in Alabama where program associates began door to door recruiting. (There are six associates in Alabama, two in Mississippi, five in South Carolina, three in Georgia, and one in Virginia, one in North Carolina, none in Louisiana.)

Connie commented that, working in the field, she was able to see many of the problems which Emory Via mentioned. How can the families be helped after they suffer reprisals for integrating schools? What is our responsibility, beyond family-by-family aid?

Winifred Falls picked up from here with the Alabama story. One hundred and fifty people had registered for the Montgomery meeting, and 300 showed up. They represented 37 of the 67 counties in Alabama. Wini felt the message is getting through. The people have read the guidelines and understand them. They also are aware of the importance of education. One man, a cotton chopper, said that soon there wouldn't be any more cotton chopping to do and his kids needed an education so they could get good jobs. (This poses, of course, the next question: how good is the education, even desegregated, going to be? And what are the jobs of the future?)

Alabama has six part-time associates: Mrs. Annie Williams, who put her own children in formerly all-white schools and got 19 other children to do likewise in Wetumpka County. She carries her children's school work with her to show parents the advantages of the desegregated schools; Mrs. Carrie Peavy, whose home

was burned down, ostensibly from spontaneous combustion, after her children desegregated a school; Mrs. Annie Braxton in Demopolis, who is also running for tax assessor. She combines campaigning and working for school desegregation. The Braxtons suffered no reprisals until they attended a PTA meeting. After that, both she and her husband lost their jobs; Mrs. Lewis Black, who has had experience with credit unions; Mrs. Lillian McGill, who is with the Lowndes County Christian Movement; and Miss Claire McMeans, also in Lowndes County.

The Economic reprisals suffered by parents are only part of the picture. Wini pointed out the subtle and not so subtle, reprisals within the schools. One senior girl and her family and friends, was anxiously awaiting the school annual. She was looking forward to the book as something she would always have and could be proud of. When the book came out, the caption under her picture was a snide comment to the effect - I pay my money and I take my choice. Another picture had an equally offensive comment. This, on top of the usual insults and name calling throughout the year, was to be her reminder of high school.

Some of the HEW officials in the field, the compliance officers, are incompetent or so new to the job as to be useless. "There is already some disillusionment with the Federal Government." There are also some who are hard working, forceful, know their job, and welcome the kind of help AFSC can offer, the kind of pressure we can facilitate.

But the guidelines must be enforced successfully. "If HEW doesn't show commitment this year, the superintendents will laugh in their face from now on."

Moving on to South Carolina, Hayes Mizell said that the state was more "genteel" than other areas of the South. There was no "movement" here, neither was there wide spread violence. There are five associates, and one other worker, who is attached to Penn in South Carolina.

Of the 108 school districts in the state 90 have filed desegregation plans, and seven are under court order. Staff are working in 31 of South Carolina's 47 counties, holding mass meetings, talking with community leaders, and canvassing door-to-door.

South Carolina communities lack, or we have not yet discovered, secondary leadership. At present, the few leaders in the Negro community are too deeply involved in politics or political education to devote much time to school desegregation.

Often staff find that they reach the parents too late, the transfer slips have already been sent, opting to return to the old schools. In most cases, the choice has been left to the children.

Hayes identified Dorchester County as one of the tough areas. In a section called the "Club House" the people organized and got 60-70 children to transfer. After getting a general runaround from the superintendent, they filed a complaint. Hayes thinks they have a fair chance of getting action.

Although there are still some who maintain the "never" attitude, South Carolina officials generally use delaying tactics, with the excuse that "they're trying" and need time.

In Beaufort, the situation is a bit more optimistic. Frieda Mitchell, program associate, pointed out that the Beaufort area has two military bases, which means the presence of many servicemen's children and military teachers. Some teachers and a principal have been cooperating.

There have not been economic reprisals or intimidation in the County. But there seems to be a lack of educational awareness - a realization of the value of education per se. (South Carolina repealed its compulsory school attendance law shortly after the Supreme Court decision in Brown vs. Board of Education). A complacency, born of tradition in part, exists among Negro parents who are content to let their children choose the schools they want to attend.

Saturday morning, - Session III, Migrant Leadership Training Program
Chairman, Mariana Alcock, Chairman of the Rural Affairs Committee).

William Channel, director of the OEO-financed project, gave a brief description of conditions in which migrant laborers live and work. Last fall, when a frost put pressure on growers to get the crops harvested quickly, and when vegetable prices doubled, wages for the pickers were cut. The cost of labor seems to have no connection with produce prices or profits, and are determined more or less along supply-demand lines. Any consideration of whether a worker can support himself and his family also seems to be irrelevant in the eyes of the grower.

Housing for migrant laborers is terrible and expensive. The units often are those built by the federal government in the 1940's which were given to local authorities. They, in turn, let them to growers or grower dominated housing authorities. The workers pay $7 - $8 a week for these, or, as they move north into houses which should be condemned, $15-$17 a week. Bill feels such conditions will continue to exist as long as growers control housing and as long as the workers agree to live there.

The project is designed to get people to do something, to get people mad. The aides in the program move around in the fields, talking to as many people as possible, getting many people mad at once. Also, Bill recognizes that if only one or a few people get mad and file complaints, they can easily be fired.

The aides are people from crews who are being trained and informed of the laws, their rights, and situations in different areas and states. They will help spread the word to their fellow workers while they are in the field. The program has three field workers who are responsible for five crews and see one migrant aide once a week.

When the crews move north, community associates will back them up. Most camps are isolated and often there is a tacit or a paid agreement between growers or crew leaders and the local law. As long as the workers don't come into town and cause trouble, the law will look the other way when anything illegal goes on in camp. But, if officials know there is a community resident who knows what is going on, who knows a complaint has been filed, they may not be so ready to look the other way.

Bill mentioned the tyranny of the machine, in particular the potato grader. Work time is determined by an electric clock rigged to the grader. One man worked from 7 a.m. to 1:30 a.m. the next morning, at $1.25 an hour. His pay was $4 because the grader ran for under four hours.

At the start of the project, Bill wondered how the program would be affected by the attitudes of the crew leaders, who were more or less considered as much an "enemy" as the growers. But many of the leaders turned out to be helpful and willing to cooperate. And they, too, needed assistance.

Early in April, as the result of a discussion between one of Bill's field workers and a sympathetic crew leader, and following three informal meetings, about 145 crew leaders formed the United Agricultural Workers of America, and elected Ed King as president. A lawyer from the American Civil Liberties Union (ACLU) has volunteered his services to help them draft a charter. There are approximately 400 crew leaders in the organization and next fall they intend to accept laborers, which has been a major concern of AFSC staff. The United Steel Workers have been attending meetings and appear intent on taking over the UAWA. However, they know little about the problems of the crew leaders, the pickers, or farming in general.

Every year, under the Annual Worker Plan, farm labor personnel from the Bureau of Employment Security - the State Employment Offices, represent the growers in Florida. They sit at tables while crew leaders move from one to the other. This year the leaders presented these representatives with price lists. At first, the representatives said they had no power to bargain, but later, after about 10 days, they asked to see the lists again. In part this is because the growers fear a shortage of pickers.

In one case a Michigan grower came down to Florida to search out the crew leader he had had last year. After looking at the price list, which is an increase for both the leader and the pickers but is still modest in its demands, the grower said okay. In fact, if the crew leader could get his men up immediately, the grower would pay by the hour for weeding and such for a few weeks until the strawberry crop was ready. Then, he would pay by the hour for the first picking, which is apt to be small and pay 10¢ (5¢ for the pickers, 5¢ for the crew leader) over the asking price. Further, if the single men in the crew would stick around, they could harvest the fall crop of apples.

Such success is encouraging. But, in part, it is due to the demand for pickers. Next year, Bill feels the going will be much rougher, because the growers, especially the citrus growers, will be ready. And the United Steel Workers are trying to move in, with the danger that, not knowing what the situation really is, they may call a strike that is easily broken. Then the union will move on but the strikers will be out of a job and more disorganized than before. This has happened in California, and Bill feels it must not happen in Florida.

When it comes time to move North, AFSC field workers will follow three crews which are going to North Carolina, New Jersey and New York. One field worker will go directly to New Jersey. Some of the crews go directly to New York, others will hit North Carolina and then to New York.

As an overall impression, Bill said he found working under OEO somewhat restrictive and lacking in flexibility, but so far he has been able to live with it.

<u>Saturday afternoon</u>, - Session IV,
Chairman, Percy Baker

Elizabeth Herring began the discussion of government resources available for low-income people. Dealing primarily with the U.S. Department of Agriculture, she commented that a certain amount of rigidity has set in, and there is quite a bit of jurisdictional in-fighting. The problem is how to get such an institution to focus its resources on the individuals who need them.

Secretary Freeman set up Rural Areas Development Committees and Technical Action Panels. The Farmers Home Administration representative in the area is always the chairman. These public advisory committees often consist of the same people and there is a lack of new philosophy. But they do recognize the need for a catalyst on the local scene to get some action out of federal agencies.

The Rural Community Development Service, headed by Robert Lewis, has been established under the Johnson Administration. This has two kinds of staff. One component is the Field staff, headed by Jim Wood. They are supposed to stir things up and work with other agencies - USDA, HEW, Labor. The other component is the Program Development Staff, under George Bickle. They are working on the problem of matching funds, stressing that labor can count, trying to help people establish viable co-ops. These two components are attempting to meet the needs of the people.

Continuing the discussion of government resources, Clay Cochran presented the case from his experience in the Office of Economic Opportunity. Clay, who had done a special paper on the way in which OEO could help meet the needs of farm laborers, said that OEO has neither the money, the staff, nor the organization to really carry on a war against poverty. He felt that the Rural Community Action Program had been developed by people with a metropolitan background who did not understand rural organization. The organizational basis is therefore on a county or multi-county unit which is unworkable. The Rural Task Force of the OEO has been stripped of its authority to do much and it is not expected that it will make a great contribution unless new life is injected into it. Title IIIB is restricted by the limitation of the wording and by lack of staff and lack of funds.

In talking about the problems of OEO, Clay said that Sargent Shriver was suffering from the fear syndrome and it was a real question as to how he would emerge.

Clay pointed out that the Labor Department survey of three Mississippi counties showed unemployment at 65%, 68% and 70%.

The need to coordinate all the different agencies is recognized, but the only coordinating ability in the OEO is the CAP and pressure at higher level by Sargent Shriver. However, an attempt by Sargent Shriver to coordinate other agencies was slapped down by the President. Now the RCDS has a Presidential mandate to coordinate. Clay said he wasn't sure what was going on nor was he sure that anyone else knew either.

Clay pointed out the services are not going to be any good to the poor unless the poor, black and white together, can be enabled to expose maladministration and put pressure on the right place. Elizabeth Herring raised the question as to whether the Task Force experience might not be applicable to other fields of interest and stressed the need for continuing groups to keep the heat on if these resources are to be useful. Clay said that it was too bad the word "vigilante" had such bad overtones because what is needed is a person who would help people to take advantage of the resources. There are plenty of resources. The Civil Rights Advisory Committee to Secretary Freeman is unfortunately mostly window dressing in Clay Cochran's opinion. He is a member of that committee. He felt that the congressmen are the key to community action programs.

To date very little money has actually been spent in the South. $32 million in the 11 southern states. If you subtract the $12 million that has gone to Atlanta and the "Star" program in Mississippi, that means $20 million in 11 states and only $6 million for the rural areas of those states which averages 35¢ a head. In

discussing Head Start it was pointed out that Head Start by and large is all segregated unless the whites have been persuaded to come in. The same thing is happening to MDTA. Elizabeth Herring pointed out that we are beginning to see the big issues on which we must work. 1) The ability of the Appropriations Committee to kill programs and 2) the interpreting of the law to suit those in power.

Al Ulmer was then asked to describe the Southern Regional Council's Community Organization planning project of which he is the staff.

1. They are surveying existing self-help and community organization efforts including credit unions;
2. they will provide consultants to groups for help; for example, someone has gone to Wilcox County on housing and the co-op for a three month period;
3. they will seed small groups interested in starting program, i.e. production coops;
4. they will hire low-income persons to do organizational work, getting a church or civic group to pay half of the cost. An example of this, a man who has just been hired to organize chicken workers. The SRC hopes for more consultants, paid and volunteer.

In response to a question, Al Ulmer described the work of the National Sharecroppers Fund's Rural Advancement Project in the South. Jac Wasserman is in Atlanta, Art Emery (Tenn.) who is working on oil co-ops, the Rev. Hagen (South Carolina), Lavert Taylor (Florida), Louis Black and James Mayes (Miss.) make up the staff. Their job is filling the gap between the services and the individuals. On an individual basis their work has been somewhat successful, but not much has been done on a community basis.

There was some discussion of training programs for rural people and citizenship. Constance Curry urged that we train groups in the community who can support others. Al Ulmer discussed the problem of splitting the community by the choice of the person that you pick. People ask "why him." The value of interchange of training of people is important because many people are fearful of speaking in front of their neighbors. It was suggested that the Georgia program of training secondary school teachers could be adapted to meet these needs.

<u>Saturday evening</u>, - Session V, South Carolina Community Relations Program
Chairman, Courtney Siceloff

Before beginning discussion of the South Carolina program, Courtney asked Connie to follow-up a bit on the task force. She said that by May 15, HEW was supposed to have a record of the number of children transferring in each district. If the percentage of transfers is not enough, there might be another transfer period. More attention would likely be concentrated in areas where complaints have been filed. HEW has said that this year is a test of performance.

Following this brief addendum, Courtney began on the topic of the evening by describing South Carolina. This state has the highest rate of selective service rejects; a high dropout rate; a high rate of adult illiteracy; only 1.5% of Negro South Carolinians are in desegregated schools; private schools are being continued and new ones set up; all but three school districts eligible have signed form 441B. There is a good compliance officer in South Carolina and the courts are setting standards in accordance with HEW guidelines. Soon there will be a new state superintendent of education, as the old super is retiring.

State tuition grants for private schooling has stopped. A bill instituting a $21 million adult education program through grants is awaiting the governor's signature. There has been little wide-spread intimidation, and the state's political structure has been changed through reapportionment. A bill reinstituting compulsory education has been proposed, but it excludes many districts. One other big issue is free text books for elementary schools.

Hayes Mizell added that there is a lack of dialogue on issues. Perhaps the old guard is dying off and a change is due. Industrial development is steaming ahead, and this may be a factor in the drive for adult literacy education, so that people can at least read enough to run machines.

Rationale for Phase II of the Task Force includes these points: AFSC has been in South Carolina and has established a foothold; the social conditions are conducive to establishment of such a program; the state is of a manageable size. Of particular challenge in South Carolina is the fact that the resistance is led by what Ed Peeples called the "gentlemen". A gentleman doesn't say "never", he is not an easily identifiable enemy. But progress is impeded nonetheless. The phenomenon of gentlemanly resistance is apt to become more common in the South. Working in South Carolina offers us a chance to learn how to handle such a situation.

Sunday morning, - Session VI, Challenges Before AFSC
Chairman, Mariana Alcock

In a brief meeting following Saturday evening's session (and in the midst of the evening's party), the chairman of the two committees and Barbara Moffett and Eleanor Eaton met to consider what questions, concerns and ideas had been identified in the first five sessions.

Barbara reported that this informal steering committee wanted to ask the group to consider minuting our sense of the vitality and timeliness of the Migrant Leadership Program and the need for it to continue. The OEO funding is for one year only; this grant will have to be renewed or private financing sought if the program is to continue.

The committees were united in the following minute:

> The Committees expressed their appreciation of the excellent report on the Migrant Leadership Education Project given by William Channel, director, and requested staff to inform the SERO Executive Committee and the Community Relations Division Executive Committee of their conviction that this program (1) is vital, timely, and relevant; (2) requires more than 12 months to develop and consolidate the projects initiated this year; and (3) should be continued on a multi-staff basis, though not necessarily in its present specific form. Should OEO funds not be available for continuation, the Committees recommended that other financial support be sought.

Following this action, Barbara Moffett summarized some of the points which had been made throughout the week end:

1. The task force has put before us several large problems, both immediate and long range. One long range concern is the abolition of the dual school system and the establishment of one system of quality education for all. In attempting

this in South Carolina, our experience will be applicable in many areas, and not have significance only in the South. Our public education system as it now exists is being challenged throughout the country.

2. The fact of crushing rural poverty presents us with the challenge of division programs which may speak to immediate needs but not be unrelated to long range problems and trends. The need for economic security, shelter, is immediate and has not been adequately met on a large scale.

We have developed some program approaches aimed at immediate needs: the immediate need for community level action and government prodding in school desegregation; the need for articulate and organized farm labor. We find small ways to support people who suffer from reprisal; but our help is given within the framework of overwhelming poverty. And our programs are carried out in the larger framework of great uncertainty about the future of rural areas, the jobs of the future, etc. How do we relate our short range and long range views? Do we have some program frameworks already set up within which new ideas could be tried out? How about Mississippi, where we have a broadly defined Community Relations Program, where we know of housing and other needs, as well as school desegregation and merit employment opportunities for progress?

3. What is our relationship to government resources? Some of our programs are OEO-financed. The task force has provided counsel, has attempted to push HEW for results, to "keep them honest." We feel a concern with the quality and training of government field staff.

4. How does AFSC operate? In various programs we help people get power to change their situation, to affect the direction of their lives. This may be done by helping them develop skills, giving them the chance to develop self-confidence, helping them identify issues. We do not agree with an "enemy-oriented" approach in principls. In South Carolina we are faced with a challenge of demonstrating that we can concentrate on issues, not on enemies, as Saul Alinsky claims the poor must concentrate if they are to gain power. For in South Carolina, there are gentlemen, not enemies. In Florida we have found ourselves in tune with a movement and have accelerated its pace and perhaps influenced it. Are there other such places? In the Task Force we have developed a technique. Can it be transferred to other areas?

Ed Peeples had been asked to begin discussion with comments. He said that the problems of desegregation are giving way to the problems of integration. Some schools which were all white are now all Negro. This is also true of neighborhoods. The next step must be integration.

Even bearing in mind Emory's prediction of 15% of the population being on the farms, the urban migration will ultimately level off and we will need to consider how to create vital non-urban communities - small towns and farms.

Concerning our work with federal agencies, we seem to put less faith in the possibility of constructive change in the Department of Agriculture than we do in HEW or OEO. Is there any chance that Secretary Freeman, perhaps through the use of key legislators, could be interested beyond window-dressing in civil rights?

Ed expressed a concern that the concept of the individual being responsible for his environment still persists in the minds of some bureaucrats. Perhaps there is a role for AFSC in educating this concept out of existence.

We must ask ourselves if Saul Alinsky's techniques have any relevance to AFSC work. They are part of this generation's concept of community organization. But with the "surrender of the enemy and the rise of the gentlemen," there would be nothing to push against.

How about the use of community decision-making studies in which mapping out decision-making patterns might cut down the time needed to produce change?

Clay Cochran, who was asked to comment too, suggested that the problem is how to get federal agencies to function as they are meant to at the local level. Perhaps creative, resourceful people could be used in local communities to "police" federal agencies in terms of their functioning or not functioning, more or less in the role of public defender. The result of this would be not what such a person was able to do but what he could find out and what he could create. He might coordinate private groups, and certainly documentation would be part of the role.

Elizabeth Herring reminded us that the makeup of rural areas consisted of three non-farm people to one, and the trend towards a diversified economy was growing. But, whatever the distribution, there will be people living in rural areas and on farms in the years ahead.

Yet many rural people have moved to urban areas. Ed Peeples asked what AFSC's role might be among such people.

Eleanor Eaton asked if we were accepting the trend away from the farm and proceeding from this base, or should we perhaps work against or dispute this trend. Perhaps what is needed is the preservation or creation of a real choice between urban or rural life, that is, make each a place where people can live and work.

Lou Schneider suggested that the real question is "Where would you live if you could afford it?"

Clay asked if the growth of megapolis was inevitable. Has anyone, lately, formulated a theory concerning the inevitability of megapolis? Besides that, what have the great American corporations been up to? Do they have a planning role in creating a better urban-rural balance?

If we were to wait for industry to move to the rural south, Al Ulmer felt that by then the people would be gone. The problems of Alabama, Mississippi, Georgia are no land, no credit, inadequate food supply. Regional planning may be needed. And there should be a guaranteed income through supplements.

Bill Channel raised the question as to whether or not family planning was an area in which we should move. Elizabeth Korty and Mary Calderone, two of the leading experts in family planning, are Quakers. The problem is how to bring services to people who may not express a desire to help due to a lack of knowledge. Ed Peeples felt that health related problems were a very good way of working in a community and that perhaps we could encourage the ghetto-type clinics being experimented with by the University of Kentucky? He felt that the AFSC role was important because any family planning work has to be done right and should not be confused with the efforts designed to "get rid of the Negroes." It was also pointed out that the A.D.C. is an important source of income, if you don't have much work. And, if you don't have much else, children are extremely important.

Barbara Moffett suggested that it is not AFSC's role to bring industry to rural areas. Among other final suggestions were: could the type of clinic Ed Peeples described be used by the Mississippi Community Relations Program; is there a place for a credit project designed to ease credit and make present sources available; Al Ulmer suggested we "go in and show it can be done", that a poor rural community could stabilize itself; could a modified task force approach be used on the problems of the rural agricultural poor; Louis Schneider asked "do we want to subsidize people to live at the poverty level?"; perhaps in the future a man's worth will not be based on his income; planning is necessary and choice should be substituted for change or the refugee concept.

After a few minutes of silence, the meeting was adjourned.

May 18, 1966.

Participants in the Meeting of Southern Programs and Rural Affairs Committees:

John Alcock, guest

Mariana Alcock, chairman, Rural Affairs Committee

Percy Baker, Rural Affairs Committee

William Channel, director, Migrant Education Project

John Clina, guest (Interne, Southern Regional Council)

Clay Cochran, Rural Affairs Committee

Constance Curry, Southern Field Representative

Arthur Dye, Finance Secretary

Eleanor Eaton, Assistant Division Secretary

Winifred,Falls, staff, Task Force

Elizabeth Herring, Rural Affiars Committee

Mabel Jessee, Chairman, Southern Programs Committee

Joseph McDomick, staff, Penn Community Services

Frieda Mitchell, Program Associate; staff, Penn Community Services

Hayes Mizell, staff, Task Force

Patricia Mizell, guest

Barbara Moffett, Division Secretary

Maria Pappalardo, Writing Assistant

Edward Peeples, Southern Programs Committee

Louis Schneider, Associate Executive Secretary for Program

Courtney Siceloff, our host, Southern Programs Committee

Elizabeth Siceloff, our hostess, guest

Marie Turner, Secretarial Assistant

Al Ulmer, Southern Regional Council

Robin Ulmer, guest

Emory Via, Southern Regional Council

Margaret Via, guest

May 2, 1966

Enclosure

Please make check payable to Southern Regional Council.

AFSC

AMERICAN FRIENDS SERVICE COMMITTEE

Proposal For
SOUTH CAROLINA COMMUNITY RELATIONS PROGRAM

The passage of the Civil Rights Act of 1964, with the provisions of its Title VI which requires school boards to submit plans for desegregation, held the hope that the responsibility for school desegregation would be placed with the proper authority, the school board. In the years since the Supreme Court decision of 1954 most desegregation procedures have placed initiative and responsibility on the shoulders of the Negro child or parent.

In the spring and summer of 1965 the American Friends Service Committee carried out a "School Desegregation Task Force" using the new opportunities afforded by Title VI to achieve as much desegregation as possible in seven southern states. We feel that we played a creative role in making the provisions of the new legislation have meaning for several thousand Negro children. However, progress once again was made mainly by the courage and persistence of Negro parents and children rather than by the positive initiative of school boards and administrators.

This year, we are again operating a "Task Force" in school desegregation, working in nine states (Virginia, North and South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Arkansas). Progress toward the very basic goal of desegregation is painfully slow; resistance is still high, both from extremist elements and unhappily, from those officials whose responsibility it is in this democratic society to provide a sound public education to all citizens equally.

The Southeastern Regional Office of the American Friends Service Committee, in planning this year's Task Force in School Desegregation, projected it as a two-phased program. Phase One would focus on implementation of Title VI of the Civil Rights Act, and would offer our services in interpretation of the requirements of the law. Phase Two was seen as a concentrated effort in one state to move from a dual educational system to a single system with the highest quality education possible available equally to all citizens. Our experience tells us this will require voluntary acceptance of an educational program that goes beyond the government's guidelines for desegregation of public schools.

We now propose to undertake an experimental program which would work toward one educational system which would assure quality education for all - an education up to the task of turning out citizens for a rapidly changing world. We see equalized educational opportunity as a way for many of our citizens to break out of the poverty cycle of education, jobs and housing. We see a non-segregated quality education as essential preparation for citizenship. We see urgently needed savings in financial and human resources through the elimination of costly duplications of facilities and personnel necessitated by a dual educational system.

We have chosen South Carolina as the location for this effort. The AFSC has long worked in the state with a variety of programs in the field of employment and education. The state is not as given to violent response to change as other states in the Black Belt. Industrial development offers the possibility of an improved economic situation and of job opportunity for those who are trained. The Negro Community is becoming more active in political life, indicating a determination to play its role in the affairs of the state and have an equal share in its future. The state has a cohesion and is of small enough size to develop a program with a statewide framework.

We propose to begin our program with two skilled and resourceful community relations staff who can work effectively at various levels within the state. We will build on the knowledge now being accumulated in Phase One of our Task Force - knowledge of the South Carolina scene and of potential leadership for creating a concern for quality integrated education in that state.

We will also adapt from Phase One of the Task Force the use of part-time "community associates". This technique involves the use of non-professional but competent community leaders, Negro and white, to work at the community level, bringing information to people about resources for creating quality integrated education and helping them to find practical ways to move toward that goal. The AFSC experimentation with the use of "associates" in the Task Force has proved it to be a sound approach and an effective extension of a small professional staff. The activity of a dozen such associates in South Carolina today is an indication, in addition, of the potential for community leadership in that state.

We cannot chart the course of our program in advance in any detail. Staff must be free to follow opportunity and interests for constructive work where they find them. Basically, however, we will see it as our job to involve leaders in educational, industrial, religious and civic circles at both state and community levels in an attempt to develop forces for educational advance in South Carolina. We will not undertake our work as education experts. Our expertise lies in helping leadership define the problems, mobilize themselves for action, and then in serving as a channel through which the necessary resources, including those with education expertise, can be brought into the situation at the most opportune moment.

The problem is daily being defined, our Task Force experience shows. There are, even in the midst of the unreasoning resistence to desegregation, those who have accepted the inevitability of desegregation and want to help in solving the knotty problems of creating a quality school system equally available to all. One resource they need is concerned and enlightened community leadership, white and Negro. We will give primary attention to developing such a concerned citizenry. It is increasingly recognized that education takes place in a community context and our experience shows us that no amount of educational expertise or state and federal resources can produce the needed change and improvement without a base of community concern and enlightenment.

In broad outline, then, our program can be described as follows:

1. Identification and development of leadership for quality integrated education in South Carolina. This will be carried out among professional groups in the state with education interests, among industrial leaders who see the need for a trained work force, and at the grass roots level. The community level might best be mobilized by the organization of Citizens Education Committees.

2. Serve as a channel through which the massive resources for education now available from the federal government and from educational professional groups can actually reach the community level where they are needed. The base of citizen concern developed by the activities in Point One would make this possible.

3. Development of special demonstration projects within the larger framework of the program, projects which might develop patterns that can be applied elsewhere. For example, we might locate one county where sufficient recognition of the importance of quality education for all citizens suggests that a concentration of resources be put there to develop a model plan of how the related factors of poverty, race, economic opportunity and educational needs can be tackled. If any educational plan could be developed in one county of South Carolina that effectively moved from the present dual and inadequate school system to one system of sufficient quality to meet the demands of the times, the program might make a contribution to other parts of South Carolina and beyond.

4. Continue our attention to the removal of racial barriers to quality education. This job is far from done and where desegregation is still seen by educational and political leadership as the issue, attention will not be turned to the more basic job of creating one quality school system that serves the needs of the community.

5. Train community leadership who might carry on our work after the AFSC program ends. The use of part-time "associates", referred to earlier, lends itself to this goal, for it is an in-service training program of a very basic sort, as well as an immediate aspect of our on-going work.

We ask your support for this pioneering effort. Our experience shows that such a program should be designed for no less than three years, and that it may need to continue well beyond that time. During the third year of the program, progress, needs and opportunities will be reviewed in order to make sound decisions as to the future.

BUDGET

First Year: $35,000

Staff Salaries	$21,500
Travel	1,500
Office Expense	2,500
Program Supplies	1,000
Conferences	2,500
Community Associates (stipends and travel)	6,000
	$35,000

Second Year: $37,000

Third Year 40,000

Southeastern Regional Office
May 6, 1966.

ADDENDUM

AFSC EXPERIENCE IN SCHOOL DESEGREGATION

Since 1951 the American Friends Service Committee has carried on programs of assistance for community groups, public officials and school personnel facing the challenge of school desegregation. It has been clear from the beginning that not only must desegregation be accomplished as a matter of law and morality but that an effective system of public education cannot be developed until desegregation is successfully accomplished.

Our work has varied with the time and place of the activity. In Washington, D. C., in the early fifties we were able to work closely with school and District officials as they planned desegregation. We carried out workshops for teachers and other school personnel and brought competent educators to talk with them about the educational challenges of the process of desegregation. We were able in 1957 to carry that pattern into our newly developing North Carolina work: teachers and principals met with AFSC staff and outside resources to consider, as educators, how to desegregate schools creatively.

As this part of the program was being carried out we worked with a wide range of community groups: opinion makers such as newspaper editors, with ministers, with Negro leaders, parents and children who faced the heavy burden of "pioneering."

As resistance to desegregation hardened, with the massive resistence of Virginia and the closing of schools in Little Rock, the willingness of school officials to accept our help lessened. We kept open every possible channel of communication; but the burden at that point had been squarely placed on the Negro parent and child to accomplish a task that clearly called for the best effort of the total community, and it was to this belabored group that our supportive services went primarily.

We worked in Little Rock, at the request of a local group of white and Negro citizens who were concerned, once the schools reopened, about the nature and quality of the school experience and the fact that it had stopped at a token level. This put undue burdens on the pioneers and effectively circumvented the spirit of the Supreme Court decisions, which had called for an end to segregated education, terming it inherently unequal.

We included a school desegregation emphasis in our Baton Rouge (Louisiana) program, which was broadly concerned with community problems, including those of employment. In both these programs, we sought to reach directly, and through respected community leaders, the school boards and other officials. We had some success, but again, the burden seemed to lie with the Negro community for initiative in the process.

In the decade between the Supreme Court decisions on schools and the passage of the Civil Rights Act of 1964, we worked in communities in Virginia, North Carolina and South Carolina, in Louisiana, in Little Rock, and in 1955, brought our Washington, D. C. Program to an end.

Atlanta, Georgia 30303

Dear Emory Via:

I am enclosing a check for sixty-five dollars and sixty-four cents which covers the expenses for your week end at Penn Community Services. We did appreciate your willingness to take time from your busy schedule to be with us. It was good to get to know Margaret Via, too.

We did not have the delays coming back that we had going down and arrived in Philadelphia along with a blue million other people at 9:05 p.m!

The rough draft of the report is already completely finished and everyone is putting in his "two cents worth" so I believe before a great while we will have a very good report.

Thanks again for your help and best wishes.

Sincerely,

Marie T.

Marie Turner

mt

P.S. I have not received Al Ulmer's expense sheet as yet. It is the only one outstanding and I would appreciate receiving it. Thanks.

Memorandum AMERICAN FRIENDS SERVICE COMMITTEE
160 North Fifteenth Street Philadelphia 2, Pennsylvania

May 20, 1966

TO: Members of Rural Affairs and Southern Programs Committees
Attenders of Joint Committee Meeting at Frogmore, South Carolina
Held: April 29, May 1, 1966

FROM: Barbara Moffett Barbara

Attached are rather full notes on our meeting in South Carolina three weeks ago. We hope it provides an adequate record of what seemed to us a valuable week end of conferring. Maria Pappalardo has pulled this report together, conferring with other national note takers.

We have followed through on several of the action items. We put the matter of continuation of the Migrant Leadership Program before the Community Relations Division Executive Committee last week and Eleanor Eaton, in consultation with the Southeastern Regional Office, has done some preliminary talking with OEO in Washington on possible future funding. On the South Carolina Community Relations Program, Wil Hartzler of SERO and I have developed the proposal further and it is now before possible sources of support. A copy of the proposal in its current form is attached.

Things are moving rapidly in the program areas covered by both committees and you will be hearing further from appropriate staff.

Emory Via
Southern Regional Council
5 Forsythe Street
Atlanta, Georgia 30303

Dear Emory Via:

Connie Curry tells me you have been very kind and have agreed to meet with our rural program staff on Monday, March 6th at the Air Host Inn. I am delighted and think we should have an interesting and useful day considering the varied experience our staff and resource people will bring.

Our staff will include: Peter Lauwerys, Director of our Department of Labor financed Farm Workers Opportunity program in Ventura County, California; Herbert Foster, Director of our 11 years old Community Development program among farm workers in Tulare County, California; Gloria Ramos, Construction Supervisor for the 55 home self-help subdivision being built in Fresno County, California; Scott Nielsen, Director of our Southeastern Pennsylvania Community Relations and farm worker program; Ed Nakawatase and Joe Anthony Melillo, two young "volunteers" in this Pennsylvania program who are working and living as mushroom workers and seeking to help other workers identify and organize to solve their problems; Dan Beittel, Director of our Mississippi Community Relations program; and finally Bill Channel, Director of our East Coast Migrant Leadership Education program and his field staff, Hank Mayer, Jimmie Pollard, Sam Jackson and Oliver Morales.

In addition of course some of the Regional Executive Secretaries who have a special interest in rural problems may be with us and we hope Constance Curry and Winifred Green will be with us for at least part of the time.

What do we want of you? This day will be the occasion when all our staff concerned with rural problems get together. It's a kind of workshop. The attached memo shows that we have identified four areas of special concern to the staff listed above. As you will see we are not asking you to make a speech. We are not planning any rigid structure. So what we want from you is perspective, experience and advice or suggestions.

The day begins at 9:30 a.m. We expect to meet until 3 p.m. with 1½ hours out for lunch. How much time can you spend with us? The whole day? It would be great if you could but that may be asking too much. So can you agree to be with definitely at the start of the day - 9:30 - 10:30 a.m. when we discuss AFSC role in relation to union organizing efforts? Bill Channel as you know is operating his p rogram among farm workers as the struggle to develop a union goes on. In California both Herb Foster in Tulare County and Pete Lauwerys in Ventura County are close to the UFWOC and Caesar Chavez. In fact Caesar spoke at an AFSC "monthly" meeting in Pasadena earlier this month.

We also want to discuss the current split (?) in the labor movement - what is taking place and the implications thereof for our programs and our work in the farm labor field.

We hope you can stay on for the rest of our discussions but will understand if you can only spend part of the day with us.

If the times don't suit you we could change the schedule around though the present agenda seems to make the most sense. If we (or Connie) don't hear from you we will assume this outline makes sense and you will be with us.

Again our thanks.

Sincerely yours,

Eleanor Eaton

Scott
Emory Via

February 16, 1967

TO: Bill Channel, Sam Jackson, Hank Mayer, Jimmie Pollard, O. Morales, Herb Foster, Dave Burciaga, Jack Garrett, Gloria Ramos, Scott Nielsen, Ed N. Joe Melillo, Peter Lauwerys, Dan Beittel

FROM: Eleanor Eaton Eleanor

SUBJECT: Monday - March 6 in Atlanta - 9:30 - 12:30 and 2 - 3 p.m.

Those of you with whom I have talked (and that's most of you) have indicated a desire for an opportunity to meet together as a "Rural Affairs staff". Monday seems the day, especially as we can have sitting in with us for as much of the day as we want some "human" Atlanta resources.

My feeling is that the day needs some structure, otherwise we might ramble to no purpose. Therefore a tentative plan is for discussions based on different program experience as follows:

1) AFSC farm labor programs relation to

9:30 a. Organizing (including union) efforts

Bill and Herb lead off.
Emory Via, Southern Regional Council, as resource.

10:30 b. Local power struggles

Scott, David and Ed N. lead off.
Randolph Blackwell, Director, Southern Rural Action Project, resource

11:30 2) Development and use of indigenous leadership

Dan, Sam, Pete lead off.
Randolph Blackwell, resource.

3) Unmet needs and priorities in farm labor and rural field

2 —

Wes, Hank, John lead off.
Al Ulmer, Southern Regional Council, resource.

When I say "lead off" we don't mean a formal speech but enough details of specific experience to allow others to ask pertinent questions and see the relationship of one program experience to another. Resource people would not make speeches either, but bring to the discussion not only their own experience but a perspective that might be useful.

We have not officially signed up these resource people but we have asked them to save the day pending finalizing the program.

Therefore please let me know by return if this use of Monday meets your needs and if you like the suggested resources. I will have to get in touch with the resource people soon.

Dear Emory:

I am not sure if you knew that Eleanor Eaton had decided to go to Puerto Rico for a week or so to try and fully recover from her stay in the hospital. In the meantime, she has asked me to write and thank you generally for your participation in the Roundup. I am sorry that I was not able to be at all of the session, but all of the AFSC staff people there said that it was really good.

I know how busy you are and how often you are invited to participate in group things like that, so I am personally very grateful--particularly since I asked you. I don't know if Kale felt the same way, but I thought the Roundup this year was really a fine meeting--I guess, because I heard AFSC people talking about "power" in the most realistic way since I began to work with them.

I talked to Margaret yesterday and am hoping to see you on Saturday night, and will take that opportunity to thank you in person again for helping us out.

Sincerely,

Connie

Columbia Record 7/6/67

American Friends Service Committee Work Described

By JOHN M. PERRY JR.
Record Staff Writer

Quakers believe in "every man following his own inner light," says M. Hayes Mizell, representative in South Carolina of the American Friends Service Committee.

Mizell, himself a Methodist, is part of a new breed of civil rights worker, the human relations professional.

Too realistic to make a career of demonstrating, the human relations professionals are nevertheless concerned about racial problems. They differ in that they are highly educated and that they work within the established framework to promote integration.

Born to "moderate" North Carolina parents, Mizell was a college graduate (Wofford '60) before he knew there was such a thing as an educated Negro, he said.

That was while doing post-graduate work at the University of South Carolina. There he became involved in the Student Council on Human Relations.

From there it was only a short jump to the post of director of the Southern Student Human Relations Project.

After two years, Mizell joined the Friends Civil Rights task force in South Carolina.

Now, with a part-time secretary, a two-room office in Columbia and a $16,000 - a - year budget, he works as a go-between: the job of easing communications between Negro groups, local school officials and the federal government.

"It's really a sort of reconnaissance work, pushing and prodding various agencies and passing on information," he says.

The American Friends Service Committee is dedicated to the principle of school integration. Founded on April 30, 1917, at the height of World War I, the service committee puts into action the Quaker philosophy.

On that spring day 50 years ago, the task was finding a way for pacifists to serve during the war. With a war raging today in the rice paddies of Vietnam, that's still a service committee function.

During the half-century, though, many other projects developed: clothing packages during the depression, peace caravans during Hitler's rise, relocation of Japanese Americans after Pearl Harbor — and, in the sixties, civil rights projects in the South.

"There's something very basic to be learned from the simple fact of mixing bodies, but as urbanization increases, so does segregated housing patterns, and there the mixing diminishes," Mizell days.

Educators in the South fail to appreciate the advantages of mixing black and white bodies in their classrooms, he feels, and, as a consequence, put off doing so.

Apparently oblivious to the needs of the poor, they dilly - dally, offering bland rhetoric and polite assurances, he says, but little action.

"I try to communicate to them the sense of urgency which exists. Sure, they're harassed from all sides, but that goes with the job.

"A great many members of the education establishment are in their fifties and sixties. They're from another era. Now all this business of equality of educational opportunity is upon them and they don't know what to do," Mizell days.

Helping them, too, to know what to do is also part of his job, though, he says, they frequently resent it.

"They say a human relations professional doesn't understand and that I'm pushing one point of view. Of course I'm pushing one point of view, but I still understand," he says.

Despite a firm point of view, Mizell is no reverse bigot — he's white, in fact — and agrees readily that just being poor and Negro isn't a license for hotheaded behavior, as Southern conservatives sometimes characterize, with some justice, Negro poor.

"We can't hold them on some moral plateau above us just because they're materially downtrodden. They're human, too, and often the mistakes are theirs," Mizell says.

The Roundtable
LETTERS

The Tenants Are Now Impatient

In your lead editorial of July 3 entitled, "Builders and Wreckers in S. C.," I was attacked because of statements I had made alluding to the possibility of civil unrest in the state. I had also cited the sense of urgency which exists within the Negro community. To disagree with these statements is the right of **The Record.**

However, I sincerely protest the inference in the editorial that I am one of the "white extremists" who would wreck the progress we have made in South Carolina "with a stick of dynamite or crackling words of demagogic hate." Let me make it clear that I hate no one, I oppose violence in whatever form it might take, and I oppose those who perpetrate violence on others. It is simply unfair, discourteous, and grossly irresponsible to take one brief statement I have made and then to imply that I am one of the "wreckers" in South Carolina.

I will not attempt to engage your wily editorialist in a debate. But if he insists on labeling me as a "wrecker" then let me admit that I do not apologize for my efforts to wreck the dual system of education in South Carolina, to wreck the last vestiges of years of discrimination and prejudice, and to wreck a system of education which has crippled, intellectually and spiritually, white and black alike.

It is, of course, neither for him nor myself to judge who are the wreckers in South Carolina; I am satisfied to leave that task to the historians. Let me simply say that I do not wish violence on anyone during this period of transition; indeed, my whole philosophy rejects violence, either to the body or the spirit, as a method for change or as a catharsis of personal frustration.

Your editorialist, to use his imagery, is concerned with the building but cares little for its inhabitants. My statements were merely pointing to the fact that the longer the tenants have to wait to move into the house, the more likely the possibility that they will consider the structure unworthy of their patience and sacrifice.

It may seem necessary to the contractors that they take time to build a sound structure, but what of the tenants who, in the meantime, continue to be reared in the hovel of another era—crippled for life by the disease of inferior and separate education, chilled by the whistling winds of prejudice, stifled by the stench of poverty.

There are those who would even question the stability of the structure now under construction. Longevity of preparation does not necessarily guarantee superior construction. Is this lengthy construction perhaps caused by the contractor's feeling that the tenants are not "ready" to move into the house? Does the contractor really understand what the tenant wants, or is he merely building the kind of house **he** likes?

We **can** build a superior structure only if we employ skilled and committed workmen, only if we utilize the most modern materials and construction procedures, and only if we utilize all available resources to complete the job rapidly. This is South Carolina's task, for the tenants are growing impatient.

M. HAYES MIZELL

Letters to the Editor
Charleston Evening Post
134 Columbus Street
Charleston, South Carolina

Dear Sir:

Your editorial of August 18, "Mr. Mizell For The State," has just been brought to my attention. This editorial was prompted by my remarks before the Senate Education Subcommittee which was considering amendments to the Elementary and Secondary Education Act. I was saddened by this editorial, not because of the incorrect interpretation of my position, but because it reflected the faulty logic, lack of information, and immaturity which continues to characterize Charleston journalism.

First, let me set the record straight about the American Friends Service Committee. The AFSC is not a membership organization and therefore does not have a "South Carolina chapter" which I allegedly "head" as you stated in the editorial. My correct position is given at the end of this letter.

You also charge that the AFSC "is known more for its promotion of forced integration than for its efforts in behalf of freedom." Such fantasies are easily stated but impossible to document. For the past fifty years the American Friends Service Committee has initiated a wide variety of humanitarian programs throughout the world in an effort to relieve the deprivation, despair, and alienation which damages the humanity of the individual and creates barriers between men. No AFSC program promotes "forced integration" as you charge. On the contrary, the AFSC seeks to relieve those conditions which create unstable situations in the human family and thereby threaten man's freedom. Having its roots in the Quaker faith, the AFSC is dedicated to a deep respect for the individual--regardless of his race, nationality, economic status, or political ideology.

The pace of school desegregation is also not as impressive as you would have us believe. Last year only 5.9% of South Carolina's Negro children attended desegregated schools. This year the figure is a mere 7%. I do not consider an increase of 1.1% significant progress as you do.

Your editorial also expressed the concern that "Negroes go to school to learn and not to foster the New Society." It is regrettable that such learning must take place in Negro schools which continue to lack the educational resources, programs, and academic environment which facilitates learning in desegregated schools. You did not mention that there is impressive documentation that a great many graduates of the Negro schools perform only on the tenth, ninth, or eighth grade level. You did not point out that such educational deprivation eventually necessitates the creation of state and federal job training programs--further burdening

the taxpayer and contributing to the bureaucracy which you abhor. You also chose to ignore, of course, the fact that the doctoral dissertations of two psychology graduate students at the University of South Carolina documented that the academic performance of Negro children generally improves after they transfer to the desegregated school.

You also charge that I, along with "a host of government officials, including the U.S. Commissioner of Education and more than one eminence of the federal bench," hold the view that "integration, to be worth having, must be compulsory." I have certainly never made such a statement nor have I heard such a view expressed by government officials. I would say that integration, to be worth having, must be significantbut there is no significant integration now, compulsory or otherwise.

I am, however, opposed to the so called freedom of choice system as a method for desegregating our schools in South Carolina. Besides the fact that freedom of choice is ineffectual as a device to abolish the dual school system, it forces the Negro parent and child to assume the burden of desegregating the schools. It is racist in approach and implementation. It certainly does not dissantle the dual educational structure which the Supreme Court declared unconstitutional in 1954 and which the U.S. Congress declared ineligible for federal funds in the 1964 Civil Rights Act. For the Southern Negro freedom of choice means the freedom to suffer economic or physical intimidation, the freedom to risk social isolation and academic failure, and the freedom to be denied equality of educational opportunity.

Freedom of choice, then, is a specious device which achieves only a kind of progressive tokenism and maintains a segregated education for most Negro children. Individuals have no freedom of choice so long as our society continues to cling to those institutions born of servitude and segregation. There can be no freedom of choice when such "freedom" is dependent upon the courage, inclination, and determination of the Negro to throw off the psychological and social restraints placed upon him by generations of white power. Just as the political and social events of the nineteenth century continue to distort the perspective of the Charleston newspapers, so are many Negro citizens still bound by the unpleasant memory of their recent past as well as by a conditioned allegiance to those institutions which our white society forced THEM to create. The present racial crisis in our country demands that white citizens give the necessary priority and commitment to the task of taking strong affirmative actions to eradicate the last vestiges of segregation and racism. Only then will we be on the road to assuring a meaningful freedom of choice.

It would not be fruitful or constructive to debate every point made in your editorial. It is apparent that we view our country quite differently. You implied that it wis in a state of decay and that I am somehow "furthering the process of deterioration." To the contrary, I have a deep faith in our democratic system and in its ability to respond to crises and inequities in our society. If we are in such a state of decay as you claim it is because of a sense of pride and exclusiveness which makes meaningful responses difficult; it is because of a sense of fear and negativism which editorials such as yours help to create.

You accuse me of being among those "who would sacrifice the judgement

and free choice of the individual for the allegedly superior wisdom of the state." Such is not my position, and in fact I feel that the best way of avoiding federal compulsion if for local leaders to take dedicated and sincere initiatives to deal with obvious local problems. The judgement and free choice of the individual is indeed sacred but if we are to CREATE and maintain a free society such judgement must be infused with a respect for the rights of others and, at the same time, free of the dogma which would deny those rights.

Sincerely,

M. Hayes Mizell, Director

Atlanta, Georgia

Dear Emory:

Welcome back again, by phone, by letter and I hope soon to say it in person. Jim Wood said the other day that he would mention to you one of the projects that the Service Committee is now working on to see if you might have any ideas on staffing. When I talked with Jim on the phone, I was rather vague and didn't have anything in writing, but I just received some very helpful information in writing.

To give you a little background--in my travelling in several rural counties in Alabama and Mississippi in the past year, the need for industry and economic development in the black community was so very obvious and the Service Committee began to think about possible programs. We asked Tim Haworth (who, by the way, is Barbara Moffett's husband) and Charlie Van Horn, management consultants, for Edward N. Hay and Associates, in Philadelphia for their advice. Tim and Charlie said that they would like to visit some of these places before they approached any of their big industry contacts, and we made a trip to five counties in May.

Since that time, Tim has contacted Western Electric and Sperry Rand and he feels that there is definite interest in the idea of helping to establish small industrial businesses, which would be controlled by local people, but which would have certain commitments from large industries, such as technical assistance, guaranteed markets, etc. The enclosed letter from Tim to Mr. Bredder at Western Electric explains where we stood as of September 25th.

Tim has since talked further with Mr. Bredder and others and what we now need is a person to bridge the gap between interested industries and the community enterprises and leaders. The exact description of what we need in such a person in enclosed also.

Barbara and others in Philadelphia are looking for the person, because there is a great need to move rapidly while industry is interested. However, we aren't having much luck and we really prefer to have Southern advice anyway. Thus, I was wondering if you and Jim could read this material and if we could talk early next week about any ideas you might have--either on possible staff or places we could go to find someone. Could you and Jim please call me on Monday and let me know when it would be suitable for me to come over? Thank you so much for your help.

Sincerely,

Connie

Constance Curry
AFSC, Room 502

cc: Jim Wood

P.S. my secretary's been sick for 3 weeks - excuse typing.

JOB DESCRIPTION: Consultant to AFSC on Development of Small Southern Industries

BASIC PURPOSE: To assure the successful establishment of small industrial enterprises in each of five counties in Mississippi and Alabama, each enterprise to be owned, managed and manned by local black people.

ROLE OF THIS POSITION: As a member of AFSC staff, to serve as catalyst, coordinator, technical advisor and initial link with the industries who will become customers of these enterprises. Particularly, to identify the need for expertise currently beyond the resources in each county and either provide it himself or find other ways of making it available, always keeping in mind the purpose of training local personnel, to provide most such expertise themselves, as soon as possible.

QUALIFICATIONS: These enterprises may well begin as cooperatives, employing about fifty people with annual sales in the $500,000 neighborhood, engaged in assembly or sub-assembly of mechanical or electronic products or components. They will require a work force eventually trained in the "semi-skilled" kinds of operations rather than the skilled trades. Ideally, the qualifications for this position are:

1. Capacity to work behind the scenes, developing and helping others to play leadership roles, with sensitivity to the racial problems involved.

2. Drive, energy, and practical problem-solving talents. Determination to "slog through" an infinite number of problems and barriers.

3. Practical background in the operation of a small production shop and its typical basic equipment (lathes, grinders, punch presses, etc.).

4. Preferably an engineer or industrial engineer with managerial or supervisory experience that includes the practical "bailing wire" approach to getting a job done under initially primitive circumstances.

NATURE OF ASSIGNMENT: We visualize about a three-year period before these enterprises can really "fly on their own". In our opinion, this position could function effectively in any of several ways:

1. As a full-time, three year assignment.

2. As a six-month (Leave of Absence) effort to get the initial work started.

3. As a consulting relationship involving nearly full-time efforts during the first six months, with gradually diminishing involvement over the following two and a half years.

BACKGROUND: (See attached letter from Timothy P. Haworth to H. S. Breddar at Western Electric Company, Inc., September 25, 1968)

Mr. H. S. Bredder
General Purchasing Director
Western Electric Company, Inc.
222 Broadway
New York, New York 10038

Dear Stan:

It was very good of you to agree to spend a couple of hours with me next Monday morning, regarding the project we discussed briefly with Harvey Mehlhouse and Ray Herrick. A little more background may be of help to you, in anticipation of our visit Monday.

We have been asked by the American Friends Service Committee (the Quaker relief and service organization) to provide technical advice in its effort to help local Negro groups establish small industrial businesses--not in the urban ghetto, but in five of the poorest rural counties of Alabama and Mississippi. Charlie VanHorn and I visited these groups in the south during the first week in June. We returned convinced that such enterprises could succeed. We were profoundly impressed by the need, by the courage, and by the competence of indigenous Negro leadership. Most of all, we were struck by the magnitude of the opportunity these projects offer in terms of palpable impact on racial and urban problems, with very little effort on the part of industry: essentially, redirecting a portion of its purchasing power.

The lead article in the August issue of FORTUNE presents the facts extremely well:

> Today's urban slums grew from sickly roots--the southern counties in which poverty, illiteracy, and bad health are endemic... Squeezed between declining farm employment and racial and educational barriers that kept them from

> taking other jobs, 3,500,000 southern Negroes have fled north in the past generation. Their exodus has changed dramatically the ethnic composition of the U. S. In 1940 one Southerner in four was Negro; today only one in five is. Seventy-seven percent of all U. S. Negroes lived in the south in 1940; now just over half do. About 100,000 Negroes still move north each year...
>
> So far, government and business have focused their problem-solving powers on urban problems, and blinkered themselves to rural ones. But every additional migrant is another burden on the cities, and the urban crisis will not be cured, or even arrested, until the south becomes more attractive to its black population than the urban north. The slums are in large part a result of the malaise of the rural and smalltown south; the violence in northern streets is a product of frustrations born in southern fields.

Incidentally, the entire article is well worth reading (The Southern Roots of Urban Crisis, by Roger Beardwood). Our own field visits verify its facts and support its observations completely. If anything, it understates the deep desire of southern Negroes to find ways to make it economically possible to remain in their home communities with dignity. Briefly, the undertaking sponsored by the American Friends Service Committee is this:

In five Mississippi and Alabama counties there are about 46,000 Negroes living in the extreme stages of poverty (Holmes, Issaquena and Sharkey in Mississippi, and Greene and Lowndes in Alabama). They represent 77% of the total population, have a median family income of about $1,000 and an average per capita income of $467. (In 1966 the median income for Negro families in sixteen southern states and the District of Columbia was $3,422; in the rest of the U. S., median Negro family income was $5,746 a year.) During the last decade, their population decreased by about 20% through out-migration. That trend has not changed during the present decade. They own very little land, few own their own homes, and few have modern facilities and services (e.g., in Lowndes County, Alabama, there are 12,500 Negroes living in the fifth poorest county in the United States, and not one Negro home has a telephone). This is ghetto fodder.

Paradoxically, there is real opportunity here. The land is rich, beautiful, and some is available. The people have strength, a sense of community and of family. There is initiative, responsible leadership and dedicated energy. This is where their roots have been for generations, and this is their home. It is only with agony that they tear up these roots to become submerged in the faceless ghettos of the north.

As a modest start toward some economic improvement, the American Friends Service Committee proposes to assist local Negro leadership in establishing a small manufacturing business in each of these five counties. Each would be owned, operated and managed by indigenous Negroes--with annual sales of about $500,000. Each would produce products on a fully competitive basis, for which, at least during the first fews years of operation, there is a guaranteed market at a guaranteed price. This means:

A. Each such business would be owned locally, and profits generated by the enterprise would be retained locally;

B. Each would be managed by local people, so that supervisory, managerial, technical and office-supporting positions would be available to local Negroes;

C. Each would be manufacturing products for a guaranteed market at a guaranteed price during the formative stages of the business, thus removing the hazard and expense of marketing which has made other efforts to build an economic base in some southern counties less effective than they should be.

In each county land is available for purchase or, if need be, can be contributed by Negroes now owning land. Water, electricity, gas, and transportation are either available or easily obtained. Harassment and obstructionism can be expected, but we believe they can be surmounted. Able, trainable hourly labor is abundant. Responsible and mature leadership is available, interested and deeply committed, although it is lacking in business and manufacturing management experience. Some middle-management, technical and supervisory talent is available, or can be attracted to return from the north if necessary. We believe that third parties exist who would be available to assist by providing financing, technical and managerial assistance and training (this could well include government, but is not dependent on it).

The essential prerequisite for these enterprises is industry's identification of suitable products, supplies or components which it would undertake to purchase in specific quantity at specific prices, if delivered within a given time period. These products, supplies or components should initially be high volume, high labor content items requiring minimum investment in equipment by the supplier. Ideally, there should be planned progression from the relatively simple kind of operation to the more complex (Phase II), and ultimately to a fairly complex operation requiring significant investment in equipment (Phase III). The purpose is, of course, to achieve a thoroughly competitive, profitable and viable enterprise that can stand on its own feet in the marketplace within a three to five year period of time.

In total, the need is for two and a half to three million dollars in sales volume annually. The major risk to industry is inconvenience caused by delay or failure to deliver, and possible quality problems during initial phases of the learning curve.

In addition, dependent in part on the complexity or uniqueness of the product and in part on industry's interest in this project, the following would also be desirable:

A. Product specification, quality standards, design, and material content;

B. Technical assistance and advice regarding optimum production processes, layout, workflow, and equipment (and possibly assistance in obtaining equipment, including donating surplus or its own manufactured products);

C. Individual training opportunities in technical aspects of the product, its production and its testing (either by lending staff for local training, or by bringing staff to its location for training);

D. Financial assistance in such areas as provision of some materials or parts; loans to facilitate purchase of equipment or materials; partial pre-payments; possible flexible pricing to reflect the learning curve in production.

Successfully establishing such small enterprises would be a laudable contribution toward solving the problems of poverty and hunger in this most prosperous of countries. It is neither charity nor the dole: it simply involves using industry's purchasing power where it can be of real help. It attacks the problem of the ghetto at its source. It helps to preserve existing values, to conserve families and communities where they are, rather than rehabilitate those that are shattered.

Requisite energy, financial investment or risk by industry in this approach is minuscule compared to that of trying to create jobs in the ghetto.

It seemed to me that this is the kind of effort in which Western Electric and the Bell System would be deeply interested. Both corporate policy and individual interests of the people I have known in top management at Western Electric, make me think so. It was encouraging to see the immediate warmth of the response from Harvey, Ray, and you, and I am sure Paul Gorman, Don Thomas and Jim Herbert would be equally warm in their response.

I am looking forward to talking with you about this on Monday. It seems to me to be something of real promise and excitement.

Sincerely,

Timothy P. Haworth

Staff Reporter of THE WALL STREET JOURNAL

Bill W., a 24-year-old graduate student at a large Midwest university, quit his part-time job as a $1.65-an-hour bookstore clerk during a recent examination week. But he didn't use the extra time to study. He quit because he had a better job lined up—taking exams for other students. In six days, he took five exams at three nearby colleges and pocketed $180.

The physical and mental strains of multiple exam-taking worried Bill a bit ("I was half dead when I started on my own exams," he says), but the possibility of getting caught didn't bother him at all. "With all the hanky-panky that goes on in an exam," he says, "nobody's going to notice a nice, quiet professional like me."

Bill is right about the hanky-panky. College teachers and students alike say that when an exam is given to almost any large group of U.S. college students, many are likely to be copying each others' answers, reading notes hidden in watches or fountain pens, listening through phony hearing aids to pocket tape recorders or flashing signals across the room to each other. Outside the classroom, moreover, some students get advance copies of exams by breaking into offices or bribing secretaries.

Themes and Theses

Nor is cheating limited to exam-taking. Students burrow through voluminous fraternity house files to find essays they can copy, or they hire ghost-writers to do the job. In New York, one group of recent college graduates will turn out papers ranging from a short theme on Dostoyevsky to a full thesis on Brazilian politics at fees ranging from $60 to $500.

Cheating is nothing new on college campuses, of course. But there's evidence that it's becoming increasingly common—and that attitudes toward it are changing dramatically. Professors increasingly are looking the other way when cheating occurs, arguing that much cheating is a product of the educational system, and some colleges are easing their penalties for cheaters.

A recent survey of students by the American Education Council found that 24% of the men queried and 16% of the women admitted having cheated at least once in their college careers. Another survey, conducted by William J. Bowers of Columbia University's Bureau of Applied Social Research, concluded that half of all students cheat at some point. Yet few colleges report that they discipline more than one or two students per thousand enrolled each year.

The Pressures Mount

Though comparable statistics on cheating in previous years aren't available, students and professors agree that the increase has been substantial. They explain that never before has

Anything for an 'A': More Students Cheat, but They're Rarely Punished

Continued From Page One

sor, informed some time afterward of the reporter's presence, said he hadn't realized an outsider was there until he tried to record the reporter's grade (a B-minus) and found he wasn't enrolled. Had the reporter been taking the exam for a regular student, the professor acknowledged, he could have succeeded easily without being detected.

Cheaters sometimes exhibit considerable inventiveness. Some students at the University of Rhode Island recently got advance copies of an exam by rummaging through trash barrels. At Ohio State, students bribed a janitor to let them into a professor's office. Other students have salvaged discarded stencils from duplicating machines used to run off exams or pulled elaborate midnight cat-burglar raids of teachers' office buildings in search of exams.

On occasion, of course, cheating attempts backfire. Sometimes the result is a major scandal. In 1965, it was revealed that a ring of cadets at the U.S. Air Force Academy was using stolen examination papers to facilitate cheating. The disclosure led to the departure of 109 cadets. Cheating scandals also have occurred in recent years at Duke University, the University of Tennessee, University of Miami (Florida) and the University of Maine.

Penalties Vary

The penalty for getting caught varies widely. Princeton University made expulsion mandatory for apprehended cheaters until recently, but now it will sometimes merely suspend the culprit for a year. Some other schools suspend only after a second offense, giving a first offender a failing grade and a warning.

But the penalties are rarely used. Most cheaters are never caught. And while many professors continue to condemn cheating unequivocally, a surprising number say that even when they catch a cheater they are reluctant to do anything about it. Some insist they see no reason to penalize a student further for having taken a course that doesn't interest him; others fear the consequences of turning in a cheater.

"I'd lose all the rapport I've built up with my classes," says a professor at Cuyahoga Community College in Cleveland. "Anyone, teacher or student, who turns in a cheater is branded forever as a rat." An instructor at the University of Pittsburgh says he "won't take the rap for sending a kid to Vietnam."

In many cases, too, it's hard to determine just where cheating begins. "Take the kid who's groping for a formula and accidentally sees it on another paper, then can't get it out of his mind," says William Kinsella, dean of students at Case Western Reserve University's Case Institute. "Legally, he has cheated; morally, it's a lot harder to say."

Open-Book Exams

Though college administrators say they are concerned about cheating, most maintain they are helpless to do anything about it. Some hope that it will be alleviated by trends toward more open-book and take-home exams, which emphasize thought rather than memorization, and pass-fail grading systems that reduce the emphasis on grades. Others simply rely on professors to use time-honored policing methods: Seating exam-takers in alternate seats, patrolling the aisles, using essay tests that make it hard to cheat. But these methods often are impossible with large classes.

The only real answer seems to lie in creating general student opposition to cheating, educators say. They suggest that many cheaters, especially those who cheat to show defiance toward the establishment, won't do it if the student body at large, and their own circle of friends in particular, disapprove. Honor systems that give students responsibility for detection and punishment of cheating, which have long been fixtures at the service academies and older Eastern colleges, are now being adopted at many other schools as well.

Students themselves have mixed thoughts about honor systems. James B. Laughlin, assistant dean of students at Princeton, says he has detected increasing opposition among incoming students to the requirement that they turn in classmates they see cheating. Other schools are adopting rules that let a student simply inform a cheater he has been spotted. The cheater is then supposed to turn himself in.

Honor systems do work sometimes: At the Air Force Academy, officials say several students have reported themselves for accidentally overhearing others talk about tests the accidental eavesdroppers haven't taken yet.

The Pressures Mount

Though comparable statistics on cheating in previous years aren't available, students and professors agree that the increase has been substantial. They explain that never before has the pressure to cheat been so great—and never before has cheating been so easy.

Students are under growing pressure to get into college, to stay in college and to get into graduate school. For men, there's the added pressure to avoid the draft—and the war in Vietnam. Some students also claim the anti-"establishment" mood prevailing on many campuses today creates a climate conducive to cheating. While campus radicals rail at their elders for selling out to an "immoral" system, some students justify cheating as a way to outwit an institution that they say represents the establishment.

At the same time, many colleges have grown so big that it's often impossible for even a devoted teacher to keep track of what his students are doing. Ohio State University, for instance, has doubled its enrollment to almost 40,000 in the past 10 years, and a freshman enrolled there might attend classes with enrollments as high as 2,000. Such courses often are taught by closed-circuit television, and exams are frequently taken by filling in spaces on a form to be graded by computer.

Because Ohio State, like many state universities, must accept any high school graduate from Ohio, basic required courses with large enrollments become, in efefct, "ax-courses" that weed out up to 30% of the freshmen. Professors grade severely, often using a "curve" system so that each student's grade is based on his performance in relation to every other student.

The Alternatives

The result is both ample opportunity and great pressure to cheat. "If anyone cheats, everyone has to—if they don't want to see the cheaters preempt the high grades," says Harold C. Trimble, Ohio State professor of mathematics.

Students agree that the other obvious alternatives—studying harder and turning in the cheaters—are less than ideal. "More study just gives a cheater a better paper to copy from," says one Ohio State junior, "and you couldn't identify enough cheaters to make a difference in a big course."

Though cheating evidently does diminish somewhat after the first year or two in college, as students begin to take courses with smaller enrollments and to develop more interest in their studies, it doesn't end. A student at Cleveland State University says he has taken four exams for friends at other schools to help them stay out of Vietnam. "They're up against the wall in a course they just can't get through, and if they fail they'll get drafted," he says. "So I take their tests for them."

To learn how easy it is to take somebody else's test, a reporter recently strolled into a classroom where roughly 100 students were about to take a political science exam. He took a test paper and started working. During the test, two students were observed apparently copying from other papers (one wore dark glasses despite gloomy weather outside). Another was seen apparently copying from notes.

The reporter also did a little peeking himself, but no one seemed to notice. The profes-

Mr. Jack Tarver, President
Atlanta Newspapers
P. O. Box 4689
Atlanta, Georgia 30302

Dear Mr. Tarver:

Dr. Gerald Reed has indicated my willingness to meet with appropriate persons from Atlanta Newspapers and Operation Breadbasket to discuss affirmative approaches in the effort to get minority participation in apprentice programs.

Unfortunately, I will be out of town on Wednesday, March 19th. I would like to suggest that the alternate dates be Wednesday, March 26 or Wednesday, April 2nd at 2:00 p.m. Your choice should be confirmed when Dr. Reed's secretary gets in touch with your office.

Sincerely,

Emory F. Via, Director
Labor Program

EFV/km

Telephone 873-2771

March 6, 1969

Mr. Jack Tarver, President
The Atlanta Newspapers
Box 4689
Atlanta, Ga. 30302

Dear Mr. Tarver:

We are pleased to note your continued efforts to broaden the scope of the Atlanta Newspapers in keeping with suggestions discussed with Operation Breadbasket.

The Carl Rowan column is a noteworthy addition to the Constitution, and we cannot overestimate its significance in the continuing struggle for a sense of dignity and identity now going on in the Black community.

There remains the matter of employment in the printshop, where we have failed so far to place black employees.

Before Mr. McGill's death, he mentioned a Mr. Via in connection with the apprenticeship program. I contacted Mr. Via of the Southern Regional Council, and he is eager to assist us in securing qualified applicants for your training program.

We would like to have another meeting of Operation Breadbasket and your staff, and have Mr. Via and some of his staff perhaps, present to discuss the matter fully once again.

May we suggest Wednesday the 19th or Wednesday the 26th of this month at 2:00 P.M., whichever is more convenient for you. I will have my secretary contact your office to confirm the date most convenient to you.

Sincerely yours,

Gerald Reed, D.D.S.

Comparing University and Corporation

By COLIN D. CAMPBELL

The author is professor of economics at Dartmouth College.

Two distinguished authors have recently criticized the organization of our universities. Jacques Barzun, former dean of the faculties and provost of Columbia University, has written that our universities are suffering from "bankruptcy, paralysis, and futility." Irving Kristol has said that "no one any longer has a clear notion of what a 'university' is supposed to be, or do, or mean."

Like most large business enterprises, universities are corporations. They have charters, and trustees who are similar to corporate directors. The trustees select the president—the chief executive of the organization. Can universities' organizational problems be attacked in the same way that business corporations typically solve theirs?

To some persons the selection of the board of trustees is a basic source of difficulty. Suggestions for change usually include selecting trustees either from the faculty or the student body. In a business corporation, this would be analogous to selecting directors from representatives of either its employes or its customers.

A Trustee's Responsibilities

Selecting trustees from the faculty could result in even more attention to research and less to the instruction of students. Also, trustees, as their title indicates, are responsible for the proper use of the bequests received from donors, just as corporate directors represent the interests of the stockholders. Since a university's resources may be used for current expenses or saved to provide further income in the future, a conflict of interest could arise: Faculty members would usually benefit most by expanding current expenditures. In addition, those faculty members elected to the board could presumably benefit their departments at the expense of others. The struggles for representation might be intense and bitter. Such arrangements would probably factionalize the faculty and involve them in time-consuming activities other than teaching and research. Decisions on how to distribute the institution's resources among its various activities are probably best made by an executive who is responsible to an outside group of trustees, rather than to the faculty.

Some of the problems with student trustees would be similar. Consider the question of raising the tuition. Students might prefer to have increases in operating costs paid for by consuming the university's endowment—but this would not be in the interest of future students.

Students' concerns are usually matters decided by faculty committees rather than trustees. Also, students lack experience for the kind of financial and legal decisions that trustees make. Trustees, like corporate directors, usually meet only once a month. They do not, and probably should not, take part in setting up the curriculum, selecting the faculty or administering student discipline, just as corporate directors do not plan production processes or hire employes.

University trustees and corporate directors are usually selected in quite similar manner. Some university charters provide that trustees be self-perpetuating. In the "modern corporation" with its large number of stockholders and no one stockholder having a controlling interest, directors are also self-perpetuating even though stockholders go through the motions of voting. In other universities, an alumni committee nominates candidates for trustees, and those receiving the most alumni votes are selected.

Professor Barzun believes that excessive diversification is the source of much of the disorganization in higher education. Universities have become research centers, with an assortment of institutes financed by both the Federal Government and private foundations. They also organize technical assistance teams for foreign countries, participate in faculty exchange programs with foreign universities and administer programs to assist underprivileged urban groups.

Some universities have ceilings on student enrollment to avoid excessive size and disorganization, yet many new non-teaching activities have been added, and in these universities the shift away from strictly educational functions has been most rapid. Only about half of some university budgets are now used for instructional purposes.

Diversification has some advantages, but it undoubtedly creates strains on management. The "multiversity" loses the economic advantages of specialization. In business organizations, competition and the profit motive prevent carrying diversification too far: Inefficiencies would lower profit and induce owners and managers to simplify the organization. In non-profit institutions, checks on excessive diversification are undoubtedly weaker. Current atttudes of most educators favor expansion and growth. As Dr. Barzun has emphasized, universities are expected to participate in the solution of social problems. Nevertheless, decisions to expand into new areas must be approved by the trustees, and where errors have been made the fault is theirs.

The Limits of Power

Professor Barzun also believes university administrators are ineffective because of their limited power over the faculty. This is blamed partly on "tenure," under which a faculty member cannot be discharged except for misconduct or failure to perform his duties. Both government agencies and business organizations face similar, but less rigid, limitations. Lack of control over the faculty is also blamed on the highly competitive market for professors. Most administrators are unwilling to try to influence their better faculty members because they fear that this might cause them to move elsewhere. Business firms have similar problems. Wherever labor markets are competitive and persons are free to choose where they wish to work, an employer is under pressure to provide pay and working conditions similar to those found elsewhere. However, the market protects universities also in their role as employers. Faculty members need not be paid any more than they can get elsewhere.

Both universities and business corporations still retain their most important technique of controlling employe performance—determining salary increases. A dean can reward those who support his policies and penalize those who do not. The resulting power of deans and department chairmen is substantial—despite the claims about the preponderant power of the faculty.

To the leaders of the student power movement, the principal reform needed is student participation in the organization. This proposal is neither realistic nor practical. Taken seriously, it would mean including students in the deliberations and voting of at least a dozen committees. In most universities, the important decisions concerning selection of faculty, courses offered, degree requirements, requirements for the major, student discipline and student admission are made by its faculty committees. Serving on these committees takes time and is difficult. Much of the work is routine and unexciting. That students would be willing to take on such duties is hard to believe. Many full-time students would not be able to do committee work.

Student committee members would not be subject to the same kind of organizational discipline that faculty members are. If student representatives did not perform their tasks conscientiously, the administration could do

subject to the same kind of organizational discipline that faculty members are. If student representatives did not perform their tasks conscientiously, the administration could do little about it. In contrast, the overall evaluation of a faculty member's performance is based in part on his contribution to such committees.

Of course, students are the persons served by universities and they should be given the best kind of education possible. But to improve education, student participation is probably no more necessary than consumer participation would be in the management of a business firm. Consumers typically get the kind of goods and services they want even though they have no voice in the management. This is because firms that produce those goods most desired are most successful.

Attracting Students

To survive, a university must attract a sufficient number of students. Unfortunately, the competition between private universities that must charge tuition and state universities where the tuition is nominal does not operate effectively. Even if state universities had less to offer, they would probably attract some students away from the private universities.

Significant competition also exists among the various academic departments. Faculty committees may formally decide what courses are to be put in the catalog, but unless students are willing to enroll in them their decisions wil not mean much. There are few institutions that can afford courses or professors who cannot attract a reasonable number of students. If a department becomes unattractive, enrollment drops, students shift to other majors, and the department will be required to reduce its staff. The typical department will almost always react by improving its offerings.

The principal way to improve the quality of education is to induce students to want better education. This is not an easy task, but it is one of the purposes of Mr. Kristol's suggestion that all students pay the cost of their education either from their own funds or by loans from the Government. If students were required to pay the cost, one would expect them to be more discriminating about the kind of education they got.

Executive Administrator

MEMORANDUM

TO: Dr. Emory Via Date: July 9, 1969

From: Mrs. Cynthia R. Montague, Neighborhood Aide Employment Coordinator

RE: Employment Roundtable

Thank you for your interest in the Employment Roundtable meeting which will be held Wednesday July 9, 1969, at 11:30 am in the 8th floor Conference Room of Economic Opportunity Atlanta, Inc., 101 Marietta Street N W. This meeting will afford an opportunity to exchange information and ideas on employment solutions and problems.

Arrangements will be made for a dutch treat sandwich lunch.

Looking foward to seeing you then.

CRM/ajb

Look forward to seeing you at a later date.

Cynthia R. Montague

October 20, 1969

Mrs. Barbara Moffett

Miss Gloria L. Alston
2015 Roosevelt Place
Gary, Indiana 46404

Dear Miss Allston:

I heard from your father recently saying that you were working on a paper dealing with black workers and organized labor. Enclosed is a bibliography which you may find helpful although many of these items may have already come to your attention.

I would also suggest that you scan a good labor history, one that I think is useful and readable is Thomas Brooks' "Toil and Trouble." It is available in paperback. Of course, if you are going to go very far back in history there are books other than the ones that I have listed which would be useful. The multi-volume labor history by John R. Commons and Associates would be a good source for the early days. The bibliographies in the works which I have suggest would provide leads to other early day information.

I trust these suggestions will be of some use. Please give my good regards to your father.

Sincerely,

Emory F. Via, Director
Resources Development Center

NEWSLETTER

No. 6970-2

FIFTH ANNUAL MEETING**AMERICAN FRIENDS OF WILTON PARK

St. Louis, Missouri - April 24, 1970
Washington University, St. Louis

Tentative schedule: Conference Opening - 3 PM (*New Modern Art Building*)
Wilton Park-style discussion seminar; Panelists:
Warden Koeppler - Chairman
Jules Moch - Old Wiltonian and former French Cabinet Minister (tentative)
Stephen Miles - Old Wiltonian and U.K. Consul General, St. Louis
Open discussion to follow
AFWP Business Meeting -- election of Directors and Officers for 1970-71

Cocktails & dinner, 6336 Forsyth Blvd., St. Louis (across from New Modern Art Building)

For information, write cohosts: *Paul R. Schratz*, Old Wiltonian - Director, Office of International Studies, University of Missouri, 8001 Natural Bridge Road, St. Louis, Missouri
Robert Rankin, Old Wiltonian - Vice President, Danforth Foundation, 222 S. Central, St. Louis, Mo.

"MEET YOU IN ST. LOUIS!"

Of interest from Wilton Park

Americans needed for Conference 119 (Feb. 1-14): The number of American participants scheduled for Conference 119, "Cohesion and Conflict within the East and within the West"-- a subject which impinges directly on the U.S. -- is small. Any AFWP Member with nominations for this Conference please write directly to Oliver G. Hayward, Director of Administration, Wilton Park, Steyning, Sussex, England.

Warden moves brain trust to U.S. for 1969-70 academic year: Dr. H. Koeppler, Warden of Wilton Park, is spending the first half of the 1969-70 U.S. academic year in the former colonies. Warden Koeppler is visiting scholar at the University of Indiana, and from that base delivering lectures at several other U.S. institutions or organizations as well (see "Of Interest from the AFWP" section for San Diego and Los Angeles visits, and the box above for St. Louis activity).

200th Wilton Park Conference Takes Place: The 200th Wilton Park Conference took place at the end of the 60's decade. Although termed the 116th officially, there had been 84 largely Anglo-German conferences between 1946 and 1957, when the present series began.

25th Anniversary of Wilton Park in June 1971: The June, 1971, Wilton Park conference will mark the 25th Anniversary of Wilton Park. Far-reaching plans for that conference are

already under way.

Rose departs Academic Staff for Thornier Problems: Mr. Michael Rose left the Academic Staff of Wilton Park, effective September 15, 1969, to become Director of Great Britain's East Africa Committee (Mr. Rose was a former British Ambassador to the Congo). Mr. H. Bryan Shepherd, T.D., B.A. has been appointed to Mr. Rose's place. Mr. Shepherd has served in the Diplomatic Service in three European posts (Copenhagen, Paris, Sofia), and three Asian ones (Hanoi, New Delhi, Singapore). He is fluent in French, and probably in Marxist dialectic as well, after Sofia and Hanoi.

Robert Sturrock tour de force in east and midwestern U.S.: Robert S. Sturrock, plaid representative on the Academic Staff, spent the summer of 1969 in the United States making many friends for the cause of Scotland. Mr. Sturrock began with 3 and 1/2 days in New York, visiting with, among others, Old Wiltonian Rudolph Berle (AFWP Regional Vice President for new York), Ward Burns (a member of the Scottish Underground of the U.S.?), Dexter Keezer, Kenneth Brown, Donald Stone and, in the New Jersey countryside, John Baker. From the Tower Suite restaurant, on top of the Time and Life building, Robert had his first real view of the Manhattan skyline at sunset and after dark (no smog that day).

Another half week was spent in Washington, which included visits with Mrs. R.G. Woolbert (AFWP Regional Vice President for the District of Columbia), Bill Brussat, Hugh Mields, and (in Maryland) Stanley Harrison and Martha Mills. Highlight of this segment was a day of lobbying on Capitol Hill -- with Mrs. Mills, Old Wiltonian responsible for foreign affairs at the League of Women Voters.

The prime purpose of Mr. Sturrock's visit was as principal speaker of a series of political science seminars at the three campuses of the University of Missouri (St. Louis, Columbia, and Kansas City). Mr. Sturrock gave a series of lectures revolving around two main elements: (1) British attitudes toward the political integration of Europe; and (2) Europe after DeGaulle. He spent many hours working with both graduate and undergraduate groups, as well as talking with faculty members at seminars and luncheon meetings. Reports from the University is that there has seldom been a more stimulating and engaging speaker in the memory of those responsible for management of the seminars.

Among those providing the social as well as intellectual support to Mr. Sturrock in Missouri were Old Wiltonians Paul Schratz (AFWP Regional Vice President for the Midwest), John Weaver (President of the University), A.G. Unklesbay (Vice President of the University), Ard Emmons and Oliver Langenberg.

There is no truth to the rumor that the Missouri administration, following Mr. Sturrock's departure, banned the miniskirt in favor of kilts.

French and German versions of AFWP under way: The "International Society of French-speaking Friends of Wilton Park", with 67 members of Belgian, French, Italian, Spanish, and Swiss nationality is pursuing a parallel course with the AFWP in those countries. The Society has an active speaking program in the various national capitals. Address: Secretary General M.P. Leotard, 28 rue de la Pompe, Paris 16e, France. A trinational German-speaking organization (Austria, West Germany, and Switzerland) has also been formed. Address: c/o Herr Karl Weishaupl, M.d.L. Mitteisstrasse 19, Munich 45, West Germany. Any AFWP members planning to travel on the continent might find these useful contacts.

Of interest from the American Friends of Wilton Park

AFWP Membership at 139 -- Thirty-nine Old Wiltonians have joined the American Friends of

119th Conference: February 1 to February 14
Cohesion and Conflict within the East and within the West

120th Conference: March 1 to March 14
The Politics and Economics of Western Defence

Wilton Park since the last newletter (No. 6970-1). AFWP membership now stands at 139. A list of 35 new active members is attached to this newsletter, and may be added to the "Active" Section of the previously-mailed AFWP Membership Roster. Four even newer: Dr. E. Wilson Lyon, President Emeritus, Pomona College, Claremont, California; David B. Arnold, Education and World Affairs, 2 Keats Grove, London NW3 England; Dr. Floyd Andre, Farmhouse-on-campus, Iowa State Univ., Ames, Ia. 50010, and Dr. Alfred Feinbach, Prof. of Government and Foreign Affairs, University of Virginia, Charlottesville, Va. 22901. The membership is double that of any previous year. This newsletter goes only to active members of the AFWP.

AFWP Grants Extended to 7: The large AFWP membership has enabled the AFWP to extend or arrange for grants to 7 individuals to partially defray the cost of travel to Wilton Park. This is the principal purpose of the AFWP Grant recipients are selected by the Grants Committee of the AFWP, the basis being that the applicant is an outstanding individual needing fellowship help for travel portions of the Wilton Park experience. Applicants must have alrea been invited to Wilton Park by the British Foreign Office. Chairman of the Grants Committee o the AFWP for 1969-70, and responsible for its success, has been AFWP's Detroit-Chicago area Vi President, Dr. Harold K. Jacobson, of the International Organization Program, Department of Political Science, University of Michigan.

AFWP Grantees for the 1969-70 year to date have included:

1. Vincent Davis, Graduate School of International Studies and Executive Director, International Studies Ass'n., U. of Denver

2. R. Berry Farrell, Program of Research & Graduate Training in Comparative Politics, Northwestern University

3. Terry A. Francois, Supervisor, City of San Francisco, and leader in San Francisco black community

4. John Gange, Institute of International Studies and Overseas Administration, University of Oregon

5. Jeffry Jenks, Program Development Coordinator, Research and Planning, Civil Rights Commission, Detroit, Michigan

6. Peter Krogh, Fletcher School of Law and Diplomacy, Tufts University, and former White House Fellow

7. Frank McCallister, Dean, Labor Education Division, Roosevelt University, Chicago

Sixth Annual Meeting to be in Philadelphia: Mrs. Ruth Weir Miller, AFWP Vice President for the Middle Atlantic region, has invited the AFWP to hold its sixth annual (1971) meeting in Philadelphia. The fifth annual meeting, as indicated at the beginning of this newsletter, will be in St. Louis. It is the policy of the AFWP to vary meeting sites regionally (the fourth meeting was in San Francisco, the third in New York City).

Regional AFWP Meetings Held in New York and Columbus: AFWP President Clark W. Maser's policy of having AFWP Directors meetings held regionally whenever possible has led to two additional regional meetings since the last newsletter. A Board Meeting at the English-Speaking Union, New York City, on June 24, 1969, was attended by Chairman William C. Olson, President Maser, Secretary-Treasurer Terrence Cullinan, various Directors, and the following

121st Conference: April 12 to April 25
Protest and Dissent in the Affluent Society: problems of higher education

122nd Conference: May 10 to May 23
Development Aid: disappointments, achievements and prospects

New York area AFWP members: Rudolf P. Berle, Robert Delson, Walden Moore, Donald Stone, Max Delson, Malcolm MacIntyre, and Zygmut Nagorski. On Saturday, November 1, 1969, the Columbus meeting at Ohio State University was attended by officers, directors, and the following regiona AFWP members: Philip N. Burgess, Robert V. Cummins, Loyal N. Gould, Lawrence Herson, Paul R. Schratz, and Hans Zetterberg. An earlier regional meeting was held in Washington, D.C.

Chairman of AFWP Board Welches: AFWP Board Chairman, Dr. William C. Olson, was invited to present a paper entitled: "International Politics: The Growth of a Discipline", at the Glenygog Conference in Wales commemorating the 50th anniversary of the establishment of the Woodrow Wilson Chair at the University College of Wales, December 13-17. Whether Wilton Park was considered "disciplined" or not, was not revealed.

Luncheon for Warden Keppler in New York: New York AFWP members hosted a luncheon, Septem ber 15, 1969, for Warden Koeppler as a "welcome to the U.S.A." for the Warden (see "Of Interes from Wilton Park"). AFWP members in attendance at the Overseas Press Club affair included Rudolph Berle, Kenneth Brown, Roland Bushner, Marcus Cohn, Max Delson, Robert Delson, Frances R. Grant, Franklyn Johnson, David Maceachron, Malcolm MacIntyre, Walden Moore, William Olsen, Edwin Sanders, Donald Stone, Dexter Keezer, and Kevin Salisburgy. The Swiss and Austrian Consul Generals for New York also attended the luncheon. Miss Grant made all the arrangements for the affair, a very successful one.

Warden leaves heart in San Francisco: Warden Koeppler visited San Francisco in the fall and spent time with Bay Area Old Boys. Included among the latter at a cocktail reception hosted by Merritt Ruddock of the World Affairs Council were Clark Maser, AFWP President; Terrence Cullinan, AFWP Secretary-Treasurer; North Baker; Vincent Cullinan; Louis Heilbron; Armin Rappaport (up from San Diego); and the British Consul-General for San Francisco. A later afternoon swim, barbecue, and tennis gathering for Non-Wiltonians desirous of meeting the Warden was held nearby at Old Girl(?) Madeline Russell's family estate -- Atherton's ansv to Wiston House. For the swimming session, the Warden for the first and only time during his U.S. stay shed his Wilton Park tie.

Vice President for Financial Affairs elected: At the New York regional meeting, the Board elected Mr. Donald W. Stone, Old Wiltonian and Recording and Financial Secretary, Lithographers and Photoengravers International Union, as Vice President for Financial Affairs of the AFWP. Mr. Stone will serve in that capacity until the fifth annual meeting.

Local chapter may organize in Columbus area: A local AFWP chapter may be started in the Columbus, Ohio area, following the regional meeting held in that city November 1, 1969. Othe regional centers at present include New York and Washington, D.C.

Warden to be featured speaker at UC San Diego: Warden Koeppler will be featured speaker at the foreign policy conference at the University of California, San Diego (La Jolla) on Saturday, April 18, 1970. Arrangements for the Warden's appearance are being made by Dr. Armin Rappaport, AFWP Vice President for California and the Southwest (History Department, UC San Diego, La Jolla, California).

Warden to be at regional AFWP meeting in Los Angeles April 18: Warden Koeppler will fly to Los Angeles following his UC San Diego speaking engagement (see foregoing) for an evening regional AFWP meeting, including a "brains trust" session and cocktails and dinner. Arrangements are being made by AFWP Director Walter P. Coombs, The California State College, 5670 Wilshire Blvd., Los Angeles, Ca. 90036.

123rd Conference: June 28 to July 11
National and International Management of the Economy: incomes and productivity policies, world liquidity

124th Conference: July 26 to August 8
Public Opinion and Foreign Affairs: the rôle of governments, parliaments and the mass media

125th Conference: October 11 to October 24
The United States and Europe: political, economic and defence issues

LAST MINUTE INSERT

Old Wiltonians in California, Arizona, Nevada
and unexplored territories

Meeting of Old Wiltonians with Warden Koeppler

April 18, 1970

Beverly-Wilshire Hotel, Champagne Room, Los Angeles

cocktails (no host) 6PM; dinner 7:30 PM - $8 including tip

Respond to: Dr. Armin Rappaport
University of California, San Diego
Department of History
La Jolla, Ca. 92037

American Wilton Park to be considered: An AFWP Committee to investigate the feasibility of initiating an American Wilton Park, under the leadership of Zygmunt Nagorski, Director of Meetings for the Council on Foreign Relations, and Robert Rankin of the Danforth Foundation, is planning a meeting of influential potential sponsors of such an organization in New York City on January 27th. Mr. Nagorski, incidentally, was the first AFWP Grantee.

Wilton Park ties may be available in U.S.: Old Wiltonian Jay H. Cerf is currently investigating possibilities of having a distribution center for Chanctonbury Ring Club ties in the U.S.*For information: J.Cerf, President, Pathfinder Fund, 245 Brattle St., Cambridge, Massachusetts 02138. (Ties are also available at exhorbitant prices from Wilton Park itself).

Missing Old Boy: Old Boys listed as missing in the newsletter have all been located thanks to various AFWP members' assistance. Currently missing, however: Paul C. Szasz. Last known address: International Atomic Energy Agency, Karntnerring, Vienna, Austria. Anyone knowing whereabouts please contact AFWP at either of the two addresses on the letterhead.

New York group seeks unAmerican Old Wiltonians: The New York City group of Old Wiltonians (Knickebocker Post) is seeking the names of Old Wiltonians, other than Americans, who are currently in the New York area (at the UN, for example) so that they might include them in some of the NY activities. Anyone knowing such presence please contact Dr. W.C. Olson, AFWP, 230 Park Avenue, NY NY 10017.

Outstanding German Old Wiltonian visiting U.S. May 1-15, 1970: Dr. Jurgen Frenzel, former Chief of Police of Hamburg, W. Germany, and presently the highest appointed official in Hamburg state, will be visiting the U.S. the first two weeks of May. Dr. Frenzel, a former Eisenhower Fellow to the U.S. and graduate student at the University of Washington, was West Germany's outstanding police chief prior to his assumption of his present post: a man uniquely able to deal with normal criminal problems and the youth of his area. He is among other things a rabid fan of, in approximate order, professional football, Herb Alpert, and American ice cream, in addition to being a brilliant administrator and equally brilliant wit. Any AFWP members desirous of meeting with Dr. Frenzel should address the AFWP's San Francisco office, care of Clark W. Maser.

*for the benefit of AFWP members who feel underdressed.

126th Conference: November 8 to November 21
Modern Technology and its Impact on Man's Environment

127th Conference (one week): December 6 to December 12
The present states of East-West Relations

Dear Harry:

The enclosed publications can possibly be made available to the delegates to the Civil Rights Conference. I think it would also be useful to have enough copies of various issues of South Today and New South so that those delegates who are interested could pick them up. I am also enclosing a sample copy of South Today and New South. If you feel any or all of these publications would suit your and Lasley's purpose, please let me know and I will see that they are at the hotel by November 29.

Sincerely,

Emory F. Via, Director

GLENDA BARTLEY 404 - JA-28764

We have tried to teach our children to abide by the law. We have taught them this when all the forces of law seemed to be working against them. In 1964, our nation passed a law that would help us and our children to become the citizens we want to be, ought to be, have a right to be. That law guaranteed that our government would no longer give financial support to institutions which discriminated against citizens of the United States. Since that time, sometimes with pain and terror for our children and for us, we have, almost alone, sought to make the meaning of that law real for us and for all people in this country.

We have done what we were told to do by the agencies of government charged with enforcing the law: we have waited, we have endured, we have answered violence with nonviolence, we have sent young children through lines of hostile, hating adults. We have done all this because we believe in the law, in the education that makes useful citizens.

We are here now because we still believe in those things. But we wonder if our government does anymore.

Two weeks ago, Mr. Jerris Leonard said that giving more time to school districts that have known for 15 years they

are breaking the law did not mean that the administration was retreating from its previous stand in favor of requiring schools to desegregate by fall, 1969. He said that school districts will still be required to desegregate right away "where that is possible. The problem is where it's not possible."

We know all too well what those words mean. Where it's not possible is wherever school boards and superintendents don't want to desegregate. It's been 15 years. We know all the tricks. We know them because at one time or another all of them have been used against each of us. We know the tricks. What we want to know now is whether this is a government of trickery or a government of law.

What do we tell our children now? How can those superintendents and school boards who have tried, some of them under threat of loss of prestige and even, in some cases, their jobs, face now those who have been hostile to school integration and tell them that doing the right thing is no longer supported in Washington?

We ask that the Nixon administration tell school superintendents and school boards all over this country and particularly those in the South that there can be no more delay. If this is not accomplished now, it will not only affect us. It will affect all those who believe in law, in a government which abides by and enforces its own laws.

So we are sitting here because there is nothing left that we can do. We have done it all: the letters, the waiting,

the believing. We are sitting here because, in the most profound and basic sense, we are tired.

to motivate people to want to improve the conditions of their lives,

to develop a sense of community in which neighbors recognize common problems and work together as responsible, self-respecting members of society to solve them."

Julia Abrahamson

Penn

Penn Community Services is an outgrowth of an experiment in education that began in 1862 when two young women, one a doctor and the other, a teacher, came to St. Helena Island near historic Beaufort, South Carolina, to provide schooling for the newly-liberated slaves. Penn School, as it came to be known, was not only a place for formal education, but also a center for the development of occupational skills and the knowledge necessary for full participation in community life. Since 1948, when the state assumed responsibility for public education on the Island, Penn has continued to move forward as the cutting edge of community education in the region. From the state-wide influence of the conference activities to the community development phase of the program, Penn retains the spirit of the founders of the original school, encouraging the development of knowledge, self-reliance, cooperation and full participation in American life.

What Does Penn Do?

Conducts a program of rural community development in Beaufort County, South Carolina.

Hosts and often arranges a wide variety of conferences, work camps, religious retreats and local meetings at our oak-shaded grounds, providing facilities for groups of a dozen up to 150 in number.

Cooperates in negotiating with private and public agencies for non-traditional types of job openings.

Encourages active and responsible participation in government, particularly at the local level.

Provides opportunities for individuals and groups to discover new programs and receive information not otherwise readily available.

Co-sponsors a nursery school, rural library, clothing sales house and marketing cooperative.

The work of Penn, a non-profit organization, is supported chiefly by contributions. Gifts to Penn are tax-deductible.

C O N F I D E N T I A L

FROM: Barbara Moffett

SUBJECT: New Orleans: notes on investigation of possible AFSC role following hurricane

During the week of 9/13 we received call from national CORE office asking for help of any agency with staff or contacts in or near New Orleans. Needed to get help to poor. Said to be shocking indifference to their plight and cover-up by political leadership of extent of need.

South Central Regional Office (SCRO) meanwhile contacted by local CORE (New Orleans -- Jerome Smith, 523-7625). Barbara Moffett and Garnet Guild decided to see what SCRO resources could go to New Orleans quickly and assess needs. Wade Mackie went on 9/17. Also on 9/19 call came to Garnet Guild from Cy Harvey, SCRO Executive Committee member from New Orleans reporting deliberations of the Monthly Meeting there.

Wade and Monthly Meeting seemed in agreement as to analysis:

1. Everything in mess. More material aids from outside not necessarily the need. Real problem is overcoming inadequacies of welfare set up and leadership so that stuff could get to those who need it.

2. Undoubted discrimination in help given. Rigid segregation in refugee centers. Navigation Canal area one of worst; worse off than Desire area. Many more refugees than papers report.

3. Don't have complete list of who Wade saw, but saw Rosenberg, Associate Director, Social Welfare Planning Council, who saw role for AFSC as "assessor, evaluator, planner to meet long range needs". Come, stay for 10 days, put needs before right people, look toward future and rebuilding.

The resource needed seemed then to be, not a relief person, but someone who would have quick comprehension of how a city mobilizes resources, what the racial barriers were, quick understanding of welfare organization, government resources, etc. SCRO asked if we could help turn up such a resource. SCRO Executive acted formally on 9/25 -- having received New Orleans Meeting minute asking for AFSC resource.

In Philadelphia, following the earliest call, we had gathered Bill Channel, Allen Bacon (Community Relations Division Executive and Housing Committees) and Arthur Dye (recent New Orleans contacts, knowledge of welfare workings) to help us sharpen questions to be put to SCRO and elsewhere.

We made inquiries in Washington.

(1) National Red Cross (through good contact of Harold Snyders -- Mary Settles, RE 7-8300 -- who led us to a very defensive and unhelpful person: Bob Edson, National Director, Disaster Service). He said he was shocked that anyone felt there was a problem. Gave full recital of resources Red Cross had in situation: so many snack meals, surplus food and clothing to so many families, 6000 mops, 10 million disposable diapers, etc., etc. Were going to spend a total of 5 million dollars, have 510 staff there. "If anyone needs help in New Orleans, it's their own fault."

(2) Civil Rights Commission. Dean Betterman (202-382-5616), staff attorney with "federal programs" part of CRC. He reported that they had received many complaints of discrimination in relief services (dry ice gotten to whites; Negroes had to travel far for it; Gas masks -- in Baton Rouge presumably -- gotten to whites first; LSU gotten back into shape in quick order, but Southern University had to wait, etc., etc.). He wished for more specific documentation. He was going to go to New Orleans week of 9/28.

He described set up: all agency work coordinated by Office of Emergency Planning Executive Office. General knowledge that Office of Emergency Planning insensitive, at best, to racial implications. CRC is going to set up training programs for their staff when this emergency is over. Also make sure government assigns civil rights man along with others to such emergency efforts in future.

Questioned about Red Cross operation, he said it was of course the key agency in such situation and known for poor performance in racial matters. Had few specific complaints against Red Cross, however, but this is a part of lack of specific complaints as opposed to generalized ones.

Head of Red Cross operations in the area: George Hastings, Baton Rouge.

(3) National Catholic Welfare Conference (202-737-7474). Social Action Department. Had talked with people in area, not aware of any particular problems. No call on their special emergency resources.

Meanwhile further information from Ezra Young visit to New Orleans confirmed lack of ability of city's welfare apparatus to cope. Political overtones. Mayor up for re-election. Some of those giving out help wearing campaign buttons, etc.

I later had a chance to check this out with Small Business Administration man whom I met at Conference. (Morris W. Bush, Associate Director, CEO Assistance, SBA, Washington, D.C. Phone: 382-4987.) He had just come back from New Orleans. SBA had interviewed 8000 people. He said, "unfortunate occurrence that some of volunteers lent to their operation were foolish enough to wear buttons. Big furor; had to send them away." Man named Galloway is New Orleans SBA coordinator.

Focus of need began to be: (1) get someone in who could fill vacuum of information about misuse or misapplication of funds and perhaps act as catalyst in present operations; and (2) think in long range terms: what could emerge by way of activitywhich would enable the poor, voiceless, to get help and make use of resources. See opportunity to rebuild, not just buildings, but patterns of community which would be better than before in terms of participation of those suffering barriers of race and poverty.

RESOURCES: We turned to Bill Channel, to Arthur Dye, and to national committee resources, Allen Bacon (Philadelphia) and Frances Coe, civic leader in Memphis, member of Southern Programs Committee. None free for length of time needed. Frances wondered about resources of Tulane School of Social Work. In checking situation out she again got from reliable sources picture of need and that relief operations of Red Cross and Salvation Army likely to be highly discriminatory. Also checked with Jacques Wilmore, head of Civil Rights Commission Regional Office in Memphis. He had gotten CORE complaints. His new staff, Bobby Doktor, had been in touch with Harvey Kerns of New Orleans Urban League and his assistant, Clarence Barney. Impressed with their knowledge and role.

Each inquiry eating up time; put question back to Houston: perhaps best to use regional resources: Wade, Garnet, etc. Garnet not ready to settle for this. We said we had an idea of resource outside our national committees, staff, but also busy and might be unable to be sprung loose: Red Stephenson of North Richmond Neighborhood House, good community organization man with free-wheeling approach. Highly respected by us and in general. She said call him. We did. Red enthusiastic about opportunity for AFSC to be helpful. Went about setting up meeting of his staff and Executive Committee for early this week (10/4). On Thursday afternoon (10/7) phoned word that he had been released for week or more; could arrive New Orleans Monday evening, the 11th; stay till following Monday, 18th, when had to go on to Washington on his agency's business. Phoned Garnet, who had previously communicated with New Orleans Friends about this possibility. Allset. Now need $1000.

Red went to work immediately to explore New Orleans situation through his own contacts:

1. David Hunter. Close to Red and knowledgeable New Orleans (Stern); "agree on community organization approaches". Red asked: "what are you hearing?" Whole New Orleans situation without good leadership for a long while. Hurricane made chaos. Urged look at long range planning which would make sense. Encouraged Red to go.

2. Norman Francis, New Orleans Urban League Chairman. Red feels #1 person in knowing institutional relationships in city. He thought who came important. No publicity. City over initial shock, but tremendous problems remain -- not solving problems. Housing one of most serious.

3. Winston Lill, CAP Director.

4. Clark Corliss (Director, Special Welfare Planning Council). Got $200,000 from OEO for neighborhood development. Will enable him to put 12 people in field, use 18 VISTAS. Inclined to see AFSC role with students, summer programs.

Red, like us, does not want to stop with agency contacts. Will want to get into neighborhoods. Will seek contacts among North Richmond community who have family and friends in New Orleans.

Red has mind on long range planning. May well come up with roles for AFSC. Important we see if roles for local Friends group, who have asked us in, and make this a rewarding and involving process for them. Question before AFSC may be: what size and type of job can we respond to? Not raise expectations couldn't fill.

November 3, 1965

TO: Garnet Guild

FROM: Barbara Moffett

SUBJECT: New Orleans Report

Red Stephenson's "visit reports" have come; those of us who have had the time to scan them are finding them exciting reading and a valuable filling out of his summary memo of October 25. (I'm attaching some spare carbons that came along, by the way, not knowing whether they were meant for us or for you. We have a copy of each.)

You are no doubt considering how best to put the report of the visit and suggestions growing out of it before your Executive Committee this coming Saturday. As we have read the summary report here, some observations occur to us and we pass them along in case you might find them helpful.

1. Red's visit seems to have accomplished its main purposes:

a. We have helpfully thought through with a wide range of people what some of the longer-range needs -- highlighted by the flood -- are and have made suggestions about what might be involved in meeting these needs. Some of these suggestions could involve AFSC work; others do not necessarily involve further AFSC resources. In any case, we can hope that Red's interviews have both strengthened those who see the issues of poverty and race and have also put concerns freshly before others. Among the concerns he shared with the leaders he saw were at least these two important ones: (1) race underlies all issues and must be faced if problems -- housing, schools, welfare, etc. -- are to be solved; and (2) more than job training, education improvements, etc. are needed on the employment front. These will lead only to more severe frustration unless there is meaningful activity for people once trained. For the moment Red proposes massive public works. There were many other parts to his message, but these struck me as two he had shared with particular force. In so doing he has made a contribution.

b. We have looked into the factor of racial discrimination in the relief and rehabilitation process sufficiently to know that race underlies everything and is a major barrier to the city's ability to identify and solve its problems. Red does not suggest a role for AFSC, however, in the immediate problems of racial discrimination in relief and rehabilitation.

2. Red has fed some helpful information into summer project planning.

We can take these into consideration in future planning for summer projects and I would gather that some further consultation has already taken place.

3. <u>There are suggestions for action which can help the New Orleans situation but may take little, if any, further AFSC investment of money or personnel</u>.

a. Bringing to New Orleans "expertise" and an enlightened point of view regarding <u>housing</u>, one of the city's crucial problems (perhaps the <u>most</u> crucial, Red may be saying). The possibility of having on O'Keefe's staff a person who could help relate federal resources to New Orleans housing needs seems exciting. The suggested role for AFSC here could be finding and interesting such a person in the job. O'Keefe expects to hear from us.

b. Stimulating <u>interracial communication</u> which goes beyond that which is achieved in Board meetings, etc. Here we note that Red found Father Twomey keenly interested in the possibilities, seeing the Institute of Human Relations at Loyola as a possible vehicle. We might help him develop this further as Red suggests.

4. <u>Red also suggests that AFSC might consider long range activity</u>.

This would include looking into neighborhood development work in the area south of the Industrial Canal and neighborhood work also in a presently interracial area such as the Carrolton Area. Both of these are interesting ideas to be studied further. Beyond them and beyond a person on O'Keefe's staff, we get the message that Red is suggesting that we begin to think of whether the AFSC has a role in the housing picture of New Orleans. AFSC could also, of course, see whether it could play a role itself in the interracial communication area, and Red has suggested that, as well as reporting on his talk with Father Twomey, which indicates an indigenous group with concern in this area.

In considering the more major and long range AFSC roles suggested we have many things to consider, obviously, including: the priority for work here as compared with other opportunities and responsibilities before the Region and the AFSC as a whole; whether we have particular competence to bring to the roles open to us in New Orleans; the possibilities of personnel and funds, etc.

From one important perspective New Orleans has a high priority: it is a key southern city in which progress should now be possible in the housing field, which affects so basically the school issue and other aspects of community life. As Red suggests, housing progress must be made in key southern cities now or they can go the way of the North, at which point our problem is all the harder to solve, as we know. We do have some areas of competence to bring to the types of roles being described, though we need to sharpen up our urban approaches and are even now just experimenting in several northern and western cities.

In short, it seems to us that Red's visit has made a contribution already, as we had hoped it would, that it opens up possibilities of AFSC making other contributions without heavy personnel or financial requirements, and that we have before us questions of whether we should begin to think of a larger continuing AFSC role in New Orleans. We'll await with interest a report of the deliberations of your Executive Committee on these matters.

Integration Ends Fast

NORFOLK JOURNAL & GUIDE - SAT OCT 2

Politicians' Leader Holds Whites Are Getting Meaner

by ROSEMARIE BROOKS

WASHINGTON — What happens to the usual patterns of segregation in a crisis?

In New Orleans, city of romance, Mardi Gras and back door integration, Betsy made little impact on the prevailing patterns.

At the outset the disaster was so great and unexpected in the past, this city usually escaped the storms and hurricans) Negroes and whites were harder together to the first available shelters.

AS SOON as immediate dangers subsided, this KKK infested community organized separate facilities. Medical aid was called upon, but the town officials were careful to assign Negro physicians and nurses to other Negroes. According to Mrs. Katie Whickam, president of the National Beauty Culturists League, the Negro nurses were the last to be called.

All Negroes were sent to Flint - Goodridge, the one hospital designated for them. About 76 people were injured by Betsy, most of them Negroes.

GETTING food was no problem. The foodstuffs were donated to the city the first few days. Near the border of the canal, where Poland and St. Claude streets merge, one grocer placed a "white only" sign. It was anticipated there might be little food, and this merchant, who usually sells to Negroes, wanted to be sure the white folk recieved his goods. However, the donated food caused no drain on his merchandise.

community; truth of the matter most of the stealing was done by the whites. The most flagrant stealing hit downtown merchants who failed to tape their windows or stripe merchandise from display areas.

SO ACUSTOMED were they to escaping past storms, they ignored warnings by Nash Roberts, a radio announcer. He asked the merchants to release their employees and prepare for the storm. This was around 5 o' clock.

So enamored were the merchants with late night profits, Nash's warnings were ignored. When the full force of Betsy arrived, store windows broke with no resistance. Strewn merchandise was easily picked up; many of the white residents had the practiced eye to pick up good jewelry, too, particularly diamond rings.

RESIDENTS of the stricken city found themselves far from alert. Early, approaching Betsy had destroyed electric lines. Radio and television warnings were not heard.

One woman awakened to find her arm immersed in water. Another half asleep, poorly clad, bare-foot Negro woman had to protect her life by sitting on a chair atop her stove. Her resuce was the only one photographed in the New Orleans papers.

A complaint before Betsy was the lack of efficient sewerage in the Negro areas. Since Betsy this problem and its health hazards are greater. But the complaints were ignored before the storm, and have been since.

SINCE THE 1964 civil rights act what has happened in this city of close family ties between the races?

Mrs. Katie Whickam whose [illegible]

the insight into this southrn community:

Q. What about public accomodations? For instance can Negroes swim in public pools?

A. No one has been swimming in this community since last year. The pools were closed after the civil rights act. There is a pool at the Hilton Inn for its guests. But it is classed as a private club.

many of them in the stores?

A. Not many are seen. Most of the Negroes shop in the smaller shopping centers in the area of their homes. Habit is strong, but they can shop in the large stores. Negroes with the "right" family background and money have few problems in places of public accomodations.

Q. What about the churches? The Catholic church, for example.

A. Some Catholic churches not all. Some parishes have closed the churches which attempted integration.

Q. What about restaurants?

green's (a national chain) provides an interesting example. All their stores have lunch counters for sitting except the one in the Negro neighborhood in New Orleans. But, despite the missing lunch room, there is a liquor store which allows the customers to drink as well as buy.

Q. Can they sit down to drink?

A. No. They stand. However, all other Walgreens have liquor stores in them. The Negro one fails to have the lunch counter. They do have Negro clerks, however.

Q. Is there a bi-racial committee?

A. Yes, but by the membership it is designed to accomplish little if anything.

Q. Does this committee have Negroes?

A. Yes. Those selected are ineffectual and not representative of militant interests in the Negro community.

Q. What do you mean by 'back door integration?"

A. For years illicit relationships, never sanctified by marriage or an attempt to marry, have existed in Louisiana. It is open, with both sides of the family — the white side and black side — aware of each other. The homes provided for both are not hidden. There are less of these illicit relationships now, but it is prevalent enough to halt any genuine progress in the state.

Q. What do you mean by that last remark?

A. I have served on boards and committees for years which obstensibly seek to alter the segregation pattern and /or improve conditions for Negroes. Invariably, members of the committees drop out or refuse to act. Why? Most of them are connected to important men in the community who do not want the change.

the relationships?

A. Not exactly. But often one is heard to say something like '...I would do this but father says.." [illegible] know you have a. It's frustrating. It always ends that way, however.

Q. Here (in the U. S. Senate and House of representatives) Rep. Hale Boggs and Sen. Russell B. Long are considered "converted rebels." Does this conversion show itself at home?

A. No. They have never done anything for Negroes. But they play an interesting game in Washington. Negroes can gain invitations to the White House, for instance. But just try getting federal registrars into the state!

Q. Do you mean to say there are no federal registrars in the state?

A. No. I can not imagine why not. They are needed, though the first Negroes to be registered will probably vote right out of the power structure's pocket.

Q. Do you see any progress forthcoming?

A. I wish I could. But the whites in New Orleans are getting meaner and meaner. Ever since our rights have been insured they have become meaner than ever. I wish I could see progress in New Orleans.

Q. By the way, Mrs. Whickam, how much time do you spend in New Orleans?

A. Since I became president of the NBCL, just about three months out of the year. When I do come home, all the politicians want to know how long I'm going to be around!

WHITE COLLAR WORKSHOPS

ANNUAL REPORT

1960

ANNUAL REPORT

WHITE COLLAR WORKSHOPS

1960

The growing numbers and changing status of white collar workers in America are of direct interest and concern to White Collar Workshops. As a subsidiary of the American Labor Education Service, it has pioneered in the field of programming for this group, molding and adapting its workshops and conferences to meet the changing needs of office and professional workers.

White collar workers now constitute almost half the entire labor force in this country, with trends indicating that the proportion of white collar to blue collar workers will continue to rise. The challenge of organizing the millions of unorganized white collar workers is one that the labor movement recognizes as urgent and immediate.

Looking at professional workers in today's society, White Collar Workshops saw the increased demands made on them by problems of population explosion, urbanization, school and teacher shortages, and by the growing numbers of government agencies calling for competent staff. Thus, in a conscious step, White Collar Workshops has turned special attention to professional workers, exploring areas not developed as yet in union programs.

White Collar Workshops has sought to develop in its 1960 program an understanding of our complex society, emphasizing unmet needs of people in an "affluent society", and what can - and ought - be done about them.

White Collar Workshop - July, 1960

The 1960 summer institute of the White Collar Workshops brought together a unique group of social workers and labor officials, some of the latter engaged in union welfare programs and liaison work between the unions and community groups. The five-day seminar was built around the theme: The Balance Between Private and Public Needs in an Affluent Society. This was the third annual Workshop designed to bring together social workers and trade unionists to discuss problems which they have in common, to share their views and experiences in this field of high mutual concern, and to find better ways to reach and arouse the public.

Realistically, since many of those deeply concerned with the subject matter would not be able to free themselves from their jobs for a five-day institute, the Workshop was divided into two parts. One group of delegates attended the full institute from July 13-17. During this time they analyzed

our economic situation in terms of the relationship of our economy of abundance to the satisfaction of human needs. They discussed our present-day social needs and the relationship of social services to satisfying them. How the values and attitudes in our present-day society determine action was another area explored.

A larger group then joined the initial group on July 15, for a week-end of intensive sessions on The Stake of Social Workers and Trade Unionists in Health Services. Here questions taken up included: are the costs of medical care, unemployment and retirement benefits threats to the economic security of our country? What is the nature of medical needs, and how can their costs be met? How can social workers and trade unionists cooperate more effectively in meeting social and medical needs?

The objective of the 1960 Workshop was the consideration of ways in which the total resources of the community can more effectively be used in meeting the problems under discussion.

White Collar Workshops believes that its schools should facilitate maximum thinking and discussion, and that the process of staff and student thinking together is most creative. The high caliber of discussion leaders and speakers at the school demonstrated the way in which reliable content and sound discussion methods combined to stimulate thought.

This process was enhanced, also, by the maturity of the student body, which brought to the school experiences in dealing with community problems and agencies that greatly enriched the sessions. Some of the delegates, for example, teach in schools of social work, direct health education programs at union health centers, and administer union welfare funds, and social workers in agencies were well represented, to mention a few of their varied backgrounds.

What is characteristic of our age is not change alone but the accelerated rate at which change occurs, and with a discussion of this point the analysis of our economic situation today was launched and attention focused on the question: "How does this change affect <u>you</u>?"

Douglas Dowd, Professor of Economics at Cornell University, discussed the economic necessity of utilizing our resources for social needs. Pressures push us toward a new social outlook, if we are to escape otherwise inevitable trends to monopoly and depressions.

Dr. S. J. Axelrod, Director of the Bureau of Public Health Economics, University of Michigan, helped the group analyze the present social needs and the part social services play in satisfying them. Are social security, unemployment compensation, and services such as those in public health adequate?

A faculty panel, chaired by Clara Kaiser, recently Acting Dean of the New York School of Social Work, took up ways of stimulating citizen participation in government to facilitate necessary program changes. On this

panel Dr. Axelrod and Professor Dowd were joined by Orlie Pell, former Education and Research Associate of ALES. During this session there was strong feeling that individual union health plans, for example, set excellent examples in ways of handling some health needs, but should not take over the job that really belongs to government.

Basic to this session was a frank consideration of ways that labor and social workers can develop better working relationships.

The second part of the school, for which the over-all subject was The Stake of Social Workers and Trade Unionists in Health Services, opened with Friday evening's speaker, Nelson Cruikshank, Director of the Social Security Department of the AFL-CIO, in a session chaired by Ethlyn Christensen, Director of the Bureau of Research Studies and Program Resources, National Board, Young Women's Christian Association, and chairman of the committee which planned the school. Here the entire group of delegates considered whether the costs of medical care, unemployment and retirement benefits were threats to the economic security of our country. Put another way, how should the cost of adequate medical care be distributed? How can unemployment and old age benefits be strengthened? Can our economy afford to carry the present inadequate systems?

Dr. Franz Goldmann, Associate Professor of Medical Care, Emeritus, Harvard School of Public Health, considered with the group the nature of medical needs, and how medical and related services might be adapted to social needs and uses. Later, with discussion leaders Sarale Owens, Personnel Consultant for the National Board of the YWCA, and Orlie Pell, delegates probed deeper the age-old question: What Can We Do? In addition to specific suggestions for action on the community level, the groups considered the degree of communication between unions and social workers, and the need for more understanding as the basis for more effective cooperative action on the part of the two groups.

One of the conference highpoints came with the Sunday morning panel, chaired by the Director. Six panel members included: Gerald Beallor, Jewish Family Service of New York and Treasurer of the Community and Social Agency Employees Local 1707; Myron Blanchard, then of the National Jewish Welfare Board; Andrew Brown, Director, UAW Community Services Committee; Douglas Dowd; Morris Iushewitz, Secretary, New York Central Labor Council; Dr. Lorin Kerr, Assistant to the Executive Medical Officer, United Mine Workers Welfare and Retirement Fund. This distinguished group reviewed our basic goals and objectives in meeting social and medical needs, and sought ways to improve communication between labor and social workers and to clarify the role played by the Community Services Committee of the union.

Throughout the institute, which was one of the most advanced that White Collar Workshops has conducted, there was a frank give-and-take among people carrying real responsibility in the social work field and in ten different trade unions, thinking through problems which they face in the short and long run. This institute was one of a series planned to bring labor and

social workers together, continuing the program begun in the 1958 and 1959 summer Workshops. In February, 1960, in Louisville, Kentucky, ALES initiated a conference which also carried out this idea.

Louisville, Kentucky

Practical and long range results flowing from a carefully planned and skillfully led conference held in February, 1960, in Louisville, show what can be done when social workers and trade unionists in a community have the opportunity to get together and learn to know each other.

As reported by ALES resident staff member Mrs. Marie Algor, the Kentucky section of the National Association of Social Workers for the first time co-sponsored an institute with the Louisville Labor Unions' Education Program Committee, held at the University of Louisville School of Social Work. The program centered around common concerns in preserving human values. A session in which there was a historical review of human values for which the labor movement has fought also included an interpretation of the special work of the AFL-CIO Community Services Committee, thus giving social workers a broader perspective on how labor looks at community problems. Time was also devoted to discussing methods of social work and some of its aims, which broadened labor's understanding as well.

Out of this unusually fruitful conference came suggestions for further cooperation between social workers and trade unionists: the request for an institute the following year, involving more people and exploring the impact of automation on community life; an interchange of speakers at social work and union meetings; additional contact between social work students and trade unionists; and additional interchange between the groups - increased support and participation on community boards on the part of labor, and more frequent presentation of legislative needs and other problems to the Community Services Committee by social workers. Finally, the group talked over the possibility of adding a labor representative as a staff member of the Community Chest.

Problems of Unions and Management in Social Welfare Organizations: An Evening Discussion Program

White Collar Workshops included a number of specific projects in 1960 built around gaining an understanding of problems of a social welfare nature. As a result of the interest stimulated at the summer institute the preceding year and the awareness of the common concerns of social workers and trade unionists that grew out of it, it was suggested that a meeting of a larger group of social workers than could attend the resident school would be constructive. This led to a panel discussion meeting in April, 1960, on the question: "What are the unique problems facing unions and management in a social welfare organization?"

Eighty-one participants gathered from the New York area, indicating wide interest in this subject. This was underscored by the recent strike of hospital workers against a number of private hospitals. The evening's discussion turned to the question of the right of social workers to strike, and to the differences between public and private agencies -- in particular the recognition which workers in public agencies have under city labor law. Is there a conflict among the professional's responsibilities: to the public supporting his services, to his employer agency, to the clients he serves, and to the union? This basic question was of deep concern to all.

Needs of this group of social workers, as discussed, include: the right to organize and bargain collectively, recognized in law as it is for other unions; the need for constant improvement in the quality of services offered by the professional; and access to fringe benefits, as well as a voice in determining conditions of work.

Chairman Ernest Witte, Executive Director of the Council on Social Work Education, had a distinguished panel aiding in the evening's program: Gerald Beallor, Treasurer, Local 1707, Community and Social Agency Employees, AFL-CIO; John Carney, United Community Funds and Councils of America Liaison with the AFL-CIO-CSA; Arthur Katz, Dean, Adelphi College Graduate School of Social Work; Joseph Reid, Executive Director, Child Welfare League of America; Albert Science, President, Local 877, United Automobile Workers, AFL-CIO.

ALES - IUD White Collar Seminar, December 1960

Because of its experience in programming for white collar workers, and its continuing interest in white collar and technical workers, the Industrial Union Department of the AFL-CIO invited the ALES to co-sponsor a Seminar especially geared to the needs of staff and officers of unions working with office and technical workers in industry. This was held December 1-3 in New York City, attended by some 50 trade unionists from 15 unions.

In addition to specific sessions on organizing white collar workers in industry, and administering collective bargaining agreements, the conferees took a look at the sociological profile of the white collar worker, his position in our economy, and how automation will affect his job. For these problems, Professor Harold Sheppard of Wayne State University, now with the Senate Committee on the Aged and Aging, and Professor George Shultz, Graduate School of Business, University of Chicago, were the keynote speakers, providing the group with a rich fund of information.

ALES was pleased to cooperate in this White Collar Seminar, an event denoting increased recognition that the large numbers of office workers in our economy need unionization, and that, equally, unions need the white collar worker to maintain a strong and forward-looking labor movement.

In Summary

Thus it has been a busy and productive year for White Collar Workshops. Strides were made in the area of increased understanding between social workers, both in and outside of unions, and trade unionists; in education relating to union-community cooperation; and in augmenting a program for office workers in industry.

Challenges remain for the future, as they always do. There is an increasing need for closer contact and understanding between social workers and unionists who work on the every-day and practical levels in our many communities. Ways must be found for circulating more widely the clues to understanding and to action uncovered through the workshops and institutes that have been - and will be conducted.

With the experience of the White Collar Workshops over the years, perhaps it can make as unique a contribution in the development of programs for technical workers as it has already done for office workers, as well as to assist unions in their post-organizing education work with these groups.

In order to do its most effective work, continual consideration must be given to the distinctive problems of white collar workers. Several studies exploring the types of attitudes of white collar workers in contrast to those of industrial workers, their special problems and needs, are now needed. As in the past, White Collar Workshops will continue to work in areas where the need seems greatest, and where it can contribute both in service to existing organizations and in pioneering new areas of workers' education.

White Collar Workshops is particularly indebted to its loyal and active Board, to Theresa Wolfson, its chairman, and Orlie Pell, its secretary, as well as to Ethlyn Christensen, who chaired the committee which worked out the 1960 summer program, and to her committee.

Respectfully submitted,

January 25, 1961

Dear Emory, Margaret and David:

The lovely card was received and I was so pleased to have it. Margaret you are doing such beautiful work - this particularly appealed to me as I've had two wonderful trips to Japan - and this reminds me so of the work of a little Japanese friend of mine in Tokyo.

Is this dry brush? A friend was here the other day looking at my cards and she asked me to inquire - she, too, was very intrigued.

Emory, I am working with the Central Body (AFL-CIO) in Duluth on a World Affairs Conference - in fact I leave here on the 31st to go to Duluth to meet with the planning committee. We had one hurried meeting when I was enroute home from New York and at that time decided that we wished to concentrate on two subjects that were much in the minds of workers in Duluth and on the Iron Range - Disarmament and Expanded Foreign Aid. They have many fears of the effects on our economy of both programs, but have much sympathy for the programs - "if the impact does not mean job losses - etc."

This means we need both a very good economist, who can discuss the impact on the economy and some one who is deeply interested in what we do in Foreign Aid. We have a wonderful person for the Disarmament Proposals - the Secretary of the UN Disarmament Commission, but he has had to accept conditionally, as the UN may at the time of the conference, April 7-8, be deeply involved in discussions that would keep him in New York. For that reason I'm also trying to discover someone who can give a thoughtful analysis of the disarmament issue as of now.

Wilbur Epstein, a Canadian, use him sometime, his quotes a person. He does not need honorarium. Just expenses. As he loves to get down the country. Also knows labor.

If you have any suggestions of economists or political scientists whom you'd like to suggest, I'd be most grateful for some news of them. It is very difficult to get people from New York or Boston up to Duluth due to the plane schedules - and the cost of transportation.

I'm going to be in Duluth, Feb. 1 - our committee will meet on Feb. 2, and I'd love it if you would write me about anyone exciting that you know about the University of Wisconsin - or anywhere else in the area - Chicago - Detroit - Ann Arbor, etc. If you do have any names for me, will you write me c/o Charles Bannister, President, Duluth AFL-CIO Central Body, 315 Providence Building, Duluth 2, Minn.?

I'd love to know how you all are, and how life is treating you. (over)

I never thanked you for helping get Harvey Abrahamson and Doc Gellin to the Schools. Also were both very fine. The Gellins me had only two people who did not measure up - this was a very good group.

I'm tapering off from work - this year, I expect only to work about two months for ALES - maybe three. Then if I can afford it, I'm not going to do anything for five or six months, and I hope from now on I'll never do more than occasionally short time jobs - come 1962 and I'll be 65 - it's wonderful.

My trip to Japan this spring was wonderful. I was there three months, almost one month of which I spent in a rice village, where I lived in a Buddhist Temple and taught "conversational English" to anyone who wished to come - and come they did, from Jr. High girls to old farmers in the village. I adored every minute of it.

My best wishes for 1961.

Bernice

Do you know anything about an economist - Kenneth E. Boulding of Univ. of Michigan? He was on the Rockefeller Panel on the Mtg. of the Amer. Econ. for Advancement of Science in N.Y. in Dec. I liked what I read of his remarks.

Kirkland, Bayard Rustin of the A. Philip Randolph Institute and AFL-CIO Exec. Secretary William

M— Apprenticeship

Chicago Building Trades Promote Job Opportunities for 4,000 Blacks

AFL-CIO News 9-13-69

Chicago—The Chicago Building & Construction Trades Council is moving ahead with a four-point program to provide job and training opportunities for 4,000 more black workers in the city's construction industry.

The council announced it would open an office in Chicago's largely Negro South Side to proceed with the recruiting program despite rejection of the plan by the Coalition for United Community Action, made up of a number of black organizations in the city.

The plan was spelled out by construction unions and management in a series of negotiations with the coalition following demonstrations that closed projects here involving nearly $100 million.

The proposal, issued jointly by the Building & Construction Trades Council and the Building Construction Employers Association, offered to:

- "Endeavor to obtain employment at once" for 1,000 qualified black journeymen and asked the coalition to help recruit them.
- Find probationary employment for another 1,000 blacks with at least two years experience in a particular craft and assign them after 30 days to the equivalent of the apprenticeship rate applicable to their experience.
- Recruit 1,000 blacks with no previous training or experience for a one-month preparatory training period along the lines of the Outreach program to help them enter the existing apprenticeship programs of all crafts.
- Launch an on-the-job training program for 1,000 more Negroes who choose not to enter pre-apprenticeship training or who fail to pass the tests involved.

In full-page advertisements in Chicago newspapers, the employers and unions outlined their program and recited continuing efforts to attract black workers into the construction industry.

This is achieved through the Apprenticeship Information Center set up by the federal government and in cooperation with the Urban League under the Apprenticeship Outreach program, which has placed 459 apprentices over a 30-month period.

"We have organized bus trips for high school students to job sites," the union-industry statement said. "Want ads for skilled tradesmen are run daily. We have worked through social agencies in the black community and through the Illinois State Employment Service. We have done our best to alleviate the labor shortage in every way we know. Yet all these efforts have resulted in pitifully few black applicants—far fewer than the number we have been ready to accept into our ranks."

The Coalition for United Community Action, whose original demands were for employment of blacks eventually in 30 percent of all construction jobs, rejected the union-industry proposals as "unrealistic" and "totally unacceptable."

A spokesman for the coalition, the Rev. C. T. Vivian, indicated a central issue in the dispute was the control of hiring and training.

"We would not be in control of our own program, and we must reject it," Vivian was quoted by the Associated Press.

The union and industry negotiators advised the coalition that they would welcome its participation in dealing with recruiting, counseling and motivational problems but would not accede to demands that would put responsibility for hiring, training and construction "in inexperienced hands."

Thomas Murray, president of the Building Trades council, and Arthur O'Neil, president of the employers' association, both expressed disappointment that the coalition leaders had "summarily dismissed" the proposals. O'Neil called the plan a "breakthrough" that could add 25,000 skilled black craftsmen to the construction program in the city over the next five years.

The council said it has no hard and fast figures on the number of blacks currently in construction jobs, but estimated they account for 20 percent of the 50,000 to 60,000 peak workforce in the immediate Chicago area.

In developments elsewhere:

- The Black Construction Coalition in Pittsburgh withheld further job-site demonstrations as negotiations continued with construction employers and unions over a job and training program. The Pittsburgh plan differs in detail from the Chicago proposals, but contains similar provisions for recruiting and admitting black journeymen, for pre-apprenticeship programs and for on-the-job training. The AFL-CIO Dept. of Civil Rights, through Dir. Donald Slaiman and Staff Rep. Robert McGlotten, provided advisory services both in Pittsburgh and Chicago.
- In Buffalo, the local building trades council, the contractors' association and the Minority Coalition signed an "affirmative action" agreement that provides for the training of 350 to 500 construction workers from the minority community in the first year. The agreement was negotiated under the auspices of the State University Construction Fund but will also apply to other area construction.

The plan also calls for the training of one worker from the minorities for each $1 million of estimated construction expenditures after the first year.

State funds will be provided for the recruitment and training programs, which envision four classifications—trainee, pre-apprenticeship, apprenticeship and journeyman trainee. Another training program for minority workers in the area, Project Justice, already has graduated 50 students who now hold journeymen's cards.

- In Philadelphia, Business Manager James L. Loughlin of the local Building & Construction Trades Council took sharp exception to frequently-quoted estimates showing a disproportionately low rate of minority employment in the various trades. Loughlin appeared before a Labor Dept. panel on the Philadelphia pilot plan announced by the department which would in effect set quotas for employment of minorities under government construction contract. He put total membership of unions in the council at about 36,000 and said a review of the individual crafts revealed that more than 11,000—over 30 percent—are blacks. Without considering the Laborers' union, which has a substantial proportion of Negro members, the remaining craft jurisdiction in the city includes about 12 percent black workers, he said.

ment barred the company or any of its employees from membership in the Trade Relations Assn. U. S. Steel had not been a member of the association for years, but the implications sent TRA scurrying.

Policies and rulings. A series of recent court cases and Federal Trade Commission affidavits has tended to equate trade relations and reciprocity absolutely, and the U. S. Steel stipulation reinforced this.

The association appealed to Justice, which proceeded to revise the language. But Big Steel's lawyers objected on the ground that the new paragraph would make it dangerous for USS to join even the most innocuous professional or trade organization. On July 14, the final day of the 30-day waiting period before the final consent judgment was filed with the court, TRA intervened in the action.

Words that please. This week, wording satisfactory to everyone was hammered out, and the final judgment entered. There is no mention of TRA in the text, and U. S. Steel is merely enjoined from "belonging to or participating in the activities of . . . any association whose activities, programs, or objectives are to promote trade relations involving reciprocal purchasing arrangements."

Although the judgment is the first indication on the legal record that trade relations can exist without reciprocal dealings, there are hints in Washington that Justice is by no means finished either with reciprocity or with TRA.

Urban affairs

'Soul power' drive for jobs expands

Blacks demonstrating against the lack of jobs in the Pittsburgh building trades interrupted work on a number of major projects this week—and it's only the beginning of a nationwide expansion of a protest movement that started in Chicago. Demonstrations loom in four other major cities, to be "counseled and coordinated" from Chicago. Beyond those, there's the country as a whole.

"It must be understood that what happens in Chicago and Pittsburgh—the discriminatory hiring practices—can't be shrugged off as just something local. It's a national problem," says Reverend C. T. Vivian, coordinator of the Chicago Coalition for United Community Action.

Organizers of the Pittsburgh demonstrations conferred with Reverend Vivian and other Chicago coalition leaders for a week in mid-August, for guidance before opening their own job protest. Others are conferring and observing in Chicago now, as 300 blacks there continue picketing and protesting to win work and union membership rights for minority workers.

The Chicago Coalition for United Community Action is a loosely organized group of 61 minority organizations, including black street gangs whose teenage members demand 10,000 high-pay, on-the-job training opportunities in the next 90 days. Over the past four weeks, coalition pickets and demonstrators have halted work at least temporarily on more than 20 construction projects valued between $85-million and $100-million.

Chicago coalition members defied injunction to demonstrate for jobs for blacks at University of Illinois building site, one of 20 picketed in current campaign.

Campaign widens. The demonstrations took a new turn—and gained new national significance—a week ago when, at the coalition's request, the Southern Christian Leadership Conference (SCLC) joined the campaign. Two of SCLC's top leaders, Reverend Ralph D. Abernathy and Reverend Jesse Jackson, flew into Chicago to mobilize broader civil rights backing for the demonstrators.

"This time, we're yelling 'build, baby, build' instead of 'burn, baby, burn,' " said Jackson, head of SCLC's Operation Breadbasket. In defiance of a court injunction barring picketing by more than six persons at a time, he led a coalition march around the site of the $17.5-million University of Illinois Science & Engineering Building, ignoring Chicago policemen in their familiar baby-blue riot helmets. Although warnings were issued over a loudspeaker at the site, no arrests were made.

Talks went on in a Loop hotel between coalition officers and representatives of contractor groups and building trades unions. There was faint optimism at midweek, although the coalition continued to threaten picketing "until at least 30% of the construction trade unions' members are black." That would require a big jump in black membership for most of the unions. Blacks now hold fewer than 5% of the skilled or craft jobs in Chicago's building trades.

Pittsburgh's drive. In Pittsburgh, black leaders using an example from Chicago set up the Black Construction Coalition, a loose grouping of most Negro organizations in the city. The Pittsburgh leaders have the same general goals as the Chicago coalition—"guarantees of more jobs for black people," according to a spokesman—but they insist that "local problems that have been around a long time" led to the protest, not "outside influences" or a national movement.

The Pittsburgh group complains that three years ago craft unions agreed to hire black apprentices, but that this hasn't resulted in many jobs for young Negroes. The blacks also complain that the Pittsburgh Master Builders Assn. has refused to cooperate with Operation Dig, a federally aided training program, by guaranteeing jobs. But while contractors are a target of the coalition, so are local craft unions charged with discriminatory practices.

To enforce their generally vague demands, the coalition this week picketed at construction sites of new headquarters buildings for Westinghouse Electric and U. S. Steel, at the site of the new Pittsburgh National Bank building, and at a $31.9-million sports stadium where construction work is under way. Coalition demonstrators also tied up traffic in downtown marches. Many were arrested and 45 were injured in clashes with police.

'Wild horses.' Reverend Abernathy told a black rally in Chicago that he was in its building trades demonstration only as an observer. But he said that if negotiations failed to produce enough jobs for blacks, "the full force of the Southern Christian Leadership Conference will be brought to bear against Chicago racist labor leaders.

"We hope it will not be necessary to bring to Chicago the brilliant team of wild horses [the staff of SCLC] which has proved it can shake any community to its foundations nonviolently."

He also assured the Pittsburgh coalition that SCLC would give "fullest support" to the demonstrations there; an SCLC representative has been assigned to work with the coalition.

Meanwhile, back in Chicago, Reverend Abernathy appeared with Coalition for United Community Action leaders at a convention of the Illinois State AFL-CIO, one of the nation's most powerful state labor bodies. The reception was friendly but not wildly enthusiastic as it sometimes has been in the past when civil rights ul-

timatums were directed elsewhere instead of into labor's own ranks.

Aid—or else. In effect, Abernathy told the laborites to pitch in or face a fight. "Your slogan is 'An injury to one is an injury to all,'" Abernathy said. "O.K., now is the time to live up to it."

"Dr. King died fighting for organized labor in the Memphis sanitation workers strike, and now we're asking labor to do something for us," he told the group. And he insisted that resolutions and "pious expressions of goodwill and support" would not be enough—in Chicago or Pittsburgh or nationally.

"If there is any building going to be done in black areas or anywhere, blacks

Pittsburgh coalition took a leaf from Chicago group to push black job demands.

are going to have to be employed in much larger numbers than they are now," he warned.

In other situations—in Memphis, in the Charleston (S. C.) hospital workers strike, and now in hospital organizing efforts in Baltimore—SCLC and other civil rights organizations have worked with labor—using the slogan "soul power coupled with union power" in joint drives.

Reverend Abernathy drew only light, polite applause when he told the unionists: "Labor cannot win its fight without the civil rights forces and the civil rights forces cannot win without labor. We will either be saved together or perish separately as fools. I urge you, march with us and the various coalitions supporting black youths knocking on the doors of labor, saying please let us in."

SDS 'work-in' that didn't work out

If militant students infiltrated plants and stores in summer work-ins, they left their placards home. None was caught by employers and unions specifically on the lookout for activists from the Students for a Democratic Society. Apart from some scattered leaflet-passing and picket-line walking, SDS plans to seek closer ties with organized workers apparently failed—or were jettisoned.

Some leaders of militant student groups try to save face by pointing out that SDS intended all the while to work "very quietly" in industry this summer, so "no exposure" shouldn't be interpreted as "no activity." But it appears more likely that the group's internal problems (it split apart at its convention in Chicago) and employer watchfulness forced SDS to shift emphasis to other programs.

Western front. A spokesman for Lockheed Aircraft Corp. in Los Angeles said that the company saw no signs of SDS in Lockheed's extensive operations. And Thomas F. Morrissey, manager of salaried personnel and organization planning for Philco-Ford Corp.'s Aeronutronic Div., said: "As far as we know, we didn't have any . . . at least, none we caught." Statements by SDS activists last spring placed aerospace plants high on their list. One aerospace official said: "The SDS summer thing just petered out."

In the San Francisco area, close proximity to Stanford University and the University of California in Berkeley added to employer jitters about SDS.

Personnel men screened applicants closely—some gave preference to summer help referred to them by employees or other trusted sources—and reported uniformly this week: no trouble with SDS.

Eyes peeled. Across the country, the story was much the same: If SDS infiltrated plants, it was done so subtly that nobody noticed it—and nothing happened.

Generally, employers took special precautions in hiring; one in Milwaukee said: "We used a special list of criteria for screening summer people this year." They asked for, and often checked into, references. A few students were turned away here and there—but an Illinois association spokesman commented: "Nobody was turned away just because he looked funny." For the most part, the screening was closest for graduate students.

Inside plants, supervisory people often were alerted to watch for anything out of the ordinary—arguments, the distribution of "radical" literature, anything at all that might be suspect. Unions instructed shop stewards to watch for and report anyone acting for SDS. In a number of cities, the precautions were taken after seminars on the "threat of SDS" to industry.

Some employers say the precautions made SDS lie low. Other employers insist that the SDS "threat" was never real—and one major company now insists that the situation was "Washington inspired, to let industry know it's not invulnerable." But most now seem to go along with a theory that SDS had so much turmoil in its ranks—between SDS "regulars" or the Revolutionary Youth Movement, and a Maoist SDS' Progressive Labor Party faction, more disciplined and dogmatic—that it was unable to mount a concerted campaign.

However, some SDS activity was evident outside plants—and in a routine form not linked with the work-in plans. Students joined striking drivers of Continental Safeway Trailways buses on a picket line in New York City. Identifying themselves as members of SDS, the students explained their interest:

"We . . . see the bosses of Trailways and other corporations as the same ones who run our schools . . . As struggles between workers and bosses, such as the Trailways strike, sharpen, we in SDS feel that students must support the fight of the American working class against the small group of men who run America's big corporations . . . by oppressing the majority."

A few from SDS also supported a strike of fuel truck drivers at New York's Kennedy Airport. Others joined picket lines and handed out SDS leaflets during Milwaukee's brewery strike and during a protest outside Standard Oil offices in Atlanta.

Some SDS members joined in a wildcat strike at Chrysler's Sterling Heights plant and when the strike ended the SDS "went on picketing but our guys just ignored them," a United Auto Workers official said. And another union man commented: "That wasn't infiltrating, it was just a case of muscling in."

Unions

Boulware writes on Boulwarism

Labor has worried about General Electric's hard bargaining policy—known as Boulwarism—for two decades, as much in fear of its spreading through American industry as for its effects in electrical manufacturing. Again this year, the AFL-CIO is mobilized to break through GE's strategy of holding the bargaining initiative, making a well-timed and carefully conceived offer, and then insisting on a final settlement essentially on that offer.

To AFL-CIO President George Meany, this is a take-it-or-leave-it policy that ignores the realities of collective bargaining. To GE and particularly to Lemuel R. Boulware, for 14 years a GE vice-president, the plan is an "enlightened approach to contract-writing. "It's a policy

the panel—with, for the first time, a full-time director general.

In this first test of its new teeth, the panel is generally believed to have gotten and published the facts. And it apparently made some contribution to bringing the two sides together. Indeed, the betting in the City is that the panel's strong showing this time has at least postponed the day when Britain adopts its own SEC.

Urban affairs

Pittsburgh blacks try negotiating

The confrontation between white building craftsmen and black job-seekers eased a bit in Pittsburgh early this week. But it was hard to compromise on the complex problems involved—which are equally critical elsewhere. The Pittsburgh truce could be short-lived unless ways were found quickly to put more blacks into jobs without weakening the journeyman system so jealously guarded by the unions.

In construction, with exceptions for unskilled laborer jobs, craftsmen ordinarily go through intensive training—sometimes three to five years of apprenticeship—before they become journeymen. The blacks are beginning to press nationally for faster entry into the system: They want what unions say would amount to "instant journeyman" status. As white building workers see it, once the system is breached, it can be eroded away—and so might be the whole basis for craft jobs. That was why white craftsmen in Pittsburgh reacted angrily last week against black pressures for more jobs and why, for a time, tension built up dangerously.

Flash point. Large-scale violence was averted when Mayor Joseph M. Barr persuaded building contractors, unions, and the Pittsburgh Black Construction Coalition (BCC) to negotiate. After losing three days of work, 13,000 construction workers returned, and BCC cooled down black demonstrators—at least temporarily. Meanwhile, national attention had focused on the city: Pittsburgh is by no means unique; what happens there could happen in any city with booming construction and a large black population.

With some $200-million of construction under way in downtown Pittsburgh, blacks demand more skilled jobs and sharply criticize building trades unions for "denying" membership to Negroes. In so doing, they are following a strategy similar to that employed by black groups in Chicago, where Negro teen-agers have complicated settlement efforts by aggressive tactics.

Shutout. Of some 30,000 building trades members in the Pittsburgh area, only about 2,100 are black, according to a 1969 survey by the city's Human Relations Commission, The Laborers' International Union, traditionally receptive to blacks, accounts for more than half.

Black membership has increased by less than 1% since 1963 when the Pittsburgh Building Trades Council pledged to end discrimination in its ranks. Some unions, with membership passed from father to son, have virtually no blacks. Local 5 of the International Brotherhood of Electrical Workers, with 1,000 members, has no black journeymen and only one black apprentice. The IBEW and locals of boilermakers and steamfitters have refused to participate in the current negotiations with the black coalition. The blacks say this must be rectified.

Blowup. Last week's BCC demonstrations almost brought the city to a standstill. Marchers tied up downtown traffic for two days, caused the shutdown of eight major construction projects, and idled 13,000 workers. There were scattered battles with police and hundreds of arrests.

Builders shut down jobs for five days through Labor Day, to ease tensions. White workers reacted angrily and demanded wages for the lost time. When they staged their own marches, white po-

Ironworker on high building: "I don't mind working with a nigger. But when we're up there, he better know the ropes. And these guys [blacks] don't know nothing."

James Acheson, operating engineer laid off during negotiations: "We all did our apprenticeships. I had to go up to Erie to work . . . We have Negroes on the job, but they never show up."

Carl Morris, steelworker: "I was at the demonstration, as a past construction worker. I used to be a hod carrier but I just couldn't get any higher. You can't get into the union without pull."

Roland Hayes: "I graduated from high school with my machinist's certificate. I could operate a lathe, everything. None of the unions would let me in."

licemen cheered and saluted. Some whites stormed into Barr's office to press their demands.

Many of the white unionists expressed racial bitterness and fears that giving into black demands would cost them jobs. Others said that blacks are "too impatient" and are demanding jobs for which they are not qualified.

Complained a white worker at one demonstration, "I waited five years to become a sheet metal worker. Let somebody else do the same."

"I don't mind working with a nigger," said an ironworker, idled from his job on the U. S. Steel building, "but when you go up on top of that steel with someone, he better know the ropes."

A minority of white workers appeared to support the blacks. "They're going to have to open the union up to Negroes," confided a white plumber.

Huddle. The Master Builders Assn., stung by black criticism, contended that its member-contractors were willing to hire blacks, but that Negroes either failed to apply for apprenticeships or were unable to pass qualifying tests. In reply, black leaders noted that the unions' pattern of discrimination over the years turns away many potential black applicants.

However, the seeds of a possible compromise plan may be contained in an MBA "Pittsburgh Plan" proposed a few weeks ago. MBA and several unions would agree to "train and employ at any one time 90 to 100 black recruits on an industrywide basis." However, BCC rejected the proposal last week because Mayor Barr had neglected to include BCC leaders in talks, and because it considered the proposed number of recruits insufficient.

UPO Cut Revised to $600,000

United Planning Organization funds will be cut by $600,000 this fiscal year instead of $1 million as previously announced, the U.S. Office of Economic Opportunity said yesterday.

OEO regional director W. Astor Kirk said UPO would receive $6.9 million in unearmarked funds for its local programs instead of the $7.5 million it got last year.

Kirk said the $600,000 reduction would not require cuts in UPO programs or staff because the agency only spent the same amount, $6.9 million, last year.

UPO director Jeanus B. Parks and board chairman Frederick B. Lee were out of town yesterday and not available for comment. Deputy director Frank H. Hollis declined to comment.

Kirk announced his "reappraisal" of UPO funding in a letter to Lee yesterday. His Sept. 8 announcement of a $1 million cutback in UPO funds aroused a storm of opposition; from UPO officials citizen groups and civic leaders who voiced fears that it was the start of a nationwide retrenchment in the war on poverty.

UPO, OEO ad an ad hoc citizen group began a round of negotiations on the cut Sept. 19 shortly after a stormy demonstration outside OEO headquarters. Last week, UPO leaders expressed hope that the talks — focused on UPO's past spending levels—would result in cancellation of all or most of the $1 million cutback.

Kirk's letter said' however, that a task force of auditors and accountants had discovered $327,000 in unspent UPO funds from 1966 through 1968 that must now legally be returned to the federal government.

The $6.9 million spending figure cited by Kirk was reached by a complex "program in place" formula that Parks said last week did not realistically measure UPO's operating level.

AFL-CIO NEWS, WASHINGTON, D. C., SEPTEMBER 27, 1969

Apprentice Rolls Jump As Demand Increases

Apprenticeship programs in 1968 enrolled a record 103,000 entrants, almost 6,000 more than a year earlier, Labor Sec. George P. Shultz reported.

Yet, the number of skilled workers being graduated by the programs is still not meeting the needs of the nation's growing economy, Shultz said.

He noted that the apprenticeship training system certified 33,700 completions last year—a 9 percent decline "at a time when skilled workers were in great demand."

The record number of registrants in apprenticeship programs will have no immediate effect on the need for skilled workers, he added, since most apprentices work four-year terms to gain necessary skills.

"Thus, the bulk of completions this year represent mostly those who began four years ago," Shultz said, "and we only had 68,500 new starts in 1965."

He expressed optimism over current figures that indicate a cancellation rate of 38 percent, "a heartening note when you consider that it is usually about 50 percent most of the time."

The 238,000 apprentices registered with the Labor Dept. and state apprenticeship agencies as of Jan. 1 also was the highest since records on the programs were kept, beginning in 1941.

Minorities accounted for 7 percent of the total number of registered apprentices and slightly more than half of these were Negroes, the Labor Dept. said.

Los Angeles Times:
-Fri., Sept. 19, 1969

Hiring of Foster Grandparents for Hospitalized Children Urged

Hiring senior citizens to serve as foster grandparents in the children's wards at the Los Angeles County-USC Medical Center was urged Thursday by Mayor Sam Yorty.

In a letter to Center Administrator David Odell, Yorty said such a program would uplift a child's morale through visits by "grandparental figures" and provide additional income to the disadvantaged elderly.

Foster grandparents must be at least 60 years of age and should be capable of "meaningful relations with neglected, handicapped or disturbed children," the mayor said.

Yorty suggested that the foster grandparents would be able to feed and dress the youngsters and read, walk and talk with them.

"They would provide companionship in the variety of things children like to do," Yorty said.

Of the more than 300,000 senior citizens in the Los Angeles area, more than 75,000 fall within the disadvantaged category, he said.

Yorty suggested the minimum pay of $1.60 an hour, a four-to five-hour working day and administration of the program by a director who is either a hospital staffer or member of an agency funded by the Economic and Youth Opportunities Agency.

He told Odell he will request funds from the EYOA if the hospital will join in providing financial assistance, including meals, carfare, consultation and lounge space for the elderly citizens.

He noted the hospital is required to contribute a percentage of the cost of such a project in order to qualify for EYOA funding.

RELIEF CHEATING HELD WIDESPREAD

ALA & Unions: Politics

By DAVID BIRD

A union official said yesterday that there was "a compelling suggestion" that almost half of the city's welfare recipients were ineligible for the aid they were receiving.

The official, Nicholas Kisburg, the research director of Teamsters Joint Council 16, estimated that $250-million a year might be going to those not legally entitled to the money, and "that's a lot of coconuts going down the drain."

Mr. Kisburg based his charge on a Federal study of the city's welfare program released last week stating that 9.4 per cent of the recipients were ineligible by Federal standards. At the time, the city denied even this figure, saying that by its analysis the total was only 3 per cent.

But Mr. Kisburg, in a news conference yesterday, said that 39.4 per cent should be added on top of the Federal figure of 9.4 per cent as possibly or probably ineligible.

'Reckless' to City Officials

Mr. Kisburg's charges were immediately denied by city welfare officials as "hysterical," "ridiculous" and "reckless."

Mr. Kisburg, whose union is supporting Mario A. Procaccino for Mayor, conceded that his charges could be used as ammunition by the Democratic nominee against Mayor Lindsay.

The Teamsters official, however, said he was only drawing his charges directly from the Federal report on the city situation. The report was prepared by the Department of Health, Education and Welfare and was based on the study of a sample of 543 welfare families here.

To arrive at the additional 39.4 per cent of those who could be receiving benefits illegally, Mr. Kisburg totaled the following percentages in the study:

OCT 1 1969

Blacks Job View Hailed by Reuther

BY JAMES STRONG

Walter Reuther, president of the United Auto Workers union, said yesterday that the crisis in the nation's building trades industry is a "tragic mistake" resulting from more than 300 years of neglect and denial of Negroes' rights.

The leader of the 1.8 million auto workers told a Loyola university centennial symposium on "Man in the Urban Complex" that the difference in policies involving civil rights and the building trades industry was among the reasons Reuther and the UAW bolted the AFL-CIO.

"I was tired of apologizing for policies I could not defend," he said. He explained that the same unions which fought pressures to comply with civil rights laws are now involved in blocking efforts by blacks to gain greater employment in the building trades.

"These unions must work in the spirit of brotherhood for peaceful change and avoid violent change," he added.

"If you had to wait 300 years your patience would be worn thru and you wouldn't wait another 300 years. We need to understand the blacks of America are not going to wait.

Cites Moral Responsibility

"Labor has the moral responsibility to provide equal opportunity. Labor has been doing more than it used to do, but it's not enough. The churches are doing more, but it's not enough, and the schools are doing more, but it's not enough."

Reuther explained that on a highly efficient rocket designed to propel men into space, 85 per cent of the workers were unskilled and 15 per cent skilled, but in the construction of a relatively simple home 90 per cent of the work force must be skilled and only 10 per cent of the work force is recruited as unskilled.

"The future of our cities is in very grave doubt. No one can say our cities will survive," Reuther said. "There is a crisis in the city, our schools are in crisis and our young people are being alienated from society."

Reuther urged the reappraisal of national priorities and an end to the war in Viet Nam and the arms race. He said we must make a national commitment to deal with urban problems with the same determination shown in placing man on the moon.

He urged social security payments be doubled, the minimum wage raised to $2 immediately and eventually $3, the creation of a national housing market, new housing laws and regional land banks, and new national health programs.

Earlier, Dr. Eli Ginzberg, professor of economics at Columbia university, warned that America will have neither peace nor prosperity until blacks are integrated into the "opportunity structure" of economic life.

"The critical issue in the cities is not more jobs for minority people, but more opportunities to get good jobs," he said. "And this can occur only as the walls of racism are reduced and leveled in employment, housing and particularly education."

Tues., Sept. 16, 1969
ST. LOUIS POST-DISPATCH

East Side Job Aid Proposal

Details of a proposed $1,900,000 job-training project for East St. Louis's hard-core unemployed were made public yesterday in response to picketing against the proposal by members of the United Front of East St. Louis.

The Front has criticized the lack of citizen participation in planning the proposal and for the last week has picketed the East St. Louis offices of the Illinois State Employment Service, which wrote the proposal. The United Front has demanded to see a copy of the plan and wants to be told who will run the program.

At the United Front's insistence. George Washnis, administrative assistant to Mayor Alvin G. Fields, obtained a copy from the Chicago regional office of the Department of Labor, which would finance the project, and made it public.

Program Replaced

The plan would use social service and governmental agencies for basic education, job training, related social, medical and legal services and transportation. The program, which is designed to replace the defunct $1,747,000 Concentrated Employment Program, would be co-ordinated by the Illinois State Employment Service.

The Rev. Charles Napier, chairman of the United Front, said he thought the plan was not complete. He called for a meeting btween the United Front, Washnis and representatives of the Illinois State Employment Service to discuss the plan. The session is expected to be held tomorrow.

Picketing of the employment service office will continue, he said.

The text of the plan disclosed:

A citizens' advisory committee would be formed within 30 days after the program went into effect. No citizens' committee participated in the writing of the plan.

Although Gov. Richand B. Ogilvie, in announcing the plan, said 5000 persons would participate, the plan envisions enrolling 1100 persons in the program. The plan sets employment of at least 450 of these participants as its first-year goal.

The program would be run by a project manager who would be an assistant to the manager of the East St. Louis office of the Illinois State Employment Service. Two co-ordinators would work under the project manager. The project manager would receive a salary of $11,736, the co-ordinators $10,956. An accountant, who would be responsible for cost control, would receive $10,276.

Training Set Up

The Illinois Craftsmen Association, a group of black skilled trades workers, would train 50 participants in woodworking and basic carpentry, concrete work, basic plumbing, electrical conduit wiring and painting and decorating. Ten participants would work at each craft in a 26-week program. They would be paid $55 a week. The plan text did not contain letters from trade unions assuring that qualified graduates of this phase could join their organization.

The program would charter two 40-passenger busses at a cost of $33,500 and purchase four minibusses at a cost of $12,400 to transport unemployed East St. Louisans to jobs in Alton, Fenton, south St. Louis County, and Sparta.

R. S. McCulla, manager of the East St. Louis office of the Illinois State Employment Service, defended the method of drawing up the plan. The St. Clair County Economic Opportunity Commission, the local antipoverty agency, was consulted, he said.

In addition, employment service officials met with Lucius Jones, Guy Gettis and Charles (Sweed) Jeffries, black militant leaders, in July, McCulla said. He said the three agreed to the plan in principle.

Estimated cost of the plan is $2,048,580, of which the Federal Government would provide $1,897,970. The local share would be in services.

BLACKS IN LONDON SHUN POLICE JOBS

LONDON, Sept. 30 (AP)—Scotland Yard conceded defeat today in its effort to get black policemen for an integrated force because immigrants will not serve.

"There is nothing we can do if colored applicants do not come forward," said Chief Superintendent Kenneth Lee, who heads the Yard's community relations branch.

"It would seem that colored boys are afraid that if they join the police they will be shunned by their fellows."

Jeff Crawford, secretary of the London West Indian Standing Conference, which represents Negroes in the capital, said:

"It is quite true that if a black man joined the police force he would be shunned by his black fellows. I am afraid the police are the enemy as far as the black community is concerned, whether they are black police or white police.

"We do not believe that the police are fair in their dealings with colored people and there will not be black recruits until they have put their own house in order."

Letter Sent to Schools

Scotland Yard recently sent a letter to the headmasters of boys' schools all over London, inviting applications. Not a single black replied.

There are 15 nonwhite policemen and about 21 part-time auxiliaries (special constables) among the 90,000-odd policemen in England and Wales. They include West Indians, Africans, Indians and Pakistanis.

The metropolitan force of Greater London, now 6,000 below its authorized strength of 25,417, has three nonwhites. Two are women. The lone Negro bobby is from St. Kitts in the Leeward Islands.

About a million nonwhite immigrants live in Britain. Scotland Yard insists the door remains open.

"We want colored policemen," said a spokesman. "There is no discrimination. It doesn't matter to us if a man is white or colored providing he is suitably qualified."

But 36 nonwhites who did apply to join the London force in 1966 were rejected on medical or educational grounds. Of five selected for interview, four failed to turn up.

RELIEF CHEATING (CONTINUED)

¶14.4 per cent who were found to have "potential resources" from relatives or other sources.

¶8.5 per cent of the cases who "did not provide information" about potential resources.

¶16.5 per cent of the cases that were in doubt because the city had failed to pursue "leads to the whereabouts of absent parents" or to take court action against them.

Mr. Kisburg said that welfare rolls were heavy with ineligibles because the city had "inaugurated a policy of 'come and get it, no questions asked.'" He said the city was taking a "culturally permissive" attitude in sanctioning "Dutch-treat marriages" where the father could disappear without bearing responsibility for child support.

This, he said, was "a philosophy not many Americans are prepared to accept." He added that there should be much more of an effort to find "if there was a parent around to assume responsibility instead of passing the burden on to you and me, the taxpayers."

Recent declines in the increasing numbers of cases being added to the welfare rolls, Mr. Kisburg said, were due to a sudden tightening of restrictions in order to gain votes from those opposed to the burgeoning welfare costs.

Mr. Kisburg said this tightening up could be keeping funds from those who really needed help.

Apprenticeship 3/10/70

Week of March 9, 1970

LABOR DEPARTMENT OFFICIAL DEVELOPS OHIO'S 1ST APPRENTICESHIP PROGRAM FOR MARINE MECHANICS

CLEVELAND -- James E. White, the first black area representative for the U.S. Department of Labor's Bureau of Apprenticeship and Training (BAT) in Ohio, has developed the first apprenticeship program for marine mechanics in the state.

Recognizing the need for qualified marine mechanics, Robert Breyley president of Breyley Marine Inc., North Roylaton, Ohio, worked with White in establishing the 4-year, 8,000-hour program.

Edward Shuerger presently is the only youth enrolled in the program. He started at $3.00 an hour, but will receive periodic wage increases and is ultimately expected to earn $4.50 an hour, plus fringe benefits.

White is hopefully looking forward to expanding his program, and is seeking to get 12 interested young men into it in order to set up the necessary classroom education and training courses as part of the apprenticeship program at North Royalton High School.

Realizing a "crying need for qualified marine mechanics," White is seeking to develop formal mechanic apprenticeship programs with both manufacturers and owners of boat sales and service companies to meet present and future needs for qualified mechanics.

"The Lake Erie shoreline from Toledo to Conneaut is dotted with hundreds of marine companies, large and small, catering to the ever-growing number of boating enthusiasts," White said. He feels that proper maintainance and servicing of these motor boats, yachts, and other vessels is essential to keep them sailing safely. He is contacting marine firms located within his service area, Cuyahoga, Lake, and Geauga Counties.

(MORE)

White has also developed an auto mechanics apprenticeship program with two enrollees. The program was set up with the Breyley Motor Center, Inc.

Since assuming his position in March 1967, White a former International Representative of the Molders Union, has been working with business and labor officials and vocational educators to develop, on a voluntary basis, apprenticeship programs to meet the nation's urgent need for skilled workers in industry and the building trades.

Mr. White is an area representative for BAT in Cleveland.

Scanlan's New York

November 1, 1970

Dear Subscriber:

Scanlan's is locked in a life or death battle with a censorious printing union which has blocked the publication of our magazine.

Printing plants in five states have knuckled under to threats of sabotage and other blackmail. They tell us they want to print Scanlan's, but they are afraid.

The editors have decided to turn to you.

Your charter subscription gave Scanlan's its license to publish.

If we are to be silenced, we think you should at least be notified as next of kin. And you may be able to help us beat the censors.

We will be brief, as there is little time.

Scanlan's October issue, entitled "Guerrilla Warfare in the United States," was halted on its way to the press by hard hat elements among the lithographers of our New York City printing plant.

That issue tells the raw truth about what is going on in this country. Some ruffian printers decided they didn't want that truth printed. They bullied the plant's owners into breading their contract with scanlan's. The threats were hardly veiled; sabotage was the alternative.

Of course we immediately took the union and the printing plant to court. The courts told us to stand in line to wait to collect our damages. When prisoners wait six months for a bail hearing, you can imagine the time schedule for controversial magazines.

That left Scanlan's with no place to print its October issue. And it was already October.

So we changed the date of the special issue on guerrilla war to November, and arranged to print it in San Francisco. The day before the presses were to roll, that printer sent us back a check we had given him as a down payment.

He hadn't cashed it. He said he could no longer print the issue. He gave no reasons.

We next contracted with a big printing plant in Los Angeles. It prints a lot of girlie magazines, and we thought it wouldn't object to politics. The issue was scheduled to go to press October 21. If it had you would have been reading it instead of this letter.

Within the last three days, Scanlan's has been turned down by other large printers in Colorado and Missouri. Their reason: the lithographer's union has "put the word out on Scanlan's." Anyone who prints this issue plainly has troubles. And there is a cloud, if not a stigma, over the printing of future issues.

This is a rank political boycott. What didn't take place even in Joe McCarthy's 50's is happening in Spiro Agnew's 70's.

Now we are not crying about this. A fight is a fight, and we will not bend to the pernicious ruffians who deign to judge what is fit to print in America. We assume that the people who put us in business - and you are one of them - would rather have us stop publishing than cave in to such political hooliganism.

Others are alarmed about Scanlan's crisis situation. The American Civil Liberties Union is studying a major lawsuit against the national union behind all this, the Amalgamated Lithographers.

The nation's top Constitutional lawyers say that this is the most serious attempt to put a gadfly magazine out of business in America since the Wilson Administration tried to silence The Masses. They think the courts will put a stop to this nonsense. Top contract lawyers hold a similar view; they say printing plants cannot allow workers to censor magazines.

The legal issues here were put in much simpler form a long time ago by Benjamin Franklin, a printer himself. He said that if printers printed only what they approved of,

> ...an end would thereby be put to free writing, and the world would afterwards have nothing to read but what happened to be the opinion of printers.

That is true. The apparently suspicious legal picture is all well and good. But that doesn't ge the magazine to you.

Therefore, the editors have taken some drastic steps around these extaordinary circumstances. We hope these meet with your approval.

We have arranged for Scanlan's special, 112-page inside story of guerrilla war in the United States - which you should have received this month - to be published by Simon and Schuster Inc. as a Pocket Book, complete with the original pictures, charts and maps that were prepared for the magazine.

This book will be sent to you, at no additional cost, as a regular issue of Scanlan's Monthly.

As a Charter Subscriber, you will receive in book form Vol.I No.8 of Scanlan's sometime in November, before it reaches the general public.

As this letter reaches you we are negotiating with printing plants outside the United States to produce future issues of Scanlan's. If Vol.I No.9 reaches you with a Canadian or German postmark, you can thank the self-appointed unionist censors in the United States for the stamp.

Your subscription will be extended to make up for any issues you missed. The book counts for one issue.

Such extreme measures we hope will be interim ones. But they are nonetheless both invonvenient and costly.

We know the perilous lessons in the history of independent political journalism. During the early part of this century the great muckraking magazines were all finally done in by their corporate or governmental enemies getting to their paper houses or their printers.

We are not so paranoid as to believe the current union vendetta against Scanlan's is necessarily linked to our expose of President Nixon's tea with New York union leaders whose criminal records were longer than the four-minute mile. We are also aware that, in a period when most publications are cooling their criticism, Scanlan's is pulling no punches. In our first few months of publication we have already been personally attacked by Vice President Agnew and Attorney General Mitchell.

At his curious junction in American history, Scanlan's could be killed by the forces of reaction. We are no superman, journalistically or economically. The brief but harrowing attempt to keep us from publishing has already taken its economic toll. We have not been able to print an issue for almost two months, and we are hurting.

But this is one of the costs of the independent, fighting journalism you asked for when you put us in business.

What now? We're proceeding according to this plan. As Scanlan's only kin there are some things you can do to help, if you will. You can tell your friends, your local newspapers and sympatico disc jockeys and your congressman about this unprecedented situation. To help us hold the fort you can renew your subscription now even though you still have issues to come. And if there is someone to whom you can give a Scanlan's gift subscription to for Christmas, or even for a birthday next year - you can do that too.

As editors, we're a little unaccustomed to communicating with our readers in a letter but we felt we had to let you know what was going on. The next time you hear from us it will be in the form of a pocket book or the next magazine issue, whichever the mails bless first. We hope to hear from you.

We need help to fight this thing.

The Editors,

Sol Yurick

Warren Hinckle

It is unreasonable what some assert "that printers ought not to print anything but what they approve"; since if all of that business should make such a resolution, and abide by it, an end would thereby be put to free writing, and the world would afterwards have nothing to read but what happen'd to be the opinions of printers.

Benjamin Franklin
An Apology For Printers

TO THE EDITORS

O.K. I'd like to help Scanlan's fight the censors.
I'll do what I can about spreading the word.

Dear Mr. Via:

We would like to invite you to participate in a continuation of our Journeyman Feasibility Study. This study has been made possible by two separate grants. One of $5,000 given in April 1971 by the AFL-CIO Building and Construction Trades Council, and one of $5,000 given in May 1971 by the AFL-CIO Executive Council.

These two grants will allow us to continue the workings of the committee. The enclosed material will explain our previous deliberations. We feel with the continued need for answers to many questions raised by the interim report, that the convening of the Committee is very timely.

We will meet on November 21, 1971 at 2:30 P.M. at Bal Harbor, Florida, Americana Hotel. Arrangements can be made by our office if necessary. Please notify Mrs. Maizie Fulston at The Institute of the Joint Apprenticeship Program, 162 Fifth Avenue, New York, New York 10010 by November 15th whether or not you plan to attend the meeting.

Sincerely,

Bayard Rustin

Dear Mr. Via:

Attached is your prepaid airline ticket and itinerary for our National Conference in New Orleans. In order to simplify matters, we secured open tickets through one carrier; they are, however, interchangeable with other airlines where necessary.

Hotel reservation are being made for a single room for the dates February 2, 3, and 4, 1972.

We look forward to greeting you in New Orleans. Also if you would like us to meet you at the airport, please let us know your arrival time, date and carrier.

Sincerely,

Ernest Green

July 31, 1972

Dear Mr. Via:

Over the last five years, the Joint Apprenticeship Program of the Workers Defense League/A. Philip Randolph Educational Fund has been actively involved in placing Blacks, Puerto Ricans, and other minorities into skilled jobs, particularly in the construction industry. From 1967 until now, the Program has gone from one office in the Bedford-Stuyvesant section of Brooklyn to 25 offices in the following cities:

Boston, Massachusetts	Mt. Vernon, New York
Bridgeport, Connecticut	Nashville, Tennessee
Bronx, New York	Newark, New Jersey
Brooklyn, New York	New Haven, Connecticut
Buffalo, New York	Orlando, Florida
Charlotte, No. Carolina	Pascagoula, Mississippi
Cleveland, Ohio	Providence, Rhode Island
Durham, No. Carolina	Rochester, New York
Evansville, Indiana	Rome, New York
Greensboro, No. Carolina	Wilmington, No. Carolina
Harlem (New York City), New York	Wyandanch, New York
Hempstead, New York	Youngstown, Ohio
Lexington, Kentucky	

We have also expanded our activities in other areas to include fully skilled journeymen and men with partial skills. We have also involved ourselves in contractors' assistance programs, non-profit housing sponsorship and preparation for civil service examinations.

The techniques in which we have pioneered since we first began as an apprenticeship program in 1963 have shown broad applicability, particularly in various construction occupations, and have served to make us a source of assistance for programs engaged in other outreach program, minority contractors, and the AID of the U. S. Department of State.

The complexity of our involvement has necessitated our becoming incorporated. On February 1, 1972, we were granted permission by the State of New York to incorporate as R-T-P, Inc., Recruitment and

Training Program. We hope this change will in no way diminish the role and relationship of the Workers Defense League/A. Philip Randolph Educational Fund in helping us to continue to gain more jobs for minorities in the various skilled crafts. Accordingly, you may be assured of the continued growth and commitment of the Recruitment and Training Program.

Sincerely,

Ernest Green

Ernest Green
Executive Director

BREAKTHROUGH
MINORITIES IN CONSTRUCTION

Editor: Maizie Fulston

A newsletter published periodically by R–T–P, Inc. Recruitment and Training Program 162 Fifth Avenue, New York, New York

VOLUME 3, NO. 1 SEPTEMBER, 1972

R-T-P, Inc. Or, What's In A Name

R–T–P, Inc. means Recruitment and Training Program, formerly the Joint Apprenticeship Program. The new name became effective April 1, 1972.

Why the need to incorporate and why the new name? In just a few short years the Program grew from a staff of three to a staff of 170 persons. The size and scope of the present organization required that we establish ourselves as a separate legal entity.

The Workers Defense League, our founder, gave birth to the program in 1964. We were funded by the Taconic Foundation, and known as the W.D.L. Apprenticeship Program. In 1966 when the A. Philip Randolph Educational Fund joined W.D.L. as a co–sponsor, we became the Joint Apprenticeship Program of the Workers Defense

RTP OPEN HOUSE SCHEDULED FOR EARLY FALL

On Sunday, September 24, R–T–P, Inc. will open its newly-renovated doors to the public for two weeks. The highlight of this occasion which celebrates the formation of R–T–P, Inc., will be an exhibition of African art from the Collection of Bayard Rustin, executive director, A. Philip Randolph Institute and chairman of the board, R–T–P, Inc. Fred Lewis, assistant director, The Studio Museum of Harlem, has volunteered his services to make the selections and install the exhibit. This show will be the first of a series of black art exhibitions to be shown at R–T–P, Inc. headquarters.

The opening will be both a celebration of name change as well as a benefit

Annual Confab a Great Success

People are still talking about RTP's Fourth Annual Conference when more than 450 people – R–T–P Inc. staff and invited guests convened at New Orleans Sheraton-Charles Hotel February 2 – 5. This marked the first time the annual conference was held outside New York City. The time was ripe for mixing a lot of business with a little pleasure also, because New Orleans was still recuperating from the Superbowl while gearing up for the Mardi Gras.

Business began at 9:00 a.m. February 3, with a welcoming address by **A.P. "Pat" Stottard**, President of the New Orleans AFL–CIO. Remarks were also made by **Rowland Watts**, President, Workers Defense League and **Bayard Rustin**, Executive Director, A. Philip Randolph Institute. **John Lewis**, Director of the Voter Education Project, Atlanta, Ga. delivered the keynote address. He conveyed the message that Blacks have come a long way politically and economically during the decade of the 60's but they still have a long way to go in developing full political potential. The afternoon panel "Manpower and Minority Employment" was chaired by Rowland Watts. **Marvin Friedman**, noted economist and Vice-president of Stanley H. Ruttenberg and Associates, Inc. presented a paper in which he praised Apprenticeship Outreach Programs as being the most successful endeavor produced by the ten year old Manpower Development Training Act. He attributed this success to Outreach's single target – getting minority youths into the building trades unions as opposed to other programs with less concrete training goals. **Roy Kirkley**, Associate Professor, Rutgers University, **Bob McGlotten**, former Director of HRDI; and **William Weinberg**, Administrative Vice-president of Rutgers University were respondents to Friedman's address.

Robert Tucker, Executive Administrative Assistant to the Mayor of New Orleans was the main luncheon speaker. Following the luncheon "Phela N'daba" (End of the Dialogue"), a film depicting the inhuman conditions under which Blacks, Browns, and other non-white people live because of the apartheid system in South Africa, was shown. **Ernest R. McKinney**, Asst. to the

Attending conference left to right, Charles Bremer, Deputy Director R–T–P, Inc., Roger Coyne, U.S. DOL, Ernest Green, Director R–T–P, Inc., Donald Slaiman, Civil Rights Director, AFL–CIO, Prof. Herbert Levine, Rutgers Univ.

Executive Director of the A. Philip Randolph Educational Fund was chairman for the afternoon panel "Labor and the Minorities." **F. Ray Marshall**, Chairman, Economics Department, University of Texas, traced the history of the relationship between the labor movement and black people from the beginning of the movement to the present. The respondents were **Bernard Anderson**, Associate Professor, Wharton School of Finance, University of Pa; **Walter Davis**, Director of Education, AFL–CIO and **Edward Gonzalez** of the School of Industrial Relations at Cornell University.

The highlight of the day, and of the conference was the Awards Banquet. Its success was largely due to the promotion job assumed by the New Orleans A. Philip Randolph Institute. M.C. **Ernest Green**, Executive Director of R–T–P, Inc. presented awards to four outstanding apprentices. They were: **Curtis Alexander**, New York, **Charles Bryant**, New Haven, Conn; **James Strouder**, Cleveland, Ohio; **Wayne Thompson**, Charlotte, North Carolina. There were

A Word From the Director

.....Ernest Green

This is our first Newsletter since the 1972 Annual Staff Conference. As you are aware, the Conference was held in New Orleans and exceeded all of our expectations. It allowed the Program to reach a broader group of people as well as broaden the scope of staff to issues other than construction. From that start of broadening our base and scope, we have now incorporated and become a separate organization, separating from both the A. Philip Randolph Education Fund and the Workers Defense League.

This separation doesn't stem from an ideological dispute, but a recognition by all parties for greater fiscal and administrative control. The Program has grown far beyond our expectations. We have grown from three staff people in 1965 to 170 in 1972. We have grown from one office in 1966 to 26 field offices in 1972. All of this represents tremendous growth, and, as you can imagine, requires great effort and energy to make sure that we perform our primary service, and that is placing as many Blacks and Puerto Ricans into decent jobs that offer both a future and adequate income.

At this time we are holding our formal Open House announcing our new name. We have also successfully negotiated a new contract with the United States Department of Labor. This contract funds our field offices in:

Boston, Massachusetts
Bridgeport, Connecticut
Bronx, New York
Brooklyn, New York
Buffalo, New York
Charlotte, North Carolina
Cleveland, Ohio
Durham, North Carolina
Evansville, Indiana
Greensboro, North Carolina
Harlem, New York City
Hempstead, New York
Lexington, Kentucky
Westchester County (New York)
Nashville, Tennessee
Newark, New Jersey
New Haven, Connecticut
Orlando, Florida
Pascagoula, Mississippi
Providence, Rhode Island
Rochester, New York
Rome, New York
Trenton, New Jersey
Wilmington, North Carolina
Wyandanch, New York
Youngstown, Ohio

for another 12 months. The total amount of the contract is $2,500,000. We expect, as we have done in previous contracts, to exceed the number of negotiated placements with D.O.L.

In our 1971-1972 contract we were able to place 1,362 apprentices and 551 journeymen against 1,275 apprentices negotiated and 350 journeymen negotiated at a per placement cost of $1,200.

This cost is very favorable when compared with many other manpower programs. We feel that the reorganization allows us to continue a high placement record as well as maintaining adequate fiscal control. As we expand our activities into programs other than construction we feel that the new structure allows a greater flexibility to achieve success with these new areas.

Our expectation is to sponsor our first 236 housing program of 110 units in Pascagoula, Mississippi. This will provide jobs as well as badly needed housing in an area where one of our most effective programs operates. We expect to begin construction by winter 1973 and to have the project completed by spring 1974. We have also developed an assistance package to assist minority contractors that will be utilized in the project.

We expect the coming years to allow us to continue our prime effort of placing the brothers into meaningful jobs and the new structure gives R–T–P, Inc. the best vehicle by which to do that.

Annual Confab

(Continued from Page 1)

many other deserving apprentices. Since all could not be chosen, the four selected from different areas of the country were representative of the quality of non-white youths R–T–P, Inc. places in the building trades. Other awards were given at the banquet. **Charles Bremer**, Deputy Director of R–T–P, Inc. presented Ernest Green with a citation from the entire staff in appreciation of his effective and efficient leadership and direction. Bayard Rustin and Rowland Watts were cited for helping to found and guide the program through the years. And **Mr. A. Philip Randolph**, that "man among men" who is revered by trade unionists for having put in more than half a century of work into securing benefits for Black Workers, received an award from the New Orleans A. Philip Randolph Institute. In Mr. Randolph's absence it was presented to Bayard Rustin by **Leonard Lewis, Jr.**, Vice-president, Amalgamated Clothing Workers in New Orleans. **Ernest Colbert**, Sr. of the New Orleans A. Philip Randolph Institute gave quite a biographical sketch of Mr. Rustin and then introduced him as the main speaker. Throughout Mr. Rustin's speech he emphasized the importance of a coalition between blacks and organized labor.

As the conference continued other panels were held to discuss other relevant topics. "Housing for the 70's was chaired by **William Ross**, Director of Operations for R–T–P, Inc. **Richard Ravitch**, Exec. Vice-president of HRH Construction Company gave the presentation. **Dennis Beese**, Southwest Regional Asst. of the Non-profit Housing Center; **John Evans**, AFL–CIO Department of Urban Affairs Director. **Donald Roffle**, R–T–P's Program Director and **Luther Gatling** of Ominform, an industrialized housing company responded. "Economics and Politics" was the closing panel. Its chairman was Ernest Green. **Tom Kahn**, Exec. Director of the League for Industrial Democracy and **Lamond Godwin**, Asst. Professor at Rutgers University both presented papers. **Napoleon Johnson II**, Director of Urban League LEAP, **Norman Hill**, Associate Director, A. Philip Randolph Institute, **Claude Ramsey**, President Mississippi State AFL–CIO and **Penn Kemble** of Frontlash, provided the responses.

Donald Slaiman, Director of the AFL–CIO's Civil Rights Department and **Roger Coyne**, R–T–P, Inc's Government Authorized Representative the U.S. Dept. of Labor, shared the microphone at the February 4th luncheon. As Mr. Coyne said "it was a swinging conference for a swinging organization. That just about summed it up. And although it lasted only a brief three days, the R–T–P staff made time to take care of the business at hand, time to enjoy the luncheons and the banquet, time to catch a pre-Mardi Gras parade or two, and time to pay tribute to the famous gospel singer Miss Mahalia Jackson whose body was brought back to New Orleans, the place she was born, to lie in state on February 3rd, before burial.

A detailed post conference report is being published.

.... ABOUT APPRENTICES

Since R–T–P, Inc. has established an enviable track record in placing large numbers of minorities in the building trades, it's easy to assume that we're hung up on quantity and not quality. Not so. All of our apprentices are outstanding. Beginning with this edition of **Breakthrough**, we're going to single out some of the young men whose activities and achievements make us very proud.

James White

The first salute goes to James White, a 28-year old, 4th year millwright apprentice. Jim, a member of union local 740 took second place in the New York City District Council of Carpenter's annual apprenticeship contest. The competition, a grueling ordeal, consisted of a four-hour written examination on job-related subjects followed by a practical test of applied skills in machinery installation. James' project was the building and erecting of a pump and motor to pump water.

In Greensboro, North Carolina, Johnjas Hedrick became the first black apprentice to enter Local 640, Pipefitter and Plumbers Union. Another trailblazer, also from Greensboro, is Samuel Leroy LeGrand, a vietnam-era veteran who became the first black admitted to Local 30, the Boilermakers. LeGrand who served 3½ years in the Air Force is working with the E.I. duPont Co. on the Savannah River Project in Aiken, South Carolina.

New Haven reports that seven black ironworker apprentices who were recruited and tutored by the staff of that office, received their union books from Ironworkers Local 424 in June. Prior to these card-carriers there were no full fledged union minority ironworkers in Southern, Conn.

From Harlem comes the news that Fred Armstead, who integrated Local 12, Heat & Frost Insulators (Asbestos Workers) two years ago, recently became a journeyman.

And trying to make their voices heard in their local unions are Bob Coveny who ran for delegate to the International Convention of Ironworkers local 40 & 361, and Charles Saunders who ran for a seat on the executive board of New York City's Sheetmetal Union local 28. Although neither one made it, both of them will probably increase their union activity to insure their chances of getting elected in the future.

HERE AND THERE FIELD OFFICE HAPPENINGS

On August 28th Executive Director Ernest Green was presented the Elks Almnus Award at their Grand Lodge in St. Louis, Mo. Mr. Green, who received an Elks scholarship to attend Michigan State, was cited for his outstanding record of achievement.

The Contracting Plumbers of Brooklyn & Queens, Inc. held a premiere showing of "E.E.O. in Brooklyn & Queens" on May 23. This is a 20 minute color and sound slide presentation directed at minorities interested in the plumbing trade, produced by Project Equality with the cooperation of R–T–P, Inc. The Bronx office, which is representative of the Puerto Rican community is featured.

A grant of 176,500 from the U.S. Department of Labor has been awarded to the F.D. Rich Co. in Stamford, Conn. to run a pre-apprenticeship training program for minorities and veterans. The Bridgport office has been designated to do the recruting for this program. This office has relocated to 1208 Stratford Ave. In order to solve the transportation problems for apprentices working in out-lying areas in New Haven SFR Maurice Sykes has been canvassing the Utilities Companies for their used cars. So far two have been donated by the United Illuminating Co. Two more have been promised by the Southern New England Telephone Co. In order to find and place journeymen the New Haven Foundation has granted $5,000 to use the advertising media.

– **Boston held its open house on July 26** to re-introduce the program to the community and to promote a spirit of brotherhood among the newly placed apprentices. Highlight of the evening was the presentation of a large bouquet of flowers to Ms. Amanda Cook, AIC director (who recently retired after 28 years of service) for the help she has given since the program's inception in Boston.

The office in Nassau County has a new address. It recently moved from the tiny office at 10 Columbia St., Hempstead to more spacious quarters at 8 North Franklin, which is on the main drag. Bill Durante, Ron Whitfield and **John Harris** have been quite creative in getting the place together–and its beautiful.

The apprentice follow-up club in Lexington, Ky. held a fund raising raffle not long ago. Al Green, Jr. Accountant at the national office was $100 richer for he held the winning ticket.

The office in Westchester has more than doubled its placement goal for this contract. They have been designated the screening agency for the Mechanical Trades Unions apprentices, trainees, and journeymen.

Through the efforts of the R–T–P office in Suffolk County and the Wyandanch Day Care Affirmative Action Plan created by that office, two minority contractors have received construction sub-contracts. Mangum Contracting Co. was awarded $51,000 for sheetrock, painting, ceramic tiling, floor tiling and acoustic ceilings. R & G Certified Service was the recipient of a $5,000 landscaping contract.

The Nashville hometown plan, which our office in that city helped to negotiate recently received $30,000 for the first year's operation. An administrator has been hired, and the plan is set to roll.

Congratulations to all field offices for the superhuman effort they made in meeting the 1971 - 72 placement goals. Those offices involved in journeymen outreach are to doubly congratulated for doubling the journeyman placement goals.

Revolving Funds Set In Motion

Last year each field office was asked to seek its own funds to help needy prospective apprentices over financial hurdles. We are pleased to report that some progress has been made.

In Bridgeport, Conn. a $5,000 grant was received from Turner Construction Co. Also, the People's Savings Bank in that city contributed $500.

Contributors to the revolving fund in New York City are the New York Life Insurance Company which gave $5,000. The Fund for the City of New York which provided a matching grant of $5,000, and the Merrill Lynch, Pierce, Fenner and Smith Foundation which donated $2,500. The grants received for use by our offices in New York City have been deposited in Freedom National Bank.

The office in Youngstown, Ohio is the receipient of two grants; $5,000 from the Youngstown Area Community Action Council and $165 from Joseph Backet & Sons Co.

Don Roffle, R–T–P, Inc.'s Program Director has been working very closely with the field offices to help them obtain funds. He plans to intensify his efforts so that those offices which have not started Applicant Revolving Funds will be able to do so in the near future.

BOSTON REVISITED

After three years of operation, and a total of 357 non-white apprentices, trainees and fully qualified journeymen placed in the building trades unions, the Boston operation was phased out in November 1971. The office which was originally opened by JAP in 1968 to service a limited area, quickly turned out to be the implementation of what is now known as the "area-wide" agreement. What started out as a program to place minorities in the Model Cities Area into the construction trades in the Roxbury-Cambridge sections, ultimately mushroomed absorbing the whole Boston area.

In November, 1970 a "hometown plan" administered by the Construction Jobs of Boston, Inc. was funded by the Department of Labor. Under this arrangement, JAP became the subcontractor responsible for the daily programmatic functions of recruiting, counseling, tutoring, placement, and follow-up. The November, 1971 contract cancellation left Boston without a funded program to facilitate minority entrance into the skilled craft unions. However, some staff members of the former program felt the need to continue their services to the brothers – even if on a volunteer basis – and that's exactly what they did. In space borrowed from the Black United Front, the group set up tutorial classes for more than forty prospective electricians apprentices.

In March, 1972 the U.S. Department of Labor again funded a program for Boston. The New program, under the ageis of R–T–P, Inc. is an Apprenticeship Outreach Program. In addition Boston now has a new bi-partite plan conducted by the Building Trades Council and the Contractors Association.

The apprenticeship outreach office is at 466 Blue Hill Avenue. Staffing that office are: Project Director, James Clark, his assistant David Lee, Field Representative, Azell Martin, Tutor, Simon Wiltz, secretary, Shirlene Barnes, clerk-typist Carrie Perry.

RTP Recruit Youth Council Makes Trip to Africa for U. S. Program

At the request of the U.S. Youth Council, RTP Inc., and other organizations made referrals for the Council's Village Experimental Program, an African summer project. The program approach is to find out from villagers what technical expertise they need as opposed to presenting a pre-planned package. Among those chosen was Howard Odum, a journeyman cement mason who was recruited for the apprenticeship program in 1968 by the Nashville staff. In addition to his skill as a mason Howard is a qualified instructor through a special course he took in Racine, Wisconsin. Thus, he was able to teach a skill much needed in West Africa.

In mid-June before departure to their respective destinations, in West Africa, the group toured RTP national headquarters.

Other members of the Youth Council group were:

Ray Keith, Brooklyn, N.Y. who will work with the Ghanaan Youth Council; Tom Elkins, small business volunteer assigned to Mali; Deinna Minis, Wichita Falls, Kansas; A.E. Dreyfuss, New York City; and Bob Jackson, Los Angeles, California.

RTP OPEN HOUSE

(Continued from Page 1)

for Knickerbocker Hospital, a voluntary hospital which serves a large black and Spanish-speaking population in central and upper Harlem. Knickerbocker, which also serves the largest ambulance district in the city, was hit by a severe financial crisis which threatened to close its doors last year.

Commenting on his decision to hold the benefit the first day of open house, R–T–P executive director Ernest Green states:

"I am impressed with the spirit and dedication of the workers, most of whom are black and Spanish-speaking. When staff people were advised that their jobs would be gone, instead of leaving, they hung in there, raised money on their own, and came in for no pay on their days off. RTP is proud to support a group that shows this kind of solidarity."

Knickerbocker employers are affiliated with local 1199 of the Hospital and drug employees union.

Admission to the opening is a $10 contribution. Admission to the exhibit is free for the remainder of the open house; Monday through Friday from 10:00 a.m. to 4:00 p.m., until October 8.

Outstanding Apprentice Award Winner

Nolan Herrera is his name and he has the distinction of being the first of over 3,000 apprentices placed in the building trades unions by R–T–P, Inc. to win an outstanding Apprentice Award for over-all excellence at graduation. He came to the Brooklyn office in November 1968 when he was 20 years old. As a graduate of Brooklyn Automotive High School, he was really undecided about what he wanted to do. Since the Ironworkers Apprenticeship Program was open he took the test, and passed it.

Matt Steinberg, Apprenticeship Coordinator for Ironworkers Local 40 and 361 says: "Even after Nolan received his apprenticeship appointment he was undecided whether to be an auto mechanic or an ironworker, but I'm so glad he chose ironworker." As an apprentice he proved to be capable, reliable and responsible. He never missed any of the 216 classroom sessions during his three years of apprenticeship. Now a foreman for Bethlehem Steel in Brooklyn he is very active in the Ironworkers follow-up club which was formed by the staff of the Brooklyn office to help struggling apprentices in that craft.

Nolan Herrera, R.T.P. is very proud of you.

A. PHILIP RANDOLPH HONORED IN CHICAGO

A. Philip Randolph, dean of all labor and civil rights leaders was honored at a banquet given by the Coalition for United Community Action at the Sherman House in Chicago on August 26. Mayor Richard J. Daley proclaimed the day A. Philip Randolph Day in Chicago and urged all citizens to take cognizance of the special events that were arranged. The 83 year old Mr. Randolph, vice president of the AFL–CIO Executive Council, president of the A. Philip Randolph Institute and president emeritus of the Brotherhood of Sleeping Car Porters which he organized in 1925 has made outstanding contributions to America in Labor and Civil Rights.

Among the speakers at the banquet were Carl Latimer, executive director, Coalition for United Community Action, Mrs. Maida Kemp, Midwest Director, A. Philip Randolph Institute and Bayard Rustin who gave the keynote address. In addition to the award for Mr. Randolph in recognition of his outstanding leadership, the coalition also presented R–T–P, Inc. executive director Ernest Green with a plaque for his contribution to equal employment opportunity, specifically in the construction industry.

Minority Contractors

The Contractors Training Development Office is one of the many programs set up in the latter part of the 1960's to give minorities the opportunity to get a "piece of the action" in the lucrative construction industry. This Newark-based program, under the direction of Guerney Nelson, opened its doors in 1968 to give minority contractors the technical assistance required to compete for work on new construction projects using government funds.

As a result of the work done in Newark, the Urban Development Corporation, which is responsible for the major share of new construction in New York State, has engaged the CTDO as a consultant agency to make good their commitment to employ minority contractors on all UDC construction sites. The recently opened Manhattan branch, managed by George Knowles, is now located in R–T–P's facilities at 162 Fifth Ave., New York City.

Some of the specific areas CTDO assists minority contractors in are:

1. Preparation of Cost Schedule and Contingency Analysis for Price Proposals.
2. Job Planning and Cost Control.
3. Management bookkeeping and record keeping.
4. The provision of information relative to new construction projects in the public and private sectors.

In addition, CTDO is assisting UDC to develop an Affirmative Action program for contractors.

Due to the success of the program, plans are presently on the drawing board to open three additional offices in the State of New York.

Construction Equal Employment Plan

On July 19, 1971 a ceremony was held at City Hall in Cleveland, Ohio for the signing of the agreement known as the Cleveland Construction Equal Employment Plan (CEEP). Signatory to the Plan were the Building Trades Council, the Building Trades Employer's Association and the Minority Coalition. Thus climaxed eighteen (18) months of negotiations between the three parties to hammer out a "hometown plan" which over a period of five years, would achieve a level of minority group employees in each craft at least proportionate to their percentage in the Greater Cleveland area.

This Plan was funded in the Spring of this year. The Detroit Plan and CEEP are perhaps the most recent tri-partite agreements funded through an administrative board in which the unions, contractors and the minority community share equal responsibility for the success of the Plan.

R–T–P, Inc., has been subcontracted to handle the daily programmatic functions of recruiting, screening, tutoring, follow-up, etc. For closer coordination between the two programs, the administrative staff, Executive Director William Johnson and secretary-bookkeeper Carol Whittaker are quartered at R–T–P's outreach office which is located 10609 Euclid Avenue. Andy LeBron, Recruiter-Counselors and Terry Butts, clerk-typist are part of the operations staff at this office.

On June 19th an auxillary office was opened on the West side of Cleveland at 1846 West 25th St. to service the Spanish speaking population which is concentrated primarily in this area, Recruiter-Counselors Bill Mason and Miguel Cora and clerk-typist Anna Ramos man this office.

R-T-P, Inc.

(Continued from Page 1)

League/A. Philip Randolph Educational Fund. Now we are simply R–T–P, Inc. Recruitment and Training Program. What started out as a single office, foundation funded pilot project in 1964, has blossomed into a national non-profit corporation with a total of 24 offices and funding in excess of 2½ million dollars by the U.S. Department of Labor.

Although incorporation makes us a legal entity apart from our parent organizations, the Workers Defense League and the A. Philip Randolph Educational Fund, our close ties still remain. As an example, Bayard Rustin, Executive Director, A. Philip Randolph Institute, is Chairman of R–T–P, Inc.'s Board of Directors; Rowland Watts, President, Workers Defense League, is Vice-Chairman.

Other officers and members of the board are: Secretary, Edward Gonzalez, instructor at Cornell University, School of Labor Relations; Treasurer, Richard Ravitch, Vice-President of HRH Construction Company; Dorothy I. Height, President, National Council of Negro Women; Bernard J. Englander, Chief Executive Officer, Group Optical Consultants, Inc., and A. Philip Randolph, Vice-President, AFL-CIO Executive Council, and President Emeritus, Brotherhood of Sleeping Car Porters. John Somers is counsel.

Institute at Rutgers

On May 12 and 13, forty R–T–P, Inc. staff members from New York and other areas met in the Continuing Education Center at Rutgers University to learn about and discuss "The Changing Labor Movement and Its Effect on Minority Workers." It was the third in-service staff training institute held since October 1970 to broaden the knowledge of R–T–P employees in areas closely related to manpower.

The session started after dinner on May 12 with the topic "Public Employee Unionism", an area which has experienced phenomenal growth in the last ten years. Lillian Roberts, Assistant Director, District 37 of the American Federation of State, County & Municipal Employees gave an excellent presentation on what organizing the hospital workers has meant to what used to be one of the most underpaid, immobile group of workers. She also discussed District Council 37's upgrading programs which have become quite popular. James Amos of the New Jersey Cooperative Area Manpower Planning Systems explained that CAMPS is mainly concerned with non-duplication of manpower programs and in analyzing the needs of target populations.

The Saturday morning session opened with Guerney Nelson, Director of the Contractor Training Development Office in Newark, N.J. discussing "New Trends of Minorities in the Construction Industry." He pointed out that minorities have only a limited time to get into contracting and they have to take advantage of it quickly. Mr. Nelson pointed out many of the pitfalls in the contracting business, but stated that with programs like his giving technical assistance to minority contractors, they could become successful if they did not try to become rich overnight.

Professor B.J. Widdick of Columbia University gave participants a look at "The Labor Movement Ten Years from Today." Based on his prediction there will be a growth of unionism among teachers, college professors and other professionals; 95% of all contracts will be negotiated without a strike; more women will be in union leadership positions; more minorities will become union members; the political movement by trade unionists will have a lot of impact.

Professors Orley Ashenfelter of Princeton and Lamond Godwin of Rutgers talked about the economic effects of trade unionism on black workers. The session ended with Simon Wiltz and William Day, two of the tutors who attended the A. Philip Randolph conference in Houston, Texas, giving a report on the conference. Summations was made by Ernest R. McKinney, Asst to the Executive Director, A. Philip Randolph Institute.

Our thanks to Prof. Herb Levine and Roy Kirkley and his staff at Rutgers who coordinated the institute.

R-T-P, Inc. Moves to Three New Cities

The first half of 1972 has been a period of continued growth for RTP, the new corporation. In March, with the endorsements of the Orlando Building Trades Council and the Florida State Labor Council, apprenticeship outreach office number twenty-two opened for business at 310 West Church Street, Orlando, Florida the home of Disney World. It was the last office to come aboard before the Program changed its name and status. Staffing this office are: Wardell Sims, Senior Field Rep., Marvin Woodward, Tutor-Recruiter and Esther L. Washington, secretary. The open house to introduce the program to the community was held August 23rd.

Office number twenty-three got underway in June. It goes about the business of placing apprentices, trainees and journeymen at 300 Heidelbach Avenue, Evansville, Indiana. Project Director is Bobby Ogburn; Willie Washington has been named Field Rep; Tutor-Recruiter is Nero Lawrence and Susan Anderson is the new secretary.

Not far behind was office number twenty-four which opened in July. It is located at 200 Cranston St., Providence, Rhode Island. Russell Handy is the senior man, Cecil Taylor is Tutor-Recruiter, while Ruth Clement has been hired as secretary.

Although progress has been made in getting non-whites into the skilled trades, in some cities, the numbers already placed are hardly representative of the minority population. R–T–P, Inc. is cognizant of its obligation to open up more opportunities for minorities who are capable and desirous of entering the construction industry, and will move to expand its services to other cities in the near future.

COMINGS AND GOINGS

There have been a number of comings and goings within R–T–P since the last issue of "Breakthrough".

IN BRIDGEPORT, the Tutor has now taken over a new position as a Project Coordinator for the Connecticut Highway Department. He has been replaced by **Raymond Perez.**

As Secretary, **Norma Holmes** has resigned to take over a new position with Executive Wardrobe Service, a black concern.

IN BROOKLYN, Harry Austin, Journeymen Recruiter, has now transferred to **WESTCHESTER,** replacing **Thomas Green** of that office. **Eugene Webster** has left for a new job and has been replaced by **Joseph Bryant,** former staff guy in the Accounting Department.

The new secretary in **BROOKLYN, Arleen Hubbard.**

IN BUFFALO, the new Journeyman Recruiter is **Grenard Poles.**

Thomas Adkins, Program Supervisor of Urban Development Corporation, is on loan to the Urban Development Corporation.

IN HARLEM, Sandra Terry, Secretary, has gone to work with **Eddie Johnson** and the New York Plan.

IN NASSAU COUNTY, NEW YORK John Harris is the new tutor.

Zora Farrow, Trevor Edwards, and **Winston McIntosh** have joined the Accounting Department. **Loyce Best** has just left that office to seek employment in Orlando, Florida.

IN PASCAGOULA, Robert Kyles has replaced **Robert Thomas** as Project Director.

IN ROCHESTER, Ronald Linzy is a Field Representative and **Simon Desouza** replaced **Percy Calvin** as Tutor.

IN NEWARK, James Seawright, Field Representative in that office, has now become Project Coordinator for the State of New Jersey under a transportation contract. **Louise Raimer** has joined him as Secretary.

Eugene Martinez, former Journeyman Recruiter, is now Field Representative for Welfare Island, sponsored by UDC. He was replaced by **Roy Wingate.**

There is some new staff that will appear in next issue.

Thought you would like to read this. Ernie

Recruitment & Training Program (WDL, 14)

OCT 13 1972

A Little Rock Pioneer Leads Minority Apprentice Program for Construction

By RUDY JOHNSON

Fifteen years ago, Ernest Green was one of nine black students who walked through hostile mobs to integrate Central High School in Little Rock, Ark. Today he heads a program that is a pioneer in the techniques of recruiting minority workers for the building trades.

Mr. Green was appointed director of the Joint Apprenticeship Program a little more than five years ago. At the same time, the program, which had started modestly in a Brooklyn storefront office, received a $287,668 Federal grant that spurred a national expansion.

The apprenticeship project—recently renamed Recruitment and Training Program, Inc.—was developed following a period of protest in the early nineteen-sixties over restrictive policies that kept blacks out of the industry.

The program was started by the Workers Defense League, and joined later by the A. Philip Randolph Educational Fund. A staff of three persons set out to find qualified blacks to take apprenticeship tests, which the courts had ordered held.

Over the years, the program grew in scope. It began recruiting journeymen, and offering tutoring and counseling services, and assistance to minority contractors, among other things.

After five years of national operation, the program is now established in 20 cities. Thus far it has recruited approximately 5,000 apprentices and journeymen in highly skilled trades.

It has grown from a staff of three to 150, and from a budget of about $300,000 to $3-million, with most funds coming from the United States Department of Labor.

A Labor Department spokesman said recently that the Recruitment and Training Program had been the "model" for the Government's manpower outreach efforts in 100 cities.

Mr. Green joined the program as a field representative in 1964, following his graduation from Michigan State University with a master's degree in sociology.

In an interview, the 31-year-old program director, who wears a full beard and talks and dresses in the idiom of today's young black activists, said that he felt his work had been shaped by the civil rights movement, beginning with the integration of Central High School.

Mr. Green spent his senior year at Central and was the first black to graduate after Federal troops had been ordered by President Eisenhower to escort the nine black students to the school

"At Central, we felt that we had to go because someone had to break through the psychological barrier," Mr. Green said, noting that the school now had a black principal, and that 35 per cent of the students were black. "That's really what the nineteen-fifties and early nineteen-sixties represented in the South-making black people unafraid anymore."

These barriers were broken down, he said, with the integration of lunch counters, buses and schools following the sit-ins and freedom rides of the last two decades. The thrust now, he said, is for making political and economic gains.

"The construction industry is not going to solve all of our economic problems," he observed, "but it's a key kind of industry—the bulk of building is going to occur in the cities. I see blacks as having a key—if not the major—role in it."

Although his program has recruited manpower for what are known as the "hometown" plans to integrate the construction industry, Mr. Green joined other critics in calling the controversial New York Plan a failure for not going far enough in providing employment.

The New York Plan was put into operation a year ago after employers and the unions had been encouraged to form such programs in their hometowns as an alternative to federally imposed guidelines. In 1969, the Philadelphia Plan was imposed in that city, requiring contractors on Government-sponsored projects to employ a minority-group percentage of the work force equal to that of the group's percentage the of city population.

In criticizing the New York Plan, Mr. Green asserted that it had failed to provide "sanctions" against employers and unions that "haven't lived up to their commitments" to guarantee jobs for trainees.

He said that both the Philadelphia and New York Plans "need some guts in terms of enforcement."

The Nixon Administration has been accused recently of planning to scrap the Philadelphia Plan, once publicized as the Administration's key civil rights program. The Administration has denied this asserting that the plan was only under "review."

Asked what the outlook was for his program in the next five years, Mr. Green said:

"I see our efforts as continuing. We will need for an extended period of time just a continuous steady push—continually educating applicants, continually moving them in, aided by continuous pressure from the community.

"Only when it gets to a point where people can move with a relative amount of freedom into the industry will the heat ever let up."

NAOMI FRANKLIN MOVES UP

Field Representative, Naomi Franklin, has just been appointed Assistant Project Director of R–T–P's lively Harlem field office.

Ms. Franklin, who in 1967 became the first secretary in that office, immediately began to show that she had what it takes to move up. Naomi took an interest in the project that far exceeded the demands of her job. She took even greater interest in the stream of applicants flowing through the office daily, helping them with their individual personal problems, helping them to structure approaches to their career goals, and adding a personal human touch to what can be a routine job of passing on information about apprenticeship training.

Because of her demonstrated interest and ability, she was appointed to fill one of three newly-created follow-up counselor spots in 1971. Although this gregarious Ms. loved working with applicants on a direct basis, she found an opportunity in this capacity to prove that she also worked well with community groups and union officials. When the opening for Assistant Project Director occurred in November, there was no question about who would fill it.

As the second female to hold this position in a major field office, it is certain that Naomi will give it all she's got. Right on–Women's Lib!!

Latin American Trade Unionists See Action At R-T-P

This year RTP became a participant of the Department of Labor's Bureau of International Labor Affairs Trade Union Exchange Program: One of the primary aims of the program is to bring foreign trade unionists to the United States to observe and study ways in which labor unions can be more effective in conducting skills training programs.

In November R–T–P had an opportunity to play host to a group of seven South American trade union participants observing selected New York City skills training programs.

They were: **Jorge Zubieta Bejarano**, Recording Secretary, Bolivian Confederation of Construction Workers, La Paz, Bolivia; **Herman Jofre Ponce**, Officer Chilean Electrical Employees Union, National Leader, Central Union of Chilean Workers (CUTCH) and Confederation of Private Sector Employees, Santiago, Chile; **Alvaro Ramirez Pinilla**, President, Union of Workers in the State of Cundinamarca (UTRACUN), Bogota, Colombia; **Cesar A Santos**, staff member, CEOSL Confederation, Guayaquil, Ecuadorean Confederation of Free Trade Union Organizations (CEOSL) Guayaquil, Equador; **Felipe A. Portillo**, Third Grievance Secretary, Construction Workers Union, San Salvador, El Salvador; **Cesar Eulalio Mestizo**, Finance Secretary, Construction Workers Union, Mejicarios, El Salvador; and, **Pausolino Zambrano**, Secretary of International Relations,

GREEN ADDRESSES OPERATING ENGINEERS

On November 15, R–T–P Executive Director, Ernest G. Green addressed the more than 200 delegates gathered in New Orleans for the 9th Annual Conference of the National Joint Apprenticeship and Training Committee for Operating Engineers.

Green shared a panel on Equal Employment Opportunity with Jim Gary, special rep for the International Union for Operating Engineers, (IUOE), Cecil Smith, Deputy Director, LEAP, National Urban League, Reese Hammond, IUOE Education Director, and panel chairman A.D. Gaither, Director, Office of Civil Rights, FWHA.

In his address, Green reviewed the progress of the apprenticeship outreach movement and RTP's participation in the IUOE skills training program. He then discussed R–T–P's role in the U.S. Dept. of Transportation's Federal Highway Administration's (FWHA) highway construction training program.

The conference, held Nov. 14-16 in New Orleans, covered every aspect of training in which IUOE is involved.

Other R–T–P staffers attending were Don Roffle, National Program Director, Thomas Stepp, State Coordinator for R–T–P's Kentucky Highway Program, and John Ribot, State Coordinator for R–T–P's Connecticut Highway Program.

A Word From the Director

.....Ernest Green

Year end is inventory time. It is also a time of reflection – a time to evaluate what we are and where we are going as a project and as an organization. After scanning our resources, determining which priorities are to remain intact, which priorities will be shifted or modified in view of our over-all goals, we can map out effective realistic strategies that will take us closer to where we want to go in 1973.

Let us look for a moment at some of the dramatic events that occurred within the organization in 1972 within the context of our objectives.

Our 1972 national conference was convened in New Orleans, Louisiana. That marked the first time in R–T–P history that an annual conference was held outside New York City. Since our projects are primarily concentrated in the east and northeast, this move meant a great deal in the sense that we increased our visibility, thereby giving the apprenticeship outreach movement and its aims more widespread geographic support.

In the spring of 1972, the program changed its name from the Joint Apprenticeship Program to R–T–P, Inc., Recruitment and Training Program. This was a logical move in view of our current size and scope. With the name change we became a legal entity, a corporate structure complete with an advisory board and a board of directors. Members of the board are Chairman, Bayard Rustin, Executive Director, A Philip Randolph Institute, Vice Chairman, Rowland Watts, President, Workers Defense League, Secretary, Edward Gonzalez, Instructor, Cornell University School of Industrial and Labor Relations, Treasurer, Richard Ravitch, President, HRH Construction. Other members are labor leader A. Philip Randolph, Bernard J. Englander, Chief Executive Officer, Group Optical Consultants, Inc., and Dorothy Height, Executive Director, National Council of Negro Women.

Although 1972 was slow for the construction industry and not nearly enough buildings were going up in many of our cities, we succeeded in meeting our Department of Labor contract placement goals. In August, which marked the end of our contract year, we found that we had surpassed our goal by placing 1,365 apprentices. Our journeyman placement record doubled the number required under the contract.

R–T–P's Training Institute, funded by the Department of Labor for the first time, gave orientation and training to more than 150 people. All of our new staff members, as well as people from around the country who are running Outreach Programs attended.

During 1972, we again had an opportunity to prove that the methods and techniques developed for apprenticeship outreach are also applicable to other public and private sector training programs. R–T–P extended itself to assist other minorities, including disadvantaged whites, to pass civil service tests for entrance into the uniformed services with a program operated by the International Firefighters Association headed by Roscoe Hamby, an ex-R–T–P employee from Nashville. The corporation also entered into contractual agreements with three different states through their Department of Highways. The U.S. Department of Transportation's Federal Highway Administration has made funds available to recruit and provide supportive and follow-up services to training programs in the states of Connecticut, New Jersey and Kentucky.

In spite of the controversy surrounding the New York Plan, R–T–P successfully recruited most of the 466 minorities for placement under the Plan. The recruiting component was funded by New York City's Manpower and Career Development Agency.

Since we have long been concerned about equal employment opportunities and other social and economic equality for *all* minorities, the Corporation offered consultation and assistance to The Black Women's Employment Program, an Atlanta-based pilot project that seeks middle-management and technical positions for minority women. We are now in the process of determining how we can increase that involvement.

Last year we pledged our organizational support to other community organizations and efforts on behalf of furthering minority community development. In September during our Open House we held a benefit for New York's Knickerbocker Hospital, a voluntary hospital serving a large black and Spanish-speaking population. The benefit grossed $2,000. Two months later, the national staff presented a check for $200 to the Sickle Cell Foundation to further sickle cell education, treatment and research. Some staff members worked to raise funds for the national NAACP's membership drive.

Looking back makes the Corporation proud of its 1972 record of achievements. Looking forward to 1973 makes us realize that in spite of what we have accomplished in the year just passed, there is still much more to be done, not only in our present areas of activity, but also in others that we have yet to discover.

I wish peace, happiness, and good health to all who are working for a constructive change to re-distribute economic power in this country. Hopefully, we can look upon 1973 as a giant step toward meeting that challenge.

RANDOLPH BIOGRAPHY SCHEDULED FOR SPRING PUBLICATION

A Philip Randolph: A Biographical Portrait **by Jervis Anderson will be published by Harcourt, Brace, Jovanovich in March 1973.**

Excerpts from the book have appeared in a three-part serial in three recent issues of the *New Yorker Magazine.* **Mr. Randolph, the "Grand Old Man of Labor" is now eighty-four years old.**

Latin Americans

(Continued from Page 1)

Communications Workers Federation, Evido, State of Merida, Venezuela.

Accompanied by their team manager and two interpreters, they visited the national office where they were provided an overview of R–T–P's role in skills training, the apprenticeship system in the United States, and why a program like R–T–P was necessary. As foreigners and as unionists they expressed curiosity and concern about discrimination in the trades and the problem of racial discrimination in general.

Prior to visiting headquarters they had been to the New York District Council of Carpenter's Technical College where they observed actual craft training. Thus, they were able to connect R–T–P's role within a total training sequence from trainee to journeyman levels.

Following the headquarters visit, the group was taken to R–T–P's Bronx field office, one which primarily services Spanish-speaking applicants. There, the visitors spoke their native Spanish to staff people and applicants and saw applicants being assisted and tutored.

The group's month-long itinerary, November 14-December 13, also included trips to the United Nations, Allied Printing Trades Council of Greater New York, AFL-CIO in New York City; and the International Union, United Automobile. Aerospace and Agricultural Implement Workers of America, Ford Motor Co., in Detroit.

Black Women Employment Program

Little did the Workers Defense League realize when they set up the pioneer outreach program in 1964 to break the barriers of discrimination in the construction industry, that the concept would have such wide applicability. Since then, the original methods of recruiting rendering supportive services, tutoring, placement and follow-up have spread throughout the country. Until recently, outreach has been utilized to gain increased minority participation in what have been traditionally male occupations – construction, firefighters, law enforcement officers. But it is no longer a male exclusive, for it is presently being used in Atlanta, Georgia to help black females gain access to good paying professional, managerial and technical jobs in the private sector.

Last year, an analysis of the Atlanta Labor Market was done. One of the most glaring inequities that showed up was the under-utilization of the talents of black women with college training or equivalent experience in certain industries and job classifications. It was aiso discovered that because of the lack of opportunity beyond the white collar clerical and secretarial level, many capable black females were leaving Atlanta in search of more lucrative job markets.

In an attempt to make changes in this situation, the Southern Regional Council in conjunction with the University of Texas, Human Resources Center set up the Black Women Employment Program. The Director, Alexis Herman and her associate, Paulette Norvel, two very attractive college trained young black females were familiar with the reaching out process to help minorities. Alexis had done recruiting for the outreach office in Pascaoula, Mississippi and Paulette had been on staff at the National Office. In addition to recruiting and working with qualified black women to help them apply for the desirable jobs that were available, they also conducted an educational campaign to acquaint employers in industries such as banking, retailing and insurance with their program and what it had to offer.

Breaking through the barriers of the upper level white collar job market for black females hasn't been easy. There has been resistance at every turn. In spite of this, the Black Women Employment Program, which has been operating a little more than six months, has made 45 placements. The fact that employers are not knocking at their door with job offers for black females has not discouraged Alexis and Paulette the least bit. They only see that 45 black females are now holding jobs they would not have gotten without the program's assistance. The fact that inroads are being made is enough to keep them knocking on employer's doors seeking job commitments for the hundreds of qualified black women they have recruited.

HERE AND THERE FIELD OFFICE HAPPENINGS

About 250 guests attended R–T–P's Open House in September where Bayard Rustin exhibited art from his extensive African art collection. Both A. Philip Randolph and Bayard Rustin were speakers. The occasion was used to help raise money for the financially distressed Knickerbocker Hospital. The affair grossed $2,000.

Among the group who recently completed the institute on "Unions in American Society in the next Decade" at the AFL-CIO Labor Studies Center in Washington were R–T–P's Grenard Poles from Buffalo and Bobby Ogburn from Evansville.

R–T–P's institute has been re-scheduled to begin in the early spring due to its busy schedule of evaluating previous sessions and preparations for the 1973 R–T–P Conference.

Roland Grant, Assistant Comptroller at the national office, received an "Outstanding Young Man for 1972" citation from the New York State Chamber of Commerce.

Members of the BOSTON staff met with the president of the Building Trades Employers Association of Western Mass. recently to explore the possibility of expanding R–T–P's efforts in other cities in Massachusetts.

BROOKLYN's Project Director, Ulysses Jordan, is doing his thing as a member of the Saul Wallen Scholarship Committee of Cornell University. With his help and assistance, 34 apprentices, 1 journeyman and national office staffers Ruth Benjamin and Ethelyn Williams received scholarships to attend Cornell's Labor College.

490 William Street is the new address of the BUFFALO office. Finally the staff has secured location on the ground floor.

During their short 2½ months under the aegis of R–T–P, the EVANSVILLE office has placed 45 non-whites in the unions as apprentices, trainees and journeymen. Another 27 are in non-union jobs. Bobby Ogburn and company are moving right on.

Matthew Cockerham, Greensboro's Project Director, has been asked by the Mayor to serve on the committee which is working to formulate an affirmative action plan for that city. Also, the close working agreement Greensboro has with HUD to find out what contractors are not in compliance enables that office to place more workers on Federally funded construction jobs.

Bill Durante, Project Director of R–T–P, HEMPSTEAD and the staff are proud of the success of the Sheet Metal Training Program and their involvement in it. Of the 27 candidates originally recruited last spring, 18 are still with it; three (3) of them are now working as mechanics.

NASHVILLE continues its pioneering efforts. Quite recently they placed their first millwright apprentice in Local 1544, their first brickmason apprentice in Local Union 44, and their first glazier (who, incidentally is the first black ever to be accepted by that craft) into Local Union 1184.

Congratulations Carl (Assistant Project Director at the NEWARK office) and Mrs. Dawson. They became the proud parents of an 8 pound baby boy born December 15, 1972. Mr. and Mrs. Frank Williams (he's R–T–P's Comptroller) also are proud new parents of a bouncing baby boy who arrived on January 7, 1973.

Through the continuous efforts of Project Director Maurice Sykes and the NEW HAVEN staff, an agreement has been made with I.B.E.W. Local 90 to use that R–T–P office exclusively for recruitment, referral and supportive services for all minorities entering Local 90. The staff has also been named as special advisor to Local 90.

The Weekly Observer of Fern Park, Florida did a full page spread on the ORLANDO operation complete with pictures of Project Director Wardell Sims, Tutor-Recruiter Marvin Woodward and Secretary Lois Washington.

The office in PASCAGOULA proudly announces that they have just placed their first female apprentice for this contract year. Her name is Quincella Kyles, and she is now a sheetmetal apprentice.

In October, the John F. Wegman Foundation donated $2,500 to establish a revolving fund to assist needy applicants going into apprenticeship training through the ROCHESTER office.

By a unanimous decision of the SOUTH CAROLINA Welfare Coalition, Pat Flack of the CHARLOTTE office has been nominated to serve on the State Welfare Board.

The WYANDANCH office, together with other local community organizations, was instrumental in having a day care center constructed, which is 90% complete. The finished structure will house 120 children and forty (40) staff members.

.... ABOUT APPRENTICES

Martin Griffin, a third year sheetmetal apprentice, was cited by Local 55, Sheetmetal Union of Suffolk and Nassau County, as the outstanding apprentice in this craft for the year 1971-1972. A $100 savings bond and a certificate of Outstanding Achievement were part of the award.

At the recent Plumbers Local 2, graduation, many awards were given. Among the R–T–P graduates who received trophies for achieving perfect attendance records for the five-year training were **Victor Woo, Chester Mullen** and **James Dones.** This trio received other citations. **James Dones** was also awarded a trophy for placing third in the fifth year contest.

The Cleveland office reports that painter's apprentice **Harold Johnson** has won second place for his wood staining-open grain panel entry at the annual Ohio State Panel Contest in Columbus.

New York's Local 3, I.B.E.W. and the N.Y. Institute of Technology report that **Peter Padilla**, a second year electrical apprentice is the finest candidate to ever enter the program. Peter is an honor student.

Congratulations **Johnnie E. Conyers, Gregory Cooper, Junius S. Copeland, Willie Perkin, Albert Warren**–new journeymen in New York's Sheetmetal Local 28. **James Carter**, also placed through the Booklyn office, graduated as a painters journeyman.

Willie Felton, one of the few blacks in the Wood, Wire, and Metal Lathers Union Local 46 became a journeyman last year, and was recently appointed shop steward.

When the Boston office held its first "Annual Awards Night", 29 apprentices won awards for outstanding performance. The honorees were joined by their families, representatives from community organizations, members of local building trades, contractors, and the press. **Mr. Carrol P. Sheehan**, regional director for the U.S. Department of Labor, presented the awards. Project Director, **Jim Clark** delivered a stirring speech in which he emphasized the importance of deeper and regular communication between project people, unions, contractors, and minority workers. . . . He also discussed the role of the family in helping the apprentice through his lengthy training process. One of the awardees, to be named at a later date, will have the honour of attending R–T–P's forthcoming annual conference.

Journeyman ironworker **Jimmy Lewis**, who was placed in 1966, is leaving the trade temporarily. He's been accepted as a Petty Officer in the U.S. Navy's Seabees where he will learn underwater welding.

Pioneers Honored in Lexington Ceremony

Two young black men, one a trainee, one an apprentice, were honored at a special banquet held in Lexington, Kentucky, December 4, 1972. The apprentice, Robert Andrews, who was placed in the Electrician's Apprenticeship Program four years ago, became the first electrical journeyman recruited by the Lexington staff. Andrews, a member of I.B.E.W. Local 183, was presented a Certificate of Achievement by the local's business agent, Jessee Steele. Donald Davis, the second honoree, is the first black trainee to complete the Kentucky Highway Training Program.

Robert McGlotten, staff representative of the AFL-CIO Civil Rights Department in Washington was main speaker. Joining honorees and guests were R–T–P national office staff members: Executive Director, Ernest Green; Charles Bremer, Deputy Director, special assistant, Professor Lamond Godwin; Program Director Donald Roffle and Lois Ricks, Administrative Assistant.

Local officials attending the affair included: Harry Sykes, city manager; Charles Gordell from the Electrician's International and Mitch Johnson, I.B.E.W. local 183; Jim Gary special representative from the Operating Engineers International; Charles Cantrell, president, United Steel Workers of eastern Kentucky.

Pictured from left to right are Carroll P. Sheehan, Regional Director of the Dept. of Labour, James C. Clark, Project Director, Boston R.T.P., Inc. and Bobby Hicks, Technical Representative, Xerox Corp.
Mr. Hicks is the first industrial apprentice placed with the Xerox Corp. by R.T.P., Inc.

ANNOUNCEMENTS

R–T–P's FIFTH ANNUAL CONFERENCE, "PERSPECTIVES 73: NEW DIRECTIONS IN MINORITY EMPLOYMENT", WILL BE HELD MARCH 5-7, 1973 AT THE MARCO POLO RESORT HOTEL, MIAMI BEACH.

The tutorial manual *General Aptitude Test Battery* which has been out of stock for some time is now available. Due to an increase in printing costs, we have been forced to raise the price from $1.00 to $1.25.

The Black Women Employment Program will hold its first conference, "Thresholds, Ways to Deal with the Future", January 19 and 20, at Atlanta's Air Host Inn.

CHARLES LUCAS: In Memoriam

Charlie Lucas, friend, brother and craftsman will be remembered by us as a warm, capable and committed human being.

Lucas, a member of the first group of R–T–P recruits who entered Local 301 of the Ornamental Ironworkers in 1968, became a journeyman ironworker in June, 1972. Throughout the four years required to achieve journeyman status, Charles neither forgot the busy people at the Harlem office through whom he was placed nor did he forget the needs of the brothers who passed through behind him – their *inner and* outer struggles to get through the test, the interview, and "holding on" during the rigorous years of on-the-job training and classroom work.

Because of his obvious enthusiasm, drive and natural leadership capability, the more than 100 apprentices who formed Harlem's follow-up club, Trades Unlimited, elected him president. The Club was well organized and just beginning to realize its strength and potential when Charlie met his untimely death, September 30th.

Lucas, who had carved a niche in the hearts and lives of his family, his friends, fellow craftsmen, the members of Trades Unlimited and the staff of the Harlem office, will be greatly missed.

COMINGS AND GOINGS

Carmen Gonzalez and **Sharon Gorman** are the newest additions to the National Office's secretarial staff. In the Finance Department, **Lottie Richbow** moved up to senior accountant; **Viola Brown** has been appointed financial administrative Assistant; **Reggie Easton** is back from temporary tutorial duties at the Brooklyn office, and **Frances Caldwell**, a junior accountant, is the most recent staff addition.

The expanded Contractors Training Development Office staff based at the National Office now includes secretaries **Mel Robinson** and **Denise Young**, senior accountant **Jim Strange**, accountant **Kirk Shah**, senior estimator, **Jesse Ghoah** and **Fitzgerald Grant**, field representative. Former manager **George Knowles** who returned to CTDO's home office in Newark as the new operations manager was replaced by **Herb Waldhauser**.

In BROOKLYN, **Lloyd Eli**, formerly with the Finance Department, has been assigned follow-up duties. **James Champion** moved from the New York Plan to handle tutorial work.

When HARLEM project director **Jerry Dawson** left to go with the Urban Development Corporation, **Bob Sutton**, second in command, was upped to the top spot. **Naomi Franklin** became assistant project director, **Roy Wingate** took over follow-up and **Jose Ramos** is now journeyman recruiter.

Jean Gillis, secretary at the HEMPSTEAD office, is on sick leave until February 1st.

In NEWARK, **George Brown** has replaced **Eugene Black** as placement counselor-tutor. **Gene** is the acting coordinator for the State of New Jersey Highway Program, the spot vacated by **James Seawright**.

Angel Roman is the field representative for the New York Plan in East Harlem. **Carmen Jurjo** is his secretary.

Highway Projects Moving

In order to meet the equal employment opportunity obligation called for by the FHWA Interim Order 7-2 (3), three states, Kentucky, New Jersey, and Connecticut have awarded sub-contracts to R–T–P, Inc. Under these contracts the R–T–P will provide supportive services in connection with approved on-the-job training programs for highway construction trainees to be placed on federally aided state-wide Highway Construction projects.

Other contracts provisions are:

1. Recruitment of trainee candidates, especially minorities and the disadvantaged.
2. Testing, screening and selecting prospective candidates.
3. Giving pre-job orientation to candidates.
4. Provding on-going counseling to trainees.
5. Conducting special tutoring and review sessions in craft-related areas.
6. Follow-up of trainees completing the program for a period of eighteen months.

Although these contracts are quite new, we have already begun to receive favorable reports from Department of Highway Commissioners. R-T-P state coordinators responsible for executing the contracts are: Thomas Stepp, Kentucky, and John Ribot, Connecticut. Eugene Black from the Newark office is acting coordinator for the State of New Jersey.

NON-PROFIT HOUSING CONFERENCE

On September 13, 1972, Mr. Ernest Green served as guest speaker and co-chairman at the Non-Profit Housing Center's National Conference at the Sheraton-Park Hotel in Washington, D.C. Other panelists with Mr. Green were co-chairman Burt Jackson, Director of the Housing Specialist Institute, Samuel J. Simmons, former Under Secretary of HUD and Richard J. Gruenwald, Assistant Secretary for Employment Standards, U.S. Department of Labor.

After making his opening remarks, Ernie then introduced Mr. Gruenwald to the conference participants.

The Conference is given by the Non Profit Housing Center annually for its members to gather together for an exchange of information and discussion of the housing field.

Atlanta, Georgia

Dear Mr. Emory Via,

On March 4-7, 1973, R-T-P, Inc. will hold its Fifth Annual Conference at the Marco Polo Hotel in Miami Beach, Florida. This is the second year that the conference is being held outside New York.

You probably gathered from the Conference and Post Conference Reports that the New Orleans gathering was a big success and provided a good deal of momentum for this year's conference. We hope that Miami will be a like success.

For some time now our efforts have been directed toward securing impressive participants for the panels. Because of your interest in R-T-P, Inc. and continuing support for our outreach efforts, we would like for you to share in the dialogue, and think it will be helpful in your program.

The accompanying information sheet will give you an idea of the accommodations that are available.

We look forward to having you join us.

Sincerely,

Ernest Green

The National Conference of R-T-P, Inc. will be held on March 5-7, 1973 at the:

Marco Polo Resort Hotel
192nd Street - Collins Avenue
Miami Beach, Florida 33160
(305) 959-1461

If you are interested in attending the conference, please submit to Richard J. Easton, Director of Finance, prior to February 9, 1973, $115.00 plus air fare from your point of departure (see attached list).

This $115.00 entitles you to the following:

1. Four nights stay at the hotel, March 4, 5, 6 and 7. However, you must share a room, or there is an additional cost of $11.00 per night.

2. Coffee and Danish in the morning, March 5, 6 and 7.

3. Two Luncheons - March 5 and 6.

4. Banquet - March 7.

5. Night Club Show - March 7.

Please make checks payable to R-T-P, Inc.

I look forward to enjoying the pleasure of your company at the conference.

Sincerely,

Ernest G. Green

REPORT ON THE JOURNEYMAN TRAINING FEASIBILITY STUDY OF THE JOINT APPRENTICESHIP PROGRAM OF THE WORKERS DEFENSE LEAGUE/A. PHILIP RANDOLPH EDUCATIONAL FUND

PREFACE

In March 1970, the Joint Apprenticeship Program of the Workers Defense League/ A. Philip Randolph Educational Fund received a grant from the AFL-CIO Executive Council to develop a "research in action" project on journeyman programs for minority workers in the construction industry. More specifically, our mandate was to study alternative strategies for increasing the number of minority journeymen and clarify the basic issues concerning the feasibility of these various strategies.

One of the most important objectives of this project was to facilitate and improve communication between the construction industry and minority groups. We therefore, established a special committee which included representatives of building trades unions, contractor associations, minority community groups, and persons from the academic community who were knowledgeable about minority employment programs in the industry.

The committee represented a wide range of experience - including that of the unions and contractors in many areas, of the Joint Apprenticeship Program WDL-Randolph Institute, in 21 cities, of the Urban League in 35 cities, of the Mexican American Opportunity Foundation, and others. Members of this committee participated in field research activities which included visits to program sites; seminars with local labor, employer and community groups; detailed interviews with program administrators and minority protest leaders. The committee made special visits to Boston and Chicago for in-depth studies of programs in those cities.

It must be emphasized however, that this is not an exhaustive analysis of programs. While such a study would be extremely useful, the limited resources available to us would not permit us to undertake such a project. Moreover, many of these programs have not been in existence long enough to be meaningfully evaluated.

REPORT ON THE JOURNEYMAN TRAINING FEASIBILITY STUDY

This report is submitted by the Joint Apprenticeship Program of the Workers Defense League and the A. Philip Randolph Educational Fund, to the Executive Council of the AFL-CIO, Feb. , 1971.

This report is necessarily an interim report. The training of minority journeymen for the building and construction trades is a complex area in which a great variety of methods and programs are now in operation. We have not been able to make a comprehensive study of all programs and their interrelationships. This report is an initial summary of our study and our recommendations, which will need to be expanded and updated as time goes on.

The committee feels that we have obtained enough insight from our study to clarify the major issues and make the following preliminary judgments. Our preliminary conclusions are based upon the following assumptions:

(1) There are non-apprenticeable routes of entry into the trades which could be made available to minority workers.

(2) It is essential that programs for minority workers do not result in the dilution of journeyman skills and union standards.

(3) It is essential that the graduates of minority training and upgrading programs should be fully qualified craftsmen with marketable skills, and not partially trained second-class mechanics.

FINDINGS

(1) Apprenticeship Outreach has been successful in increasing the number of minority youth in apprenticeship training programs. By October 1970, programs operating in over 80 cities under the

sponsorship of either the Urban League, or the Joint Apprenticeship program or the Building and Construction Trades Councils have placed 7,813 minority youths in apprenticeship programs in the building and construction trades. (See Table 1). In Chicago, during the few months of operation of the Chicago Plan, between its beginning and December, 1970, 184 minority apprentices were indentured (See Table 2). (In Chicago, apprentice outreach has been going on for several years, and has placed more than 600 minority youths as apprentices.) In Boston, outreach placed 107 minority youth as apprentices in the period between October 1968 and September 1970. (See Table 3). Thus, in spite of declining employment during 1970, outreach programs continue to recruit and indenture minority youth in substantial numbers in apprenticeship programs.

(2) It is important that the local affiliates of the AFL-CIO Building and Construction Trades Department continue, in accordance with their policy adopted in October, 1969, to recruit qualified minority craftsmen who are able to work as journeymen and become full union members. Special outreach efforts to recruit minority journeymen should be initiated where they have not yet been started. While the number of fully qualified minority mechanics who are not union members is not large in most crafts and areas, there are nevertheless a group of such persons who should be encouraged to enter the unions. In Chicago, for example, 203 minorities were placed as journeymen under the Chicago Plan by December 1970. (See Table 2). In Boston 148 minorities were placed as journeymen between October, 1968 and September, 1970. (See Table 3). Implementation of journeymen outreach programs nationwide will reduce unnecessary conflict between the minority community, the contractors and the building and construction trades unions.

(3) The nature and role of training-upgrading programs for partially skilled minority workers is a complex area which involves a variety of experimental programs. We have not, in the limited time alloted to us, been able to make a comprehensive study of all these activities and their interrelationships. However, we did study the training-upgrading programs now starting to operate in Boston and Chicago. In both these cities and others as well minority workers are being trained to be journeymen in special programs. In Chicago 192 minorities were placed in upgrading-training programs by December 1970 (See Table 2), in Boston 44 persons were placed in upgrading-training programs by September, 1970 (See Table 3). These programs are at a beginning stage and full evaluation of them will require additional research.

(4) In many areas, including the cities of Boston and Chicago which we visited, minority staff involved in recruiting, tutoring, counseling and motivating minority workers have made a significant contribution to the success of these programs.

(5) However the limited experience of these programs suggests to us that minority workers who possess some but not all of the skills of a journeyman should be given upgrading-training subject to two principles:

(a) That the apprenticeship programs are not undermined.

(b) That the minority worker is provided skills that will make him a full journeyman with union membership.

(6) Journeyman upgrading-training for minority workers should include:

(a) On-the-job training.

(b) Related instruction off the job site.

(c) Wages commensurate with the productivity of the worker as compared to a full journeyman.

RECOMMENDATIONS

1. Apprenticeship outreach programs should be continued and expanded.

2. Journeymen outreach programs should be established as soon as possible. Existing Apprenticeship Outreach Programs should provide the mechanism for successful journeyman outreach programs.

3. Upgrading-training for partially qualified minority mechanics should be developed in ways consistent with the practices and requirements of each craft. Also, there should be further study as to the most effective ways by which upgrading-training programs can be developed.

4. It is essential that the communities along with the contractors and the building and construction trades unions participate in the implementation of these programs for the following reasons:

(a) There will be less hostility among the parties in accomodating their legitimate interests.

(b) There will be greater chance for success in overcoming certain conflicts that emerge from these interests.

(c) Programs become stronger and more workable since communication is enhanced and mutual respect is developed through such participation.

NOTE:

We would like to stress that this Committee was composed of the representatives of many diverse groups (see the attached list),

including the building and construction trades unions of the AFL-CIO, Contractors Association, Civil Rights groups, minority contractors and several universities. That such diverse groups was able to meet periodicly, exchange views and come to some common areas of agreement is of some very real importance. Each of our organizations benefited from the exchange of ideas and information, and from the research which we jointly conducted.

ECONOMIC CONDITIONS A VITAL FACTOR:

To the degree that there is scarcity in the economy, to that same degree social changes becomes difficult. To the degree that there is abundance in the economy, to that same degree social change becomes increasingly possible. Therefore; if there is, in the near future, a recovery from the present recession in the construction industry, we can expect a more rapid and complete implementation of our mutual aims.

Submitted by Bayard Rustin and
Donald Slaiman,
Co-Chairman for the
Committee.

RTP INC. Recruitment and Training Program

WHAT R-T-P IS

R-T-P, Inc., Recruitment and Training Program, is the pioneer organization of the apprenticeship outreach movement in the United States. It is a non-profit corporation engaged in assisting minorities to gain entry into the skilled crafts within the building and construction trades unions.

HOW IT ALL CAME ABOUT

In 1963 the Workers Defense League, a human rights organization founded in the 30's, responded to civil rights groups picketing construction sites in Harlem, lower Manhattan, Brooklyn and Queens by surveying employment opportunities in the construction industry for Black and Puerto Ricans in New York. WDL soon discovered that minorities never had access to apprenticeship information and had never been recruited. Traditionally, employment opportunities were communicated by word-of-mouth within ethnic groups and through nepotism, closed systems that necessarily excluded non-whites. Using its resources and staff, WDL embarked upon an exhaustive trek to uncover information on training opportunities. This search resulted in a handbook, *Apprenticeship Training in New York,* a guide which was circulated among civil rights organizations, community groups, vocational guidance counselors, and other agencies directly or indirectly involved with minority youth.

THE OUTREACH CONCEPT

Though this handbook represented an informational milestone, it soon became apparent that information alone was insufficient. Announcements of craft openings sent to community groups failed to attract minorities.

Something else was needed.

The outreach concept is based on the assumption that recruitment machinery should be easily accessible to the minority population or in the heart of areas where minorities reside. Further, the staff people heading the recruitment effort should be like the target population, people who know and understand the language, nuances, and consequences of the minority experience. Thus, "reaching out" to the people became a revolutionary concept applied to the construction industry by WDL that has since been applied to non-construction situations.

In 1964, with a $34,000 grant from the Taconic Foundation, WDL opened the first field office in the Bedford-Stuyvesant area of Brooklyn. Two years later, in 1966, the A. Philip Randolph Educational Fund joined WDL as a co-sponsor and the organization was named the Joint Apprenticeship Program (JAP). In 1967, JAP received its first contract award from the U.S. Department of Labor to maintain its operation and to expand in other cities. The Department of Labor is still the primary funding source. In April 1972, JAP became R-T-P, Inc., Recruitment and Training Program, a separate legal entity.

WHAT R-T-P DOES

With the cooperation and endorsement of local building trades councils and contractors associations, R-T-P, Inc. utilizes local employment agencies, minority community groups, community and youth organizations, churches, public school vocational counselors, and the media to:

RECRUIT minorities, 18-26, with extensions for military service for present and prospective openings in certified apprenticeship training programs. R-T-P directs most of its energy to placement in the high-paying mechanical trades, (e.g., sheet metal, pipefiitters, electricians, iron workers, plumbers, operating engineers). Although greater emphasis is placed on these mechanical trades, opportunities are also available for the general and trowel trades like carpentry and bricklaying. Most trades require a high school diploma or equivalency. Some, however, require less than completion of high school.

ASSIST recruits in completing *the application process.* This includes securing important documents like high school transcripts, giving loans for application fees, carfare or transportation, medical examination.

PROVIDE *supportive services* to prospective apprentices, by counseling them on both the positive and negative aspects of the construction industry, and the availability of apprenticeship opportunities, by tutoring them for examinations which cover mechanical reasoning, spatial relations, mathematical computation, problem-solving, and verbal comprehension; coaching the applicants for union interviews through the use of simulated dry-run situations, and providing follow-up services on applicants on and off the job through contact with the individual, written correspondence, and job-site information checks.

Today the R-T-P structure and approach through which more than 6500 Blacks and other minorities have been placed in the building trades apprenticeship programs, stands as a prototype for other apprenticeship outreach programs throughout the nation.

JOURNEYMAN OUTREACH

In 1971, R-T-P, Inc. was awarded an extended Department of Labor contract to recruit minority journeymen for the skilled craft unions. This journeyman component permits applicants with limited or extensive experience to have normal age or education requirements waived.

Reaching out for non-white trainees and journeymen has also been facilitated by contracts with the Cleveland Equal Employment Opportunity Plan and the New York State Urban Development Corporation.

THE TRAINING INSTITUTE

R-T-P, Inc. is the only apprenticeship outreach program that maintains a training program for its own staff as well as personnel from other outreach programs. Staff and personnel from governmental agencies working closely with outreach programs are also able to take advantage of this training opportunity. During these week long sessions, the "nuts and bolts"

tasks of initiating, operating, and developing outreach projects are taught, as well as the AOP's relationship to other programs. Participants also learn about the legislation which supports their affirmative action efforts.

THE OUTREACH CONCEPT EXTENDED

Utilizing the sound outreach techniques — recruitment, counseling, supportive services, tutoring, placement, follow-up — developed through years of working to get minority males into the building trades unions, R-T-P, Inc., has successfully applied these techniques to other employment areas:

CORPORATIONS: Minority placements have been made in large corporations — Eastman Kodak, Xerox, Exxon, Burroughs — to name a few.

CIVIL SERVICE: R-T-P is assisting the National Association of Firefighters in recruiting and tutoring prospective minority firemen in 12 cities.

ROAD BUILDING: Through supportive services contracts with the Department of Transportation in Connecticut, Kentucky and New York, R-T-P has applied the outreach concept to road building.

SHIP BUILDING: The outreach office in Pascagoula, Mississippi is working with minority males as well as Black and white females to place them in skilled craft training in the Litton shipyards.

R-T-P, Inc. is also beginning to address itself to the problems that minority females have in seeking certain kinds of jobs. Based on the experience gained from working closely with the pilot Black Women Employment Program in Atlanta, Georgia, R-T-P opened the Minority Women Employment Program in Houston, Texas this year. This program recruits Black and Chicano college trained women and finds professional, managerial and technical jobs to match their capabilities in both the public and private sector.

PUBLICATIONS

To supplement its supportive services program R-T-P issues several publications. Among those currently available for nominal costs are:

Mathematics for Apprenticeship and General Aptitude Test Battery by Dr. Dennis Derryck, *Black Craftsmen Through History* by Robin Myers, *The Minority Experience in Construction* by Eddie Johnson and the new *Construction Apprenticeship Handbook*. *"Breakthrough"*, the Corporation's quarterly newsletter, serves as a vital communications link between the organization and the public.

COMMUNITY AFFAIRS

Realizing that the Corporation is in the human relations business as well as the recruiting business, staff members on both local and national levels are involved in community affairs. These activities are designed to help people and organizations in cities served by R-T-P and to call attention to the work and mission of R-T-P. In Rochester, for example, R-T-P staff people were instrumental in preparing the training component of the Northeast District Council's Housing Proposal. The proposal, which provides for new housing for Rochester's 7th Ward, is an answer to the housing shortage in the area as well as its environmental upgrading. In Youngstown, the staff conducted a city-wide kidney fund campaign for pipefitter applicant, John Fitzgerald that yielded $10,000. John, whose brother donated a kidney, underwent a successful transplant operation.

On the national level R-T-P brings its work to the attention of the general public through the sponsorship of several community affairs activities which have included: an exhibition of fine African Art from the collection of Bayard Rustin; "Mother and Child" an art exhibition showcasing ten Black artists; and the co-sponsorship of the Fourth Annual Westside Folk Festival chaired by Rev. F. D. Kirkpatrick an aide de camp of the late Martin Luther King, Jr. Noted folk singer Pete Seeger also took part in the Festival.

Compile

ATLANTA ELECTRICAL JOINT APPRENTICESHIP & TRAINING COMMITTEE JAN-MAY, 1966
Mr. Walter Griffin, Training Director (872-6146)
Rm. 137, 795 Peachtree St., Atlanta, Georgia 30308

Class of approximately 25 begins each July. Applications are taken all year round, but application must be made by April 30 in order to get in class. Information and application forms are available at the Training Director's office. Applicant must be between 18 and 24 years of age (may be as old as 28 if he's been in military service), present a birth certificate, a copy of high school record proving he has a high school education, or have taken and passed a G.E.D. test. Applicants must take an aptitude test at the Georgia State Employment Office and be interviewed by the JAT Committee.The Committee sends recruiting leaflets or information to the State School Superintendant, to the Labor Journal and to the local newspapers. The Committee is made up of 3 labor representatives and 3 management representatives.

ATLANTA IRONWORKERS JATC
Mr. Benjamin Lowry, Coordinator (524-1223)
1014 Edgewood Ave., N.E., Atlanta, Georgia 30307

Classes begin when there is a need for ironworkers and whenever various complex and complicated circumstances warrant, so the coordinator said. Anyway, there is no definite starting time and he put the Council on his mailing list to be notified of times to make applications. They have not needed to advertise in order to fill the training classes up to now, but for the next class they plan to send out information to the city vocational schools and high schools and to the Georgia State Employment Office. Applicants must be between the ages of 18 and 30, have a high school education, take an aptitude test and be personally interviewed.

ATLANTA PAINTERS JAC
Mr. J.J. Webb, Coordinator (373-1463)
263 Casson St., Atlanta, Georgia

They train people as they qualify, no definite number of people in a class, applications taken anytime. Applicants must be between 18 and 24 years of age, have a high school education or equivalent, be in good health. Each applicant is interviewed by the board of the JAC, which is made up of 3 labor and 3 management representatives. They plan to send out notices to schools superintendents, etc., since they do need trainees. Information and application forms may be obtained from the coordinator.

ATLANTA BRICKLAYERS JATC
Mr. Elmer Holden, Chairman (522-2736)
121 Memorial Dr., S.W., Atlanta, Georgia

A new training program begins every 3 months. In order to get in the April program, applications must be in by March 15. To get information or to make application, a person should go to the office on Memorial Dr., (2 block behind Capitol)or to the State Labor Building on Trinity Ave.. Applicants must be between 17 and 24 years of age. There are no educational requirements to be met. They have not done any advertising or active recruiting in the past. Their board also has 3 labor and 3 management representatives.

ATLANTA GEORGIA SHEET METAL JAC

Mrs. Ruth Stanley, Office Secretary (873-3706)
250 Tenth St., N.E., Atlanta, Georgia 30309

The training program runs with the public school year. Applications are taken in June, July and August for the class which begins in September, the first Tuesday after Labor Day. Applicants must be between 18 and 26 years of age, have a high school education, pass a math test and an apptitude test (Georgia State Employment Office). They are interviewed by the committee, which is made up of 3 labor and 3 management representatives. Recruiting has been done by sending notices of beginning classes to State School Supt., and to the Journal of Labor.

ATLANTA PLUMBING & PIPEFITTING JAC

Mr. Curtis F. Green, Training Director
Suite 200, Mechanical Institute Bldg.
742 Ponce de Leon Place, Atlanta, Georgia

There are two training classes beginning each year, corresponding to semesters in public school, i.e.g., in January applications are taken for the class which will begin in February and in the summer applications are taken for the class which will begin in September. It is a 5-year course with the trainee working on the job during the day at union wages and going to school at night. Applications are made only through the Georgia State Employment Office where a general aptitude test is given. Applicants must be between the ages of 18 and 25, pass the tests given at the Georgia State Employment Office, pass math test at the JAC office, be a high school graduate, and be personally interviewed by the committee. The Committee is made up of 4 labor and 4 management representatives. No advertising.

ATLANTA CARPENTERS JAC

Mr. Charles Ingraham, Chairman (522-3648)
c/o Flager Company
305 Techwood Dr., N.W., Atlanta, Georgia

Applications maybe made at any time at the local Carpenters Union (250 Tenth St., N.E.). Applicants must be between the ages of 18 and 24 unless a veteran, in which case older people may apply. A high school education or equivalent is required and the applicant must pass an aptitude test at the Georgia State Employment Office. The training program is continous with trainees being taken at any time they qualify. It is a 4-year program consisting of on the job training during the day and classes at night two nights a week. The Apprenticeship Committee is made up of three union members and three management members who screen the applicants when they meet once a month. They have not sent out announcements on the training program in the past.

ATLANTA PRINTERS JAC

Mr. William Baker, Chairman (873-1805)
Printing Industry of Atlanta (this is a Trade Assn.)
881 Piedmont Ave., N.E., Atlanta, Georgia

There are actually two apprenticeship committees set up - one is for Pressman, and one is for Compositors. The training programs last from 4 to 7 years on-the-job training, depending upon the job you want. A high school education or

Address

equivalent is necessary and the applicant should be between 19 and 25 year of ages. The first step is to go to the Printing Industry Office on Piedmont and fill out an application blank and talk to the Chairman to get an over-all picture of the printing industry. Then make an application with a printing company. After you have the job, so to speak, you must go over to the Georgia State Employment Office to take an aptitude test. If you qualify, then you are screened by the apprenticeship committee. The Chairman says they need more workers but that they make no announcements of training programs and do no advertising except to go to high schools on "Vocational Day"and talk about printing to interested students.

CAPITOL CITY MACHINE SHOP

Mr. W.H. Strickland, Capitol City Machine Shop
301 Pryor St., S.W., Atlanta, Georgia (522-7739)

Staff or U.S. Department of Labor? Free or not? Program

The Capitol City Machine Shop is a private industry and they run their training program to train their own employees. They are independent of the union and of the Dept., of Labor too, but they are registered with the latter. They require a high school education and the applicant must apply at the shop. The training consists of working 4 years under a journeyman. Mr. Strickland says recruiting is no problem; they always have boys wandering in who want to work.

ATLANTA LATHERS JAC

Mr. H.N. Bowen, Instructor of the Training Program (home-636-0202)
Mr. Alexander Jackson, Bus.Mgr., for the Union (525-4478)
158½ Auburn Ave., N.E., Atlanta, Georgia

Applicants must have an eighth grade education, pass an aptitude test, be between 18 and 24 years of age. They apply at 158½ Auburn Ave., on Monday and Wednesday nights at 6:30. The apprentice goes to school two nights a week and works three years on the job under a journeyman. They take apprentices as they need them, always keeping the ratio of one apprentice to 5 journeyman. They have been integrated for years and have about the same number of Negro and white workers. When I asked whether they would accept a woman, Mr. Jackson said they did not want to discriminate, but he did not really think its suitable work for a woman. He likened it to a man applying for a bunny's job at the Playboy Club!

Why have not had for other

NATIONAL BISCUIT COMPANY

Mr. Vinson, Mr. Johnson, Mr. Turner, National Biscuit Company (758-7461)
Mfg. Plant, 1400 Murphy Ave., S.W., Atlanta, Georgia.

This also is a private industry program training apprentices to work in its own machine shop. Applicants should have a high school diploma and/or some training in high school or vocaional school or some work experience. They should be between 18 and 30 years of age although exceptions are made in some cases. Applicants are first hired by the company and then apprentices are screened by the committee. It is a 4 year on the job training program with school two nights a week. The recruits come through the union or word of mouth. To Mr. Turner's knowledge no Negroes have ever applied.

Why not compared up for other

LOCKHEED-GEORGIA COMPANY

Mr. H.H. Mann, Apprentice Training Coordinator
Lockheed-Georgia Co., Dept., 89-01 (424-2782)
Marietta, Georgia

Lockheed always has more than enough applicants for their apprentice programs (in March they started two classes, 30 apprentices altogether, and there were 640 applications). They do not have regular classes beginning at certain times, but they train in groups. About 2/3 of the apprentices are from the Lockheed plant and the other 1/3 have been recruited through their advertising in the newpapers. Applicants must be between the ages of 18 and 26 and have a high school diploma. They must pass a rigid test battery, and a strong background in math is essential. They are interviewed by a sub-committee and then screened further by the full committee. They are integrated but Mr. Mann thinks the heavy math requirements are responsible for having so few Negroes. The 3-year apprentice program is divided into 12-week periods (9-week job assignments and 3-week class instruction). During the last of the training program tests are given to channel some people into management.

ATLANTA ROOFERS JAC (688-2543)

Mr. Larry Shields
208 Red Rock Bldg., Atlanta, Georgia

Mr. Larry Shields, Executive Secretary, Master Roofing and Sheet Metal Contractors of America Inc., says top pay for a journeyman is $2.85 an hour. Common laborers in Atlanta get $2.40("why should anyone want to be an apprentice and go to school for 2 years to get $2.85?") Unions can't pay more - the government and Contractors restrict the union wages. Roofing is hard work and un-glamorous, to say the least. 25% of the work force on a job have to be replaced each week because they don't really want more than a temporary pay period. They recruit at the city jail, Decatur St., triangle, union mission, etc.,

Last March, the Sheet Metal workers roofers,carpenters, construction etc., set up a "Construction Career Day" at Georgia Tech for high school seniors in Atlanta, spent much money and time on publicity program, etc.. 45 people showed up, mostly girls interested in secretarial positions.

February 2, 1967

Dear Emory:

Again you are out of town - why not stay with us some time as we continue to need all that you provide.

Seriously, I called the First Federal Building and we are too late to get any room except Room "E" and after "Al" mentioned it was not good, I had to revamp my thinking for the meeting of 2/16/67.

Would it be possible for us to have it in the Conference room of the Southern Regional Council?????

It must be as I sent the invitation out indicating same.

I have some good news.....one of the youngsters I sent to apply for the Sheet Metal Apprenticeship program has been accepted and will begin his training Monday, 2/6/67. How about that??

See you soon.

B.L.

Jane: rate for us to be prepared for this meeting - chairs, pads, where to order lunch, drinks, etc. 12 - 2:30

Labor Agency Raps 500 Apprenticeship Programs on Their Alleged Discrimination

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Labor Department has threatened disciplinary action against some 500 union-employer-run apprenticeship programs for assertedly failing to comply with nondiscrimination regulations.

The action was disclosed in a memorandum from Assistant Labor Secretary Stanley Ruttenberg to Hugh Murphy, head of the Labor Department's Bureau of Apprenticeship and Training. Mr. Ruttenberg said programs that hadn't shown progress in filing proof of nondiscrimination in line with 1964 regulations should be decertified; that is, Federal sanction of the union-employer programs as meeting certain minimum standards would be removed.

As a result of the Ruttenberg order, letters were sent early this month to some 500 apprenticeship programs in 21 states warning them they were expected to comply by April 10; some 1,700 such programs in these states are registered with the bureau. Among programs specifically criticized were those involving the plumber's union and the typographical union. Plumber's union president Peter Schoemann told his local unions involved in the Rutteberg order to disregard the compliance command until they checked with him; Mr. Schoemann denied his union was discriminating.

The bureau of apprenticeship and training has jurisdiction over programs in 21 states that don't have their own apprenticeship councils. By meeting certain minimum standards, union-employer-run apprenticeship programs can register with, and be recognized by, the bureau. The procedure is entirely voluntary and several large apprenticeship programs don't register with the bureau.

The recognition accorded the programs permits the hiring of apprentices on Federal construction jobs at less than journeyman rates.

If an apprenticeship program still doesn't choose to comply with the nondiscrimination regulations, there is little the bureau can do beyond removing the program's badge of respectibility. However, other Federal agencies might step in with disciplinary action on the ground the program is violating Federal civil-rights law.

The Government doesn't directly finance apprenticeship programs, but various types of manpower-training funds can be funneled through them. To qualify for these funds, the programs have to meet nondiscrimination tests.

The Ruttenberg order was viewed in some quarters as a move to force the bureau to move more aggressively in seeking compliance on nondiscrimination regulations. The bureau has been criticized in some union and Government circles as lacking sufficient zeal when it comes to helping eliminate discrimination in union programs.

PACT

Minutes of the P.A.CCT.TMeeting
April 27, 1967

The meeting was opened by Emory Via who served as chairman in the absence of Ben Lewis. Dr. Brantley of Clark College was introduced as was Mr. Richard Prim who substituted for Mr. Linwood Whitlaw.

The purposes of P.A.C.T. were briefly reviewed. These included a summary of the information gathered to date, the focus on apprentice programs in the building trades for the present, and a concern for the eventual ending of discrimination in all skilled training and employment.

Mr. Ben Brown was welcomed again as a new staff person with the Atlanta Urban League working with their LEAP project. Mr. Brown reviewed some of his activities since the last meeting that related to the group's interests. He had met with Dr. Standridge and felt that the meeting was a good beginning. He was sorry not to have had questions and suggestions from other PACT members to take to Standridge. It was suggested that Standridge might be invited to a subsequent PACT meeting. Also Mr. Lockhart might be an alternate visitor.

Brown also talked with Mr. Butler, President of the Atlanta Labor Council. Butler was interested in our project and expressed willingness to cooperate in work with unions regarding the employment of Negroes.

Contact had been made by Brown with the American Can Co. There will be some possibility of work there even though their skilled programs are not apprentice programs.

Brown also visited with some high school counselors regarding skill training opportunities for high school graduates. He reported that the Urban League office now has 200 cards of young men interested in skilled training.

Seven students from several of the schools were scheduled to take the Employment Service test to qualify for apprentice programs the next day (Friday, April 28). They are hoping to qualify for the electricians apprentice program. It was recognized that though the time was short and the students were taking the test with less preparation than would be desirable, that it was good to move ahead in order to be prepared for the cut off date for the cut off date for the electrician's program. Dr. Brantley suggested that some follow-up be conducted to determine where the students felt they had difficulty or strengths in the testing procedure. Mr. Brown will consult with Dr. Brantley on such a follow-up procedure.

It was suggested that further since the chances of failure on the part of these first seven might be high, that Mr. Brown and PACT be prepared to consult further with the young men to keep morale high and to provide them with an opportunity to prepare for

the next opening.

It was suggested that Mr. Via follow up with Earnest Greene of the Workers Defense League apprentice program in New York about using Greene and Dennis Derrick for consultation with PACT, and other agencies interested in problems of recruitment and training. Mr. Brown sais that he would like to cooperate in coordinating such an undertaking.

Comments were made about the role of unions, management and government in employment discrimination. Miss Cooper thought it would be wise to determine if students at Southern Technical Institute would be interested in further skilled training. It was agreed that their status--whether they should consider apprentice programs, skilled employment, or other training--should be investigated.

Dr. Brantley told the group that the University of Georgia is engaged in a project to identify students for vocational and skilled training. Their Project FAIT has published a directory which should be of great interest to Pact.

Dr. Brantley observed, with general agreement, that the counselors themselves needed assistance in knowing about skilled traing opportunities and as to when to recommend such training to their students.

The time for the next meeting was set for May 11, 12:00, Urban League Office, 4th Floor, 78 Marietta St., N.W.

Negro and unions can't close gap

By SAMUEL SHARKEY JR.
Star-Ledger Washington Bureau

SUNDAY STAR-LEDGER, April 23, 1967

Of the AFL-CIO's 13.5 million members in 129 unions, 1 million to 1.5 million are Negroes. Yet only three AFL-CIO unions (with 20,000 members) have Negroes as presidents, and only one Negro sits on labor's top governing body, the AFL-CIO Executive Council.

Sixteen international unions and more than 150 locals still are not desegregated despite all-out efforts from AFL-CIO President George Meany on down.

As of last week, 1,333 charges of discrimination by

Sharkey

trade unions had been filed with the U.S. Equal Employment Opportunity Commission (EEOC).

At least 128 union locals still are balking at complying with federal anti-bias rules on apprenticeship.

Seniority rules, parallel white and Negro promotion lines, and dual black and white locals still form effective barricades against trade union integration.

Although many Negroes hold subordinate offices in unions, few stand an early chance of being elected to a presidency.

This situation exists despite years of pledges, speeches, statements and resolutions from all levels of the AFL-CIO on ending union discrimination.

* * *

The rate of progress is [illegible] Even the most optimis- [illegible] labor leaders concede it will be years before their ringing promises of full racial equality in unions will be close to realization.

Part of the problem is that nobody really knows exactly how many Negroes are members of unions. Top AFL-CIO officials estimate the figure is about 1.5 million. They admit, however, it could well be as low as 1 million.

Some unions refuse to classify their members by color, saying this is a racist action.

Others do keep numerical lists in the belief that the best way to measure progress is to count their minority members periodically.

Secretary of Labor W. Willard Wirtz took that position last fall in reversing a long-standing Labor Department policy of not keeping statistics by race.

Wirtz is undeterred by charges of racism by civil rights groups, so the federal government is beginning to improve its understanding of just how extensive the plight of Negro workers really is in relation to trade unions.

* * *

New government information shows many Negores are affected not merely by discrimination in hiring, apprenticeship entry, promotions and seniority, but more importantly by fear of those barriers, which are often thrown up by unions themselves.

The result is a running contradiction between officially stated AFL-CIO high purposes and bias in lower level implementation of those promises.

William F. Schnitzler, AFL-CIO secretary treasurer and chairman of its civil rights department, and Don Slaiman, director of the department, are optimistic on the future but candid on current shortcomings.

XERO COPY XERO COPY XERO COPY XERO COPY

In interviews, both pointed to progress, particularly in reducing the number of dual black and white locals. But both agreed serious problems remained in union barriers in hiring, apprenticeship entry and promotion.

The variety of unions involved indicates the difficulties in solving problems, as each union has a distinct set of issues, rules or policies. Schnitzler and Slaiman ticked off these unions:

The musicians, iron workers, steel workers, painters, sheet metal workers, lathers, roofers, plasterers, paper makers, plumbers, carpenters, cabinet makers, meatcutters, pulp makers, printers and at least one rail brotherhood.

* * *

Where dual unions are concerned — the musicians form the major group — the lack of integration frequently is a result of refusal by the Negro local to merge with the white one in the same city.

Negroes fear loss of control, loss of prestige, loss of their local money chest, loss of delegate privileges at conventions, lowering of status in the community and similar problems.

In many cases, Negro locals are richer or have better employment rates than their white counterparts, and are strongly opposed to giving up those advantages.

On apprenticeships, Schnitzler and Slaiman acknowledge some unions have established perhaps arbitrarily high standards in order to limit or control those seeking entry.

AFL-CIO News 5-7-67

Apprenticeship Rolls Reach 18-Year High

The number of persons training in government-registered apprenticeship programs rose to an 18-year high in 1966.

Labor Sec. W. Willard Wirtz reported that 207,000 apprentices were receiving skilled training in programs registered with the Labor Dept. or with state apprenticeship agencies at the end of the year.

He said the 1966 figure was the highest "since the influx of veterans in the immediate post-World War II period replenished the war-starved ranks of apprentices."

The net increase of 23,700 apprentices between 1965 and 1966 was the largest since the 1945-46 period when the one-year gain was 74,200.

The Labor Dept. also cited these other statistics:

- The 85,000 new apprentices registered in 1966 was a 19-year high and 16,500 more than in 1965.
- Last year 26,400 trainees completed their apprenticeships, the largest number in five years and 6 percent more than in 1965.
- With a nationwide 11 percent net increase in the number of apprentices, the eight states with the biggest gains were: Illinois, up 31 percent; Indiana, 30 percent; Michigan, 27 percent; Ohio, 23 percent; Connecticut, 20 percent; Wisconsin, 18 percent; Texas, 17 percent, and Pennsylvania, 14 percent.

Wirtz cited "these solid and growing advances" as indicating "the vitality of labor and management in this training system."

The Labor Dept.'s role, he said, is to help unions and employers expand the apprenticeship system and assure equal opportunity in its functioning.

PACT MEMBERS

Members Present

Eunice Cooper	NAACP
Noyes Collinson	American Friends Service Committee
Richard Lyle	Atlanta Urban League
Ben Brown	Atlanta Urban League
Richard Primm (re: Linwood Whitlaw)	Equal Employment Opportunity Compliance Office
Emory Via (Presiding)	Southern Regional Council
Dr. Brantley	Clark College

Members Absent

Benjamin Lewis	Nat'l Urban League (LEAP)
Fred Bennett	Breadbasket ($CLC)
B.R. Brazeal	Morehouse College
Al Henry	Ga. Council on Human Relations
E.T. Kehrer	AFL-CIO Civil Rights Dept
Harold Kramer	E.E.O.C.
Eliza Paschall	City Hall - Atl Commission on Community Relations
Robert Bennett	Laborer's International Union, Local 438

MINUTES OF THE P.A.C.T. MEETING
APRIL 27, 1967

The meeting was opened by Emory Via who served as chairman in the absence of Ben Lewis. Dr. Brantley of Clark College was introduced as was Mr. Richard Primm who substituted for Mr. Linwood Whitlaw, of Equal Employment Opportunity Compliance Office.

The purposes of P.A.C.T. were briefly reviewed. These included a summary of the information gathered to date, the focus on apprenticeship training programs in the building trades for the present, and a concern for the eventual ending of discrimination in all skilled training and employment.

Mr. Ben Brown was welcomed again as a new staff person with the Atlanta Urban League working with their LEAP project. Mr. Brown reviewed some of his activities since the last meeting that related to the group's interests. He had met with Dr. Standridge and felt that the meeting was a good beginning. He was sorry not to have had questions and suggestions from other PACT members to take to Dr. Standridge. It was suggested that Dr. Standridge might be invited to a subsequent PACT meeting. Also, Mr. Lockhart might be an alternate visitor.

Mr. Brown also talked with Mr. Butler, President of the Atlanta Labor Council. Mr. Butler was interested in our project and expressed willingness to cooperate in work with unions regarding the employment of Negroes.

Dr. Brantley of Clark College asked Mr. Brown what the procedures were for providing manpower for the various unions. Mr. Brown replied that the men who plan to attend college and are interested in this apprenticeship training program are given the opportunity to do so. Brown further explained the various methods of how men are selected, referred, and placed. He mentioned interviewing, counseling, testing, referral, and follow-up. Selection and referral to the unions, employers, apprentice programs, etc., depended upon the skill, knowledge, training, pre-vocational training, basic education, and work experience of the individual concerned.

Emory Via told members he felt that we must reach the persons who may never get to college; to try to train them for the apprentice program in order to have a trade. There is wasted and unknown talents in many a disadvantaged person who may never reach college, but they can be reached for training and developing their talents and skills. Dr. Brantley spoke about working on a project to identify students for vocational and skilled training. The University of Georgia is engaged in this project, called, FAIT, which has published a directory which should be of great interest to PACT. The counsellors can sometimes identify the good students, and they are the key to the problem of providing the manpower for the training program.

Emory Via suggested pre-test training, for those contemplating on taking examinations, since those that have never had any experience or knowledge in taking tests, are disillusioned when they fail the tests. There were some men that had passed the Sheet-Metal tests and were then able to secure the jobs. Via further suggested that the proper instructors, or experienced knowledgeable persons, with materials for pre-test training, sample examinations, etc., could be set up to prepare a student to pass the examination. Mr. Brown concurred. Dr. Brantley observed that the need necessary for students to pass tests, was to have a number of experiences relating to the test, so that he would have knowledge of what he is doing and the test he is taking.

Contact had been made by Brown with the American Can Company. There will be some possibility of work there even though their skilled programs are not apprentice programs.

Brown also visited with some high school counselors regarding skilled training opportunities for high school graduates. He reported that the Urban League office now has 200 cards of young men interested in skilled training.

Seven (7) students from several of the schools were scheduled to take the Employment Service test to qualify for apprentice programs the next day (Friday, April 28). They are hoping to qualify for the electricians apprentice program. It was recognized that though the time was short and the students were taking the test with less preparation than would be desirable, that it was good to move ahead in order to be prepared for the cut off date for the electricians' program. Dr. Brantley suggested that some follow-up be conducted to determine where the students felt they had difficulty or strengths in the testing procedure. Mr. Brown will consult with Dr. Brantley on such a follow-up procedure.

It was further suggested that since the chances of failure on the part of these first seven (7) might be high, that Mr. Brown and PACT be prepared to consult with the young men to keep morale high and to provide them with an opportunity to prepare for the next opening.

It was suggested that Mr. Via follow up with Earnest Greene of the Workers Defense League Apprentice program in New York, about using Greene and Dennis Derrick for consultation with PACT, and other agencies interested in problems of recruitment and training. Mr. Brown said that he would like to cooperate in coordinating such an undertaking.

Comments were made about the role of unions, management, and government in employment discrimination. Miss Eunice Cooper thought it would be wise to determine if students at Southern Technical Institute would be interested in further skilled training. It was agreed that their status--whether they should consider apprentice programs, skilled employment, or other training--should be investigated.

Dr. Brantley observed, with general agreement, that the counselors themselves, needed assistance in knowing about skilled training opportunities and when to recommend such training to their students.

The time for the next meeting was set for Thursday, May 11, 1967, at 12:00 noon, National Urban League Office, 4th Floor Conference Room, 78 Marietta St. N.W., Atlanta, Georgia.

PROCEEDINGS

of the

TWELFTH NATIONAL LEGISLATIVE CONFERENCE

BUILDING AND CONSTRUCTION TRADES DEPARTMENT

AFL-CIO

First Day

June 12, 1967

WASHINGTON HILTON HOTEL

WASHINGTON, D. C.

REMARKS OF THE HONORABLE W. WILLARD WIRTZ, SECRETARY OF LABOR

SECRETARY WIRTZ: Thank you very much.

I know this program is running behind on time. I see people waiting here in the wings whose words are more important to you than mine. I am going to forego any speech and use these ten or twelve minutes simply to bring several matters of business to your attention, and be done with it.

As a matter of fact my luck with speaking engagements is running very poor recently. Several weeks or months ago I

agreed to two speeches for the last two days. One was at 11:00 o'clock last night, the other at 10:00 o'clock this morning. The one last night came just at the moment in which the Security Council was meeting on the subject of the problem of the Near East and my speech was to the Israel Independence Ball. I knew exacty what to say. It is another quirk of history that this morning two things hapened at 10:00 or 11:00 o'clock. One is my remarks to you, and the other is the convening of the House Committee on the Railroad Legislation, to which George Meany has just referred.

They are not very good breaks as far as a speaker's schedule is concerned.

On the matter of the Railroad Legislation, let me say just this—and really none of it in contradiction to what George has just said.

Nobody that I know likes the prospect of legislation on the railroads. I am not the least bit inclined to argue as to what it ought to be called. It doesn't make any difference. There is no question about the fact that there is an element of finality and an element of compusion in it. The important thing as far as I am concerned is this: Every single effort was made to avoid that matter coming to a head. And by every single effort I mean efforts of some ten to twelve months, participated in by the parties, and by the Government. Twice the Congress extended the legislative period in the hope that collective bargaining could be made to work. There are two emergency Boards that were set up to help make the matter work. It didn't work.

The situation today is that unless there is an alternative answer, this country's railroads come to a halt on June 19.

I don't defend the legislation in terms of principle. I defend the legislation in terms of necessity, and express the deep commitment, the idea that we must today, under the present circumstances in the work and the Nation, have the services of the railroads, and beneath that, the complete dedication to the idea of collective bargaining to the belief that compulsory arbitration is wrong, and to the proposition that everything must be done in this country to preserve free collective bargaining, to its fullest opportunity.

I express only the feeling that this, as I say, is legislation

of necessity. I would wish greatly the matter never had come up again.

With respect to the legislative program before you I take as my checklist the same checklist that you have. I will run down the five items that are on there and very quickly.

There is little I can say with respect to on site picketing, HR-100, which you haven't said, which Leo Hant said, which George Meany hasn't said, and which I haven't said dozens and dozens of times before. The time for the relevance of talk as far as Situs-Picketing is concerned is passed. As far as the talk is concerned, I just say here simply and on the line, I am for, one hundred percent, that legislation and will do everything possible as I have in the past to support it in the interests—

(Applause.)

and I say beyond that, whether there will be this legislation this year depends in my judgement on what you people do in the next two days. And it is just that simple.

You are going to hear, because I have heard it, a dozen times a week for the past two or three weeks, the people who previously agreed to support this legislation now find some reason in the Supreme Court decision not to support that legislation.

I say to you that there is no connection between the two, and anybody who takes that position is trying to get off what he thinks is a hook and he should not be permitted to get off it. The proposition is just as right—

(Applause.)

And furthermore, it isn't a hook. If he would stop talking about labels and start talking about the simple question of whether there is the same justification for picketing and for striking in the construction situation that there is in every other situation, the answer to that would be dead clear, and the issue is just that simple.

I wish you the best of luck and offer you the fullest cooperation, but say to you, what happens on that is very much in your hands. I am just as plain spoken about it as I can be.

With respect to the other matters on this list, with respect to trade promotion funds, we are working with you, with your legislative representatives on that, in complete source of it.

Apprenticeship

Similarly the police option agreements and the Davis-Bacon action. Similarly and with a special strength of feeling about the construction safety program which we have talked too much about and we haven't done enough about. And we look forward along the lines we have been pressing. Surely with respect to the Social Security Amendments there can be no question or doubt whatsoever.

I should like to add at this point, because that is all I propose to say about the legislative program, which is that we are one hundred percent in support of every piece of this program. I should only like to add to that the expression of gratitude for the opportunity to work with Neil Haggerty, and for a man for whom I have the greatest admiration and respect, your legislative representative on this.

Walter Mason and I have worked together for 20 years now, in one way or another. I know of no other situation in which one man has expressed the continued dedication to the purpose of the Situs-Picketing legislation. I know of no other situation in which anybody has been caught by as many unfortunate accidents, including the unseemly performance of last year.

As far as that bill is concerned, Walter Mason, I take my hat off to Walter for the kind of work he has done in this situation.

I would like to spend the last four or five minutes on a matter which has come up in one form this morning which underlies a good deal of this legislation. I would like to speak briefly and directly to the point on which George Meany touched in connection with the Model Cities Program.

Gentlemen, in the Building and Construction Trades there is one area in this whole affair with respect to which there has been a lack of complete working understanding between the Building Trades and the Department of Labor. This has to do with the apprenticeship program and it has to do particularly with the matter of the employment of minority members or the bringing of minority group members into the apprenticeship program. I would like to say these few things and very briefly.

The past, and by the past I mean the past three or four years, has been characterized by the pointing of a finger on the matter of racial discrimination at the building trades which is totally unfair. There is no question about two things: First, that there has been a differentiation on the basis of race as the

product of history in the Building Trades, of most building trades which is not characteristic of others.

The second truth, that there is today, there has been recently, as far as my fairest appraisal of it is concerned, as complete, as honest, as sincere and as potential effective a movement to meet this problem in the building trades as in any other American institution in the labor movement or outside it.

Unfortunately this may be a period in which every single case of there being no minority member in an apprenticeship program has been the subject of front page attention and headlines. And there has been no comparable attention to all of the things which have been done to meet that problem. I wish that there were some way of getting just not equal time but ten percent time for the kind of thing that is going on, and Pete Brennan knows what I am talking about, in New York—so does Harry Van Arsdale and a lot of others—the way we worked out in New York, and by we, I mean the Department of Labor and Civil Rights group, the programs in New York City, Westchester, Buffalo and Cleveland.

I wish there could have been just a little attention last week when the leaders of the Building Trades Council of Baltimore sat down with the President of the National Urban League and the local Urban League to work out a program there for meeting this problem.

I wish there could be a little attention to the fact that the same thing is going on in Detroit, St. Louis, Philadelphia, Portland, Atlanta, Georgia.

I wish there could be just a little attention to what the Building Trades, Jay Turner and his colleagues, taking the lead, have done with the Government and with the Civil Rights groups here in the City of Washington so that you can stand today and say with complete fairness, that the matter of the color of a boy's skin when he comes to an apprenticeship in Washington, D. C. doesn't make one single bit of difference. I say it that way.

(Applause.)

You know and I know that parts of the problem remain. You may not know what I know, that when four years ago, now three years ago, we sent out requests through the Bureau of Apprenticeship and Training for statements of compliance

by the Apprenticeship Program in this country, compliance with the Civil Rights Rules, 44,000 went out, and as of today only 7,000 have been returned. That is three years later. And that presents a problem which wuold be a mistake for anybody to disregard. It is not being disregarded.

You know, some of you, and all of you should, a little of the current status of this matter. I would like to just tell you of the telephone call which Pete Schoemann, Stanley Ruttenberg, our Manpower Administrator had, now about five or six weeks ago, and what has come as a result of that.

There has been the establishment of a meeting on May 2 or 3, of a five-man committee from the Building Trades, of which Pete is a member and Hunter is a member, Gordon is a member, Morris is a member, Fosco is a member. Neil Haggerty will be with them, that will be meeting a week from today with Under Secretary of Labor Jim Reynolds, with Stanley Ruttenberg, the Manpower Administrator, with Hugh Bradley, Bureau of Apprenticeship and Training, and I want very much to attend part of that meeting, in which we will say to each other what has been the reason for the misunderstanding. There may be a lack of confidence. There hasn't been a lack of communication in terms of volume, but there may be a lack of communication in terms of understanding. The time has come to move on from here.

I would like to call to your attention two recent reports on this subject. The facts are pretty thoroughly assembled. The first document to which I call your attention is the report of the New York City Commmission of Human Rights of about two weeks ago, which as far as I am concerned represents zero contribution to the understanding of this problem because it deals with all of the stereotypes of five to ten years ago, purports to be a study of what is being done about minority participation in apprenticeship programs in New York City; says almost nothing about what Pete and Harry and their colleagues have done, and take that or eight unions which had the hardest time and leaves out of account the unions which have moved rapidly ahead in this particiular area, and comes up with the kind of report which attracts front page headlines.

Then I would like to you to know about a report entitled "Negro Participation in Apprenticeship Programs" which has been prepared by the Manpower Administration of the Depart-

ment of Labor, by Mr. Marshall, and Mr. Briggs, which has come out now, several months ago, with a formal release very recently. We can get no newspaper attention to it at all because it is as fair-minded a document as I have ever seen. It criticizes you, it criticizes me, it points out the inadequacies in meeting the problems of discrimination. But it then goes to point out, very deliberately, and very carefully and in detail, the problem of bringing qualified minority group members to the apprenticeship program.

It says to you and says to us, you have some things left to do as far as eliminating discrimination is concerned.

But the problem here is central today, the problem of being sure that there are people of all races qualified for these programs, and it concentrates on the problem of the disadvantaged.

I hope with all my heart that next Monday will be a turning point in the history of lack of complete understanding, of lack of communication. I hope with all my heart that as of that point we will recognize clearly that the time for recrimination is past, that the information is now before us, and that we are in a position to move ahead to meet a problem which has been distorted out of all reasonable perspective.

I ask you for your cooperation, your confidence now, and your understanding. I offer you our complete cooperation and confidence and our understanding of this situation.

As this point of minority group participation borders on the apprenticeship program, let me just say this in words which parallel the words George Meany already used: As far as I am concerned the Apprenticeship Program is the best work training program which has ever been designed in this country. It will remain the best work training program in this country. It should be conducted by those who know their business, as George said. It ought to be recognized that these apprenticeship programs are joint programs in the communities in which they are developed. It ought to be recognized that the answers should come basically through this apprenticeship program.

In that connection one final point of business, again a matter of being sure there is as little misunderstanding, and as much understanding as possible. You will know, some of you, that I took the position last year, a position of question about the

deferment under the Selective Service Act of some apprenticeship programs. I just want to be sure that you understand my position on that. I have been opposed personally to any deferments from the Selective Service program, including college deferments.

(Applause.)

The sentiment of the country and the sentiment of the Congress is apparently different from that. I respect that different view. And with the Selective Service Act under consideration now and apparently based on the deferment of college students, I shall be the strongest to insist in every way at my command that those boys who are getting their education in the school of hard knocks, as well as in college, get similar treatment.

(Applause.)

And that means, as far as I am concerned, the apprenticeship program, and it means the other job training program. I hope for as much democratization of that process as possible.

In conclusion let me simply refer to what George Meany has already suggested. The only things that ever interest us properly are those immediately ahead. We couldn't move ahead without a realization of where we have come. This is not a year of great promise as far as legislation is concerned. This is part of an expanding development in this country which as far as all of us in this room are concerned we will recognize as representing a larger advance for the wage earner, which is the term of your responsibility and by statute the term of mine, in any comparable period in the history of this country.

I want to pay my respects not as a matter of duty but as a matter of deep conviction, my respects to a Congress and to a President who have in the course of the last three or four years brightened the future as far as the human values in this country are concerned, in a way comparable to what the scientists are doing as far as their concern.

George mentioned Medicare. He mentioned the Minimum Wage Law. He mentioned the Education bill. He can go on. And every man and woman in this room could go on to list the charter of progress, a charter of human advantage, a charter of a recognition of individual rights, charter of freedom in the sense that it cmes into people's homes and in people's lives,

which has been written in the last three or four years, beyond any forum. It is not a matter of duty. It is not a matter of formality. It is a matter of something I feel so deeply inside me that I can hardly express it. A matter of being proud of being associated with a labor movement, proud of being associated with a Congress of the United States, of being proud of being associated with President Lyndon Johnson and Vice President Hubert Humphrey in the architecture of a program of human progress which is the kind of thing I have dreamed about all my life.

I want to say thanks to you and to them for what has been done in the last three or four years. I want to express to you the feeling that in the years ahead of us there still lie opportunities for doing an infinite amount and a great deal more.

I want to express finally and in conclusion a personal pleasure which I share with you in having come here a year ago, with Neil Haggerty not feeling very well, that I come here today to say, Neil, it is grand doing business with you and with all the members of the Building and Construction Trades Department. I am just delighted that you are back in the saddle again.

Thank you very much.

(Standing ovation.)

PRESIDENT HAGGERTY: Thank you, Mr. Secretary, for your remarks to this Conference, particularly those pertaining to myself as the speaker at the moment.

I appreciate your being here and discussing from your point of view some of the problems which confront both you and those of us in labor who must take part in their adjustment.

Carl Albert, Majority Leader of the House, is our next speaker. He is a great and distinguished American statesman. He has been a member of Congress for more than 20 years. He is a man respected and loved by all who know him. His Democratic colleagues in the House of Representatives elected him to serve as the Majority Leader in 1962, the position he now holds.

Needless to say, he is a real friend of labor. And it is an honor and a privilege to present to this Conference the Majority Leader of the House, the Honorable Carl Albert.

(Standing ovation.)

NEWS from U.S. DEPARTMENT OF LABOR
W. Willard Wirtz, Secretary

Apprenticeship

USDL - 8298

FOR IMMEDIATE RELEASE
Thursday, June 8, 1967

URBAN LEAGUE TO PREP BALTIMORE NEGRO YOUTH FOR APPRENTICESHIP

The Urban League and the AFL-CIO construction trades unions will start a cooperative program in Baltimore to prepare and train Negro youth for participation in apprenticeship programs, Secretary of Labor W. Willard Wirtz announced today.

Whitney M. Young, Jr., Executive Director of the National Urban League, was in Washington today to sign a $46,400 Manpower Development and Training Act contract with Assistant Secretary of Labor Stanley H. Ruttenberg who heads the Manpower Administration.

Approximately 300 Baltimore youth will be recruited from the disadvantaged sector of the community by the Baltimore Urban League and the Baltimore Building Trades Council for participation in the educational preparatory program, called LEAP (for Labor Education Advancement Program).

The program sponsors hope to place a minimum of 30 youths in apprenticeable construction trades. Classes will consist of from 25 to 75 youths, depending upon the apprenticeship opportunities available at a given time, and will run from 4 to 10 weeks prior to the apprenticeship test date.

One of the features of the program will be mock interviews conducted to prepare the applicant for the actual screening sessions held by the various joint apprenticeship committees. Qualified personnel will be recruited by LEAP to assist in the tutoring of applicants.

LEAP was organized under the joint sponsorship of the National Urban League and the American Federation of Labor-Congress of Industrial Organizations through a grant from the Ford Foundation to help motivate and prepare Negro youth for participation in apprenticeship.

All Federal and local agencies in the Baltimore area will be utilized in the program, including the field staff of the Bureau of Apprenticeship and Training, the services of the Apprenticeship Information Center, the Baltimore Central Labor Council, the Neighborhood Youth Corps, and the various civil rights organizations.

The program is similar to the pioneering efforts of the Workers Defense League in New York City.

The Technical Assistance Division of the Equal Employment Opportunity Commission aided in planning this program.

Arkansas Gazette June 11, 1967

Foes of the Negro Are Foes Of Labor, One of LR's Nine Tells State AFL-CIO Meet

Gazette State News Service

HOT SPRINGS — Ernest Green, one of the Little Rock Nine who now helps New York minority group youths prepare for the building trades, returned to Arkansas last week to tell the State AFL-CIO that the Negro's enemies generally were labor's enemies.

Green, now a field representative of the Workers Defense Apprentice Program in New York, was one of the nine Negro students whose enrollment in previously all-white Central High School at Little Rock in September 1957 created a stormy confrontation of state and federal authority. He became the first Negro to graduate from Central High.

There have been many changes since Little Rock 1957, he told the union members at their annual convention here but they have not altered the basic economic problems of most of the people. There are thousands of Negro youths who can't get a proper high school education, have no chance of getting into a good college and for whom there are no jobs.

The spread of automation, he said, is eliminating thousands of semiskilled jobs for Negro and white workers. Hundreds of thousands of white persons in the South are victimized by these conditions, Green said.

"Both [white and Negro] are victimized by inadequate jobs at substandard pay", he said. "Both want better education, which they either can't get or can't afford. Both are being cut back and being cut out by the spread of automation. Both are being used by union-busting industries as the cheapest source of labor in the South. Both are being forced to work in shops where the unions cannot bargain, and if it weren't for a federal minimum wage . . . Negro and white workers in the South would still be earning less than a dollar an hour."

'Right-to-work' Laws Blamed for Low Pay

Why is it that the majority of the states that have so-called right-to-work laws are Southern states and why is the poverty level in these states lower than in others?" Green asked.

"It follows that the solution of the problems that plague the Negro and white wage earners, particularly in the South, will depend to a large extent upon whether we of both groups are able to recognize the nature of our common enemies," he said.

These enemies, he said, start with racism—"not in the sense that whites hate Negroes, but in the deeper sense that those who are in power are happy to exploit race hate for the simple expediency of setting the black and white working class against each other."

The other common enemies, he said, are "state's rights" and "opposition to federal programs."

"If we relied on state's rights do dictate the nature of life in parts of the South," he said. "we would hve no federal spending and no federal minimum wage; we would certainly have chronic low income, inferior education for Negroes, chronic unemployment and for certain people permanent poverty."

Says Birch Society Is Another Enemy

The John Birch Society is another enemy, he said. It not only is anti-Negro and anti-Semitic, he charged, "but also antisocial reform and pro-big business. It claims to speak nobly of human initiative and American freedom but fundamentally it is dedicated to quite opposite propositions—that those who do not have it do not deserve it; that people are poor because they are lazy; that it is not the duty of the government to take a compassionate interest in their social condition, and that ultimately we should all return to the law of the social and economic jungle where only those who have it have a natural right to make it."

The growth of all these common enemies, Green said, has developed out of a special Southern attitude towards Negroes, poor whites, labor unions, big business and social privilege.

". . . it would seem to me that the social and economic deprivation that blights the lives and futures of so many white families in the South is too high a price to pay simply in order to maintain a sense of their whiteness," he said.

Calls for Unity To Gain Improvement

There is no alternative, he said, but that Negroes, white workers and farmers must unite behind the labor movement in a struggle against unemployment, low wages, discrimination and poverty.

He cited his job of working with Negro and Puerto Rican youths in New York to train and help them get jobs in the building trades as an example of this sort of effort.

"But we must go further, and strive towards uniting Negro and white working people behind the programs to tear down slums, rebuild sections of our cities and call for full employment programs that will force the federal government to spend more money in public works programs all across the nation," he said.

U.S. DEPARTMENT OF LABOR
W. Willard Wirtz, Secretary

FOR IMMEDIATE RELEASE V-67-6-16-1258:BAT

TRADE UNION LEADERSHIP COUNCIL TO PREPARE
200 DETROIT NEGRO YOUTH FOR APPRENTICESHIP

Detroit's Trade Union Leadership Council, Inc., (TULC) will start a cooperative program in the Motor City to prepare and train some 200 primarily Negro youth for apprenticeship programs under the Manpower Development and Training Act (MDTA).

The contract for this project is being executed today for Secretary of Labor W. Willard Wirtz by William C. Webb, regional director of the Department's Bureau of Apprenticeship and Training (BAT), in a ceremony at the TULC offices at 8670 Grand River Avenue.

Signing the contract for $94,980 in MDTA funds with Mr. Webb will be Robert Battle, president of the TULC. The Detroit Building Trades Council and the Michigan Building Trades Council are cooperating in the development and administration of the program. Representing them at the ceremony were their respective secretaries, Jack Wood and Stan Arnold.

Neil B. McArthur, the Labor Department's deputy assistant manpower administrator from Washington, D. C., represented Manpower Administrator Stanley H. Ruttenberg at the ceremony.

Webb stated that the project is intended to bring more minority group members into the apprenticeship programs, and, in practical terms, to anticipate the work of preparation for apprenticeship tests.

The approximately 200 Detroit youths will be recruited from the disadvantaged sector of the city.

The staff of the TULC and of the Building Trades Councils will work jointly in the development of job opportunities in apprenticeable occupations, and in recruitment of applicants for these jobs. Qualified personnel will be recruited to assist in tutoring of applicants.

It is expected that there will be 25 to 75 youths in a class, depending on the apprenticeship opportunities available at a given time. Each class will

(MORE)

run from four to ten weeks prior to the apprenticeship test date. During this period the youths will receive training and tutoring to prepare them for their craft test.

One of the features of the program will be mock interviews conducted to prepare the applicant for the actual screening sessions held by the various Joint Apprenticeship Committees.

Federal and local agencies in Detroit will be utilized fully in the development and administration of the program. These include the BAT field staff, MESC, the Apprenticeship Information Center, and various civil rights organizations.

This program is similar to the pioneering efforts in apprenticeship preparation by the Workers Defense League in New York City.

JOINT APPRENTICESHIP PROGRAM

OF

THE WORKERS DEFENSE LEAGUE/
A. PHILIP RANDOLPH EDUCATIONAL FUND

4th Annual Conference

February 3-5, 1972
Sheraton-Charles Hotel
211 St. Charles Avenue
New Orleans, Louisiana

Wednesday, Feb. 2

7:00 P.M. Cocktails
Canal and Gravier Rooms

Thursday, Feb. 3

Morning

8:30–9:00 A.M. Registration & Coffee
Mezzanine

9:00–10:00 A.M. Welcome & Introduction
Jackson Room

Ernest G. Green
Executive Director,
Joint Apprenticeship Program,
WDL/APREF

Honorable Moon Landrieu
Mayor, City of New Orleans, La.

A.P. "Pat" Stottard
President, New Orleans AFL-CIO

Rowland Watts
Executive Director,
Workers Defense League

Bayard Rustin
Executive Director,
A. Philip Randolph Institute

10:00–10:30 A.M. Keynote Address
John Lewis
Director Voter Education Project
Atlanta, Georgia

10:30–11:30 A.M. Panel
Manpower and Minority Employment

Chairman:
Rowland Watts
Executive Director,
Workers Defense League

Presentation:
Marvin Friedman
Vice President,
Stanley H. Ruttenberg
& Associates, Inc.

Response:
Roy Kirkley
Associate Extension Specialist,
Rutgers University

Robert McGlotten
Executive Director,
Human Resources Development
Institute, AFL-CIO

William Weinberg
Administrative Vice-President,
Rutgers University

11:30–12:15 Panel Discussion

12:30–2:30 Luncheon Meeting
Beauregard Room

Chairman:
Charles E. Bremer
Deputy Executive Director,
Joint Apprenticeship Program,
WDL/APREF

Remarks:
Robert Tucker
Executive Administrative Assistant
to the Mayor of New Orleans, La.

Film:
Phela Ndabacend
of The Dialogue
Comment: Nana Mahomo

Afternoon

2:45–3:45 P.M. Panel
Jackson Room
Labor and the Minorities

Chairman:
Ernest R. McKinney
Assistant to the Executive Director
A. Philip Randolph Educational Fund

Presentation:
F. Ray Marshall
Chairman, Economics Department,
University of Texas

Response:

Bernard Anderson
Associate Professor of Economics,
Wharton School of Finance,
University of Pennsylvania

Walter Davis
Director of Education, AFL-CIO

D. Quinn Mills
Assistant Professor:
Sloan School of Management,
Massachussetts Institute of Technology

3:45–4:45 P.M. Panel Discussion

Evening
6:00–7:30 Reception
Canal and Gravier Rooms

7:30–10:30 P.M. Awards Banquet
Beauregard and Clairborne Rooms

Master of Ceremonies:
Ernest G. Green
Executive Director,
Joint Apprenticeship Program
WDL/APREF

Speaker
Bayard Rustin
Executive Director,
A. Phillip Randolph Institute

Awards

Friday, Feb. 4

Morning
9:30–10:00 A.M. Coffee
Jackson Room

10:00–11:00 A.M. Panel
Jackson Room
Housing for the 70's

Chairman:
William M. Ross
Director of Operations,
Joint Apprenticeship Program,
WDL/APREF

Presentation:
Richard Ravitch
Executive Vice President,
HRH Construction,
President, Citizens Housing
& Planning Council of
New York, Inc.

Response:
Dennis Besse
Southwest Regional Assistant,
Nonprofit Housing Center

John Evans
Director, Department of Urban Affairs,
AFL-CIO

Donald L. Roffle
Program Director,
Joint Apprenticeship Program,
WDL/APREF

11:00–12:00 Panel Discussion

12:15–2:15 P.M. Luncheon Meeting
Beauregard Room

Chairman:
Ernest G. Green
Executive Director,
Joint Apprenticeship Program,
WDL/APREF

Luncheon (continued)

Remarks:
Robert McConnon
Director, Office of National Projects,
United States Department of Labor

Donald Slaiman
Director, Civil Rights Department, AFL-CIO

Afternoon
2:30–3:30 P.M. Panel
Jackson Room
Economics and Politics

Chairman:
Ernest G. Green
Executive Director,
Joint Apprenticeship Program,
WDL/APREF

Presentation:
Tom Kahn
Executive Director, League for
Industrial Democracy

Response:
Lamond Godwin
Assistant Professor,
Labor and Industrial Relations,
Rutgers University

Napoleon B. Johnson, II
Director of Urban League, LEAP

Emory Via
Director,
Resources Development Center,
Southern Regional Council, Inc.

3:30–4:30 P.M. Panel Discussion

4:30–6:30 P.M. Adjournment – Cocktail Party
Lagniappe Room

Saturday, Feb. 5

Morning
9:30–10:00 A.M. Coffee
Jackson Room

10:00–11:00 A.M. Administrative Staff Meeting
Jackson Room
National Staff and Regional Supervisors

11:00–12:00 General Supervisor's Meeting
Jackson Room
Sr. Field Representatives and Supervisors

12:00 Noon Adjournment

PER CENT OF TOTAL	82	75	76	76	86	84	86

[a] Equals net increase in employment based on employer expectations plus age separation effects.

[b] This requirement is derived by subtracting the number to complete company training by periods from net number of job openings.

The following tabulation shows the most important technical, skilled, and clerical jobs in the Atlanta Area on the basis of job openings and training requirements in the next five years.

	Net Job Openings in 5 Years	Net Training Requirements in 5 Years
Technicians:		
Electronics	687	542
Accountant-Gen & Cost	645	448
Industrial Tech	243	40
Draftsman-Mech-Furn	155	94
Subtotal	1,730	1,124
Skilled Workers:		
Electrician	1,461	1,253
Plumber	746	359
Machinist	576	491
Auto Machanic	530	444
Pipe & Steam Fitter	459	357
Welder	420	342
Carpenter (Non-mfg)	381	338
Subtotal	4,573	3,584
Clerical Workers:		
Stenographer	3,404	3,163
Typist	3,006	2,857
Accounting Clerk	2,754	2,120
Subtotal	9,164	8,140
TOTAL	15,467	12,848

The totals from the above 14 jobs will account for 55 per cent of the job openings in five years and 65 per cent of the net training requirements.

Scott Green is Ernest Green's brother. In the long roll of the history of the civil rights movement, both names will be duly recorded. Scott Green is the first Negro apprentice to be admitted to Local 28 of the Sheet Metal Workers Union, the first Negro to break the color barrier of the most recalcitrant of the building trades unions.

His brother, Ernest, gained national spotlight by being the first Negro to be graduated from Central High School in Little Rock, Arkansas. From there Ernest Green went to Michigan State University. He is now Assistant Director of the Workers Defense League Apprenticeship Program situated in the heart of Bedford-Stuyvesant. Along with Ray Murphy, Director of the project and a former New Jersey employment specialist, it is Ernest Green's job to open the closed doors of the craft unions to Negroes and Puerto Ricans. It is only fitting that the first of the WDL Apprenticeship candidates to crack the unions be his brother.

Scott Green became a Local 28 member in April of 1964 as a result of a court ruling ordering the Local to end 78 years of discrimination and to administer tests for entrance. That year he was the only Negro to qualify. The next spring nine Negro and two Puerto Rican young men, recruited and tutored by the WDL, passed the test and were admitted to the Sheet Metal Union's apprenticeship program.

"To want a Cadillac is not un-American; to push a garment rack is."

—Bayard Rustin

Now Scott Green is working on the construction of a new school in the Brownsville area in Brooklyn — JHS 292 on Pitkin and Wyona Avenues — and is glad to be out of the dead-end job he held in the garment district.

"Anything is better than that," he says of his garment days. Scott, a rugged six-footer, is a veteran of the Air Force where he completed his school education. When WDL ran classes in preparation for the historic Local 28 apprenticeship tests under the supervision of Dr. Kenneth Clark, Scott jumped at the chance to become an apprentice.

"This is much more rewarding work," Scott says. And a sheetmetal worker who has completed the four years of schooling is rewarded with $182.50 for a thirty-five hour week; apprentices begin at 40% of the journeymen wage rate. Their salaries increase periodically until they have completed the apprenticeship program and earn the full journeyman wage.

"WDL's is the best kind of anti-poverty program because it helps young people find meaningful work at good wages"

—Michael Harrington

The WDL Apprenticeship program is the only one of its kind in New York City and, perhaps, the nation; its aim is to place Negroes and Puerto Ricans into the well-paying building trades jobs. Most of the programs dealing with minorities and the poor have shied away from the seemingly fruitless attempts to prepare applicants for craft union jobs. HARYOU-ACT, for example, concentrates on mass industrial jobs.

Green and Murphy are considered experts in the field now. Yet, when the WDL received a Taconic Grant in 1964, to undertake the apprenticeship program there was no body of experience from which to draw.

"We started from scratch," Ernest Green says. "There was no one to show us how to go about it. Most people thought we were crazy to work on such a program. After all, no Negroes had gotten in the building trades for years, and the civil rights groups were concentrating on areas of mass unemployment. Remember, it takes a highly motivated kid to apply for the craft jobs."

A Tutoring Session for Sheetmetal applicants

Ernest Green and Harry VanArsdale, President Central Labor Council, AFL-CIO, hold impromtu conference.

Apprentice Ironwo Ronald Bowers lea a journeyman.

In the last year, Green and Murphy have placed approximately 100 Negro and Puerto Rican youth ranging in age from 18 to 24 in the coveted craft apprenticeships. Besides the sheetmetal breakthrough, WDL got the first two Negroes into Local 40 of the Iron workers, the first Negro into District 15 of the Machinists and the first Negro chef's apprentice in the Regency Hotel. The program has also placed 25 to 30 Negro and Puerto Rican young men into Local 3 of the Electrical Workers. When Local 3 announces its tests in the fall for apprenticeship openings, Green and Murphy hope to be swamped by more than 2,000 applicants.

"Most vocational school students and kids from the Ghetto want to be electricians," Murphy says, "because they've actually seen Negro apprentices."

ONLY WDL
Recruits, Tutors and Places The Applicant

The WDL recruits the youngsters from a variety of sources: churches, civil rights groups, vocational high schools, poverty agencies such as Mobilization for Youth and HARYOU-ACT. Candidates are interviewed by the staff and then told of approaching test dates. They are then given Otis I.Q. tests. When an apprenticeship test date is announced, WDL begins a tutorial program to prepare the candidates for the test. These programs consist of 3-4 weeks study, supervised by Dennis Derryck, a former math teacher who turned down higher paying jobs to become WDL Tutoring Coordinator.

Tutoring sessions last for two-and-a-half-hours; Derryck teaches mechanical reasoning and special relations as well as test-taking techniques.

"Unfortunately, the city's vocational schools don't even teach the kids how to take a test," Green comments. "What the kids do in the tutorial program is similar to preparing for college exams."

Candidates are admitted into some union apprenticeship programs on the basis of the test results and an interview with the joint union-management committee. Before the second sheetmetal exam WDL asked personnel people from the Western Electric Co. to go through a role playing session with the applicants. The volunteers played hostile white bosses; they were particularly effective. In fact, the candidates found the Western Electric volunteers much tougher than the actual screening committee.

The Workers Defense League conceived of the Apprenticeship program following the demonstrations which stopped construction at Harlem Hospital in 1963. An indication of how far the program has come is the relationship between the WDL staff and the craft unions. At the Building Trades Unions' Executive Committee luncheon recently, the guest speaker discussed the necessity of opening the union registers to Negroes and Puerto Ricans. His name: Ray Murphy, Director of the Workers Defense League Apprenticeship Program. Last February, Peter Brennan, President of the Building Trades Council, told a WDL

rkers, Raymond Richie and rn the trade from John Diabo

Seated left to right: Cecilia Sarashon, Supervisor of Guidance, Board of Education; Raymond Murphy; standing left to right: Bayard Rustin, Director, A. Philip Randolph Institute; David Crockett, Vice President, Local 6, Printers Union; and Peter Brennan, President, Building Trades Council.

sponsored career conference for vocational school youth, "You are wanted in the building trades . . . We don't want minority groups to think this is just talk. Anyone in the building trades who doesn't want to cooperate, we'll knock them into line."

The Workers Defense League is a human rights organization devoted to full equality before the courts, on the job and in the union. Founded nearly 30 years ago, WDL has steadily fought racial, economic and political exploitation. From the Negro sharecroppers to West Indian migrants and Freedom Fighters in Hungary, WDL has stood for the rights of free men everywhere.

Unlike civil liberties organizations WDL does not refuse cases that will not establish a legal precedent — the hundredth violation of a given right is as important to us at the first. Unlike legal aid organizations WDL does more than defend a right or a liberty in court. When the case has significant social impact WDL organizes campaigns of public education to see that the injustice is exposed and corrected.

Breaking the Barrier in the Building Trades Unions

— A special Report on the WDL Apprenticeship Training Program

By: Maurice R. Berube
Assistant Editor THE UNITED TEACHER

P.A.C.T.

(Planning, Action, Coordination(or communication) Team)

(1) Purpose.

~~Purpose:~~ The purpose of the organization will be to assist in ~~ending any form of discrimination~~ achieving the fact of equal opportunity in employment in the Atlanta Metropolitan area through a concerted, planned effort. ~~We understand that "employment" as used here includes such equal opportunity~~ can be achieved only ~~come~~ if all phases of the employemnt process are fully open to all persons. The organization's interest extends, but is not limited, to the problems of motivation, recrutiment, training, on the job relations, up-grading ~~promotion~~, as well as to the actual hiring of an employee. Because of the ~~special~~ need for providing employment of sufficiently high caliber to insure good income and continued employability, the organization will be especially interested in the skilled trades and training programs for those trades. ~~the skilled trades.~~

A first interest of the organization will be to secure ~~with the availability of~~ training opportunities for Negro youths in the building trades. It is recognized from the outset that this is just a beginning step towards our long range objectives. ~~in much broader range~~

(3) ~~Kinds of activities~~ Kinds of Activities ~~Types of activities:~~ ~~P.A.C.T.~~ It will develop and circulate information. It will call attention to problems both privately and publicly as it deems appropriate for the particular situation. It will elicit the cooperation of public and private groups and individuals in the achievement of its purposes. It will assist in the development of programs, and offer ~~consul~~ consultative services where it is deemed appropriate and within the ability of the organization. It will serve a "watchdog" function to see that discrimination in employment is ended and that new efforts toward equality are successful. It is understood that through its cooperating agencies and ~~persons~~ individuals, and as the result of agreed to strategies, the following kinds of activities will be a part of P.A.C.T's program.

specific jobs available at Respondent's plant, or in terms of the racial composition of Respondent's work force.[1] In the absence of evidence that the tests are properly related to the jobs and have been properly validated, Respondent has no rational basis for believing that employees and applicants who pass the tests will make more successful employees than those who fail; conversely, Respondent has no rational basis for believing that employees and applicants who fail the tests would not make successful employees. Respondent's testing procedures, therefore, are not "professionally developed." Accordingly, since Respondent's testing procedures serve to perpetuate the same pattern of racial discrimination which respondent maintained overtly for many years before it began testing, we conclude that there is reasonable cause to believe that Respondent, thereby, has violated and continues to violate Title VII of the Civil Rights Act of 1964.

(Decision signed by Marie D. Wilson, Secretary to the Commission, December 2, 1966.)

[1] According to *Standards for Educational and Psychological Tests and Manuals* published by the American Psychological Association (1966), tests should be revalidated at least every 15 years. The Otis tests were devised in 1922, the Bennett in 1940, the Wonderlic in 1942 and the PTI in 1950.

Intelligence Test

SUMMARY OF CHARGES

The Charging Parties allege discrimination because of race, as follows: After Negro applicants had qualified for employment by passing a dexterity test (GATB), they have subsequently been systematically excluded by the Respondent through the use of an intelligence test (Wonderlic). Negroes who have been able to pass the intelligence test have sometimes not been employed, and white applicants have been hired either without testing or when they have applied at later dates than qualified Negro applicants. The change in standards for employment works to the disadvantage of Negroes in the community because of low educational attainment. In addition, the Respondent's use of the local state employment service office for initial screening of applicants results in disadvantage due to traditional discriminatory practices by that facility —where Negro applicants may not sit, where they encounter rudeness and offers of domestic work instead of industrial work, and where they suffer delayed referrals or are refused referrals to industrial employment. Charging Parties and the local CORE chapter (on behalf of Negro citizens) contend that Respondent utilizes certain methods to avoid hiring substantial numbers of Negroes. Furthermore, they allege that the company and the local power structure have agreed to limit the number of Negro women to be hired, to avoid disturbing the domestic work force.

SUMMARY OF INVESTIGATION

The Respondent's facility for processing poultry for frozen and canned food products received widespread publicity prior to opening in June 1966. As early as the summer of 1965 applicants at the state employment office requested referrals to the company; screening tests began in the winter of 1965. As of October 6, 1966, Respondent had hired 1,011 persons, including 176 Negroes, classified as follows: 124 unskilled and 19 semi-skilled workers, 18 service workers, 8 skilled workers, 5 technicians, and 2 clerical workers. Several hundred job opportunities are expected to materialize and be filled within the next few months as the plant operation achieves full production. The majority of jobs available fall into the category of unskilled work involved in dressing, cooking, and packaging poultry.

Investigation disclosed that selection processes used by Respondent have lent themselves to discriminatory practices:

Application Evaluation: Initial screening of more than 6,000 applications eliminated immediately those with less than eight years' school,

 Copyright © 1967 by The Bureau of National Affairs, Inc.

BEST COPY AVAILABLE

erratic or inappropriate work histories, over 50 years of age, and incomplete applications; in addition, preference was given those with industrial work experience. All criteria were not rigidly adhered to, in that some past 50 and a few with less than eight years' school were employed. About 1,500 applications were rejected; nearly three-quarters of these were from Negro applicants, with schooling a major factor. Negroes comprise nearly one-half of the population in the county, and more than half in neighboring counties, but of those over 25 years of age who did not complete eight years of school in Sumter, 62 per cent are Negro. Eight years of schooling is no more valid an indicator of job qualifications than is a passing score on the intelligence test such as the Wonderlic.

Physical Examination: No detailed examination was made of medical records. However, investigation disclosed that there may be a slight disadvantage for Negro applicants because of the large proportion of rejections for medical reasons.

Reference Checks: Reference checks, which are not required in writing, are a major stumbling block, and often barrier, to many Negro applicants inasmuch as some employers (especially private households and farmers) are reluctant to lose this source of low-paid labor. Of those Negroes already hired, at least one-half were formerly domestics, paid at the rate of $3.50 per day.

Manual Dexterity Testing: At least 40 per cent of the females referred by the state employment office were Negroes who had passed the GATB finger and manual dexterity testing. One technical irregularity in the use of this test was noted, in that one critical score of the GATB B-238 series (validated for poultry laborers) was not being used. Section IV of the Manual for the USES General Aptitude Test Battery, published by the Department of Labor (1966), sets forth finger dexterity (F) and manual dexterity (M) factors as important aptitudes in the selection of poultry-dressing workers (D.O.T. Code 525.887). An earlier (1962) version of Section III of the *Guide to the Use of the GATB* also refers to aptitudes F and M. The correlation between these aptitudes and supervisory ratings of current employees was 0.53. This validity coefficient is moderately high and is quite adequate for the predicition of applicants' subsequent performance on the job.

Neither the *Dictionary of Occupational Titles* (D.O.T.) nor the GATB Manual contain any information to substantiate the notion that general intelligence, verbal ability, numerical ability, or spatial ability are required for the performance of this kind of unskilled work. Since the Wonderlic Personnel Test is heavily loaded with the verbal, numerical, and abstract reasoning components of "general intelligence", its content is irrelevant to job content and employee performance among poultry-dressing workers.

Intelligence Testing: One month after hiring began, Respondent introduced the Wonderlic test. A trial with the Wonderlic had been conducted during the spring; Negro and white personnel who failed to achieve qualifying scores in this early testing were hired despite the results and have proved to be satisfactory employees. Respondent personnel who administer the Wonderlic have no training for or experience with testing; they use for guidance a small booklet accompanying the test. They have arbitrarily subtracted more than one point from the score designated by publishers of the test as the national norm for persons completing eight years of school. A certain number of irregularities in test administration and scoring were noted, in that a number of records revealed questionable scoring and improper grading, as well as alterations on test papers. Respondent contends these were clerical errors.

Seldom will there be independent evidence that Respondent intended its educational and testing requirements to eliminate a disproportionate number of Negro job applicants, but it is elementary that a person must be held to intend the normal and forseeable consequences of his actions. If Respondent did not anticipate the results of its screening procedures, it is certainly aware of them now. This is

not to suggest that in all circumstances it is improper for an employer to utilize selection devices which may incidentally reject a disproportionate number of Negro applicants, *but where, as here, the educational and testing criteria have the effect of discriminating and are not related to job performance, there is reasonable cause to believe that Respondent, by utilizing such devices, thereby violates Title VII.*

Nine of the 30 Charging Parties are included among 2,000 applicants awaiting consideration since June 1966; when hiring is done, the Respondent states that applications are selected from the file in a "random" fashion and with no attempt to hire in the sequence in which people had applied. This does not explain why only 17 per cent of the current employees are Negro, whereas 40 per cent of the applicants referred by the Employment Security Commission as being qualified are Negro. Negroes account for nearly one-half the population in the county where the plant is located, and more than 60 per cent in counties to the South and East and 66 per cent in the county to the North. Despite this, a pattern of rigid segregation persists in the area.

The majority of the jobs to be filled require no special skills. Those classified as skilled maintenance jobs do require that the applicant read and write. The Respondent is using job descriptions developed for operations in similar plants at other locations until such can be written for this facility.

Inspection of the plant revealed that Negro employees were not segregated within working areas, and there were no signs of differential treatment with respect to any plant facilities. Some jobs appear to be dominated by one sex, but this does not appear to result from any claim for a bona fide occupational qualification. Female employees were observed to operate forklift trucks, a non-traditional assignment. However, male and female employees are assigned separate series of clock numbers, and personnel records are segregated by sex.

DECISION

Reasonable cause exists to believe the Respondent has violated Sections 703(a)(1) and (2) of the Civil Rights Act of 1964, as follows:

It has failed to hire Charging Parties and others similarly situated, because of race, by arbitrarily and discriminatorily setting educational standards that are not justified for the job sought, as a means of restricting the number of its Negro employees; and

It has limited the selection of its employees in a way that tends to deprive the Charging Parties and others of employment opportunities, because of race, by the discriminatory use of testing procedures which are not exempted by Section 703(h).

(Decision signed by Marie D. Wilson, Secretary to the Commission, December 6, 1966.)

Atl. Council
Apprenticeships
report

July 1st
Fed. Govt. Info Center

The report of the Council which planned the June 1-2 White House conference on civil rights made a series ofrecommendations, the first of which is

"Establish Metropolitan Jobs Councils in All Major Urban Areas to Plan, Coo dinate, andImplement Local Programs to Increase Jobs".

The recommednation is restated "What Should Be Done":

"Metropolitan Jobs Councils should be established in each major urban area with a substantial Negro population. With urgen support from the highest levels of the national government, the initiative in establishing such councils should be taken promptly in all major cities of theUnited States."

The need for coordinating job councils is not new, nor is the suggestion that they be established new. The part of the picture which is still missing is WHO should establish Councils. WHO is to take the initiative and even more important, at whose initiative will other groups respond, os that the Jobs Council includes those actually involved in manpower programs rather than those who comment on manpower programs. TO WHOM issuch a Council tobe accountable and WHAT CONTROLS could it or should it exert over the "jobs system" of the community?

The apprentice training picture in Atla ta illustrates clearly the need for coordination and stimulation of more efforts, but it illustrates just as clearly the present diffusion of responsibility and authority and the resulting confusion to those for whose beneift the programs are being developed.

Some lead in sentences — such as —
For example, the Atl. Council's efforts at secur info have shown many difficulties

2

COUNCIL ON HUMAN RELATIONS OF GREATER ATLANTA, INC., 5 Forsyth St., Atlanta, Ga.

In 1963 the Council on Human Relations of Greater Atlanta prepared a summary of training programs available in the metropolitan Atlanta area, including apprenticeship programs. In order to do this it was necessary for a Council representative to go to the regional office of the Bureau of Apprenticeship and Training of the U.S. Dept., of Labor located in Atlanta, copy from records their names and addresses of individuals listed for each of the approved programs, individually contact each of these individuals and obtain from each pertinent information for each program.

In 1966 the Council on Human Relations of Greater Atlanta prepared another summary of training programs, including apprenticeship programs. In order to do this it was not necessary to go to the office, because due to our acquaintanceship of the past 3 years, we knew the persons well enough to telephone and ask for a list of the approved programs with the contact person for each, but there was still no list already prepared for general distribution - (We received an individual list from a regional labor office, as a result of a conversation with the right person at the right time) As in 1963 some of the names, addresses and telephone numbers were out of date. As in 1963, it took many telephone calls, as many as 12 in one instance, to reach the individual concerned - ie., it was not possible simply to call a certain "office" and get the information. As in 1963, the Council on Human Relations asked to be placed on lists to receive information about the programs. We have yet to receive a notice from any office announcing any new programs or details of any current apprenticeship programs.

As in 1963 it was pointed out by the Labor Dept., staff that the Labor Dept., acts as a consultant only in apprenticeship-training programs. "They contribute no money, have no supervisory powers, can only encourage". Their legal responsibility is to notify the state employment service and the state school superintendent of approved programs. The apprentice programs are in the hands of Joint Apprenticeship Committees (JACs) composed of representatives of labor and management. (Actually in the Atlanta area, the assistant regional director of the Bureau of Apprenticeship and Training, goes around to the high schools talking about the programs to students, guidance counselors and principals, but this seems to be a one man operation.) Does this system of developing apprenticeship programs provide for metropolitan Atlanta's needs for skilled workers?

Should Schools be part of target

In 1963 there were 11 programs for the Atlanta area registered with the U.S. Dept., of Labor Bureau of Apprenticeship and Training.

In 1966 there are 19 programs for the Atlanta area. A U.S. Dept., of Labor Bullentin states "all major industries train apprentices and there are over 350 apprenticeable occupations under the following general classifications".. a list of 93 trades follow.

The Georgia Skill Study published in 1963 by the Georgia Dept., of Labor predicted that metropolitan Atlanta would need for the 5 year 1962-67 period a net increase of 5454 skilled workers trained. Many of the 19 apprenticeship programs accept applicants "as they need them" or "as they apply", but if the Electrical program, which does admit a specific number each year is typical, the numbers being trained is woefully inadequate to fill the job openings. It was reported at a conference held during the spring of 1966 that labor and management in Atlanta had turned down a suggestion for public Apprenticeship Information Center. We question the need for or even the desirability of such

must attached

Shd of an overall job & training info center, with some specific responsibility & power, it seems there is an argument in the paper for an app. info center

Some recognition of why so few programs

Jobs needed, interest, whether that industry is in area — # of applicants needed to start a program, etc.

Perhaps here may apprentices in Atl. area.

can we do something on other trades than electrical alone.

Atlanta needs 1253 trained for eletrical jobs for the 5 year period. The Electrical JAC accepts a class of 25 a year ~~xxxxxxxxxx~~ for apprenticeship.
~~Atlanta xxxxx~~

2a insert

Labor spokesmen generally say that managment is not enthousiastic about apprenctice programs because apprentices earn more than some other trainees and the program takes longer.

Managment spokesmen generally say that labor wants to keep the number down, to keep wages up.

23

a specialized type of Information center. It would seem more profitable to have such information available at all points where people go for job counseling and information. If the Labor Dept., nor the JACs have money for a simple operation such as a publicly available listing of the programs available with requirements, etc., for each, how would there have been money for an Apprenticeship Information Center? If on the other hand, there is money for such a Center in Atlanta, why can't some of that money be spent in giving the facts to those individuals and groups in a position to advice possible applicants?

x x x

How about 1965 manpower Study

The 1963 Report of the President of the United States to the Congress on "Manpower Requirements, Resources, Utilization and Training" states "the only current data on potential supply of craftsmen come from registered apprenticeship programs. In 1962 approximately 160,000 apprentices were in registered programs. It has been estimated that an equal number of apprentices may be in training under unregistered programs.

"Despite the fact that this Nation's economic development and well-being depend upon an increasing number of well-trained craftsmen, limited progress has been made in recent years in expanding apprenticeship programs and enrollments. Yet most training authorities agree that apprentice training, which takes account of ... provides workers with an all-round background of great assistance in adjusting to changing job requirements... Unless apprenticeship training is increased it will provide only a small percentage of the journeymen needed by 1970".

In discussing the training of electricians, the Report says "Unless electrician apprenticeships are greatly increased in the years ahead, most new entrants into electrician jobs.. will continue to be workers who "pick up" the skills. This informal procedure usually takes longer.. and weldom results in all-round mastery of the trade".

x x x

A 1963 U.S. Dept., of Labor Bulletin on "Manpower Problems and Local Action" describes the National Manpower Advisory Committee, appointed by the President. One of the recommendations of the Committee, on which Mayor Ivan Allen, Jr., served as one of the 3 Public Representatives, was that "manpower advisory committee be established in each state" and that local committees be appointed for local labor market areas. A local manpower committee is described as "a small group of persons who are vitally interested in the economic welfare of a community and its citizens, and who are familiar with the area's employment opportunities and its manpower problems." While the Bulletin deals specifically with the MDTA program, it also states that "It is the function of a local committee to deal with all aspects of the community's manpower problems and activities.."

Should this be a separate fight — but perhaps not

When the subject of the appointment of a local Atlanta manpower committee was discussed with Mayor Allen, he indicated his opinion that the office of the Mayor ~~is~~ was not the proper office to initiate of name such a committee.

On Jan. 2, 1964, a meeting on Training was called by the Atlanta Coordinating Committee, which had been appointed by Mayor Allen in response to the creation of the ~~Summit Leadership Conference~~. The meeting was attended by representatives of state and federal agencies, labor, management, and civic organizations. Again the desirability of a community wide committee was agreed upon, but there was no answer to the question of who should initiate such.

Will readers know this and understand "stand what in response to" means

A report ~~in~~ of the Council on Human Relations dated Jan. 14, 1964 records an interview with the Supervisor of Community Employment Programs of Georgia Dept., of Labor who answered "yes" - the program calls for that" who in answer to the question "would it be good to have a community-wide committee?" The next question was "who would appoint such" and the answer was "We would. We're working on that now".

At that same time, a Council ~~representative~~ staff member

But contacts with Ga. Dept. of Labor revealed that The Ga. Advisory Committee serving the Atlanta area -

~~Conversation with person~~ in regional Labor Dept., office indicated that one of the requirements for MDTA projects ~~is~~ was to have a local Advisory Committee. Telephone call to office of Mr. Marion Williamson (Director, Bureau of Employment Security in Georgia Dept., of Labor) to ask about state Advisory Committee; secretary said she would have someone call me. Mr. Steens secretary called and gave me thename of T.M. Forbes, as "Chairman of Georgia Advisory Council". When I asked for the rest of the name of the Council, she asked Mr. Steen, who said it is the Georgia Dept., of Labor Advisory Council. He told the secretary that he did not have the names of the members of the Council, that they could be secured from Mr. Forbes (34 Peachtree Street, N.E.).

Jan 1966

Within the Georgia Dept., of Labor there is still no advisory committee for metropolitan Atlanta nor is there any administrative head for metropolitan Atlanta (at least according to their office staff. When we asked to speak to the person in charge of the Atlanta area, we were asked what program we were interested in, told there is no one "head" for the Atlanta area). Programs (MDTA, etc.) are administered separately, and the Georgia Advisory Committee to the Bureau of Employment Security of the state department serves Atlanta. That committee is appointed by the state Commissioner of Labor, an elected official, and meets on call. ~~Its present composition is~~ On the local Atlanta level there seems to be no structure requiring consultation between those who have the jobs, those who want the jobs and those who are setting up programs to train those who want the jobs for the jobs available. One might expect to find this on the Board. Conspicously absent from the Board, members of which are appointed by the mayor and the chairman of the Fulton County Commission, are representatives of the Employment Service or any part of the state Dept. of Labor, the vocational training system, the Chamber of Commerce, the federal government which is probably still the largest single employer in the area, or any major industry which employs large numbers of persons. The business men who are members are employed in banking, real estate, insurance, automobile agency, business representative and blueprinting.

Should there be area, general info office? Under this auspice?

have jobs to offer?

or unions?

Economic Oppr. Atlanta

what function are you arguing that this is the agency to serve

7 5

Check: Melvin Taylor

Within the U.S. Dept., of Labor conditions there is also diffusion of responsibility and authority and lack of built in ~~condition~~. The Manual organization chart for the Dept., in the U.S. Government Organization ~~Chart~~ shows the "Manpower Administrator, the Office of Manpower, Automation and Training, the Bureau of Employment Security, and the Bureau of Apprenticeship and Training" all with equal relationship to the Under Secretary of Labor. On the regional level, i.e, in the Atlanta region, there is no one "regional director", but a rotating chairman of a Regional Staff Committee, which includes representatives of the 13 Bureaus.

check latest issue

Watered? how relate to Atlanta

There is now a new President's Committee on Manpower Coordination. Secretary of Labor Willard Writz is chairman and members include

Perhaps it would not be presumptious to suggest that there be enough coordination within each department so that the programs already in operation can be reviewed and evaluated realistically. The question as to <u>who</u> should establish the Metropolitan Job Councils which the White House conference recommended remains unanswered, at least for metropolitan Atlanta.

In fact,

The question is not only who should bell the cat, but which cat should be belled!

Integrating the Negro Teacher Out of a Job

BARBARA CARTER

HOUSTON HAMPTON BOOZER, principal of the only Negro school in the little town of Munday, Texas, has long been in favor of school integration. "We've seen it coming for the last five years," he told me, "and we've tried to prepare the children for it. We've told them their school was not up to par, and how much better integration would be for them. And we've taken every chance we could find, things like scrimmage football and track meets with students from white schools, to get them used to an integrated situation." Now the great day has come: when the three formerly all-white schools open this fall, the Negro children from the Dunbar School will be enrolled in them. The Dunbar School is no more—and all but one of its seven teachers have lost their jobs.

What has happened in Munday has had a number of interesting side effects that could well become patterns as desegregation, speeded up by Federal pressure, gains momentum in the South. Foremost, of course, is the increasing number of Negro teachers who have been put out of work as a result of the desegregation they themselves have advocated. When the year began, only a third of the South's school districts had been desegregated. In the southwestern state of Oklahoma alone nearly four hundred Negro teachers have been displaced in the decade since the Supreme Court decision.

The problem is only now beginning to be recognized. There are no over-all statistics on the number of Negro teachers who have already lost their jobs because of desegregation, but Samuel Ethridge, a field director of the National Education Association (NEA), the largest professional association of teachers, estimates that the jobs of as many as 5,500 Negro teachers in the eleven Southern states may be endangered over the next several years. At present, from the scattered reports collected by the NEA and the NAACP, Ethridge can "document" only 250 or so cases of Negro teachers who definitely lost their jobs in the spring because of desegregation, but a far larger number, he explained, are currently in a kind of limbo, their contracts neither officially terminated nor renewed. Much depends on how many Southern Negro students, given the choice of attending white schools, will do so—for in the larger cities, unlike Munday, desegregation means only that a certain number of Negro pupils will be allowed to transfer to white schools; the Negro schools will remain intact. In larger Southern cities, then, many Negro teachers will be able to keep their jobs for the time being; and a few may even be allowed to teach in predominantly white schools.

It was in February that Hampton Boozer first learned officially from the superintendent of schools in Munday that the Dunbar School, with its small enrollment of 137 in twelve grades, would be completely shut down at the end of the semester. His wife, Vernice, who was head of the school's English department, felt confident that something would be worked out. Their own position, at least, appeared strong. After all, both were fully certified teachers, both had nineteen years' teaching experience, both had a B.S. degree in education, and both had earned a number of hours toward a master's degree. But Boozer was not so confident about the future as his wife was.

February was also the time when, according to custom, the school principals of Munday were notified if their contracts would be continued. The three white principals were so notified; the principal of the Dunbar School heard nothing, nor was he even considered along with the rest. Boozer, qualified as a math teacher and athletic coach as well as a principal, asked the superintendent if he and his wife could apply for teaching jobs in the other Munday schools. The superintendent said he would do all he could to help.

In early March, again according to custom, the Munday teachers learned whether their contracts would be continued. At least the white teachers were notified; the seven Negro teachers at Dunbar heard nothing. "All of my teachers have B.A.s or B.S.s," Boozer told me. "All of them have professional teaching certificates."

A Matter of Degree

When Negro schools are closed, Sam Ethridge observed, it often happens that their teachers are not considered part of the available supply, nor are their qualifications compared to the rest in the school system. This is in contrast to the normal school-consolidation procedures around the country, where a great deal is done to help the displaced teachers find new assignments in the school system. Ethridge, a Negro, is against any suggestion that Negro teachers be given preferential treatment. He thinks it only fair, however, to have them considered part of the available supply, to have their credentials justly compared with those of others in the system, particularly with those who hold only emergency or temporary certificates. "I'd just like to see them follow the rules," he said.

Many Southern school superintendents automatically assume that Negro teachers are generally inferior

to the white. In a recent survey by the Houston *Post*, only one superintendent could be found who did not make the easy generalizations about Negro teachers. Certainly, it is true that many Negro teachers are not well qualified, if only because of their segregated background and inferior education. Yet others are equally, if not better, qualified than a good number of white teachers. For one thing, Negro teachers have found it worthwhile to compete with whites for credits, since that entitles them to equal pay. Moreover, teaching is one of the few professions an educated Negro in the South can aspire to, with the result that many Southern communities have no shortage of Negro teachers. Thus people like Mrs. Boozer "would not dare," as she put it, apply for a teaching job in Texas without a degree.

The matter of degrees is tricky. Both the Boozers, for example, earned their B.S.s from Butler College, a Negro school in Tyler, Texas. Butler, however, along with two other Negro teachers' colleges, was warned by the Texas Commissioner of Education that if it doesn't come up to standard by 1967, its accreditation will be withdrawn. Yet it is precisely the inferior education offered by the segregated institutions in the South that has prompted many Negro teachers to seek their degrees in the North and to receive what may well be better preparation than the Southern whites who stayed home. Both the Boozers felt it necessary to go on to the University of Denver for their graduate work.

When Vernice Boozer learned that the contracts for the Negro teachers in Munday had not been renewed, she was still confident that something could be worked out. "It's hard to understand," Boozer said later. "The whites have been so good to the Negro children. They've even gone out and found jobs for the children who needed them most, and by and large helped them to do better. But when it comes to the Negro adults. . . ." Boozer stopped speaking, and made a sharp cut downward with his hand in a gesture of complete denial. "Mrs. Boozer had *too* much confidence in them," he said reflectively. "She felt surely the school system would integrate some of the faculty. With her qualifications and with the respect the superintendent had shown for her work down through the years, she didn't see how there could be any reason she wouldn't be considered. Now, of course, she's shocked."

Pattern Making

Before the semester was over, there was one last painful flurry of excitement at the Dunbar School—rumors that the school might not be abandoned and that its students would be given the option of remaining at Dunbar. The Negro teachers thought that some of their jobs might be saved—although the price, of course, would be continued segregation for the students who remained. Then the superintendent quickly confirmed that the closing was definite.

A week before school let out, the Boozers heard that one of the Dunbar teachers—a Mrs. Gipson, who

had taught for seventeen years—had been offered a contract with the Munday schools. What she would teach in the white school was not specified—it was a "no assignment" contract. Here is where events in Munday touch on another pattern in the making. For Mrs. Gipson was advised to take library science during the summer, and it is assumed that she is being groomed for a library job, or what is called a "short contact" job, having limited association with pupils. Other Negro teachers are reported to be taking assignments in newly integrated schools as guidance counselors to Negro children only. And still others are accepting positions as "teachers' helpers." Such downgrading is frequently excused on the basis of the reaction anticipated from white parents if a Negro teacher were in charge of a white class. Yet the Houston *Post* has reported that there was no such reaction when Negro teachers were given predominantly white classes in several larger Texas cities.

When Boozer learned of Mrs. Gipson's appointment, he met with the superintendent. He was told that Mrs. Boozer had not gotten the contract only because there was no place to fit him in as well, and yet he knew that a math teacher and coach had resigned from one of Munday's white schools, leaving a vacancy he felt he could fill. He told the superintendent he was going to fight. In reply, the superintendent confided that a school in Earth, Texas, might have an opening for Mrs. Boozer. He wanted to know, before sending on his recommendation, how much "static" Boozer planned to cause.

This incident reveals a good deal about the powerful leverage available to a superintendent. It also accounts in good measure for the otherwise puzzling apathy of many Negro teachers who, like Mrs. Boozer, have sent "applications galore" for teaching jobs and yet, upon getting no response, do nothing more than wait. Many Negro teachers won't even admit that they have been let go—they are afraid they will be considered troublemakers and denied the necessary recommendation.

Sometimes a superintendent's pressure is designed to forestall trouble. Henry Williams, principal of a Negro school in Palestine, Texas, and a member of the NEA's Commission on Professional Rights and Responsibilities, recently saw a letter from one Texas superintendent to a Negro teacher. First it informed him that his contract was not going to be renewed and then asked him, if he wanted a favorable recommendation, to send in his resignation. Thus, the real number of Negro teachers who lose their jobs because of desegregation may never be known, and rumor is free to add to the tensions of the waiting game. The NEA has been able to confirm that 180 Negro teachers have been let go in Texas this year, but Mrs. Boozer has

heard rumors putting the figure as high as 1,100.

A few days after his conference with Boozer, the superintendent dropped by the Dunbar School to say he had sent on the recommendation for Mrs. Boozer. The Boozers, however, were not particularly hopeful, for Earth, Texas, was seeking to fill a vacancy in a white school; they were not surprised that they have heard nothing more about it. Shortly after school let out, Boozer went to the NAACP's offices in Dallas. He has decided to bring suit against the Munday school system, charging discrimination.

THERE ARE precedents at hand. Two suits involving Negro teachers' rights, one in Florida in 1963, another in Tennessee in 1964, have already been won on the grounds that the Supreme Court school desegregation decision of 1954 applies to teachers as well as students. Still another was won in Virginia this June, when the court found that the arbitrary action of a school board in dismissing seven Negro teachers deprived them of their rights under the Fourteenth Amendment. The number of such suits is sharply increasing now, with the Justice Department intervening in some cases.

The Civil Rights Act of 1964 does not provide specific protection for Negro teachers' rights. Commissioner of Education Francis Keppel, however, has said that "it should be unmistakably clear" that his office's guidelines "do provide for review of policies or patterns with regard to teaching staffs which have a discriminatory impact on students." Keppel has adroitly shifted the emphasis from teachers' rights to students' rights to desegregated teaching. "If the Commission has the right to withhold funds, then the major part of the battle is over," the NEA reported in June. "If not, we may have a long hard struggle ahead."

At its June convention, the NEA voted to raise a million dollars to aid the displaced Southern Negro teachers. It is co-operating informally with the NAACP in compiling lists of districts where wholesale dismissals have taken place. Yet "dismissal based on race" may become increasingly hard to prove as the deep South, becoming more practiced, refines the tactics of token appointments and "short contact" jobs. Even objective attempts to compare teachers' qualifications are difficult, and they could prove to be the thorniest thicket yet encountered on the road to integration.

The new militancy on the part of the NEA is somewhat compromised by the fact that in four Southern states its affiliates still are associations "for whites only," although they are required to desegregate by July, 1966. In the other Southern states, the white teachers' associations have removed the barriers to Negro membership, but the Negroes have not rushed to join. They have, after all, their own teacher associations, affiliated with the NEA, through which they gain the national recognition they have been unable to obtain in their own states. They do not want to be members in name only, and they know the Southern white affiliates are not committed to their cause.

The NEA and the NAACP, however, are not the only ones who intend to help. One prominent teacher "still on leave of absence from Houston public schools," as President Lyndon Johnson describes himself, has promised special re-employment services

and Manpower Development and Training Act funds to help displaced Negro teachers. He has asked Congress to provide them fellowships, and perhaps of more significance, he has publicly directed his Commissioner of Education to "pay very special attention, in reviewing the desegregation plans, to guard against any pattern of teachers' dismissal based on race. . . ."

Meanwhile, retraining is as difficult for older Negro teachers from the South as relocation, and many have to face both. The New York State Commissioner of Education, for instance, has warmly urged the displaced Southern Negro teachers to come to his state, but the invitation is circumscribed somewhat in that New York's chief need is for physics and chemistry teachers and the fact that New York's certification standards are among the highest of all the states.

Indicative Endings

Early in June, the Boozers packed their 1957 Mercury and drove to Washington, D.C., in search of teaching jobs. "We knew by then we could only find a job outside the state," Boozer said. "We've spent over $2,000 since January looking for work." By the middle of July, both Boozers had finally found jobs in Prince Georges County, Maryland, teaching educable mentally retarded children. They must leave the three of their five children who are in college fifteen hundred miles behind in Texas, but both will be earning more money than before, Mrs. Boozer more than half again as much.

This happy solution, however, has not been achieved by the remaining teachers of the now abandoned Dunbar School, and their situation is more typical. It is perhaps indicative that two of them who had said that they would join the Boozers in their suit have now withdrawn. At last report, it was still only Mrs. Gipson who had found a job. "They're not doing anything to help themselves" Boozer said sadly.

For the rest of the summer, with the help of an expected loan from the NEA, the Boozers will take a few education courses at Prairie View A&M, a Negro college forty-five miles outside of Houston. Their daughter is attending school there now and will graduate this month—as a teacher. With no hope of teaching in Texas public schools, she is looking for work at the college itself. "It's a funny thing," Boozer said when asked what the Prairie View faculty was advising its students who major in education. "I've questioned Erma Jean a lot about this, but she says her professors simply won't talk about the situation. It's not discussed at all."

What's happening to the unions

Membership regains a little ground—but labor force grows faster

Year	Total members	Percent of nonfarm workers belonging to unions
1956	17,490,000	33.4%
1957	17,369,000	32.8
1958	17,029,000	33.2
1959	17,117,000	32.1
1960	17,049,000	31.5
1961	16,303,000	30.2
1962	16,586,000	29.9
1963	16,559,000	29.2
1964	16,841,000	28.9

How some major unions are doing

	1962	1964	Percentage gain or loss
AFL-CIO	14,835,000	15,150,000	+ 2.1
UAW	1,074,000	1,168,000	+ 8.8
USW	879,000	965,000	+ 9.8
IAM	868,000	808,000	− 6.1
Brotherhood of Electrical Workers	793,000	806,000	+ 1.6
Carpenters	739,000	760,000	+ 2.8
Laborers	429,000	432,000	+ 0.7
Retail Clerks	364,000	428,000	+17.6
Meat Cutters	333,000	341,000	+ 2.4
Building Service Employees	294,000	320,000	+ 8.8
Operating Engineers	297,000	311,000	+ 4.7
Communications Workers	279,000	294,000	+ 5.4
Union of Electrical Workers	295,000	271,000	− 8.1
Railway Clerks	300,000	270,000	−10.0
Plumbers	251,000	256,000	+ 2.0
State, County & Municipal Employees	220,000	235,000	+ 6.8
Retail, Wholesale & Dept. Store Union	159,000	167,000	+ 5.0
Government Employees	106,000	139,000	+31.1
Teachers	71,000	100,000	+40.8
Teamsters [Ind.]	1,457,000	1,507,000	+ 3.4

LABOR

Unions gain members, but the going's slow

Addition of 315,000 to labor rolls in two years is hailed as 'dramatic progress.' But gain is short of expectations, and the boom in the economy may deserve most of the credit

After the AFL and CIO merged a decade ago, its leaders talked confidently of doubling the federation's membership. In early December, the alliance will be 10 years old. Nevertheless, the big gains are yet to be made.

AFL-CIO has had its ups and downs since 1955. When it acted against the International Brotherhood of Teamsters and smaller unions in an anticorruption campaign, it gave up 1.5-million members. And its 130 affiliates have been hard-pressed to hold their own; few have made significant gains.

Today, about the most AFL-CIO can claim is that it is nearly as big without the Teamsters as it was with them in 1955.

Upturn. There's an upturn apparent now, however, though it's not a sharp one: Gains over the past two years totaling 315,000 are far short of AFL-CIO estimates of what it should be doing. Nevertheless, they are cited as "dramatic progress" and a forerunner of new gains to be made.

There's a big difference from the past in labor's predictions today: Organizing estimates are scaled way down; there's more talk of gains in the thousands than in the millions.

Unions blame legal restraints and the economy—particularly spreading automation—for the difficulties they are having. They lambaste the Taft-Hartley Act for creating conditions that make resistance to unions safer and easier for employers. They cite figures to show that today's labor force gains are in occupations traditionally hard to unionize. Furthermore, declines in the blueshirt or industrial force cause shrinkages in union memberships and in the unions' organizing potential.

Some union leaders say there's another reason the unions aren't forging ahead more: Labor, they say, has lost much of its former crusading spirit and possibly its appeal as a cause. The charge always sets off heated controversy. But even those who retort in strongest words concede that labor needs to examine possibilities for opening up new organizing fields.

New hope. Meanwhile, union hopes are rising with gains in membership. Leaders expect help from:

- Repeal of Taft-Hartley Section 14(b), which they say would lead to a more favorable "positive" climate for labor; union strategists talk of "thousands" of new members immediately, perhaps 100,000 within a year, possibly a half-million by 1970 if 14(b) goes in 1966.
- The civil rights situation, which they feel gives Negroes incentive and encouragement for joining unions.
- The Administration's endorsement of government unions, first granted during President Kennedy's term; this has had dramatic results already, and labor officials expect that in time it will mean gains in the hundreds of thousands.

The latest figures for union mem-

The Big Difference

between Cosco and other fine chairs is the money you save!

That's the BIG difference.

There are other important differences that should not be overlooked. Differences like: Durable construction . . . all-day-long comfort . . . appealing style.

Whether you choose the Cosco Director 30 Series, (illustrated), Contemporary or Standard chairs, you get the most for your money. And the same holds true for Cosco desks, credenzas, tables, and lounge furniture.

See the difference. *Save* the difference. Insist on seeing Cosco before you buy. Locate your Cosco dealer in the Yellow Pages, or write us— Dept. BW 115.

COSCO.

Hamilton Cosco, Inc.,
Office Furniture Division, Gallatin, Tennessee

bership are for 1964. With very few exceptions, unions look for further marked gains this year.

Stimulated gains. Actually, the state of the national economy, more than the union's own efforts, apparently is responsible for much of labor's recent growth. Union members laid off when their industries were depressed are back on the job—and counted once more in the official membership roll.

Unions are organizing—but work in the field is difficult, expensive, and often frustrating. Some unions with pinched budgets have greatly curtailed organizing work; now they're beginning to expand operations again. They say conditions for organizing are "improving" after years of troubles.

They cite National Labor Relations Board records: In the NLRB fiscal year that ended June 30, unions won 60.8% of the elections they entered, the best percentage since the late 1950s. AFL-CIO unions gained a potential of 115,232 new members, independent unions (the Teamsters particularly) another 106,492.

What's happened. Labor in this country reached its peak membership in 1956, when 17,490,000 belonged to unions in this country. Canadian members of U. S. unions boosted the total to 18,500,000. Then a downward drift set in. By 1961, membership had dropped to 16,303,000, excluding Canadians. There's been some up and down movement since then.

Recently reported figures, however, show that membership in 1964 rose from 16,559,000 to 16,841,000. Though this is still 641,000 below the peak, it is a substantial increase.

Unions are beginning to talk of new heights to be scaled.

Ratio is down. At the same time, labor's leaders are worried about another hard reality. The percentage of the eligible work force that belongs to unions is continuing to drop. Year by year, unions represent a smaller part of the working population.

In 1956, 33.4% of the nation's 52,408,000 nonagricultural workers were in unions. In every year except one since then, the percentage went down slightly. In 1964, only 28.9% of the 58,188,000 nonagricultural workers were organized. The number in unions had risen nearly 300,000 in the year, but the percentage had dipped from 29.2% in 1963.

AFL-CIO's gain. In 1964, AFL-CIO unions reported 15,150,000 members as compared with 14,835,000 two years before. And the U. S. Labor Dept. reported national unaffiliated unions (such as the International Brotherhood of Teamsters) had 2,825,000 members in 1964 as compared with 2,794,000 in 1962.

The most substantial gains in AFL-CIO were those of the United Auto Workers and United Steelworkers—and these suggest reasons why labor's 1964 gains aren't more significant.

In reporting membership, unions give figures only for dues-paying members. Those not working are exempt from dues. When many industrial workers are unemployed, union membership figures reflect it by dropping sharply. When the workers are recalled, they resume dues payments and union membership figures rise correspondingly.

Pattern in 1964. The industrial workers' ranks thinned in the early 1960s. UAW and USW suffered from heavy layoffs; at one time, the steel union said that more than 300,000 members were idle—and off its roll of dues-paying members.

During 1963 and 1964, the booming auto and steel industries recalled workers.

UAW membership went up from 1,074,000 to 1,168,000, a gain of 94,000 for the two years. Some were new members, of course, but a very large part of the total were UAW unionists back on payrolls.

USW membership rose from 879,000 to 965,000, a gain of 86,000 but still about 200,000 off USW's peak in the 1950s. Here, too, the very large part was made up of returned workers.

Boost for AFL-CIO. UAW and USW together contributed 180,000 to AFL-CIO's 315,000 increase in 1964. With about a seventh of the federation's total membership, UAW and USW are important factors in AFL-CIO growth: As they fluctuate, so does AFL-CIO.

Both are in tightly unionized industries: They have close to 90% of all who are eligible under union contracts. They have organizing money and manpower, but only scattered, small, hardest-to-unionize plants left as targets. Their growth potential is in their industries' further expansion, in large part, and in finding and cultivating new fields for membership—white-collar workers, technicians, and similar groups, for instance. Neither has yet done well in signing up white-collar and salaried workers.

Machinist losses. The International Assn. of Machinists is another union able to blame gains and losses on the economy. It was hard hit in 1963 and 1964 by aerospace and railroad layoffs, showed a membership decline from 868,000 in 1962 to

A new one every ten days...

There are now over 215 Howard Johnson's Motor Lodges in 32 states — and another is added at the rate of one every 10 days. What's more, 20% of these Lodges are currently adding more rooms. How do we keep it up? Because the public has confidence in the quality and sensible prices they find under the orange roof . . . at the Motor Lodge and at the Howard Johnson's Restaurant right next door.

PATERSON PARCHMENT PAPER COMPANY
Bristol, Pennsylvania 19007

808,000. More recent IAM figures would reflect marked gains: IAM members have been going back to jobs.

Services gain. In the expanding services, the Retail Clerks International Assn., up 64,000, and Retail, Wholesale, and Department Store Union, up 8,000, showed unexpected gains. So did the Amalgamated Meat Cutters & Butcher Workmen, largely a store union, with an 8,000 gain. And the Building Service Employees' International Union, also in an expanding field, reported a two-year gain of 26,000.

These gains were a result of hard organizing, not expansion of employment under labor contracts. To the contrary, automation is shrinking store jobs. For instance, RCIA's gain of 17.6% over two years actually understates the number it added to its rolls; by one estimate, the union must sign up 50,000 new members each year merely to hold its membership level steady.

On a treadmill. Softgoods unions also must organize hard to keep their totals. The International Ladies' Garment Workers' Union and the Amalgamated Clothing Workers of America, with memberships of 442,000 and 377,000 respectively, showed gains of only 1,000 each, although they enrolled many more workers than that in the reported period.

In the booming construction industry, major unions all reported gains—among them the Brotherhood of Carpenters & Joiners, up 21,000. The declining employment in the railroad industry was reflected in drops in memberships of all rail brotherhoods.

Government unions. Government unions showed large gains, owing in part to a more favorable attitude toward unions of public employees. The American Federation of Teachers added 29,000 members from 1962 to 1964; the American Federation of Government Employees picked up 27,000, and the American Federation of State, County & Municipal Employees showed a 15,000 gain.

Otherwise, internal troubles in the International Union of Electrical Workers apparently were responsible in large part for a 24,000 loss, at least partially recouped this year.

More stabilized conditions in the Communications Workers of America, and harder organizing, added 15,000 members to its rolls in a period in which CWA complained that automation was costing it jobs.

Among the independents, the Teamsters reported a substantial increase from 1,457,000 in 1962 to 1,507,000 in 1964—the nation's top union membership. **End**

LABOR IN THE SOUTH

Ray Marshall

I. ORIGINS OF UNIONS IN THE SOUTH

A. The Earliest Unions
B. The Knights of Labor
C. The American Federation of Labor
D. Highlights of Developments by Trade and Industry Before the New Deal

1. Printing and building trades
2. Railroad workers and longshoremen
3. Coal miners and textile workers
4. Agricultural and lumber workers
5. Revolt of the textile workers
6. The 1930 organizing campaign

E. Depression and the New Deal

1. Upsurge in coal mining
2. Communists, Socialists, and sharecroppers
3. Growth of the CIO
4. Growth of some AFL unions

F. Impact of World War II
G. "Operation Dixie" and the 1946 AFL Organizing Drive

II. THE PRESENT STATUS OF UNION STRENGTH IN THE SOUTH

A. Discussion of the Trends in Union Membership by States and Unions

1. General changes in union membership
2. Evolutionary and gradual changes

B. Factors Accounting for the Present Status of Unions in the South

1. Political factors - importance of political action for the growth of unions in the South
   a-the traditional political structure of the South
   b-the changing political structure - industrialization and social change
   c-the importance of favorable and unfavorable legislation for the growth of unions

2. Economic factors - importance of economic forces for the growth of unions in the South - the unions economic strength

a-the structure of the Southern economy - especially agriculture
b-importance of the level and structure of wages - will cause greater resistance, etc.
c-importance of the structure of firms operating in the South
1. the size of firms
2. the importance of branch plants
3. the extent of competition
d-importance of the economic objectives of the South's leaders

3. Social factors
a-labor's public image in the South
1. state and local officials - these people reflect local power structures
2. intellectuals in the South as compared with the non-South reflect the differences in the structuring of objectives - less anti-union here
3. the importance of race relations for union growth

a) has the issue been exaggerated as a factor hampering union growth?
b) how has it influenced unions?
1) - use in representation elections
2) - refusal by unions to organize some workers
3) - Negro-labor political coalitions
4) - unions' ability to organize where it would like to organize
5) - influence on internal union affairs and unity of workers
6) - potential effect on control of apprenticeship and other labor objectives

4. The internal strength of the labor movement
a-relationship of internal structure to organizing
b-financial strength and organizing
c-what accounts for the morale or spirit of a labor movement, and how important is this for organizing?
d-is the labor movement strong enough to shape the political, social, and economic trends in the South, or must it merely be shaped by those forces?

C. The Trends in Union Strength in the South

1. Favorable factors
a-industrialization
b-favorable legislation and administration - Negro-labor political coalitions
c-inflation
d-basic ecnomic strength of the unions
e-continuing importance of collective bargaining - gradual increase in white collar membership

2. Unfavorable factors:
   a-decentralization and smaller plants
   b-human relations approaches of companies
   c-composition of the labor force
   d-increasing living standards and weakening of identification with traditional goals of unions
   e-alienation of intellectuals and liberals within the labor movement

SPECIAL PROVISIONS

The following Special Provisions together with the attached Department of Labor General Provisions and Established National Urban League Policies are applicable to this Sub-contract. Where there is a conflict between the aforementioned, the Special Provisions take precedence. Where a matter is not resolvable under the Special Provisions, the General Provisions must next be consulted, and if not resolvable thereunder, the Established National Urban League Policies will apply so long as such policies do not conflict with any other written authoritative issuance by the funding source.

SPECIAL PROVISION NO. 1 - KEY EXECUTIVES AND STAFF PERSONNEL

(1) The Sub-contractor agrees that, as such as possible but not later than 15 days from the date of contract execution by the National Urban League, he shall provide the National Director, Labor Education Advancement Program with a list of key executives and other staff personnel whose salaries, in whole or in part, are charged under the contract. The list shall include position titles, name, social security number, annual salary, percent of time to be devoted to the project, and accompanied with descriptive duties and responsibilities of each staff position.

(2) The Contractor further agrees that he will, opposite position titles, a annotate the aforesaid list to reflect those persons who will be responsible for the handling and disbursing of Federal funds, and who are properly bonded pursuant to clause 23 of the General Provisions of the contract.

(3) In the event the Sub-contractor finds it necessary, during the life of the contract, to make any change to that provided under (1) and (2), above, he shall promptly notify the National Director, Labor Education Advancement Program in writing, giving the reason therefor and furnishing the name and biography of the intended replacement. No change, however, shall be made by the Sub-contractor until the receipt of written notice from the National Director to proceed with the change. Generally, circumstances warranted, such written notice will be made within 30 days from date of receipt.

(4) Notwithstanding (3), above, the National Urban League also reserves the right at any time during the contract period to request the removal of any person whose performance or record is considered inconsistent with or detrimental to the objectives of the project, or not in the best interest of the Government. Such request will be made by the National Director, LEAP in writing, setting forth the reason(s) on which it is based.

SPECIAL PROVISION NO. 2 - COMPUTATION OF STAFF SALARY

The following salary seale shall apply for the positions listed. Personnel occupying any position not listed below shall be compensated at the rate as specified in the budget(s) of this sub-contract. The contractor shall have the right to hire personnel at less than the maximum rate shown and to upgrade the employees salary in accordance with performance. In no event, however, shall any employer be paid in excess of the maximum budgeted rate unless written approval is granted by the National Director, LEAP and the sub-contract modified accordingly.

Director	$13,500 to $14,500
Tradesmen Specialist	12,000 to 13,500
Recruiter	11,500 to 12,500

SPECIAL PROVISION NO. 3 - FRINGE BENEFITS

Social Security, Workmen's Compensation, Unemployment Compensation and any other fringe benefits required by law and paid by the employer are allowable costs under this contract.

Additional fringe benefits may be negotiated under this contract provided such fringe benefits are a normal practice of the Contractor at the time of final negotiations for this contract and are available to all employees. Fringe benefits from an immediate previous employer which may be continued while employed under this contract are an allowable cost. In no event will duplicate fringe benefits be allowable to an individual employed under this contract.

SPECIAL PROVISION NO. 4 VACATION, SICK LEAVE, LEGAL HOLIDAYS

Any staff personnel employed by the Contractor under the terms of this contract shall be granted annually the following leave:

Vacation - Two weeks (ten working days) or in accordance with the Contractor's written policy. (Sick Leave - Two weeks (ten working days) or in accordance with the Contractor's written policy. (Legal Holidays - New Years Day, Washingtons Birthday, Memorial Day, Independence Day, Labor Day, Veterans Day, Thanksgiving Day and Christmas Day.

Leave shall be accrued at the rate of 5/6 of 1 day per month for each month employed. If the term of this contract is for more than or less than one year, the above leave shall be adjusted accordingly. No payment may be made under this clause if the above items are covered under Special Provision No. 3, "Fringe Benefits".

SPECIAL PROVISION NO. 5 - FLEXIBILITY OF COSTS

Flexibility of costs between the budgets of the sub-contracts for each of the cities specified shall not be allowed. Funds made available for expenditure under one sub-contract budget shall not be used to pay costs incurred under any other sub-contract budget. Flexibility of direct costs, not to exceed 20%, will be allowed however within the sub-contract budget at the time of final settlement provided no change is made in line item 14A (1) WAGES AND SALARIES and further provided that the total estimated cost of each budget is not exceeded.

SPECIAL PROVISION NO. 6 - STAFF SALARY LIMITATIONS

No employee under this contract will be paid an amount in excess of $22,000.00 per year under this contract unless otherwise authorized in writing by the Contracting Officer.

SPECIAL PROVISION NO. 7 - LEASE-PURCHASE AGREEMENT

The Contractor shall not, while using Federal funds in performance of this contract, lease either real or personal property under terms providing, among other things, for the option to apply rent in whole or in part toward the purchase of the property being leased without prior written consent of the Manpower Administration Property Officer. Moreover, the Contractor agrees to have the substance of this clause inserted in any subcontract or equivalent instrument entered into in performance of this contract.

SPECIAL PROVISION NO. 8 - TRAVEL AND PER DIEM

All travel under this contract shall be at tourist, coach fares, or less than first class unless itinerary or nonavailability dictate otherwise. All automobile travel shall be reimbursed at 10¢ per mile. Per Diem of $20 per day shall be allowed when lodging cost is $10 or less per day and additional per diem amounts above $20, but not to exceed $25, when lodging cost is more than $10 per day. A $20 per diem rate will be used for determining fractional parts of a day for continuous travel of more than 24 hours. For travel of less than 24 hours when a night's lodging is not required, the per diem rate shall be $10. However, no per diem shall be allowed when the travel period is 10 hours or less during the same calendar day; except when the travel period is 6 hours or more and begins before 6 a.m. or terminates after 8 p.m.

SPECIAL PROVISION NO. 9 - FULL TIME EMPLOYEES

It is understood that all employees under this contract are required to devote full time to the operation of this contract. No employee shall provide services to any other contractor or employer unless specifically authorized to do so, in writing, by the Contracting Officer. If so authorized, that employee shall be compensated from this contract on a pro-rata basis commensurate with the percentage of time devoted to this contract.

SPECIAL PROVISION NO. 10 - CONTRACTING OFFICER'S REPRESENTATIVE

The National Urban League's National Director of the Labor Education Advancement Program and his professional staff shall monitor performance under this contract. No changes in the program phases of the work or terms and conditions of this Sub-contract may be made without prior approval of the National Director of the Labor Education Advancement Program. Such changes, if any, shall be accomplished only by a properly executed Request For Contract Modification.

SPECIAL PROVISION NO. 11 - REPORTS

The Sub-contractor shall furnish the National Director of the Labor Education Advancement Program on or before the first (1st) working day of each month, the following reports and documents:

1. Form MT4-OJT-4 Original and two copies.

2. Monthly Activity Report - three copies.

3. Contractor's Invoice - Original and two ink signed copies.

C. The undersigned representative of the State Employment Service of _____ certifies that there is a legitimate need for training in the occupations identified in this contract, and that reasonable expectation of employment has been established.

(State Employment Security Representative) (Title) Date

D. The undersigned representative of the State Vocational Education Agency of the State of _____ certifies that: ☐ 1. The plan and budget for supplementary instruction are adequate and reasonable and recommends approval, OR
☐ 2. He has been notified of this proposal.

(State Voc. Ed. Representative) Date

The undersigned representative of DHEW Approves the proposed supplementary instruction and authorizes the expenditure of Manpower funds therefor.

(Division Voc. Tech. Ed. Field Representative) Date

E. The undersigned representative of the Bureau of Employment Security finds this OJT proposal well substantiated as to evidence of suitable occupational shortage, availability of trainees, and reasonable assurance of employment for persons who successfully complete the training; approves the State Employment Security agency budget for project costs and allowances; and recommends approval of the proposal.

(BES Representative) (Title) Date

F. The undersigned USDL representative certifies that the training content of this OJT proposal is adequate and that it has been discussed with a duly constituted Manpower Advisory Committee or with labor and management groups representative of the area, and recommends approval.

(Agency and Title of USDL Representative)

Signature Date

(Following this page attach E.S. M2-1 and any other documents relating to justification for training.)

LABOR MARKET AREA, NAME _____ No. _____

LOCAL E.S. OFFICE, NAME _____ No. _____ State _____

SECTION II—GENERAL PROGRAM DATA CONTRACT NUMBER 34-0-0001 -007

(This section to be completed for each OJT contract)

1. OJT Contractor: ATLANTA URBAN LEAGUE

2. Address: 75 PIEDMONT, N. W. (Street) ATLANTA (City)

(County) GEORGIA (State) (803) 256=3666 (Phone)

3. Product or Service (If Employer): SOCIAL SERVICE AGENCY (Give Standard Industrial Classification Code if Known)

4. Total No. of Employees: _____ 5. Proposed starting date of training: 9/1/69

6. Name of person in charge of OJT: LYNDON WADE

7. Location and brief description of OJT space: 75 Piedmont, N. W. Atlanta, Georgia

8. (a) No. projects under this contract: ONE (b) No. Trainees: ONE HUNDRED (100)

9. Will trainees receive wages from the contractor for any portion of the OJT period?

☐ Yes ☒ No If yes, indicate hours of paid and non-paid time in Item 22.

10. Are contractor and Government adequately insured against liability claims by trainees?

☒ Yes ☐ No

11. Do the Project Plan and Facility meet the requirements relative to the terms and conditions of employment prescribed by applicable Federal, State, and local law?

☒ Yes ☐ No (Explain adjustments required prior to start of training)

12. Show major items of OJT Contractor's equipment to be used in training:

ITEM	NO.	ITEM	NO.

SHEET B

13. Program Narrative: (In this space give a concise narrative description of the proposed training. Tell how, when and where the training will be given; explain any unusual aspects.)

PURPOSE

It is the purpose of this agreement between the National Urban League and the Urban League of ATLANTA, GEORGIA affiliate of the National Urban League, to establish the following:

1. The Urban League of ATLANTA, GEORGIA will establish and operate a LEAP apprenticeship outreach project to prepare and place at least ONE HUNDRED (100) apprentices in the building and construction trades.
2. The term of this contract will be not more than 24 months.
3. Funds will be provided under the National Urban League's prime contract with the U. S. Department of Labor to reimburse for the approved administrative costs and other supportive services.

SCOPE OF WORK

Objectives

The prime objective of this project is to promote, locate, motivate guide and assist minority youths in gaining entrance into registered apprenticeship training programs in the building and construction trades which normally have not accepted minorities in the past, and to counsel and assist those so selected in remaining in their apprenticeship until successful completion. The secondary objective is to assist minority youths in gaining entrance in the construction industry. Also, to assist minority individuals to enter the construction trades as journeymen. It is understood that those placements which are made under the secondary objective will not be counted against the total trainee goal outlined in the contract.

Proposed Duties and Responsibilities

1. To seek out and identify minority youths for apprenticeship training.
2. To acquaint minority youth with the opportunities available in the apprenticeable occupations.
3. To work with the candidate's family (parents or older member) to:
   a. Convince them of the advantages and the career benefits of apprenticeship.
   b. Neutralize any resistance or antipathy the family may have toward blue collar occupations, and
   c. To enlist their support of the candidate through the waiting period, indenture process and apprenticeship.
4. Preparing each applicant for JAC examination, both written and oral by special coaching such as refresher sessions in mathematics and related work, and how to take tests (interviews), etc.
5. To keep them advised as to date, place and time to make application for those programs they qualify for, and assist where necessary to insure proper follow through.
6. To establish an effective working relationship with the local JAC'S union and management officials, local, state and federal agencies, so as to maintain an accurate and up-to-date picture of conditions pertaining to the opportunities, etc., available.
7. To maintain a current file of prospective apprentice applicants and other records necessary to provide the Advisory Committee with a monthly report.

SHEET

13. *Program Narrative:* (In this space give a concise narrative description of the proposed training. Tell how, when and where the training will be given and explain any unusual aspects.)

8. To work closely with the BAT Representative to coordinate activities.
9. To provide follow-up service to those placed under this contract and where required to those youths who are selected as apprentices so as to prevent dropouts.
10. To follow through on all applicants so as to maintain interest, etc.

Provide all necessary supportive services assisting the candidate in securing all documents or records that are required by a JAC such as high school diploma (or equivalency) school records, birth certificate, health examination, etc.

SHEET

SUBCONTRACT APPROVALS

All subcontracts promoted under the terms and conditions of this contract shall be reviewed, signed and executed by the Executive Director and the authorized representative of the subcontractor.

Approval of the subcontract, prior to execution, will be obtained from the National Urban League LEAP Contracting Officer.

No subcontract shall be executed which expires after the expiration date of the prime contract.

This subcontract as well as the National Umbrella Contract can be cancelled at any time at the convenience of the Labor Department; likewise, this subcontract can be cancelled at the convenience of the National Urban League.

Performance Terms:

This subcontract is entered into with affiliate Urban League in order to accomplish the goal of getting minorities into the Mechanical Trades. The staffing pattern of this subcontract is based upon the computed, desired, and allowable need for supportive services in order to accomplish the aforementioned goal.

Failure to Perform:

Failure to perform under the terms of this contract regarding the special, general, and NUL provisions shall be considered as a basis for immediate notification of the affiliate Executive Director and Project Director for their consideration. Upon discovery of the failure to perform according to the terms of this subcontract the following steps will be taken:

A. Within 15 days of notifying the affiliate authorities, notification should be given to NUL that corrective steps have been taken.

B. Within 30 days of notification of affiliate authorities, provided all violations are not corrected, suspension of the project and preparations for termination will begin. At this time, all project staff will be notified of their suspension and possible termination within 30 days.

C. After 15 days additional time, failure to correct the subcontract violations will result in an official notice of termination to the subcontract affiliate authorities and staff. All such persons affected will be terminated within two working weeks.

D. All contractu[illegible]gations undertaken by an affiliate such as vacati[illegible] to employees, etc., will be assumed by the [illegible]nal Urban League Coordination Office and an [illegible]ant coordinator will be assigned there to asce[illegible] the legitimacy of such claims and all payments [illegible]e made to the legitimate claimants as part of c[illegible]ut of subcontracts.

E. The special [illegible] account and all funds which are obligated to [illegible]rom the National Urban League according to the contr[illegible] will be reimbursed and steps taken to close-out [illegible] account. However, where funds are due to the special bank account by affiliates due to contract violations, these funds will not be reimbursed for close-out until the affiliate has reimbursed owed monies to the special bank account.

MONITORING OF SUBCONTRACTS BY CONTRACTOR STAFF

1. Each training facility shall be visited by a member of the Contractor's Staff prior to execution of subcontracts, and shall be visited during the term of the subcontracts as may be required.

2. Progress reports will be required from subcontractors as required by the Office of National Projects, Manpower Administration, U. S. Department of Labor.

3. Contractor Staff shall review each subcontractor report prior to approving the progress report and authorizing payment for services rendered by the subcontractor.

4. Payments to subcontractors will be made at intervals specified in the subcontract according to the conditions stated therein.

CLOSING SUBCONTRACTS

Final payment to subcontractors will not be made until:

1. The Contractor has approved all reports and has received a subcontractor's release, final invoice, a final OJH-4, monthly activity report and any other documents or reports required by the Department of Labor.

TRANSPORTATION AND SUBSISTENCE

No out of town transportation and subsistence costs will be allowed to any affiliate, except where authorized in writing by the National Coordination Office.

Per diem is allowed at the rate not to exceed $25.00 per day and .10 per mile is allowed for the use of privately owned automobiles. Each subcontract contains a budget item for mileage and parking costs based on an estimate of the weekly need for each project staff member. This estimate is close to what costs will actually be incurred, and mileage for all staff should be reasonable, consistent and similar.

EQUIPMENT

Since most required equipment was purchased under the previous umbrella contract, it is presumed that the affiliates will need a minimum of additional items. To this end, a flat rate will be provided for maintenance and other small items of equipment.

STAFFING PATTERNS

Wherever possible, the contractor will attempt to continue the employment of all staff members which have proven their capacity to perform under the previous subcontract. However, given the reduction in overall funding and the inflation in costs, some shrinkage of job positions may be necessary. Also, where an affiliate due to its previous performance has received fewer slots, the administrative ratio will be the final parameter in the size of the staff.

STAFF SALARY STANDARDS

In order to make possible the recruitment and continuation of the best and most productive personnel in any affiliate project, the National Coordination Office has struggled to achieve a maximal and adequate level of renumeration for project personnel. These standards are stated in the model budget forms attached, and it is recommended that they be adhered to completely.

BONDING

All Executive and Project Directors will be bonded. This bond will be effective throughout the contractual period. If the personnel desired by the Executive Director are not bondable, they cannot be employed on the affiliate LEAP staff and all changes in the affiliate staff desired by the local Executive Director must be submitted and approved by the National Coordination Office prior to employment. At least three weeks notice is required for such changes to be approved.

SPECIAL BANK ACCOUNT

According to the terms of the subcontract any and all funds advanced to the affiliate must be placed in a single special bank account numbered by the subcontract digits and drawable against the submitted agreement by the Board President or Executive Director and cosigned by the Project Director. All signatories will be bonded. If the affiliate wishes to have another person designed to sign checks or make withdrawals, he may be substituted for the Board President. However, in all instances all transactions should be signed by the Project Director and one other affiliate authority. No transfer of funds from the special bank account can be made without approval of NUL coordinating office in writing.

PROGRESS REPORTS

The subcontractor shall submit monthly reports during the term of the subcontract. The reports shall be submitted to the LEAP Coordinator's Office by the fifth of every month and must be complete according to the terms described in the Subcontractor's Manual. Reports which are late or incomplete will be returned to the affiliate and a delay of payment of approximately thirty days will ensue. Progress reports will include: monthly billings, time sheets, travel expense sheets (including odometer readings), and OJT 4 - MT4 etc. A deposit slip registering the actual deposit of the previous month's reimbursement from the NUL to the Special Project's bank account number, must be included as part of the monthly progress report.

EXPENDITURES

All expenditures under the contract shall be individually and separately documented and substantiated. Proper internal controls must be maintained according to the NUL Bookkeeping Standards.

CHANGES IN CONTRACT

No changes affecting any subcontract shall be made without prior approval, in writing, from the NUL.

COSTS

All costs over and above those specified in the contract shall be absorbed by the subcontractor.

REVERSION OF FUNDS

All funds awarded the Urban League of ATLANTA URBAN LEAGUE under this contract but not used in fulfillment of its provisions, will be refunded to the National Urban League.

FISCAL RESPONSIBILITIES

A. The Subcontractor agrees to follow a standard system of accounting practices and procedures as set up by the LEAP Fiscal Officer for all Urban League apprenticeship outreach projects.

B. The Subcontractor agrees to maintain and make available for inspection, audit or reproduction by the National Urban League's Contracting Officer or his designee all books, records, documents, papers and other evidence pertaining to transactions related to this contract.

FOR RELEASE: P.M. Editions, Thursday, March 11, 1971, or thereafter

SOUTHEASTERN BUILDING TRADES WAGE SCALES ADVANCE IN FOURTH QUARTER OF 1970 TO $5.24 AN HOUR

Union hourly wage scales for building trades workers in the Southeast 1/ averaged $5.24 an hour on January 4, 1971, according to Brunswick A. Bagdon, Southeastern Regional Director of the U.S. Department of Labor's Bureau of Labor Statistics. Nationally, these trades averaged $6.39 an hour.

The all-trades average in the Southeast rose by 13.9 cents during the fourth quarter of 1970--an increase of 2.7 percent. Among individual trades, increases in the Southeast ranged from 9.5 cents for plasterers to 18.1 cents for carpenters and averaged 10.4 cents for plumbers and electricians, 11.7 cents for painters, 12.2 cents for bricklayers, and 12.7 cents for building laborers.

The level of hourly wage scales in the region on January 4, 1971 was 53.2 cents above the previous year, an increase of 11.3 percent. The year-to-year advance varied from 40.9 cents for plasterers to 91.6 cents for plumbers.

Among the six journeymen crafts, plumbers had the highest average scale as of January 4, 1971--$6.69 an hour. The basic scale for plumbers varied from $5.25 an hour in Columbia, South Carolina to $7.59 in Miami, Florida. For the other journeymen trades, regional average hourly scales were painters $5.03, plasterers $5.27, carpenters $5.48, bricklayers $5.87, and electricians $6.39.

1/ Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

Building laborers' scales averaged $3.45 an hour, ranging from $2.20 in Montgomery, Alabama to $5.30 in Miami, Florida.

Changes in union scales over the quarter and year and the rate levels on January 4, 1971 are shown below. In computing the changes in rates, the increases in each trade were averaged among all workers in the trade, whether or not they received raises. Data for the separate crafts, by city, are shown in the accompanying table.

Trade	Change in Average to January 4, 1971 from --				Average Rate	
	October 1, 1970		January 2, 1970		January 4, 1971	
	Percent	Cents	Percent	Cents	Average	Range
Bricklayers.....	2.1	12.2	10.4	55.3	$ 5.87	$ 4.65 - 7.33
Carpenters.....	3.4	18.1	9.9	49.6	5.48	4.05 - 6.70
Electricians.....	1.7	10.4	14.3	79.9	6.39	4.85 - 8.08
Painters.....	2.4	11.7	9.0	41.7	5.03	4.00 - 6.50
Plasterers.....	1.8	9.5	8.4	40.9	5.27	4.25 - 6.85
Plumbers.....	1.6	10.4	15.9	91.6	6.69	5.25 - 7.59
Building Laborers..	3.8	12.7	14.0	42.4	3.45	2.20 - 5.30
All Trades.....	2.7	13.9	11.3	53.2	5.24	- -

Data not comparable with Southeastern averages published prior to July 1, 1969 due to a change in regional definition.

Union scales are the minimum wage rates (excluding holiday and vacation payments made directly to the worker each pay period) agreed upon through collective bargaining and reported to the Bureau by local respondents. The scales do not reflect rates for apprentices or for premium work. Overtime beyond established maximum daily and weekly hours is excluded.

REPORT ON THE JOURNEYMAN TRAINING FEASIBILITY STUDY
OF THE JOINT APPRENTICESHIP PROGRAM OF THE WORKERS
DEFENSE LEAGUE/A. PHILIP RANDOLPH EDUCATIONAL FUND

PREFACE

In March 1970, the Joint Apprenticeship Program of the Workers Defense League/ A. Philip Randolph Educational Fund received a grant from the AFL-CIO Executive Council to develop a "research in action" project on journeyman programs for minority workers in the construction industry. More specifically, our mandate was to study alternative strategies for increasing the number of minority journeymen and clarify the basic issues concerning the feasibility of these various strategies.

One of the most important objectives of this project was to facilitate and improve communication between the construction industry and minority groups. We therefore, established a special committee which included representatives of building trades unions, contractor associations, minority community groups, and persons from the academic community who were knowledgeable about minority employment programs in the industry.

The committee represented a wide range of experience - including that of the unions and contractors in many areas, of the Joint Apprenticeship Program WDL-Randolph Institute, in 21 cities, of the Urban League in 35 cities, of the Mexican American Opportunity Foundation, and others. Members of this committee participated in field research activities which included visits to program sites; seminars with local labor, employer and community groups; detailed interviews with program administrators and minority protest leaders. The committee made special visits to Boston and Chicago for in-depth studies of programs in those cities.

It must be emphasized however, that this is not an exhaustive analysis of programs. While such a study would be extremely useful, the limited resources available to us would not permit us to undertake such a project. Moreover, many of these programs have not been in existence long enough to be meaningfully evaluated.

REPORT ON THE JOURNEYMAN TRAINING FEASIBILITY STUDY

This report is submitted by the Joint Apprenticeship Program of the Workers Defense League and the A. Philip Randolph Educational Fund, to the Executive Council of the AFL-CIO, Feb. , 1971.

This report is necessarily an interim report. The training of minority journeymen for the building and construction trades is a complex area in which a great variety of methods and programs are now in operation. We have not been able to make a comprehensive study of all programs and their interrelationships. This report is an initial summary of our study and our recommendations, which will need to be expanded and updated as time goes on.

The committee feels that we have obtained enough insight from our study to clarify the major issues and make the following preliminary judgments. Our preliminary conclusions are based upon the following assumptions:

(1) There are non-apprenticeable routes of entry into the trades which could be made available to minority workers.

(2) It is essential that programs for minority workers do not result in the dilution of journeyman skills and union standards.

(3) It is essential that the graduates of minority training and upgrading programs should be fully qualified craftsmen with marketable skills, and not partially trained second-class mechanics.

FINDINGS

(1) Apprenticeship Outreach has been successful in increasing the number of minority youth in apprenticeship training programs. By October 1970, programs operating in over 80 cities under the

sponsorship of either the Urban League, or the Joint Apprenticeship program or the Building and Construction Trades Councils have placed 7,813 minority youths in apprenticeship programs in the building and construction trades. (See Table 1). In Chicago, during the few months of operation of the Chicago Plan, between its beginning and December, 1970, 184 minority apprentices were indentured (See Table 2). (In Chicago, apprentice outreach has been going on for several years, and has placed more than 600 minority youths as apprentices.) In Boston, outreach placed 107 minority youth as apprentices in the period between October 1968 and September 1970. (See Table 3). Thus, in spite of declining employment during 1970, outreach programs continue to recruit and indenture minority youth in substantial numbers in apprenticeship programs.

(2) It is important that the local affiliates of the AFL-CIO Building and Construction Trades Department continue, in accordance with their policy adopted in October, 1969, to recruit qualified minority craftsmen who are able to work as journeymen and become full union members. Special outreach efforts to recruit minority journeymen should be initiated where they have not yet been started. While the number of fully qualified minority mechanics who are not union members is not large in most crafts and areas, there are nevertheless a group of such persons who should be encouraged to enter the unions. In Chicago, for example, 203 minorities were placed as journeymen under the Chicago Plan by December 1970. (See Table 2). In Boston 148 minorities were placed as journeymen between October, 1968 and September, 1970. (See Table 3). Implementation of journeymen outreach programs nationwide will reduce unnecessary conflict between the minority community, the contractors and the building and construction trades unions.

(3) The nature and role of training-upgrading programs for partially skilled minority workers is a complex area which involves a variety of experimental programs. We have not, in the limited time alloted to us, been able to make a comprehensive study of all these activities and their interrelationships. However, we did study the training-upgrading programs now starting to operate in Boston and Chicago. In both these cities and others as well minority workers are being trained to be journeymen in special programs. In Chicago 192 minorities were placed in upgrading-training programs by December 1970 (See Table 2), in Boston 44 persons were placed in upgrading-training programs by September, 1970 (See Table 3). These programs are at a beginning stage and full evaluation of them will require additional research.

(4) In many areas, including the cities of Boston and Chicago which we visited, minority staff involved in recruiting, tutoring, counseling and motivating minority workers have made a significant contribution to the success of these programs.

(5) However the limited experience of these programs suggests to us that minority workers who possess some but not all of the skills of a journeyman should be given upgrading-training subject to two principles:

(a) That the apprenticeship programs are not undermined.

(b) That the minority worker is provided skills that will make him a full journeyman with union membership.

(6) Journeyman upgrading-training for minority workers should include:

(a) On-the-job training.

(b) Related instruction off the job site.

(c) Wages commensurate with the productivity of the worker as compared to a full journeyman.

RECOMMENDATIONS

1. Apprenticeship outreach programs should be continued and expanded.

2. Journeymen outreach programs should be established as soon as possible. Existing Apprenticeship Outreach Programs should provide the mechanism for successful journeyman outreach programs.

3. Upgrading-training for partially qualified minority mechanics should be developed in ways consistent with the practices and requirements of each craft. Also, there should be further study as to the most effective ways by which upgrading-training programs can be developed.

4. It is essential that the communities along with the contractors and the building and construction trades unions participate in the implementation of these programs for the following reasons:

(a) There will be less hostility among the parties in accomodating their legitimate interests.

(b) There will be greater chance for success in overcoming certain conflicts that emerge from these interests.

(c) Programs become stronger and more workable since communication is enhanced and mutual respect is developed through such participation.

NOTE:

We would like to stress that this Committee was composed of the representatives of many diverse groups (see the attached list),

including the building and construction trades unions of the AFL-CIO, Contractors Association, Civil Rights groups, minority contractors and several universities. That such diverse groups was able to meet periodicly, exchange views and come to some common areas of agreement is of some very real importance. Each of our organizations benefited from the exchange of ideas and information, and from the research which we jointly conducted.

ECONOMIC CONDITIONS A VITAL FACTOR:

To the degree that there is scarcity in the economy, to that same degree social changes becomes difficult. To the degree that there is abundance in the economy, to that same degree social change becomes increasingly possible. Therefore; if there is, in the near future, a recovery from the present recession in the construction industry, we can expect a more rapid and complete implementation of our mutual aims.

Submitted by Bayard Rustin and
Donald Slaiman,
Co-Chairman for the
Committee.

Joint Apprenticeship Committees - Area 4-Georgia

In reply to memorandum of 3/16/66 from RD Conner -here are the names of the joint apprenticeship committees and name and address of Secretary and/or Chairman to whom communications should be sent:

Central Savannah River Area Trowel Trades JAC
N. Ted Gilmer, Secretary
1907 Heckle Street
Augusta, Georgia 30904

Brunswick Trowel Trades JAC
S. B. Self, Secretary
370 New Jesup Highway
Brunswick, Georgia

Savannah Trowel Trades JAC
James M. Artley, Chairman
P. O. Box 6388
Savannah, Georgia 31405

Savannah Electrical JAC (includes Savannah, Brunswick, Waycross)
M. J. Counihan, Secretary
P. O. Box 54
Savannah, Georgia 31402

Augusta Electrical JAC
W. S. Carter, Secretary
1250 Reynolds Street
Augusta, Georgia 30902

Savannah Iron Workers Area JAC
J. W. Cain, Secretary
908 Abercorn Street
Savannah, Georgia 31401

Augusta Painters JAC
Jack Atkinson, Secretary
316½ - 8th Street
Augusta, Georgia 30902

Brunswick Painters JAC, E. G. Davis, Secretary
1316½ Newcastle St., Brunswick, Georgia 31521

Joint Apprenticeship Committees - Area 4-Georgia cont.

Savannah Painters JAC
Dan Caterina, Secretary
P. O. Box 3284
Savannah, Georgia 31404

Savannah Machinists JAC
Jack H. Vinall, Secretary
17 West Park Avenue
Savannah, Georgia 31401

Augusta Carpenters Joint Appren. Comm.
J. Harold Dye, Secretary
1225 Gordon Park Road
Augusta, Georgia 30902

Brunswick Carpenters JAC
Jas. R. Stewart, Secretary
302½ Gloucester Street
Brunswick, Georgia

Savannah Carpenters JAC
Louie M. Nunn, Secretary
P. O. Box 276
Savannah, Georgia 31402

Augusta Plumbing, Steamfitting JAC
Peter M. Menk, Chairman

Apprenticeship and Training Committee

Gentlemen:

The Painting and Decorating Industry is to be commended for its continued interest and efforts to develop its craftsmen through apprenticeship. This fifth edition of your National Apprenticeship and Training Standards will do much to carry out your objective.

We in the Bureau of Apprenticeship and Training congratulate you. We know you will continue to meet the growing demand for journeymen and maintain your enthusiastic support of apprenticeship. We know, too, that you will not overlook the necessity of keeping your journeymen up-to-date.

Our field representatives in each of the fifty states are always available to serve you.

Sincerely yours,

Edw. E. Goshen

Gentlemen:

The revision of the National Painting, Decorating and Paperhanging Apprenticeship Standards were prepared through the co-operation of the Painting and Decorating Contractors of America, The Brotherhood of Painters, Decorators and Paperhangers of America, and the Federal Bureau of Apprenticeship and Training. They have been carefully studied by our staff and we hereby endorse the revised standards.

It is the feeling of this organization that with these standards brought up to date and into conformity with our new apprenticeship courses of instruction, a more effective piece of work can be accomplished for our industry.

We again pledge the support of our councils and chapters to the Apprenticeship Regional Offices and agencies in the work that lies ahead.

Very truly yours,

Leon V. Switzer

January 7, 1960

Bureau of Apprenticeship and Training
U. S. Department of Labor
Washington, D. C.

Gentlemen:

The Brotherhood of Painters, Decorators and Paperhangers of America has cooperated fully with the Painting and Decorating Contractors of America and the Bureau of Apprenticeship and Training, U. S. Department of Labor, in preparing this major revision of the National Painting and Decorating Apprenticeship Standards.

These standards, which comprise a manual of procedure for building and perfecting a national apprenticeship system for the painting and decorating industry, are being distributed among all state and local officers of the Brotherhood of Painters, Decorators, and Paperhangers of America. They are being urged to give it careful study and use it as a pattern for revising and developing local apprenticeship standards and training programs.

You may rest assured that our Brotherhood joins the contractors in the industry in expressing appreciation to everyone in your department for the very capable assistance rendered in furthering the cause of apprenticeship and training in our industry, and wish to assure you of our plans for continued expansion and development in the field of training more qualified journeymen craftsmen in the painting and decorating industry throughout the nation.

Sincerely yours,

L. M. Raftery

Certificate of Registration

NATIONAL PAINTING AND DECORATING APPRENTICESHIP AND TRAINING STANDARDS
(Jointly Sponsored by the Brotherhood of Painters, Decorators, and Paperhangers of America and the Painting and Decorating Contractors of America)

Nation-Wide

Issued in recognition of the above apprenticeship system, registered as part of the National Apprenticeship Program, in accordance with the fundamentals recommended by the

FEDERAL COMMITTEE ON APPRENTICESHIP

for the trade classification of PAINTER-AND-DECORATOR

Date Rev. May 9, 1961

Registry No. 81380

Arthur J. Goldberg
Secretary of Labor

Edw. E. Goshen
Director, Bureau of Apprenticeship and Training

JOINTLY DEVELOPED AND ADOPTED BY CONTRACTORS AND LABOR

In order that there may be continuous activity and progress in the national apprenticeship program in the painting and decorating trade, a National Joint Contractor-Labor Apprenticeship Committee was originally established and appointed by the Secretary of Labor to serve in an advisory and promotional capacity. This national committee, now known as the National Joint Apprenticeship and Training Committee, is made up of an equal number of representatives of the Brotherhood of Painters, Decorators and Paperhangers of America and the Painting and Decorating Contractors of America. A representative of the Bureau of Apprenticeship and Training, U.S. Department of Labor, and of the Trade and Industrial Education Service, U.S. Office of Education, serve as consultants to the committee.

To enable young men to obtain the training necessary to equip them for the responsibilities they must assume as successors to the present generation of craftsmen, the national committee has developed, for the guidance of local contractor and labor groups, the national standards of apprenticeship contained in the following pages. It is through the cooperative effort and initiative of the local groups that the national committee looks for ever-increasing apprenticeship activities.

These national standards represent the conservative judgment of leading painters and decorators concerning the essential factors in the development of highly skilled painting and decorating craftsman. The national committee will arrange for every assistance possible to be given to the local groups in establishing practical and sound apprenticeship programs. It will review the operation of apprenticeship programs and the development of apprenticeship training in the industry through periodic surveys, and make such recommendations as may be necessary for improving the effectiveness and completeness of the training of apprentices.

FOREWORD

Set forth in this booklet is the fifth revision of the National Joint Painting and Decorating Apprenticeship and Training Standards, which were originally formulated and adopted in 1937. This latest edition was developed by the Joint Painting and Decorating Apprenticeship and Training Committee in cooperation with the U.S. Department of Labor's Bureau of Apprenticeship and Training. The committee, which represents the Brotherhood of Painters, Decorators and Paperhangers of America and the Painting and Decorating Contractors of America, is established on a permanent basis.

The painting and decorating trade was one of the first trades in the United States to adopt national standards to provide a uniform pattern for use by employers and labor in every locality in setting up and operating apprentice training programs. The original standards formulated in 1937, formed a basis for national standards subsequently developed in many other trades.

Continuously on the alert for ways and means to improve training methods and procedures, representatives of contractors and labor in the trade revised the original standards in 1938, 1948, again in 1954 and 1960, and now in 1961. The changing techniques and new competitive materials introduced have constantly increased the skills and technical knowledge required in the trade and the necessity for more versatile, thoroughly trained craftsmen, capable of a more economical, longer-lasting, perfectly executed job.

In addition to itemizing the various provisions of this latest version of the national standards, this booklet includes an explanation of the application of the standards for the guidance of contractors and labor representatives. Not only have many of the provisions been amplified, but a new provision has been added relating to joint training funds. Supplementing the provisions is an example of an apprentice recordkeeping form and a new schedule of work processes in which to train apprentices.

It is hoped that all employers and labor representatives in every community will take full advantage of this edition of the Painting industry's National Standards in establishing, improving, and conducting local apprenticeship programs.

NATIONAL PAINTING AND DECORATING APPRENTICESHIP AND TRAINING STANDARDS

Part I

Provisions of Standards Governing the Employment and Training of Painting and Decorating Apprentices

NOTE.—Local application of these National Standards in States having State Apprenticeship Councils may require adaptation to meet the standards of apprenticeship in such States. The staff of the Bureau of Apprenticeship and Training and State apprenticeship agencies is available to advise on such standards.

1. *Definition of Painting and Decorating Apprentice.*—A "painting and decorating apprentice" is a person—

(*a*) who is at least 16 and not over the age of 25,

(*b*) who is engaged in learning the trade covered by these standards, and

(*c*) who is covered by a written agreement, hereinafter called an "apprenticeship agreement," with a local painting and decorating joint apprenticeship and training committee, acting as agent of the contractor, or with a contractor with approval of the agreement by the local joint committee.

2. *Definition of Registration Agency.*—The term "Registration Agency," as used herein, shall mean a State apprenticeship agency recognized by the Federal Committee on Apprenticeship, or, if no such recognized agency exists in the State, it shall mean the Bureau of Apprenticeship and Training, U.S. Department of Labor.

3. *Qualifications for Apprenticeship.*—Applicants for apprenticeship must be at least 16 and not over 25 years of age. (The local joint and training apprenticeship committee will have the authority to waive the maximum age limit in the case of honorably discharged veterans, and in other special cases.) All applicants shall satisfy the local joint committee that they have the ability and aptitude to master the rudiments of the trade and have sufficient education to satisfactorily complete the required hours of related theoretical instruction.

Applicants must be American citizens, or in the process of naturalization; be physically able to perform the work required of the trade; and meet such other entrance requirements as shall be established by the local joint apprenticeship and training committee.

All applicants shall be afforded equal employment opportunity regardless of race, creed, color, or national origin.

4. *Selection of Apprentices.*—It is recommended that local joint apprenticeship and training committees establish proper selection procedures for applicants interested in a painting and decorating apprenticeship. The use

of application forms, appropriate interviewing techniques, and aptitude tests are essential tools of the selection process, and properly used, provide some degree of assurance that the applicant possesses the qualities necessary to success in the trade. Among other benefits to be derived from adequate selection procedures are:

(*a*) better qualified apprentices,
(*b*) reduction in turnover,
(*c*) savings in time, money, and effort in training, and
(*d*) more competent and highly skilled craftsmen.

The facilities of State Employment Services, local vocational schools, colleges, and universities, and the Veterans Administration are generally available upon request. These agencies may be in a position to provide assistance in developing selection procedures suitable to the local situation, where necessary.

5. *Term of Apprenticeship.*—Apprentices shall serve a minimum term of 3 consecutive years (approximately 6,000 hours) in the painting and decorating trade, which shall consist of six 6-month periods of reasonably continuous employment during such term, and include the probationary period and the required hours of supplemental school instruction.

6. *Related Classroom Instruction.*—Apprentices shall be required to attend classes in subjects related to the trade each year of their apprenticeship (144 hours per year of such instruction is normally considered necessary). The local joint apprenticeship and training committee shall request the local schools to establish classes of supplemental related instruction for apprentices, and shall cooperate with the local vocational school officials in determining the subject to be taught, and the qualification of instructors. The local joint apprenticeship committee may recommend journeymen in the trade who have the knowledge and ability to teach related classroom instruction.

Where it is found impracticable to establish related instruction classes, the local joint apprenticeship committee may substitute other organized forms of instruction in the theoretical and technical subjects related to the painting and decorating trade, such as correspondence courses or other industrial courses of equivalent value.

Local standards of apprenticeship should clearly indicate the policy of the local committee with respect to hours spent in related instruction:

(*a*) The local standards should include the statement that "hours spent in related instruction after regular working hours shall not be considered hours worked."

Local standards should clearly indicate the policy of local committee with respect to payment for hours spent in related instruction.

NOTE.—In Wisconsin, State laws provide that the employer shall pay for the time the apprentice is receiving instruction at his regular hourly rate. It also provides that if the apprenticeship is for a longer period than 2 years, the total amount of instruction shall not be less than 400 hours.

No apprentice should be allowed to work overtime when such work will interfere with his attendance at related instruction classes. In case of failure of any apprentice to fulfill his obligations as to school attendance and conduct, without due cause, the local joint apprenticeship committee shall take necessary disciplinary action.

7. *Ratio of Apprentices to Journeymen.*—The provision in local standards covering the ratio of apprentices to journeymen shall be worked out according to local practices or agreements.

8. *Apprenticeship Agreement.**—Each apprentice shall be covered by a written apprenticeship agreement with the local joint committee, acting as agent of the contractor; or the agreement may be between the apprentice and the contractor with approval by the joint committee. All apprentices shall be registered with the appropriate registration agency.

Each apprenticeship agreement shall contain a statement making the terms and conditions of the local trade standards a part of the agreement. For this reason, every apprentice and employer will be required to read the local standards of apprenticeship before signing the agreement.

9. *Probationary Period.*—Apprentices employed under these standards shall be subject to a try-out or probationary period, to be determined by the local joint apprenticeship and training committee, which shall not exceed 3 months of reasonably continuous employment. During the probationary period, the termination or cancellation of the apprenticeship agreement shall be made by the local joint apprenticeship committee at the request of either party to the agreement. After the probationary period, the agreement may be canceled by the local committee after adequate cause has been shown, and all parties to the agreement have had an opportunity to be heard.

The registration agency shall be notified of all cancellations and terminations of apprenticeship agreements.

10. *Apprentice Wages.*—It is recommended that the schedule of wages for apprentices be established on a percentage of the prevailing local journeyman painter and decorator's wage rate, and increased each 6 months to completion of the apprenticeship.

The local joint apprenticeship and training committee shall examine apprentices before each period of advancement, ascertaining as to their satisfactory attendance and progress both at school and on the job, and the degree of proficiency and quality of workmanship achieved.

11. *Credit for Previous Experience.*—If the local joint committee finds, upon examining the applicant's records, that he has had previous practical experience in the trade it may grant him advanced standing on the term of apprenticeship, subject to review before the end of the probationary period.

---

*Some Srate Apprenticeship Agencies require the use of their own apprenticeship agreement forms. In such instances, the agreement forms may be obtained from the staff of the State Apprenticeship Agency or of the Bureau of Apprenticeship and Training.

Apprentices who receive credit for previous experience shall be paid the wage rate for the period to which such credit advances them.

12. *Hours of Work for Apprentices.*—The hours of work for apprentices shall be the same as those for journeymen employed in the trade. No apprentice shall be allowed to work overtime, if it interferes with his attendance at related instruction classes.

Apprentices absent from the services of their employers through their own fault shall make up all such time lost before being advanced to the next period of apprenticeship.

13. *Supervision of Apprentices.*—The contractor shall designate a particular person, who may be the superintendent, foreman, or journeyman, to be responsible for the training of apprentices. He shall, with the advice and assistance of the local joint apprenticeship and training committee, be responsible for the apprentices' work experience on the job, for their attendance at related classes, and the recording of same on record forms provided for this purpose. (See example of apprentice recordkeeping form on page 13.)

It shall be his duty to see that these record forms are complete in every detail and forwarded to the local joint committee at periodic (quarterly) intervals. The local committee shall keep a master record of the apprentices' work experience and related instruction.

14. *Coordinator of Apprenticeship.*—Where the local program of apprenticeship or the area of coverage of the local program is unusually large, the local joint committee should give consideration to the appointment of a person to assist it in the supervision and administration of the apprenticeship system. The Coordinator of Apprenticeship shall be responsible to the local joint committee and assume such duties as may be assigned to him by the local committee. In effect, the Coordinator of Apprenticeship acts for and on behalf of the local joint apprenticeship and training committee during the interim between regular meetings of the local committee to assure the effectiveness and success of the local program.

15. *Accident Prevention.*—Apprentices shall receive instruction on accident prevention and safe working habits during their entire term of apprenticeship. Such instruction shall be coordinated with the actual work being performed on the job and the tools and equipment being used.

16. *Adjusting Differences.*—The contractor and the apprentice shall have the right and privilege of appeal to the local joint apprenticeship and training committee in the event of disputes or controversies arising over any provision of the local apprenticeship standards which cannot be satisfactorily settled between them. The local committee shall hear all parties and make such adjustments as it may consider neccessary.

17. *Work Experience.*—During his apprenticeship, the apprentice shall be taught the use, care, and effective and safe handling of all tools and equipment commonly used in the trade. He shall be given work experience and training in all branches of painting and decorating, including paperhanging, to assure him the skill and proficiency that characterizes a fully qualified and

competent craftsman in the art of painting and decorating, and paperhanging. (See the recommended schedule of work experience and training outlined on page 11.)

18. *Certificate of Completion of Apprenticeship.*—Apprentices who complete their apprenticeship and have passed the required journeyman examination, shall be awarded a certificate by the local joint committee, attesting to their satisfactory completion of training and recognition as qualified journeymen painters and decorators. Certificates of completion are available from the registration agency for all apprentices completing their apprenticeship under registered standards.

19. *Consultants.*—The local joint committee may request interested agencies or organizations to designate a representative to serve as a consultant. Consultants may be asked to participate without vote in conferences on special problems which affect the agencies or organizations they represent.

Part II

Adapting National Standards to Local Use

1. *Local Painting and Decorating Joint Apprenticeship and Training Committee.*—It is recommended that a local joint apprenticeship and training committee, equally representative of management and labor, be established which shall be responsible for the administration of the local apprenticeship standards, and for coordinating them, where desirable, with the apprenticeship standards of other groups in the community.

Where organizations of employers and employees exist, such organizations should each appoint an equal number of its members to serve on the local joint committee.

Where no employer or employee organizations exist, a committee may be formed in like manner by volunteers who shall agree to carry out the national standards as herein set forth.

A representative from the Bureau of Apprenticeship and Training, U.S. Department of Labor, and/or the State apprenticeship council, if one exists in the State, is available upon request to attend meetings of the joint committee as advisor and consultant on labor standards applicable to apprentices, on the development of administrative procedures for the conduct of apprenticeship, and on any problems relating to apprentices and apprenticeship.

2. *Coverage.*—It shall be the duty of each local joint apprenticeship and training committee to identify its area of operation and to assume responsibility for the training of all painting and decorating apprentices by contractors within that area with whom the local union has bargaining agreements. The local committee shall also encourage all other contractors in the area to employ and train apprentices under its system of apprenticeship, and any contractor who desires to do so may participate in the local program by signifying agreement to the terms and conditions of training prescribed in the local standards.

3. *Duties of Local Joint Apprenticeship and Training Committees.*—The local joint committee shall develop local apprenticeship standards consistent with these national standards, and covering such items as:

(*a*) Method of selecting apprenticeship applicants.

(*b*) Schedule of work experience on the job.

(*c*) Progressively increasing schedule of wages for apprentices.

(*d*) Provision for supplemental related instruction.

(*e*) Provision for instructions on safe working habits and accident prevention.

(*f*) Provision for reviewing or testing the apprentice's progress, both on the job and in related instruction.

(*g*) Provision for adjusting complaints regarding apprenticeship.

(*h*) Procedure for providing apprentices with certificates of completion.

It shall be the responsibility of the local joint committee to:

(*a*) Conduct surveys to determine the need for, and the availability of, apprentices in the local area.

(*b*) Ascertain whether contractor undertaking to train apprentices has the necessary facilities to assure effective training.

(*c*) Place each apprentice under agreement. (Where the apprentice is indentured to the local joint committee, the committee shall make every effort to keep the apprentice continuously employed and assure him of well-rounded training and experience in all phases of the trade by rotating him, whenever possible, among the various participating contractors. Where the apprentice is indentured to the contractor, and the contractor is unable to provide employment for him, the local joint committee shall exert every effort to place him temporarily with another contractor with the understanding that the contractor to whom he is regularly indentured shall have first call on his services when and if he is able to furnish employment for him.)

(*d*) Assure that apprentices are receiving the necessary on the job experience and related technical instruction.

(*e*) Conduct the final examination for apprentices to establish their status as journeymen in the trade.

(*f*) Notify the appropriate registration agency of all terminations and cancellations of apprenticeship agreements.

(*g*) Prepare and submit all reports concerning its apprenticeship program that may be legally required by local, State, or Federal agencies, and the respective national organizations.

(*h*) Supervise the enforcement of all the provisions of the standards.

4. *Responsibilities of Apprentices.*—The local joint apprenticeship and training committee should impress upon each indentured apprentice that in signing the apprenticeship agreement he has voluntarily agreed to abide by the provisions of the local standards, and inform the apprentice of his responsibilities and obligations under the apprenticeship program.

(*a*) To diligently and faithfully perform the work of the trade and other pertinent duties as assigned by the contractor in accordance with the provisions of the standards.

(*b*) To respect the property of the contractor and abide by the working rules and regulations of the contractor and the local joint committee.

(*c*) To regularly attend and satisfactorily complete the required hours of instruction in subjects related to the trade, as provided under the local standards.

(*d*) To maintain such records of work experience and training received on the job and in related instruction, as may be required by the local joint committee.

(*e*) To develop safe working habits, and conduct himself in his work

in such manner as to assure his own safety as well as that of his fellow-workers.

(*f*) To work for the contractor to whom assigned to the completion of his apprenticeship, unless he is reassigned to another contractor or his agreement is terminated by the local joint committee.

(*g*) To conduct himself at all times in a creditable, ethical, and moral manner, realizing that much time, money, and effort will be spent in affording him an opportunity to become a skilled craftsman.

Filing with the Registration Agency

As soon as the local apprenticeship standards have been developed and approved by the sponsoring local groups, the local joint committee shall file a copy with the registration agency. The joint committee shall furnish the registration agency with any additional information required by Federal or State laws or regulations affecting apprentices. The joint committee shall also register a copy of each apprenticeship agreement with the registration agency.

Cooperating Agencies

Local joint apprenticeship and training committees may obtain assistance in the formulation and administration of apprenticeship programs from:

(*a*) Painting and Decorating Contractors of America, 2625 West Peterson Avenue, Chicago 45, Ill.

(*b*) Brotherhood of Painters, Decorators and Paperhangers of America, Painters and Decorators Building, Lafayette, Ind.

(*c*) The Painting and Decorating National Joint Apprenticeship and Training Committee, L. E. Longstreet, Secretary, P.O. Box 618, Joplin, Mo.

(*d*) The Bureau of Apprenticeship and Training, U.S. Department of Labor, Washington 25, D.C.

(*e*) State Apprenticeship Councils, State Labor Departments, or State Industrial Commissions.

(*f*) The Division of Vocational Education, U.S. Office of Education, which administers and supervises Federal funds appropriated for apportionment among the States for vocational education. The assistance of State and Local Boards of Vocational Education is also available upon request.

Federal Laws and Regulations Affecting Apprenticeship

Wage Determination Regulations.—Federal or federally aided projects.—The Secretary of Labor, through the Solicitor's Office of U.S. Department of Labor, predetermines the prevailing wages for construction mechanics, laborers, and apprentices employed on Federal or federally aided construction projects. (Details of these regulations will be found in Part 5, Title 29, Subtitle A, Code of Federal Regulations, covering labor standards provisions applicable to public contracts.) The local joint apprenticeship

committees should advise all contractors participating in the local apprenticeship program that in case they bid on and are awarded a Federal construction project contract, they should not employ apprentices on such project until such time as they have requested and obtained the applicable apprentice wage schedule for the area from the contracting or sponsoring government agency; and provided further that the apprentices are employed under a bona fide apprenticeship program registered with a State apprenticeship agency recognized by the Federal Committee on Apprenticeship, U.S. Department of Labor, or if no such recognized agency exists in the State, with the Bureau of Apprenticeship and Training, U.S. Department of Labor.

Veterans Administration Legislation (Public Law 550).—Provide for the approval of programs of apprenticeship by the appropriate State (veterans) approving agency under Veterans' Administration regulations to permit eligible veteran apprentices to receive a training allowance for their education and training. Under the provisions of Veterans Readjustment legislation, joint apprenticeship committees may be recognized as *training institutions*. Consequently, if it is anticipated that veterans may be employed as apprentices under the local standards, the committee should request approval of its program by the appropriate State (veterans) approving agency, keeping in mind that the criteria for approval under Veterans Administration Regulations includes detailing of the work schedules and approximate length of time to be spent on each operation or task, and the keeping of progress records. This criteria is contained in Public Law 550.

Selective Service Regulations (Deferment of Training of Apprentices).—Upon request from the Joint Apprenticeship and Training Committee, its program may be certified to the Selective Service for deferment purposes by the Registration Agency after the program has been in existence at least one year. One or more apprentices must have been in training during that time in each occupation for which certification is requested. In the painting and decorating trade, eligible apprentices must have completed 2,000 hours of training. The local joint committee or the contractor assumes responsibility for submitting requests for deferment of individual apprentices to the local draft board. However, there is no assurance that the request will be granted since there is no blanket deferment of all apprentices even though employed in certified programs. The ultimate decision rests with the local draft board, subject to appeal. Detailed information and necessary forms may be obtained from the nearest field representative of the Bureau of Apprenticeship and Training or State apprenticeship agency.

Joint Training Funds

1. *Legality of Training Funds.*—Training funds for use in defraying the cost of apprenticeship or other training programs, to which employers contribute, are authorized under The Labor-Management Reporting And Disclosure Act of 1959 which amends Section 302 of the Labor-Management

Relations Act of 1947. Such funds must be established in the form of a trust; the trustees must be equally representative of the employers and employees (this may be the joint apprenticeship committee); and the basis on which payments to the trust fund are to be made must be detailed in a written agreement with the employer, including provision for an annual audit of the trust. Those persons (trustees) responsible for the custody or control of the trust funds must be bonded.

Where a trust is established, a clause should be included in the trust agreement to the effect that the trusteeship is (1) a nonprofit organization; (2) that no part of the net earnings will inure to any private individual or member; and (3) in the event of dissolution of the trust, how the accrued moneys and other assets will be disposed. (They can be apportioned to those who paid into the fund, donated to a charitable or educational organization, or to the labor organization.)

2. *Tax Exempt Status of the Trust.*—Training trust funds are considered to be tax exempt by the Internal Revenue Service under Section 501(c)5 of the Internal Revenue Code of 1954. To obtain this exemption, the trustees must file Form 1024 with the appropriate District Director of Internal Revenue. In submitting Form 1024, include with it a copy of the trust agreement and apprenticeship program. After the tax exempt status of the trust has been determined, each year thereafter the trustees shall make a return on Form 990 in order to maintain this exemption.

Employer contributions to the training trust fund are deductible as ordinary and necessary expenses in the conduct of their business under Section 162(a) of the Internal Revenue Code.

TRADE EXPERIENCE SCHEDULE FOR PAINTERS, DECORATORS AND PAPERHANGERS

This schedule is an example of the type of work experience and training considered necessary to develop a skilled and productive worker in the painting and decorating trade. Within the limits of basic trade requirements, local joint apprenticeship committees will find the schedule sufficiently flexible for adaptation to local conditions, and in allocating the approximate experience.

	Approx. hours
I. Preparation of Surfaces	
1. Wood and composition	
2. Masonry and concrete	
3. Metal	
4. Plaster	
5. Painted

IX. Graining, Marbling, and Metal Leafing	.....
X. Stenciling and Stripping	.....
Total Term	.....

APPRENTICE RECORDKEEPING

To maintain a current record of the progress and ability of apprentices, an accurate recordkeeping system, covering the pertinent points, is essential. A number of different types of recordkeeping systems are in use in the different areas. Some systems include a variety of recordkeeping forms—daily, weekly, monthly, as well as a final master chart summarizing the pertinent data recorded during the entire term of apprenticeship.

Reproduced on the following page is a simply designed recordkeeping form used by joint apprenticeship and training committees in a number of localities. It is presented as an example to those in charge of apprentices in other localities in establishing their own recordkeeping systems. This form covers a 2-week period and is accumulative. The number of hours the apprentice has been trained on the job in each phase of the trade are recorded in columns I through X, and the hours of related classroom instruction are recorded in the next column. Provision is also made for the verification of hours spent in related instruction.

It will be noted that the data recorded during each 2-week period is carried forward to the next 2-week period. In this way, a current and complete record of the progress of each apprentice may be kept on this single form.

Samples of other recordkeeping systems may be obtained, upon request, through the field representatives of the Bureau of Apprenticeship and Training or State apprenticeship agencies.

Certificates of Completion of Apprenticeship, awarded apprentices when they have completed their training, are issued by the State apprenticeship agency or the Bureau of Apprenticeship and Training in States in which no such agency is established.

APPRENTICESHIP AGREEMENT

Between Apprentice and Employer

(Front View)

The employer and apprentice whose signatures appear below agree to these terms of apprenticeship:

The employer agrees to employ and train the apprentice in accordance with the terms and conditions of the ....., which are made a part of this
(Name of Apprenticeship Standards)
agreement; or, in accordance with the terms and conditions stated on the reverse side of this agreement.

The apprentice agrees to apply himself diligently and faithfully to learning the trade in accordance with this agreement.

Trade ..... Term of apprenticeship .....
(Hours or Years)

Credit for previous experience ..... Term remaining .....

Date the apprenticeship begins .....

This agreement may be terminated by either party notifying the other or in accordance with the named apprenticeship standards.

.....	.....

4th.....	.....	8th.....	.....	12th.....	.....

Journeyman's rate as of..... is ..... {per hour / per week}

4. Number of hours per week or per day to be worked by the apprentice:
   (*a*) Hours per week.....
   (*b*) Hours per day.....

5. Number of hours of related instruction:
   (144 hours per year—4 hours per week during regular school year, is normally considered necessary. Where classes are not available through the local school, other organized trade, industrial, or correspondence course of equivalent value may be substituted)
   (*a*) ..... week ..... year
   (*b*) School or course.....
   (*c*) Apprentice ☐ will ☐ will not be compensated for hours spent in related instruction after regular working hours.

6. Other provisions:
   (*a*) There is reasonable certainty that the job for which the apprentice is being trained will be available to him upon completion of his apprenticeship.
   (*b*) Upon request by the Joint Apprenticeship Committee or employer, a Certificate of Completion will be granted the apprentice by the Registration Agency upon satisfactory completion of the apprenticeship, in accordance with standards covered herein.

APPRENTICESHIP AGREEMENT

Between Apprentice and Joint Apprenticeship Committee

(Front View)

THIS AGREEMENT, entered into this ..... day of ..... 196.. between the parties to .....
(Name of local apprenticeship standards)

represented by the Joint Apprenticeship Committee, hereinafter referred to as the COMMITTEE, and ....., born .....
(Name of apprentice) (Month)

....., hereinafter referred to as the APPRENTICE, and (if a minor)
(Day) (Year)

....., hereinafter referred to as his GUARDIAN.
(Name of parent or guardian)

WITNESSETH THAT:

The Committee agrees to be responsible for the placement and training of said apprentice in the trade of ..... as work is available, and in consideration said apprentice agrees diligently and faithfully to perform the work incidental to the said trade during the period of apprenticeship, in accordance with the regulations of the Committee. The Apprenticeship Standards referred to herein are hereby incorporated in and made a part of this agreement.

MOTION PICTURE OF APPRENTICESHIP PROGRAM

A documentary film depicting the operation of an apprenticeship program has been made available at regional offices of the Bureau of Apprenticeship and Training to show to members of joint apprenticeship committees and other groups interested. Although it pictures apprentice training in the bricklaying trade, it will be found valuable in providing a better understanding and stimulating an interest in apprenticeship in any trade.

APPRENTICESHIP COURSE MATERIAL

First and second year training courses (third year course will be printed in the fall of 1960) and Teacher's Supplement are available from the General Secretary-Treasurer, William H. Rohrberg, care of The Painters & Decorators Building, Lafayette, Ind., at a price of $2 per course. The Teacher's Supplement is furnished free where it is to be used for instructing apprentices. Make checks payable to the National Joint Painters & Decorators Apprenticeship and Training Committee.

Information on other available reference text books and manuals for use in conjunction with the training of Painter and Decorator apprentices may be obtained by writing to the National Joint Painters & Decorators Apprenticeship and Training Committee, P.O. Box 618, Joplin, Mo.

National Sign, Pictorial Display, Electric Sign
and Process Industry Joint Apprenticeship Committee

Gentlemen:

It gives me great pleasure to inform you of the Registration of the National Apprenticeship and Training Standards for the Sign, Pictorial Display, Electric Sign and Process Industry, with the Bureau of Apprenticeship and Training, U. S. Department of Labor.

You are to be commended for providing a uniform pattern of apprenticeship standards for the use of local employers and unions in the industry.

The active interest and cooperative efforts of your local groups will invariably reflect the extent to which success is achieved in producing the high calibre craftsmen so essential to your industry.

The assistance of the staff of the Bureau of Apprenticeship and Training and its cooperating State apprenticeship agencies are available to help in attaining the goals established in your National Standards.

Sincerely yours,

Edw. E. Goshen

Washington, D.C.

Gentlemen:

The Brotherhood of Painters, Decorators and Paperhangers of America has cooperated fully with the Sign Industry Employers and the Bureau of Apprenticeship and Training, U. S. Department of Labor, in preparing National Apprenticeship Standards for the Sign, Pictorial Display, Electric Sign and Process Industry.

These Standards, which comprise a manual of procedure for building and perfecting a national apprenticeship system for the Sign, Pictorial Display, Electric Sign and Process Industry, are being distributed among all state and local officers of the Brotherhood of Painters, Decorators and Paperhangers of America. They are being urged to give it careful study and use it as a pattern for revising and developing local apprenticeship standards and training programs.

You may rest assured that our Brotherhood joins the contractors in the industry in expressing appreciation to everyone in your department for the very capable assistance rendered in furthering the cause of apprenticeship and training in our industry, and wish to assure you of our plans for continued expansion and development in the field of training more qualified journeymen craftsmen in the Sign, Pictorial Display, Electric Sign and Process Industry throughout the nation.

Sincerely yours,

L. M. Raftery

Gentlemen:

Having actively participated as a member of the National Committee in the formulation of the Apprenticeship Standards for the Sign, Pictorial Display, Electric Sign and Process Industry, we respectfully recommend their adoption.

There is little question but that when this program is put into effect it will enable those companies in our industry to develop a reservoir of talent which will not only improve the quality of workmanship of our service but will provide many opportunities to young men to learn a highly specialized trade offering substantial financial rewards.

Very truly yours,

William Meech

JOINTLY DEVELOPED AND ADOPTED BY EMPLOYERS AND LABOR

In order that there may be continuous activity and progress in the national apprenticeship program in the Sign, Pictorial Display, Electric Sign and Process trades, a National Joint Employer-Labor Apprenticeship and Training Committee was established to serve in an advisory and promotional capacity to the industry. This National Committee is made up of representatives of the Sign, Pictorial Display, Electric Sign and Process employers and the Brotherhood of Painters, Decorators & Paperhangers of America. A representative of the Bureau of Apprenticeship and Training, U.S. Department of Labor, and of the Trade and Industrial Education Service, U.S. Office of Education, serve as consultants to the Committee.

To enable young men to obtain the training necessary to equip them for the responsibilities they must assume as successors to the present generation of craftsmen, the National Committee has developed, for the guidance of local employer and labor groups, the national standards of apprenticeship and training contained in the following pages. It is through the cooperative effort and initiative of the local groups that the National Committee looks for ever-increasing apprenticeship and training activities.

These national standards represent the considered judgment of leading employer and labor representatives in this industry concerning the essential factors in the development of highly skilled craftsmen. The National Committee will arrange for every assistance possible to be given to the local groups in establishing practical and sound apprenticeship programs. It will review the operation of apprenticeship programs and the development of apprentice training in the industry through periodic surveys, and make such recommendations as may be necessary for improving the effectiveness and completeness of the training of apprentices.

FOREWORD

Set forth in this booklet is the first edition of the National Sign, Pictorial Display, Electric Sign and Process Industry Apprenticeship and Training Standards, formulated and adopted in 1962. They were developed by the Sign, Pictorial Display, Electric Sign and Process Industry National Joint Apprenticeship and Training Committee in cooperation with the U.S. Department of Labor's Bureau of Apprenticeship and Training. This Committee represents the Sign, Pictorial Display, Electric Sign and Process employers and the Brotherhood of Painters, Decorators & Paperhangers of America.

The purpose of these National Standards is to provide a uniform pattern for use by employers and labor in the industry in setting up and operating effective apprenticeship programs. In addition to itemizing the various basic recommendations relating to the employment of apprentices in the recognized branches of the trade, the National Standards include recommendations concerning the local application of the standards, the selection of applicants for apprenticeship, the appointment of shop apprenticeship committees to supervise the training of apprentices in each shop, and related instruction requirements of apprentices.

It is hoped that all employers and labor representatives in every community will take full advantage of these Sign, Pictorial Display, Electric Sign and Process Industry National Apprenticeship and Training Standards, and the related information presented, in establishing, improving and conducting local apprenticeship programs.

Edw. E. Goshen
Administrator, Bureau of Apprenticeship and Training

NATIONAL APPRENTICESHIP AND TRAINING STANDARDS FOR THE SIGN, PICTORIAL DISPLAY, ELECTRIC SIGN AND PROCESS INDUSTRY

Part 1

NOTE.—Local application of these national standards in states having State apprenticeship councils may require adaptations to meet the laws and standards of apprenticeship in such states. The staff of the Bureau of Apprenticeship and Training and State apprenticeship agencies is available to advise on such standards and any necessary adaptations.

1. Definition of Sign, Pictorial Display, Electric Sign and Process Apprentice

A Sign, Pictorial Display, Electric Sign and Process Apprentice is a person who is—

(*a*) At least 18 years of age.

(*b*) Engaged in learning a trade covered by these standards.

(*c*) Covered by a written agreement, hereinafter called an "apprenticeship agreement," with a local joint committee, acting as agent for the employer, or with an employer with approval of the agreement by the local joint committee.

2. Definition of Registration Agency

The term "registration agency," as used herein, shall mean a State apprenticeship agency recognized by the Federal Committee on Apprenticeship or, if no such recognized agency exists in the State, it shall mean the Bureau of Apprenticeship and Training, U.S. Department of Labor.

3. Qualifications for Apprenticeship

Applicants, before being accepted for training, must meet the following requirements:

(*a*) American citizen, or one who has declared his intent to become a citizen.

(*b*) At least 18 years of age.

(*c*) High school education desirable, but not essential.

(*d*) Physically capable of performing the work of the trade.

(*e*) Satisfactory character.

(*f*) Artistically and mechanically inclined.

4. Selection of Apprentices

It is recommended that local joint committees establish proper selection procedures for applicants interested in Sign, Pictorial Display, Electric Sign and Process apprenticeship. The use of application forms, appropriate interviewing techniques, and aptitude tests is essential in the selection process, and properly used, provides some degree of assurance that the applicant possesses the qualities necessary to success in the trade. Among the benefits to be derived from adequate selection procedures are:

(a) Better qualified apprentices;
(b) Reduction in turnover;
(c) Savings in time, money, and effort in training; and
(d) More competent and highly skilled craftsmen.

The facilities of State employment services, local vocational schools, colleges and universities, and the Veterans' Administration are generally available upon request. These agencies may be in a position to provide assistance in developing selection procedures suitable to the local situation where necessary.

Selection of apprentices under this program shall be made on the basis of qualifications alone and all applicants will be afforded equal opportunity under these standards without regard to race, creed, color, national origin or physical handicaps (except to the extent that such physical handicaps affect the applicants qualifications for the trade or craft).

5. Term of Apprenticeship

The term of apprenticeship in the Sign, Pictorial Display, Electric Sign and Process trade shall be approximately 10,000 hours of on-the-job training, which shall include the probationary period and the required hours of related supplemental instruction. The term shall be subdivided into ten 6-month periods of 1,000 hours each.

6. Related Instruction

Apprentices shall attend related supplementary instruction classes at local schools not less than 144 hours per year for each year of their apprenticeship, when available. Where it is impracticable to establish related instruction classes, the local committee may substitute other organized trade, industrial, or correspondence courses of equivalent value.

However, all apprentices, regardless of the trade branch in which employed, shall receive at least 288 hours of supplementary instruction related to commercial sign work.

Time spent in related instruction shall be credited to the apprenticeship term. No apprentice shall be allowed to work overtime when

such work will interfere with his attendance at related instruction classes. In case of failure without due cause on the part of any apprentice to fulfill his obligations as to school attendance and conduct, the local committee shall take necessary disciplinary action.

Any agreement to pay apprentices for time spent in related instruction shall be in conformity with existing State laws.

Local joint apprenticeship committees should request the assistance of local schools in providing the necessary related instruction.

Suggested Related Instruction

(*a*) Use of tools and materials.
(*b*) Brushes—all types.
(*c*) Lettering pens, drafting tools, etc.
(*d*) Paints, vehicles, and pigments.
(*e*) Use of various background materials.
(*f*) Care and use of equipment—ladders, ropes, etc.
(*g*) Preparation and treatment of all surfaces.
(*h*) Lettering—history and development of alphabets.
(*i*) Layout and design.
(*j*) Process work.
(*k*) Bulletins and wall signs.
(*l*) Pictorial painting.
(*m*) Training aids, such as, applicable films, and literature obtainable from trade manufacturers.

7. Ratio of Apprentices to Journeymen

The provision in local standards covering the ratio of apprentices to journeymen shall be worked out according to local practices as determined by the local joint committee, but shall not conflict with the collective-bargaining agreement in the area.

8. Apprentice Agreement [1]

Each apprentice shall be covered by a written apprenticeship agreement with the local joint committee, or the agreement may be between the apprentice and the employer with approval by the joint committee. All apprentices shall be registered with the appropriate registration agency.

Each apprenticeship agreement shall contain a statement making the terms and conditions of the local trade standards a part of the agreement. For this reason, every apprentice (and if a minor, his parent or guardian) and employer will be required to read the local

[1] Some State apprenticeship agencies require the use of their own apprenticeship agreement forms. In such instances, the agreement forms may be obtained from the staff of the State apprenticeship agency or the Bureau of Apprenticeship and Training.

standards of apprenticeship before signing the agreement. The apprentice, employer, the joint committee, and the registration agency, if required, shall each receive a copy of the signed apprenticeship agreement.

The registration agency shall be notified of all cancellations and terminations of apprenticeship agreements.

9. Probationary Period

Apprentices employed under these standards shall be subject to a tryout or probationary period, to be determined by the local joint committee, but which shall not exceed 500 hours of reasonably continuous employment. During the probationary period, the termination or cancellation of the apprenticeship agreement shall be made by the local apprenticeship committee at the request of the apprentice or employer. After the probationary period, the agreement may be canceled by the local committee after adequate cause has been shown, and all parties to the agreement have had an opportunity to be heard.

10. Apprentices Wages

It is recommended that the schedule of wages for apprentices be established on a percentage of the prevailing local journeyman Sign, Pictorial Display, Electric Sign and Process Worker's Wage rate, and increased each 6 months to completion of the apprenticeship.

The local joint committee shall examine apprentices before each period of advancement, ascertaining as to their satisfactory progress and the degree of proficiency and quality of workmanship achieved.

The schedule of wages for all Sign Painter apprentices in the commercial, outdoor advertising, display, electric sign and silk screen process branches of the trade shall be as follows:

1st 6 months: ____ percent	6th 6 months: ____ percent
2d 6 months: ____ percent	7th 6 months: ____ percent
3d 6 months: ____ percent	8th 6 months: ____ percent
4th 6 months: ____ percent	9th 6 months: ____ percent
5th 6 months: ____ percent	10th 6 months: ____ percent

11. Credit for Past Experience

Applicants who present qualifications in excess of the minimum requirements may be admitted to advanced standing when they satisfactorily pass a practical examination provided for cases of this kind. The amount of credit given for previous experience shall be determined by the joint committee after careful review of the merits of each individual case.

Apprentices who receive credit for previous experience shall be paid upon entrance, the wage rate of the period to which such credit advances them.

All persons now employed as apprentices will be placed under these standards. These apprentices will be given full credit for the time they have already served as apprentices.

12. Basic Hours of Work for Apprentices

The basic hours of work for apprentices shall be the same as the journeymen employed in the trade. Apprentices shall not work overtime unless assisting a journeyman, or as provided for in the working agreement.

Apprentices absent from the services of their employer through their own fault shall make up all such time lost before being advanced to the next period of apprenticeship.

13. Supervision of Apprentices

Apprentices shall be under the general direction of the local joint committee and under the immediate supervision of a journeyman for on-the-job training.

The local joint committee shall prepare adequate record forms to be filled in by the journeyman under whom the apprentice receives the on-the-job training.

Each apprentice shall keep an accurate record of the number of hours worked in each major division of the trade. This record will be checked by the journeyman and sent to the local joint committee at the end of each reporting period. The local joint committee shall determine from this record when sufficient time has accumulated as to warrant the transfer of an apprentice to his next job assignment.

A written report shall be submitted by the apprentice to the journeyman before each 1,000-hour period of advancement for review and rating. The report is to consist of work done on the job and in related instruction. The journeyman shall forward this report to the local joint committee for final evaluation. These reports will be the basis on which recommendations for advancement are made.

If it is found that an apprentice shows a lack of interest or does not have the ability to become a competent craftsman, he may be permitted to continue in a probationary status, required to repeat operations in which he is deficient, or his agreement may be terminated. All decisions shall be made by the local joint committee.

14. Consultants

The committee may request interested agencies or organizations to designate a representative to serve as a consultant. Consultants will be asked to participate without vote in conferences on special problems related to apprenticeship which pertain to the interests of the agencies or organizations they represent.

15. Accident Prevention

Apprentices shall receive instruction on accident prevention and safe working habits during their entire term of apprenticeship. Such instruction shall be coordinated with the actual work being performed on the job and the tools and equipment being used.

Safety publications of the Bureau of Labor Standards, U.S. Department of Labor, are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, at a small cost. These pamphlets may be helpful to local joint apprenticeship committees in impressing apprentices with the need for developing safe working habits along with his trade skills.

16. Adjusting Differences

The employer and the apprentice shall have the right and privilege of appeal to the local joint committee in the event of disputes or controversies arising over any provision of the local apprenticeship standards which cannot be satisfactorily settled between them. The local committee shall hear all parties and make such adjustments as it may consider necessary.

17. Work Experience

During his apprenticeship, the apprentice shall be taught the use, care, and effective and safe handling of all tools and equipment commonly used in the trade. He shall be given work experience and training to assure him of the skill and proficiency that characterizes a fully qualified and competent craftsman. (See the recommended schedule of work experience and training on p. 15.)

18. Certificate of Completion of Apprenticeship

Apprentices who complete their apprenticeship shall be awarded a certificate by the local joint committee, attesting to their satisfactory completion of training and recognition as qualified journeymen Sign, Pictorial Display, Electric Sign and Process Workers. Certificates of completion are available from the registration agency for all apprentices completing their apprenticeship under registered standards. These ceremonies may be accompanied by a program of events or awards at each graduation class.

Part II

Adapting National Standards to Local Use

1. Local Joint Apprenticeship Committee

It is recommended that a local joint apprenticeship and training committee, equally representative of management and labor, be established, which shall be responsible for the administration of the local apprenticeship standards, and for coordinating them, where desirable, with the apprenticeship standards of other groups in the community.

Where organizations of employers and employees exist, such organizations should each appoint an equal number of its members to serve on the local joint committee.

Where no employer or employee organizations exists, a committee may be formed in like manner by volunteers who shall agree to carry out the national standards as herein set forth.

A representative from the Bureau of Apprenticeship and Training U.S. Department of Labor, and/or the State apprenticeship council, if one exists in the State, is available upon request to attend meetings of the joint apprenticeship committee as adviser and consultant on labor standards applicable to apprentices, on the development of administrative procedures for the conduct of apprenticeship, and on any problems relating to apprentices and apprenticeship.

2. Coverage

It shall be the duty of each local joint apprenticeship and training committee to identify its area of operation and to assume responsibility for the training of all Sign, Pictorial Display, Electric Sign and Process Worker apprentices by employers within that area with whom the local union has bargaining agreements. The local committee shall also encourage all other employers in the area to employ and train apprentices under its system of apprenticeship, and any employer who desires to do so may participate in the local program by signifying agreement to the terms and conditions of training prescribed in the local standards.

3. Duties of Local Joint Apprenticeship and Training Committee

The local joint committee shall develop local apprenticeship standards consistent with these national standards, and covering such terms as—

(*a*) Method of selecting apprenticeship applicants.

(*b*) Schedule of work experience on the job.

(*c*) Progressively increasing schedule of wages for apprentices.

(*d*) Provision for supplemental related instruction.

(*e*) Provision for instructions on safe working habits and accident prevention.

(*f*) Provision for reviewing or testing the apprentice's progress, both on the job and in related instruction.

(*g*) Provision for adjusting complaints regarding apprenticeship.

(*h*) Procedure for providing apprentices with certificates of completion.

It shall be the responsibility of the local joint committee to—

(*a*) Conduct surveys to determine the need for, and the availability of, apprentices in the local area.

(*b*) Ascertain whether employers undertaking to train apprentices have the necessary facilities to assure effective training.

(*c*) Place each apprentice under agreement. (Where the apprentice is indentured to the local joint committee, the committee shall make every effort to keep the apprentice continuously employed and assure him of well-rounded training and experience in all phases of the trade by rotating him, whenever possible, among the various participating employers. Where the apprentice is indentured to the employer, and the employer is unable to provide training for him, the local joint committee shall exert every effort to place him temporarily with another employer with the understanding that the employer to whom he is regularly indentured shall have first call on his services when and if he is able to furnish training for him, subject to approval of the local joint committee.)

(*d*) Assure that apprentices are receiving the necessary on-the-job experience and related technical instruction.

(*e*) Conduct the final examination for apprentices to establish their status as journeymen in the trade.

(*f*) Notify the appropriate registration agency of all terminations and cancellations of apprenticeship agreements.

(*g*) Prepare and submit all reports concerning its apprenticeship program that may be legally required by local, State, or Federal agencies, and the respective national organizations.

(*h*) Supervise the enforcement of all the provisions of the standards.

(*i*) Prepare proposed amendments to the standards for approval by local union and employer sponsors.

4. Responsibilities of Apprentices

The local joint committee should impress upon each indentured apprentice that in signing the apprenticeship agreement he has volun-

tarily agreed to abide by the provisions of the local standards, and inform the apprentice of his responsibilities and obligations under the apprenticeship program.

(*a*) To perform diligently and faithfully the work of the trade and other pertinent duties assigned by the local joint committee and the employer in accordance with the provisions of the standards.

(*b*) To respect the property of the employer and abide by the working rules and regulations of the employer, union, and local joint committee.

(*c*) To attend regularly and to complete satisfactorily the required hours of instruction in subjects related to the trade, as provided under the local standards.

(*d*) To maintain such records of work experience and training received on the job and in related instruction, as may be required by the local joint committee.

(*e*) To develop safe working habits and conduct himself in his work in such manner as to assure his own safety as well as that of his fellow workers.

(*f*) To work for the employer to whom assigned to the completion of his apprenticeship, unless he is reassigned to another employer or his agreement is terminated by the local joint committee.

(*g*) To conduct himself at all times in a creditable, ethical, and moral manner, realizing that much time, money, and effort will be spent in affording him an opportunity to become a skilled craftsman.

5. Nonliability of Joint Committee

Entry into and pursuit of a Sign, Pictorial Display, Electric Sign and Process Worker apprenticeship, and the employment and on-the-job training of apprentices, being undertaken on the basis of acceptance of the standards and other requirements established by the committee, no member of the joint committee, nor any organization of employees or employers represented thereon, nor any member of such organizations, nor any employee of any public agency connected with the program operated under these standards shall be financially or otherwise liable for any consequences resulting from action taken by the joint committee with respect to—

(*a*) Withholding apprenticeship from any individual on the basis of lack of qualifications, employment and training opportunities, or training facilities; or

(*b*) Canceling the apprenticeship agreement of any apprentice for lack of aptitude or diligence, or noncompliance with these

standards or other regular requirements established by the committee; or

(*c*) Withdrawal or withholding of apprentices from an employer having violated these standards or committee requirements; or

(*d*) Inability of the joint committee to find and provide employment and on-the-job training opportunities under the terms of the apprenticeship agreement; or

(*e*) Failure of the employer to provide workmen's compensation insurance, and adequately and continuously insure his employees against work injury as provided by the laws of the State; or

(*f*) Failure of an apprentice to comply with rules concerning safety and the prerequisite that he ascertain that workmen's compensation and other insurance coverages are provided by the employer; or

(*g*) Failure of a legal minor properly to protect himself by complying with the laws of the State with respect to work in this trade or failure of an employer to observe laws concerning the hiring and employment of a legal minor.

6. Filing With the Registration Agency

As soon as the local apprenticeship standards, or any amendments thereto, have been developed and approved by the sponsoring local groups, the local joint committee shall file a copy with the registration agency. The joint committee shall also notify the registration agency of all actions affecting apprentices, such as hires, cancellations, and completions, and furnish any additional information required by Federal or State laws affecting apprentices.

7. Cooperating Agencies

Local joint apprenticeship committees may obtain assistance in the formulation and administration of apprenticeship programs from—

(*a*) National Sign, Pictorial Display, Electric Sign and Process Industry Joint Apprenticeship and Training Committee, Director of Apprenticeship and Training, Brotherhood of Painters' Building, Lafayette, Ind.

(*b*) Brotherhood of Painters, Decorators & Paperhangers of America, Painters & Decorators Building, Lafayette, Ind.

(*c*) The Bureau of Apprenticeship and Training, U.S. Department of Labor, Washington, D.C., 20210.

(*d*) State apprenticeship councils, State labor departments, or State industrial commissions.

Part III

Federal Laws and Regulations Affecting the Employment and Training of Apprentices

Veterans' Administration Legislation (Public Law 550, 82d Cong.)

Provide for the approval of programs of apprenticeship by the appropriate State (veterans) approving agency under Veterans' Administration regulations to permit eligible veteran apprentices to receive a training allowance for their education and training. Under the provisions of veterans' readjustment legislation, joint apprenticeship committees may be recognized as training institutions. Consequently, if it is anticipated that veterans may be employed as apprentices under the local standards, the committee should request approval of its program by the appropriate State (veterans) approving agency, keeping in mind that the criteria for approval under Veterans' Administration regulations includes detailing of the work schedules and approximate length of time to be spent on each operation or task, and the keeping of progress records. These criteria are contained in Public Law 550.

Selective Service Regulations (Deferment of Apprentices)

State directors of selective service are authorized to accept for deferment purposes apprentice training programs which meet its regulations, upon request of the local program sponsors. The request must be accompanied by a certification from the registration agency that the program has been in operation at least 1 year, and one or more apprentices have been in training during that time in each occupation covered. After the program has been accepted, the program sponsor and the apprentice may request the local board to defer the apprentice. In the Sign, Pictorial, Display, Electric Sign and Process Worker's trade, the apprentice for whom the deferment is requested must have been engaged in and completed not less than 2,000 hours of training. The decision as to actual deferment rests with the local board, subject to appeal if the request is denied. Detailed information and necessary forms may be obtained from the nearest field representative of the Bureau of Apprenticeship and Training or State apprenticeship agency.

Wage and Hour Regulations (Ruling Concerning Payment for Time Spent by Apprentices in Related Instruction)

The Fair Labor Standards Act requires that each employee, not specifically exempted, who is engaged in interstate commerce or in the production of goods for such commerce receive the statutory minimum wage, and that no employee (including apprentices) may be employed for more than 40 hours a week without receiving at least time and one-half of his regular rate of pay for the overtime hours.

As an enforcement policy, time spent in an organized program of related supplemental instruction by apprentices working under bona fide apprenticeship programs may be excluded from working time if the following criteria are met:

(1) The apprentice is employed under a written apprenticeship agreement or program which substantially meets the fundamental standards of the Bureau of Apprenticeship and Training, U.S. Department of Labor;

(2) Such time does not involve production work or performance of the apprentice's regular duties. If the above criteria are met, the time spent in such related supplemental training shall not be counted as hours worked unless the written agreement specifically provides that it is hours worked. The mere payment or agreement to pay for time spent in related instruction does not constitute an agreement that such time is hours worked.

Joint Training Funds

1. Legality of Training Funds

Training funds for use in defraying the cost of apprenticeship or other training programs, to which employers contribute, are authorized under the Labor-Management Reporting Disclosure Act of 1959 which amends section 302 of the Labor-Management Relations Act of 1947. Such funds must be established in the form of a trust; the trustees must be equally representative of the employers and employees (this may be the joint apprenticeship committee); and the basis on which the payments to the trust fund are to be made must be detailed in a written agreement with the employer, including provision for an annual audit of the trust. Those persons (trustees) responsible for the custody or control of the trust funds must be bonded.

Where a trust is established, a clause should be included in the trust agreement to the effect that the trusteeship is (1) a nonprofit organization; (2) that no part of the net earnings will inure to any private individual or member; and (3) in the event of dissolution of the trust, how the accrued moneys and other assets will be disposed. (They can be apportioned to those who paid into the fund, donated to a charitable or educational organization, or to the labor organization.)

2. Tax-Exempt Status of the Trust

Training trust funds are considered to be tax exempt by the Internal Revenue Code of 1954. To obtain this exemption, the trustees must file form 1024 with the appropriate district director of internal revenue. In submitting form 1024, include with it a copy of the trust agreement and apprenticeship program. After the tax-exempt status of the trust has been determined, each year thereafter the trustees shall make a return on form 990 in order to maintain this exemption.

Employer contributions to the training trust fund are deductible as ordinary and necessary expenses in the conduct of their business under section 162(a) of the Internal Revenue Code.

APPRENTICE RECORDKEEPING

To maintain a current record of the progress and ability of apprentices, an accurate recordkeeping system, covering the pertinent points, is essential. A number of different types of recordkeeping systems are in use in the different areas. Some systems include a variety of recordkeeping forms—daily, weekly, monthly—as well as a final master chart summarizing the pertinent data recorded during the entire term of apprenticeship.

Suggested recordkeeping forms may be obtained from the secretary of the National Sign, Pictorial Display, Electric Sign and Process Industry Joint Apprenticeship and Training Committee.

Samples of other recordkeeping systems may be obtained, upon request through the field representatives of the Bureau of Apprenticeship and Training or State apprenticeship agencies.

WORK EXPERIENCE

The committee recommends that apprentices in all branches of the sign painter's trade receive a minimum of 288 hours of supplementary instruction related to commercial sign work in addition to the work processes outlined below (such hours, including the 144 per year of related instruction, shall be credited toward the apprenticeship term):

Sign Painter—Commercial Sign (Branch) (5-year term—8 hours per day—5 days per week)

	Hours
A. Care of tools, equipment, and rigging	800
B. Construction and erection of signs	1,600
C. Color mixing and matching	600
D. Preparing backgrounds	2,000
E. Gilding—glass and surface	1,500
F. Layout and designing	1,500
G. Lettering	2,000
	10,000

Sign Painter—Outdoor Advertising Branch (5-year term—8 hours per day—5 days per week)

A. Care of tools, equipment, and rigging	1,000
H. Pictorical painting (actual application)	3,500
C. Color mixing and matching	1,000
D. Preparing backgrounds	500
F. Layout and designing	1,500
G. Lettering	2,500
	10,000

Sign Painter—Display Branch

A. Care of tools and equipment	500
D. Preparation of backgrounds	1,000
C. Color mixing and matching	1,000
J. Use of Cut-All and power tools	500
K. Mask or frisket cutting and adhering	2,000
L. Adhering and fabricating of all materials	1,000
F. Layout and designing	2,000
G. Lettering	2,000
	10,000

Sign Painter—Silk Screen Process Branch

A. Care of tools and equipment	500
D. Preparing backgrounds	400
C. Color mixing and matching	600
J. Operation of process machines	500
M. Photo screen preparation	800
N. Operation of silk screen	500
O. Film cutting and setup	2,000
F. Layout and designing	2,500
G. Lettering	2,200
	10,000

Sign Painter—Electric Sign Branch

	Hours
A. Care of tools and equipment	1,000
P. Drafting, blueprint reading	1,000
D. Preparing backgrounds	1,000
C. Color mixing and matching	1,000
F. Layout, sign pattern making (during last 2 years)	2,000
G. Lettering	2,000
K. Plastic sign faces (cutting, trimming, adhering, processing, and lettering)	2,000
	10,000

APPRENTICESHIP AGREEMENT

Between Apprentice and Joint Apprenticeship Committee

THIS AGREEMENT, entered into this ____ day of _____ 196_ between the parties to _____
(Name of local apprenticeship standards)
represented by the Joint Apprenticeship Committee, hereinafter referred to as the COMMITTEE, and _____, born _____
(Name of apprentice) (Month)
_____ _____ hereinafter referred to as the APPRENTICE, and (if a minor)
(Day) (Year)
_____, hereinafter referred to as his GUARDIAN.
(Name of parent or guardian)

WITNESSETH THAT:

The Committee agrees to be responsible for the placement and training of said apprentice in the trade of _____ as work is available, and in consideration said apprentice agrees diligently and faithfully to perform the work incidental to the said trade during the period of apprenticeship, in accordance with the regulations of the Committee. The Apprenticeship Standards referred to herein are hereby incorporated in and made a part of this agreement.

Credit for previous experience at trade, if any _____ { Hours. / Years. } Apprenticeship remaining____ { Hours. / Years. }

Other Conditions

Terms and Conditions

(Back View)

1. Term of apprenticeship and period of probation:
   (*a*) Total Term: _____ calendar years, or _____ hours.
   (*b*) Probationary period: _____ months, or _____ hours.
2. Schedule of work processes in which the apprentice is to receive adequately supervised instruction and experience, of which a record will be kept and periodically evaluated:

   (*a*) List here: Major divisions of the trade and work tasks required under each:

   (*b*) List here: Approximate time, in hours, months, or percent of apprenticeship:

3. Wage rate to be paid the apprentice each period of apprenticeship: (Period may be expressed in hours, months, or years; rate may be expressed in money or percent of journeyman's wage.)

Periods	*Rates*	*Periods*	*Rates*
1st _____	_____	6th _____	_____
2d _____	_____	7th _____	_____
3d _____	_____	8th _____	_____
4th _____	_____	9th _____	_____
5th _____	_____	10th _____	_____

   Journeyman's rate as of _____ is ____ { per hour / per week

4. Number of hours per week or per day to be worked by the apprentice:
   (*a*) Hours per week ____ (*b*) Hours per day _____
5. Number of hours of related instruction:
   (144 hours per year, 4 hours per week during regular school year, is normally considered necessary. Where classes are not available through the local school, other organized trade, industrial, or correspondence course of equivalent value may be substituted.)
   (*a*) _____ week _____ (*b*) School of course _____
   (c) Apprentice ☐ will ☐ will not be compensated for hours spent in related instruction after regular working hours.
6. Other provisions:
   (*a*) There is reasonable certainty that the job for which the apprentice is being trained will be available to him upon completion of his apprenticeship.
   (*b*) Upon request by the Joint Apprenticeship Committee or employer, a Certificate of Completion will be granted the apprentice by the registration agency upon satisfactory completion of the apprenticeship, in accordance with standards covered herein.

Where a State requires the use of its own agreement forms, such forms may be obtained from the staff of the State apprenticeship agency or of the Bureau of Apprenticeship and Training.

MOTION PICTURE OF APPRENTICESHIP PROGRAM

A documentary film depicting the operation of an apprenticeship program has been made available at regional offices of the Bureau of Apprenticeship and Training to show members of joint apprenticeship committees and other groups interested. Although it pictures apprentice training in the bricklaying trade, it will be found valuable in providing a better understanding and stimulating an interest in apprenticeship in any trade.

FOR IMMEDIATE RELEASE

CINCINNATI, OHIO Any person interested in taking a test for journeyman classification in the Building Trades unions should register with the Ohio Civil Rights Commission prior to February 15, it was announced by Robert J. Coates, Deputy Executive Director, for the Commission.

"This is the initial step in the journeyman testing program which is structured to provide all persons, without regard for race, color, religion, national origin or ancestry, the opportunity to become qualified for referral as craftsmen when the anticipated, increased employment activity begins in the Spring,"Mr. Coates stated.

Registration forms for this purpose are available in the Commission's Southwest Regional Office, 603 Schmidt Building, 431 Main Street in downtown Cincinnati. Forms may also be obtained at Unit 51, Second Floor, Ohio State Employment Service, 1916 Central Parkway; Cincinnati Human Relations Commission, Room 158, City Hall; and Urban League, 2400 Reading Road; along with all Building Trades Local Union offices.

"The preliminary registration project is being conducted in order to prepare more efficiently for the actual examination. It will give some evidence of the number of persons interested and some of their qualifications. Some of the unions are ready to begin testing in the next few weeks. We expect to announce the time and place of these tests very soon," Mr. Coates added.

The following crafts are included in the journeyman project: Asbestos worker, bricklayer, carpenter, cement mason, composition roofer, electrician, elevator constructor, operating engineer, glazier, laborer, lather, marble shop worker, painter, paperhanger, pipefitter, plasterer, plumber, reinforced concrete iron worker (Rodman), sheet metal worker, sign and pictorial painter, stained glass worker, stone and marble mason, structural iron worker, and teamster.

Dear Miss Horowitz:

You were good enough to send me in December materials relating to the WDL apprenticeship program. These were most helpful and greatly appreciated.

Could you send me a dozen copies each of the 1965 report of the program and of the winter 1965 Special Edition of WDL News featuring the article by Murray Kempton.

If you need to charge for these please bill me.

Sincerely,

Emory F. Via
Director

Mr. Emory F. Via
Director, Labor Program
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia -- 30303

Dear Mr. Via:

I have enclosed the sheets we used for tutoring sheetmetal applicants, a report on our Apprenticeship Program and some clippings about Local 28, Sheetmetal Workers Union.

As you can tell from the type of questions we used, the test had nothing specifically to do with sheetmetal work. It is really an achievement test. Local 28 had a 78 year history of segregation and was forced by a court order to administer an objective test as the basis for entrance.

The first test was given last spring. We made the mistake of thinking it would be an appititude test and tutored accordingly. As a result, only one Negro passed. For the second test we were more knowledgable; had a longer time to tutor and consequently 14 Negroes scored in the top 65.

We have discovered that the New York vocational schools do not keep up with the employment field and subsequently downgrade basic mathematics and English, while allowing students to take 47 different shop courses.

We are trying to convince the Board of Education that in an automated society it is better to flunk algebra three times than work in an obsolete school shop. We haven't had much success.

The sheetmetal test was a significant breakthrough however. For about a year all the youth agencies and civil rights organizations have been sending their vocational high school graduates to our office to be serviced. And since the sheetmetal exam, we've been able to place 20 young men in Local 40, Ironworkers program, 20 more in Local 3 and we expect to place 15 in printing shops.

New York is in a peculiar position though. The State Department of Labor adopted a series of apprentice compliance regulations in September, 1964, to go into effect September, 1965. So far one union has submitted "acceptable" standards. That union is the thoroughly corrupt District Council #9, Painters Union (in some shops there are 8 apprentices to one journeyman, and apprentices have been kept from full journeymen status for 8 to 9 years or more.) Theoretically, only Local 28, and District Council #9 can start classes.

Of course, the State is not making any attempt to obtain acceptable standards nor has it set down specific guidelines. They are functioning much like HEW in re: school segregation.

Please be in touch with us, if you need any further information.

Sincerely,

Rachelle Horowitz

APPRENTICESHIP IN THE UNITED STATES: LABOR MARKET FORCES AND SOCIAL POLICY

A Paper Presented by

David J. Farber*
Assistant Chief, Division of Research
Bureau of Apprenticeship and Training
U.S. Department of Labor

before the

Conference on Research in Apprenticeship Training
University of Wisconsin

September 8, 1966

The American apprenticeship system has been evaluated from many perspectives: as a system of job control; as a method of vocational education; as a monopoly of a privileged ethnic majority; as a fossilized form of nepotism in the job market; as an instrument of manpower policy; as a ritual similar to the puberty rites of cultures more primitive than our own; and, I suspect, from still other vantage points as well.

Economic analyses dealing relatively rigorously with apprenticeship as a phenomenon of the labor market have been conspicuous by their absence. Most frequently these analyses have been limited to a comparison of the current number of apprentices with a projection of future demand for

*The author wishes to acknowledge the assistance of Mr. Rufus Daniels, Statistician, Bureau of Apprenticeship and Training, who prepared the correlation and regression coefficients, and assisted with the statistical analysis.

craftsmen. With respect to apprenticeship in the labor market of today—as a response to the present forces of supply and demand in the current job markets—these analyses are silent, or else content themselves with calling attention to the convention that statistics on apprenticeship are not notably reliable.

The fact that apprenticeship is rarely, if ever, analyzed by labor economists in terms of the current state of the labor market is, or should be, the occasion for some surprise. Apprenticeship, under most labor agreements which deal with the subject, would appear to be related to the number of craftsmen. Nonetheless, competent economists have concluded that the apprenticeship ratio provisions of these agreements

> seem to have had virtually no effect on the number of journeymen. The number of apprentices has been small but this has been due to the reluctance of most employers to train skilled workers rather than to union policies. Indeed, nonunion employers who were free from union restrictions have trained fewer apprentices than did union employers. 1/

Under these circumstances, investigation of the factors affecting the number of apprentices might more properly be regarded as the province of industrial or management psychology. Or perhaps, if we accept at face value the view of the latter-day Cassandras that the apprenticeship system is a catatonic fossil, we must assign such an inquiry to psychopathology.

And yet, I confess to the feeling that it is a sound instinct that prompts the economist to continue in the belief that a minimal rationality does underlie the job market, including the supply and demand for apprentices. For although the apprenticeship system is a form of vocational

1/ Slichter, Healy, and Livernash, The Impact of Collective Bargaining on Management, The Brookings Institution, Washington, D.C., 1960, p. 74.

training, the system is operational only as a form of employment, and as such, should be as susceptible to the forces of the labor market as other forms of employment.

I am aware, of course, that to the empirical economist the labor market is not very rational; that it is a Saragossa Sea, full of "rigidities" which inhibit or preclude the free interplay of the forces of the market place. I am also aware that efforts to correlate empirically changes in employment levels with changes in wages have been spectacularly unsuccessful.[2/] Most frequently, economists explain the failure of empirical wage and employment data to conform to their theoretical expectations as the failure of ceteris to be paribus. Without recourse to the ritual of ceteris paribus, many economists no doubt would have surely succumbed to the currently fashionable existentialist despair.

It is conceivable, however, that existentialist despair is premature, that the labor market is not a nihilistic chaos, and that at least in the case of apprenticeship a certain degree of rational economic behavior can be discerned and measured. In this paper, I propose to consider some of the essential elements of a simplified economic model of the American apprenticeship system. My purpose is to seek evidence of the extent to which apprenticeship responds to certain short-run changes in the economy. Put somewhat differently, I propose to explore the ability of the apprenticeship system to adjust to change, which, if I remember correctly, is one of the classic definitions of intelligence. Perhaps, too, I should explain that like other

2/ See, for example, Allen M. Carter's statement that "A general money wage increase may increase, decrease, or leave unchanged the level of employment." Theory of Wages and Employment, Richard D. Irwin, Inc., Homewood, Illinois, 1959, p. 150.

builders of economic models, I make certain "simplyfying assumptions," to wit: that apprentices are human beings, many of whom prefer satisfaction of immediate wants to future gratification of needs; that employers hire more workers when they need them, and that workers like higher wages. Lastly, in this economic model, labor unions are non-existent and apprentices enter and leave their employment solely on the basis of an agreement between the individual employer and the individual apprentice.

I--Supply and Demand Factors

New Apprentice Registrants

Despite the fact that there appears to be no correlation between the

Source: Table A10 Manpower Report of the President, March 1966, p. 164 and Trends in Apprentice Registrations, 1941-65, Bureau of Apprenticeship and Training, U.S. Department of Labor.

Figure 1--Index of Number of New Apprentice Registrants and of Annual Average Employment of Craftsmen, 1947-65 (1957-59 = 100.0)

number of new apprentice registrants and annual average employment of craftsmen—and please note that I did not say the number of employed craftsmen—a glance at Figure 1 may be rewarding. The index of annual average employment of craftsmen from 1947 to 1965 rises only slightly at best. The index of new apprentice registrants, on the other hand, shows sharp fluctuations from one year to the next, dipping regularly and recurringly in 1948-49, in 1953-54, 1957-58, and in 1960-61. (Table 1)

Figure 2 suggests that apprenticeship is not necessarily as irrational or as arbitrary as might be supposed, nor is it immune from the vicissitudes of the market place. There appears to be ample warrant for the first of the hypotheses on which we may construct our economic model. The number of new

a/ Calculated by expressing number of completees in an instant year as a percentage of number of new registrants entering apprenticeship four years earlier.

Figure 2--Index of New Apprentice Registrants and of Annual Average Unemployment, 1947-65
(1957-59 = 100.0)

apprentice registrants appears to vary inversely with the level of annual average unemployment in the economy as a whole. Generally, periods of peak unemployment—1948-49, 1953-54, 1957-58, 1960-61—the recession years—are also periods in which the number of new apprentices ebbs to its lowest level. Conversely, 1953, 1956, 1959, 1962, and 1963-65—years in which the index of annual average unemployment declined—are also years in which the index of new apprentice registrants rose sharply. (Table 2)

For the statistical-minded, Figure 3 summarizes this relationship.

Figure 3--Relationship Between Indices of Annual Average Unemployment and of New Apprentice Registrants, Each Year, 1947-65 (1957-59 = 100.0)

In general, the 1947-65 period was characterized by recurring and rising levels of unemployment, and, as Figure 2 indicates, by declining numbers of new apprentice registrants. The regression line in Figure 3 is, there-

fore, negatively sloped. The close relationship between annual average unemployment and the number of new apprentice registrants is revealed by the coefficient of correlation: -.609, significant at the 1percent level.

Apprentice-Completion Rate

The number of new apprentice registrants, however, represents only part of the "supply" of apprentices who actually complete their terms of apprenticeship. Figure 4 reveals an interesting relationship. Unlike the

number of new apprentices--which appears to be inversely related to the level of annual average unemployment--the apprentice-completion rate varies directly with the level of unemployment. The years in which annual average

Figure 4--Indices of Completion Rate, By Trade, and of Annual Average Unemployment, 1952-62
(1957-59 = 100.0)

unemployment "peak," are the years in which the apprentice-completion rates also "peak." Similarly, years in which annual average unemployment decline, are also years in which the completion rate falls. Interestingly enough, this tendency holds true not only for all apprentices, but also is substantially true in the case of apprentices in the construction trades and in the metalworking trades as well. (Table 3)

Apprenticeship and the Job Market

Thus far, we have exposed only the bare skeleton of an economic model of apprenticeship. Essentially, we have hypothesized, the number of entering apprentices, and the rate at which they complete their apprenticeship terms, are related to the level of unemployment in the economy as a whole. In recession years, when unemployment is high, few employers will agree to the employment of new apprentices when those already in training on the job, or perhaps even skilled journeymen, may be faced with joblessness. Since apprentices are least productive during the initial year of their apprenticeship terms, employers are likely to be reluctant to hire new apprentices during recession periods. As a consequence, in recession years, the number of new apprentices tends to fall.

In the interplay of market forces, we may conclude that a young would-be apprentice has only minimal bargaining leverage. With little or no training or experience, he is substantially the captive of changes in the level of unemployment and in the demand for labor. The apprentice who has completed a substantial part of his term, however, is in a very different position. Even with as little as one year of training, he has garnered experience and has learned some of the fundamentals of his trade. Furthermore, his employer, in many instances, has a substantial vested interest in

his training. As a consequence, fluctuations in the apprentice completion rate are much less volatile than variations in the number of new apprentices.

More importantly, the apprentice who has completed a significant part of his term can frequently compete on terms of relative equality for many of the more demanding semi-skilled jobs. Even after completing the first year of his apprenticeship, annual earnings of apprentices are probably lower than those of the average semi-skilled male. In 1959, for example, according to the 1960 Decennial Census median earnings of apprentices were $3,486, as compared to a median of $4,299 for operatives; of $4,447 for manufacturing operatives; of $4,411 for bus drivers; of $4,491 for assemblers; and of $4,221 for truck drivers.

The existence of this differential in annual earnings, particularly in the case of young people, places a severe strain on the ability of apprentices to forgo the immediate increase in earnings which would be theirs if they "jump" their training and become semi-skilled workers. If this hypothesis is valid, apprentice completion rates should vary inversely with changes in interindustry mobility, and directly with changes in the differential between the wages of craftsmen and of semi-skilled workers.

Interindustry Mobility

In Figures 5 and 6, for the 1949-61 period, I have plotted the indices of the completion rates of all apprentices and of construction and metal-working trades apprentices, by the estimated date of entry into the apprenticeship system. Also shown is the index of the interindustry mobility rates (the IIMR) of all men. The inverse correspondence between changes in the male IIMR and changes in the completion rate for all

Figure 5--Indices of Apprentice Completion Rate and of Male Inter-Industry Mobility Rate, 1949-61 (1957-59 = 100.0)

apprentices, as shown in Figure 5, are striking indeed. With the exception of a one year period during the Korean War--when both the IIMR and the apprentice completion rate move in parallel fashion--a decline in interindustry mobility is invariably accompanied by an increase in the apprentice completion rate. Conversely, periods in which interindustry mobility increases are also periods in which the apprentice completion rate declines. (Tables 4 and 5).

Table 4--Indices of Male Interindustry Mobility Rate (IIMR) and Apprentice-Completion Rates, 1949-62 (1957-59 = 100.0)

apprentices--we see the identical inverse relationship between changes in the male IIMR index and the index of completion rates.

Wage Differentials

Consideration of the association between interindustry mobility and apprentice completion rates inevitably suggests investigation of the always tantalizing question of the relationship between wages and the employment of apprentices. As I indicated earlier, analyses of the wage-employment relationship have invariably failed to disclose any significant association. To the best of my knowledge, however, such efforts involved

a comparison of average hourly earnings and annual average employment data. As I shall attempt to demonstrate in a moment or two, annual average employment is a subtle statistical concept most frequently interpreted as a measure of the number of employed workers. With this interpretation, I find myself in disagreement. With respect to statistics on average hourly earnings, a distinguished labor economist long ago voiced the truism that conceptually these data do

> not indicate either the full cost of labor to the employer or the income measure in which the worker is mainly interested. Discussion with workers indicate that by "wages" they usually mean their weekly take-home pay. This may change considerably without any change in hourly rates because of changes in the work week, /and/ changes in various types of premiums. . .In the same way, the total cost of an hour's work to the employer may vary independently of wage rates.3/

These considerations suggested that the analysis concentrate on the relationship between annual earnings of apprentices and their employment. The data on interindustry mobility, however, tended to confirm the hypothesis that many apprentices--particularly those who complete the first year of their terms of apprenticeship--would be likely to choose to earn the probably higher wages of semi-skilled workers in the present, as opposed to the potentially higher earnings of skilled craftsmen some two or three years hence. For this reason, it seemed most realistic to investigate the changing differential between the annual earnings of year-round craftsmen and operatives and its relationship to the number of apprentice completees.

3/ Lloyd G. Reynolds, "Toward A Short-Run Theory of Wages," The American Economic Review, June 1948, p. 291.

a/ Source: Current Population Survey, P-60 Series, Bureau of the Census, various years.

A comparison of changes in the earnings differential and in the number of apprentice completees from 1955 to 1964 is shown in Figure 7. In general, there appears to be a fairly close correspondence between changes in the earnings differential and changes in the number of completees. During the first five years of this period, the index of the differential between the median earnings of year-round craftsmen and operatives rose steadily. From 1960 to 1964, however, despite increases in the median earnings of both groups, the differential tended toward the erratic, displaying some tendency to narrow. The number of completees, as shown by the indicies in Figure 7, tended to follow a similar pattern. From 1955 to 1959, the index of apprentice completees rose steadily each year, peaking in 1959. Beginning in 1960, as the wage differential tended generally to decline, the index of apprentice completees also weakened. (Table 6)

Figure 7--Indices of Differentials in Median Earnings of Full-time Craftsmen and Operatives, and of Number of Apprentice Completees, All Trades and Construction Trades, 1955-64 (1957-59 = 100.0)

Earnings Differential

Construction Trades Completees

All Completees

While there was an overall general correspondence between the movements of the indices of the wage differential and of apprentice completions, little or no statistically significant relationship can be claimed. In the case of the construction trades, however, there is a decidedly significant correlation between the two indices—.82, significant at the 1 percent level. The direction of each change in the wage differential index corresponds in every instance with the direction of the change in the number of construction trades completees. For each year from 1955 to 1959, the earnings differential index rises, as does the construction trades completee index. From 1959 to 1960, both indices fall, increase from 1960 to 1961, decline during the 1961-63 period, and both rise slightly from 1963 to 1964. Until 1959, not only do both indices move in the same direction, but the amplitude of the year-to-year changes is approximately the same. From 1959 onwards, however, the extent of change in the index of construction completees is of much greater proportions than the more modest declines in the index of the earnings differential, suggesting the presence of still other factors which influence the number of construction trades completees.

II—Public Policy and Economic Research

I turn now to the implications of these hypotheses for public policy and economic research. The fact that it is possible to construct an economic model of apprenticeship without reference to labor unions—admittedly an overly simple one—is not without a certain significance for social policy and economic research. If, as our hypotheses suggest, the number of new apprentice-registrants is indeed inversely related to the general

level of unemployment, and their completion rate is positively related to unemployment and the craftsmen-operative wage differential, it is entirely possible that the role of the labor unions in the system—whether as villain or as hero, depending on your taste in casting—has been very much overstated. If, as our hypotheses suggest, the basic parameters of apprenticeship are in fact fundamentally responsive to the general state of the economy and to particularistic forces of supply and demand in the job market, we may conclude that labor unions may at best only influence the apprenticeship system. Perhaps, we may eventually conclude, the number of apprentices entering an occupation is a function of demand for labor, and not a response to an apprentice ratio clause in the collective bargaining agreement. If, as our hypotheses suggest, the apprentice completion rate is in fact positively related to the level of unemployment and to changes in wage differentials described earlier—we will not castigate the apprenticeship system as a failure because of what we may erroneously believe to be an unduly high dropout rate. So far as I know, no responsible critic has argued, for example, that our system of higher education is a failure because "the national average of those who enter college and fail to finish is estimated at 40 percent."[4] And if we measure the educational dropout rate in terms of the number of high school graduates who do not enter college, the dropout rate no doubt would equal or exceed the apprentice dropout rate. Nonetheless, critics of the apprenticeship system continue to view the apprentice dropout rate as excessive.

4/ Martin Meyerson, "The American College Student," Daedalus, Summer 1966, p. 720.

The Sin of the Intellectuals

Precisely what a non-excessive rate would be, however, is not made clear. Indeed, I suspect, such a standard cannot be stated explicitly as a norm because in the minds of many is the thought that apprenticeship should be producing more craftsmen to meet current and projected needs for craftsmen. Under these circumstances, an ideal completion rate is one which presumably satisfies precisely present and projected demands for labor, and perforce must therefore fluctuate with each successive change in the projection of demand.

That such projections present certain difficulties to the economist, I am sure, will be regarded by most economists as a very considerable understatement. This is particularly true in the case of projections involving craftsmen, and the number of apprentices who will be needed in the future. He who undertakes such a projection exhibits valor above and beyond the call of duty, and is probably worthy of the Congressional Medal of Honor. Since such recognition is so frequently awarded posthumously, I trust that you will forgive me if I undertake no effort to discuss employment projections per se.

As one who has labored in the area, however, I feel it pertinent to conclude my remarks with certain technical observations concerning the nature and characteristics of the raw materials on which such projections are generally based. Usually such projections posit a given growth rate in the economy, and in annual average employment in an industry or occupation. Retirement and death rates are applied to annual average employment as of the base period, and the number of replacements needed to maintain existing levels of employment are calculated. To the estimated number of

replacements, there is then added an allowance for growth. The aggregate of these two factors constitutes total projected demand for labor in the subject industry or occupation.

While it is customary to criticize and to warn that such projections reflect, to some degree at least, the judgment of the economist, I confess that I do not share in this caveat. Inevitably, every projection involves judgment. If I decide to walk across the street—even though an automobile a half block away is proceeding in my direction at the rate of 15 miles per hour—I am staking my life on my judgment as to its trajectory and my reflexes.

When we make projections affecting other people and their livelihoods, in a democratic society we feel obliged to minimize judgment and maximize the use of objective statistical data. It is in this statistical area, I believe, in which we economists—and particularly the economists in universities—regrettably have underplayed our role. One of the most useful functions of the intellectual is that of the critic. And with respect to the statistics concerning employment projections and apprenticeship, I suggest that labor economists have not been as constructively critical of the available data as they might have been. In their zeal to analyze "hot" issues they have neglected to consider the conceptual underpinning of the statistics on which they base their analyses.

One of many glaring examples must suffice for the moment. Annual average employment, as I indicated a moment ago, is generally used as the basis for many employment projections. But precisely what does annual average employment represent? Almost unanimously, this term is taken to mean the average number of people employed during the year, and changes from year

to year are interpreted as changes in the number of employed persons. I suggest that this concept is not just inaccurate, but that this interpretation may materially affect the nature and level of projected employment.

Construction Data

Let us consider, for example, statistics on employment in contract construction, an industry of special significance to the apprenticeship system. Both the Social Security Administration and the Bureau of Labor Statistics prepare such statistics. As shown in Figure 8, however, the level of employment as reflected in the Social Security data is almost twice as high as in the BLS data. Furthermore, there are differences in the direction of year-to-year changes and almost invariably differences in the magnitude of the changes revealed by these data. If both sets of data are accurate, can they both refer to the same industry and the same workers? And, if they do, can they both be accurate?

The answer to both questions, in my judgment, must be "yes." Annual average employment data consist of an average of the 12 monthly reports on the number of workers employed in contract construction. The individual statistics for a given month are therefore homocentric. When averaged for a given year, however, they refer not to the number of individual workers employed during the year, but to the average number of job incumbents, an opocentric or job measure. Since each incumbent can occupy only one job at a given moment of time, conceptually the annual average employment data represent the average number of jobs filled during a given year. The Social Security employment data, on the other hand, are homocentric, unduplicated counts of individual workers employed in contract construction at any time

Figure 8--Opocentric and Homocentric Employment Counts, Contract Construction, 1949-63

(In Millions)

during the course of a calendar year. By dividing the homocentric Social Security data by the opocentric annual average employment statistics released by BLS, we are enabled to derive the ratio of the number of workers to jobs. In fact, this is a turnover rate, a means of calculating the employment "value" of jobs in contract construction. (Table 7)

In Figure 9 I have plotted the turnover rates in contract construction. These plot points are summarized in the regression line, which is negatively sloped. The significance of these turnover rates for projections of employment, I believe, is readily apparent. Although the number of jobs--i.e., annual average employment--and the number of workers employed in contract construction have both increased, the job turnover rate has declined. In other words, fewer persons are employed per 100 jobs in the 1960's than were

Table 7--Turnover Rates: Number of Workers Employed Per 100 Jobs, Contract Construction, 1949-63 1/

Year	Employment (in millions)	Jobs	Turnover rate
1949	4.4	2.2	2.0418
1950	4.8	2.3	2.0748
1951	5.2	2.6	2.0167
1952	5.2	2.6	1.9829
1953	5.1	2.6	1.9300
1954	4.9	2.6	1.8840
1955	5.1	2.8	1.8195
1956	---	---	------
1957	5.1	2.9	1.7347
1958	5.0	2.8	1.8114
1959	5.3	3.0	1.7925
1960	5.2	2.9	1.7985
1961	5.1	2.8	1.8094
1962	5.2	2.9	1.7887
1963	5.4	3.0	1.8051

1/ Derived by dividing OASI unduplicated employment figures for the industry division by the BLS annual average employment data. In effect, the turnover rate represents the number of persons employed during the year per 100 jobs.

Figure 9--Trend in Turnover Rates Per 100 Jobs In Contract Construction, 1949-63

employed in the 1950's. Any projection based on annual average employment data, if this conceptual analysis is at all correct, must be interpreted as a judgment concerning the probable average number of jobs which may be anticipated at some future date. From annual average employment statistics we should not expect to make projections of the number of employed persons, unless we assume that turnover, or interindustry mobility, are non-existent. In a free society, of course, such an assumption, fortunately, is quite unrealistic.

These observations should not be construed as indicating that any particular judgments concerning future increased demand for craftsmen or other workers are incorrect. Nor would I have you interpret these remarks as implying that realistic employment projections are impossible to construct. Quite the contrary. Increasingly, I believe, they will be recognized as indispensible tools of manpower policy.

Before confidently asserting that the country will need X number in this or that occupation at some future date--and that the apprenticeship system will contribute only Y percent of anticipated demand--I suggest that it would be well if economists examine the conceptual bases of the statistics which enter into their judgments. If, for example, we assume that the trend in the employment value of jobs in contract construction continues downward, a projected increase in annual average employment of 10 percent might represent an increase in demand for individual homocentric workers of only 8 percent, or perhaps 6 percent.

Conceivably, too, recognition of the effects of job turnover rates--i.e., what I call the employment "value" of jobs--might influence some of our evaluations of the American apprenticeship system, and of the difficult

function it undertakes to perform.

For in the final analysis, we ask of that system that it undertake to train a sufficient number of young workers on the job at present in order to assure a supply of adequately trained craftsmen to meet future needs. And, frequently, we ask that such employment be afforded young people at a time when unemployment is high and demand for labor--particularly for untrained young people--may be quite low. And so long as employers are expected to pay wages to their employees in a sometimes depressed present--no matter how stringent may be the labor shortages of the future--the economic problems of apprenticeship training will lend themselves to no easy solution, nor, I suspect, to any merely facile formula devised by the mind of man or the ingenuity of the economist.

Apprenticeship

12-14-66 No. 586

NEW ENGLAND BUSINESS REVIEW*

In recent years employers across the Nation have complained of their inability to fill certain skilled craftsmen jobs such as machinists and toolmakers. Moreover, the demand for workers with craft skills is expected to continue growing both in the Nation and in New England.

Many commentators on this situation have laid the blame for the shortage on the nation-wide decline in apprenticeship training. An investigation of this type of training indicates that many of its requirements are deterrents to the employer giving the training as well as to the workers entering apprenticeship. If the program is to meet the nation's growing needs, many changes are necessary. This article examines the current state of apprenticeship training in the region and the Nation and makes some proposals for strengthening the program.

APPRENTICESHIP DEFINED

The United States Bureau of Apprenticeship and Training defines formal apprenticeship training as combining on-the-job learning experiences with classroom study of related technical aspects. Apprenticeship is usually distinguished from other on-the-job training programs by the longer duration of the training period and by the formality of the arrangement.

Apprenticeship programs recognized by Federal and State governments generally contain provisions for the following:

1. A starting age--usually not less than 16 years.
2. A schedule of work processes to be taught--generally lasting 2,000 or more hours.
3. Related school instruction--usually at least 144 hours of instruction each year.
4. A progressively increasing schedule of wages.
5. Proper supervision of on-the-job training with adequate training facilities.

The discussion here is concerned with this type of apprenticeship training. It includes considerably more than programs registered with the U.S. Bureau of Apprenticeship and Training since only about two-thirds of all bona fide apprentices are so registered.

THE EXTENT OF APPRENTICESHIP

IN THE NATION

It is estimated that in 1962 only about 250,000 workers were taking apprenticeship training. This is a small number in relation to the number of existing craftsmen jobs, some 10 million. Between 65 and 70 percent of these apprentices were in registered programs. Building, metal, and printing trades accounted for almost nine-tenths of the registered apprentices.

Apprenticeship in recent years has been relatively unimportant as a means of reaching the journeyman's status. According to a United States Department of Labor estimate, a large proportion of the Nation's craftsmen, 59 percent, have had no formal training (school, apprenticeship, or Armed Forces).

- - - - - -

*The New England Business Review is produced in the Research Department. Edwin F. Estle was primarily responsible for the articles, "Next Year's Capital Outlays to Rise" and "Apprenticeship Training." Much of the material for the latter was drawn from his 1966 Princeton Ph.D. dissertation, "On-the-job Training: A Theoretical and Empirical Analysis." rider

Most craftsmen have reached the journeymen level through on-the-job experience and informal training. Moreover, less than three-fifths of those who enter apprenticeship training, based on data for registered apprentices, complete their training. Past studies of apprentices who have discontinued their training indicate that they do so for a variety of reasons such as need for more money, opportunity to receive journeyman's wage, the desire for steady work, or disliking or being unsuited to the trade.

Available data on the number of apprentices, which are not complete counts but are thought to represent the trend, indicate that apprenticeship training has been declining over the last decade and a half. The United States Censuses of Population indicate that the number of apprentices declined 27 percent between 1950 and 1960. Over this same period the number of craftsmen, foremen, and kindred workers rose by an eighth.

Counts of registered apprentices show the same type of movement over the 1950-60 period, a decline of 26 percent. However, the decline has been arrested since 1960. At the beginning of 1965 registered apprentices were down less than 1 percent from 1960 levels. Between 1960 and 1962 the number of apprentices fell by almost a tenth, but then the number increased to 1965 by almost the same proportion.

In New England

The amount of apprenticeship training in New England has shown much the same movement as in the Nation as a whole. Between 1950 and 1960 according to the U. S. Census of Population, the number of apprentices in the region fell by 41 percent. At the same time, the number of skilled workers in the region increased 7 percent. Registered apprentices show a 35 percent decline over this period. Since 1960 registered apprentices have decreased 4 percent. As in the Nation, an increase has occurred since 1962.

At the close of 1965 there were between 16 and 17 thousand apprentices in New England, if the national relationship of registered to total apprentices holds in the region. This is less than 3 percent of the existing craftsmen jobs in the region. Registered apprentices in New England are concentrated in the building, metal, and printing trades in about the same proportion as in the Nation.

The Training Conditions for Apprentices

Duration of Training

The duration of apprenticeship training varies from 2 to 6 years depending upon the trade. On the average, however, a program lasts 4 years.

Employers report that the length of these programs is a major deterrent to inducing young workers to become apprentices. It is also a deterrent to the employer instituting an apprenticeship program, because of the difficulty of forecasting labor needs as much as 4 years in the future.

Wage of Apprentices

An interview survey of 23 firms in the Greater Boston Area found that the average start wage of trainees for apprentice-type training (training lasting more than 2 years) was 70 percent of the journeyman wage. Typically, the apprentice's wage is raised about 5 percent each year until the journeyman level is reached.

In 1959, according to the 1960 U. S. Census of Population, apprentices who worked 50-9 weeks that year had an annual wage income of $4,278--that was 74.7 percent as great as the median wage of a craftsman. As Table 1 indicates, this proportion varied considerably by occupation.

The apprentice's wage level would appear to be relatively low, for laborers earn about the same wage and the average operative earned about 6 percent more when differences in weekly hours worked were taken into account. Such an adjustment is necessary since apprentices are normally not allowed to work overtime if it interferes with their related classroom instruction.

Thus, it would appear that the apprentice could have earned as much or more without entering training. These comparisons are misleading, however, for they do not take into account the differences in age and educational level, as well as the occupational distribution of the two groups. As Table 2 shows, the average apprentice is much younger, but has completed more years of school.

Adjustments for age and educational level show the apprentice to be earning well above the level of operatives and laborers, his alternative occupations without training. Apprentices earn about 17 percent more than operatives when these adjustments are made. (The differential is much greater in comparison with laborers).

Moreover, the available data indicate that apprentices tend to have higher earnings than operatives when comparisons are made by occupation. For workers age 18-2 years--the average age of apprentices--the median earnings of apprentices exceed those of operatives in 31 of 42 occupational groups.

In summary, the worker tends to improve his earnings position while taking apprenticeship training. This improvement, however, may not generally be recognized, since apprenticeship wage levels are usually cited in terms of journeyman levels.

School Instruction

In addition to the training received on-the-job, apprentices are required to attend classes each week, usually on Saturdays, for a total of 144 hours each year. Employers are assessed for part of the cost of running these classes. This required time spent in school also deters some workers from entering training.

The school instruction is administered and supervised by the state and local boards responsible for vocational education. This classroom training is financed through Federal, state, and local funds.

Selection, Supervision

Registered apprenticeship programs are supervised by joint apprenticeship committees composed of employer and employee representatives.

In unionized crafts apprentice candidates are selected by the union and the supervisory committee passes on their suitability. The apprentice's supervisor sends monthly reports to the union as to the apprentice's progress in training. In addition, in some instances the apprentice must complete monthly lesson assignments and forward them to the union for grading.

In the absence of a union the employer tends to select apprentice candidates from among his work force on the basis of their past job record and desire to obtain the craft skill.

Redirection

Recent interviews with employers disclose that they have, in some cases, shortened the duration of apprenticeship training and raised the apprentice's wage to induce more workers to enter training. They contend that workers can be trained in a shorter time and with less classroom instruction than established programs now require. Moreover, they maintain that this does not reduce the trained worker's productivity level.

A Trainee's Output Level

Some evidence indicates that in many types of training the output of a trainee is near that of a fully-trained worker for much of the training period.

One representative of the United States Department of Labor stated in testimony before the United States Senate that, "In general, it is thought that an apprentice constitutes a 'cost' during his first six months of employment and training; however, thereafter he earns roughly the equivalent of his pay by the work he performs."

Another indication of the level of a trainee's output is found in a detailed study of productivity records of groups learning to assemble pumps. It showed that during the learning period, from the start of the job until the standard work pace was reached, the average productivity was about 85 percent.

Moreover, if the ratio of an apprentice's to a journeyman's wage can be considered as approximating the trainee's productivity in relation to that of a journeyman, the apprentice is producing at about 60 to 70 percent of the journeyman's output level. For this is the average wage ratio found in formal apprenticeship programs.

Comments of a construction firm interviewed in the Boston area supported the above evidence. The firm maintained, and felt that most contractors would agree, that an apprentice bricklayer after 6 months of training can do just as good a job as a journeyman, for all except the very special skills which must be taught in the school.

This firm's jobs were mostly repair work and required none of these special skills. A bricklayer is normally apprenticed for 4 years.

Shortened Training Periods

Employers, recognizing the type of productivity relationship described above, have shortened training periods to obtain apprentices. For example, another firm in Boston's construction industry has cut the training period for carpenters from the traditional 5 years down to 3. This firm has also raised the starting wage of apprentices by 100 percent, up to the starting wage of a laborer in the firm.

Moreover, it does not require the apprentices to attend school. These apprentices are slowly integrated into the job, but they can perform some tasks satisfactorily from the beginning.

Another Boston firm, this time in the printing industry, has been able to shorten the length of training of compositors from the traditional 6 years down to as few as 2 years, depending upon the individual trainee's ability.

Other firms in the transportation equipment, machinery, and metals industries were found to vary the duration of their training programs for such occupations as machinists and toolmakers with the qualifications of the individual trainee.

Training Costs

A previous survey by this Bank in 1962 of New England manufacturers found the average length of apprenticeship training to be almost 3 years, with the average outlay for each trained worker close to $5,000. 1/ This, of course, is a substantial outlay, particularly because the firm can have no assurance that an apprentice will stay on after training. Therefore, it is in the firm's interest to hold training time down to the minimum necessary to obtain satisfactory performance.

1/- Edwin F. Estle, "Industrial Investment in Manpower," New England Business Review, Federal Reserve Bank of Boston, February 1964.

A followup survey in 1965 of firms investigated in 1962 found that the length of the average apprenticeship course had been reduced over the period, from 2½ years in 1962 to 2 years in 1965.

The interview survey of Boston firms shed more light on the nature of training costs. Most of the firms pay the instructor the standard wage he receives as a journeyman. Two firms pay instructors more than their usual wage; in one case an additional 10 percent and in the other an additional 10 cents an hour.

The firms had little information on the nonwage costs of training. They were about equally divided on the question of whether equipment, maintenance costs, and wastage of materials created expenses or caused no appreciable change. In some firms material damaged by the trainee can be salvaged, such as through remelting, while in other firms damaged material has to be discarded.

The lack of concrete cost information implies that giving training is more of a necessity than an option to the firm. Moreover, in most instances the number being trained in any particular occupation in the firm was found to be quite small. Even using broad job classifications such as machinist and tool-maker, the average number trained per firm in a job classification was 10 workers. This, of course, would tend to obscure the cost of training in relation to other types of costs.

The Desirability of Apprenticeship

Certainly the best type of development for occupations requiring a high skill level combines theory with controlled on-the-job experience. It is in the public's interest, as well as the individual's, to develop a supply of skilled manpower adequate for the economcy's advancing technology.

This may not, however, be the same as the individual employer's interest. The employer does want to obtain qualified labor, but he also has to be concerned with labor cost. Thus, training apprentices may be in his long-run interest, but represents an additional financial burden in the short run. Since workers can move freely, an employer may invest money--particularly in the earlier stages of training--with no certainty that he will recover his costs.

The traditional pattern of apprenticeship training appears to be breaking down into a shorter, less formal type of on-the-job training that is tailored to the specific skill needs of the firm. This need not be an undesirable development, if supplemental training programs are available to enable the worker to extend and perfect his skill. Indeed, with the rapid pace of technical development, the worker's attainment of journeyman status does not negate the necessity of systematically upgrading his skill.

Moreover, many crafts, such as the repair trades, which are appropriate for apprenticesh have never had large programs. Skill improvement is desirable and needed in these groups.

A Proposal

Further changes in craft training may be needed. These would involve a continuation of on-the-job instruction provided by industry but only to the extent of enhancing the worker's value to the firm. The theoretical school type of training would become broader in coverage and continue throughout a person's attachment to the workforce.

A program could perhaps be established whereby every firm contributes a small sum, dependent on the size of its workforce, to operate the craft schools. (Great Britain has recently instituted a system of levies and grants which might be considered.

All craft workers, rather than just apprentices, would be encouraged to avail themselves of this instruction at night, on weekends, and perhaps during the workweek if the firm finds it possible to release the worker for a few hours. In current terminology, these craft schools would provide courses at the pre-apprenticeship, apprenticeship, and journeyman levels, as well as courses for reviewing and updating of existing skills.

Workers would receive certificates upon successful completion of a course and have this noted on their job records. These certificates could be given some sort of designation that would indicate their level of difficulty -- perhaps simply a number from 1 up to the highest level in each skill, for example, toolmaker 1, toolmaker 2, etc. The firm could then take this school training into account when hiring new workers and revising pay levels, rewarding workers for attaining various levels of school training.

Workers could continue to participate in the school program during periods of unemployment and when they shift places of employment.

Some system of close contact between employers and the schools would have to be established to insure that the content of the school courses met the needs of industry. Each industry would have to select representatives, perhaps through the industry's trade association, that would act in an advisory capacity to the school authorities.

Likewise, it would be desirable to include representatives from employee organizations to make sure that workers were also getting the training they desired. In this revised system, the present Federal Bureau of Apprenticeship and Training and the apprenticeship divisions of the state departments of labor might have as their role the overseeing of the relationship between the schools, workers, and employers.

They would endeavor to see that contact between the groups was maintained to ensure that the theoretical instruction remained related to actual job practice. They could also promote the school training among workers and encourage them to take advantage of the school programs.

This is not a radical departure from the situation that now exists, except that the training would be broader and would be a continuous process. Moreover, a uniform standard would be provided for judging the competency of craft workers. The present system's standards are not uniform, and have resulted in registered and unregistered apprentices and journeymen who have completed only a portion of their apprenticeship or none at all.

Need for Craft Workers

A more systematic method of training craft workers is needed simply because the demand for craft skills is expected to continue advancing. The U.S. Department of Labor expects the need for craftsmen, foremen, and kindred workers to increase in the Nation by a fifth during this decade. Mechanics and repairmen, building trades craftsmen, and metal workers are expected to account for most of this growth.

In New England the need for craftsmen is expected to increase by 11 percent over the 1960's according to projections by this Bank. The demand will be particularly strong in construction and the durable goods sector of manufacturing.

The time has come to recognize that training has a beginning but no ending throughout an individual's worklife, and that training should be available to all who desire it on an equal basis. Only in this way can our workforce keep abreast of technological developments.

NEWS from the AFL-CIO

NA. 8-3870

LABOR NEWS CONFERENCE PROGRAM 43, SERIES 6

FOR RELEASE, A.M. PAPERS, MONDAY, FEBRUARY 13, 1967

An AFL-CIO spokesman said today that poor information about apprenticeship opportunities in the building trades keeps many minority group youngsters from applying for them.

Donald Slaiman, director of the AFL-CIO's Department of Civil Rights, said that a "unique program" has been developed by the Workers Defense League, the A. Philip Randolph Education Trust and the United States Department of Labor, to "meet the problem of finding applicants for skilled trades entry jobs, both in apprenticeships and otherwise, especially in minority group communities."

The pilot project to help prepare interested youngsters for apprenticeship entry tests in construction, manufacturing, utilities and trade and service, has the full cooperation of the AFL-CIO and its Building and Construction Trades Department.

"There is a tremendous lag of knowledge and understanding between what is available -- what the policy is -- what laws are available to back this up -- and the actual advice and information that the youngsters have," Slaiman said.

School counsellors often fail to advise students where and how to apply for available jobs, he said, or tell them, "'don't bother, I know that you are wasting your time.'" His statements came during the network radio interview, LABOR NEWS CONFERENCE.

Slaiman said that requirements for entry into apprenticeships -- usually a high school education -- are realistic.

"Skill requirements have been rising," he said, and the "probability is that if an applicant were a dropout before he finished high school, he wouldn't end up making a journeyman -- he wouldn't keep up with the demands of the trades."

Reporters questioning Slaiman on the AFL-CIO produced public service program, a weekly feature on the Mutual Broadcasting System, were Stanley Levey, labor correspondent for the Scripps-Howard Newspapers, and Alan Adams, Washington correspondent for Business Week magazine.

LABOR NEWS CONFERENCE
Mutual Broadcasting System

SUNDAY, FEBRUARY 12, 1967
Program 43, Series 6

SUBJECT : Apprenticeships -- New Skills for New Workers

GUEST : Donald Slaiman, director of the AFL-CIO's Department of Civil Rights

PANEL : Alan Adams, Washington correspondent for Business Week magazine
Stanley Levey, labor correspondent for the Scripps-Howard Newspapers

MODERATOR: Harry W. Flannery

FLANNERY: LABOR NEWS CONFERENCE. Welcome to another edition of LABOR NEWS CONFERENCE, a public affairs program brought to you by the AFL-CIO. LABOR NEWS CONFERENCE brings together leading AFL-CIO representatives and ranking members of the press. Today's guest is Donald Slaiman, director of the AFL-CIO's Department of Civil Rights.

Under the terms of a recent agreement, the Workers Defense League and the A. Philip Randolph Education Trust will join with the United States Department of Labor in a program to prepare young men for apprenticeship tests in four metropolitan areas. The program, which has the full cooperation of the AFL-CIO, will prepare men for apprenticeships in construction, manufacturing, utilities, and trade and service. Here to question Mr. Slaiman about the project and other civil rights matters, are Stanley Levey, labor correspondent for the Scripps-Howard Newspapers, and Alan Adams, Washington correspondent for Business Week magazine. Your moderator, Harry W. Flannery.

And now, Mr. Adams, I believe you have the first question?

ADAMS: Mr. Slaiman, the AFL-CIO has had a long-time anti-discrimination policy, both within the international unions and within the federation. Can you give us an estimate of how successful that policy has been, particularly in the more troublesome areas of building trades unions and apprenticeship training programs?

SLAIMAN: Yes. Well, success has to be measured in a number of ways.

As far as policy is concerned, not only the AFL-CIO, but our affiliated unions -- including those in the building trades -- have adopted anti-discrimination policies.

Not only have they adopted them by voting for them at AFL-CIO conventions, but in the apprenticeship program, every one of the building trades unions had agreed to cooperate, in compliance with anti-discrimination regulations brought in by the Department of Labor and the Bureau of Apprenticeships and Training.

The effectiveness of these regulations is hard to determine. One reason is that there are very few complaints of violations. The real problem we have is to find out whether there are people applying and being treated in a non-discriminatory manner, and to determine whether this results in actually increasing numbers of minority group applicants in the programs.

ADAMS: Well, Mr. Slaiman, there may not be many complaints within the building trades, or to the building trades unions, but there seems to be a general disturbance within the civil rights groups about lack of Negro membership in building trades unions and in apprenticeship programs.

SLAIMAN: Yes, that is just my point. There is a lot of suspicion and a lot of agitation -- a little less than there was a few years ago.

But, what has been missing is actual applicants through the programs. That is, one looks at a particular trade in a particular city and finds no -- or few -- Negro applicants. And you ask, "How come, in the year 1967, there aren't any, if there is no longer discrimination or there hasn't been?"

The answer of the trades, and it happens over and over again, is that we haven't been discriminating -- we haven't turned anybody down. There have been no qualified applicants coming in.

LEVEY: Well, isn't that in part, Mr. Slaiman, a result of sort of a policy of self-elimination by Negroes and Puerto Ricans, who have gotten the word that they are not welcome in the building trades?

SLAIMAN: This is partially true -- that is, people still don't apply for jobs, because they feel it would be a waste of time. It's not merely self-exclusion -- the whole of our society contributes to this. That is, for example, how do people find out about careers?

Youngsters have school counsellors. If school counsellors don't advise them where to apply and what's available, but to the contrary, say "don't bother, I know that you are wasting your time," youngsters are not going to apply.

In other words, there is a tremendous lag of knowledge and understanding between what is available -- what the policy is -- what laws are available to back this up -- and the actual advice and information that the youngsters have.

LEVEY: Well, isn't part of the answer also, Mr. Slaiman, that the qualifications and requirements of many of the building trades are really not geared to the problem that we confront in trying to get Negroes and Puerto Ricans into those building trades?

I have got in front of me here a list of the qualifications required for apprenticeship opportunities in the building and construction trades unions in Washington, D.C. and vicinity. Just listen to some of these qualifications that a young man has to have. Education --

high school diploma. Tests -- United States Employment Service aptitude test. Personal interview with joint apprenticeship training board. That's for electrical workers.

For glazers, high school diploma. For iron workers, high school diploma. For lathers, high school diploma.

Isn't that an unrealistic requirement, particularly when one of the problems confronting Negro kids is that they are dropouts -- they don't stay in school, and couldn't conceivably begin to meet this requirement?

SLAIMAN: No, they are not unrealistic. The fact is, in skilled trades, the skill requirements have been rising. It is not true that no Negro kids can qualify. In Washington, D.C., in 1966 -- the first eleven months of 1966 -- 59% of the youngsters who have come through the Apprentice Information Center at the United States Employment Service -- 204 to be exact, Negro youngsters qualified under those qualifications and are working as apprentices in the building trades in Washington, D.C. They are apprentice electricians, iron workers, steam fitters, plumbers, etcetera.

It is true that a dropout is not going to make an apprenticeship program unless he has educational catchup. But it is also true that if he did get in the probability is that if he were a dropout before he finished high school he wouldn't end up making a journeyman -- he wouldn't keep up with the demands of the trades.

LEVEY: But, aren't those just exactly the kids who are facing the most difficult employment problems? For the educated Negro boy or Puerto Rican boy, the sky is the limit. There are offices, service industries and educational institutions that are just dying to get kids like that.

SLAIMAN: It is true that the highly skilled trades are not particularly strong opportunity areas for the school dropout. It is also true that the bright minority group high school graduate is going into other fields. This is why, in my opinion, although there are thousands of youngsters who neither go to college nor are dropouts they don't automatically get to the door of the trades which has been opened. Somebody has to find them and bring them to that door.

ADAMS: In that connection, Mr. Slaiman, I would like to ask you a bit about this new training program that the Labor Department and the Workers' Defense League is working out. Apparently, it is aimed at finding some 375 apprentices for the building trades unions in four major areas. And I gather they are going to have to interview something like 4000 Negroes, Puerto Ricans and other minorities for this project.

Is this a potentially successful plan, do you think? Is this one that can work in finding school dropouts and others, and preparing them for building trades tests?

FLANNERY: Mr. Slaiman, before you begin to answer that, will you tell us what the Workers' Defense League and the A. Philip Randolph Education Trust are?

SLAIMAN: The Workers' Defense League is a civil liberties organization, whose primary work has been done in getting rights for unions in the past, where they didn't have their rights under the law.

The A. Philip Randolph Education Trust is the tax-exempt arm, so to speak, of the A. Philip Randolph Institute, which is an organization headed by Bayard Rustin, that has labor, liberal and civil rights people on its board. It has a number of function and does cooperative work between the civil rights movement, the labor movement and liberals.

This particular program is a unique one, and was developed to try to meet the problem of finding applicants for skilled trades entry jobs, both in apprenticeships and otherwise, especially in the minority group communities. It has already been highly successful in New York City.

Mr. Adams, in answer to your questions, the program that you refer to has been operating in New York City for about two years on a small foundation grant. It has a staff of three young Negroes. One of them was the first Negro graduate of Central High School in Little Rock, Arkansas. They have been finding, not school dropouts, but Negro and Puerto Rican youngsters who are not going to go to college and helping them apply -- getting the information where the openings are, when and how you apply -- and then giving them some preparatory work, so that they can compete successfully in the entry examinations. The numbers you mentioned are rather general goals that the Labor Department announced and aren't specific numbers for any of the cities.

As a matter of fact, in New York City, which is one of the cities that the grant will cover, they have placed many more than the assigned number in the past couple of years. They have placed about 250 Negro and Puerto Rican youngsters in apprenticeship programs there.

LEVEY: In the programs? How many have been placed on jobs?

SLAIMAN: All of those placed in the programs are on jobs. That is, when a youngster is accepted into an apprenticeship program, he is working -- he goes to school one night a week. This differs from getting people qualified and on the list. Once a man is accepted in a program, he has a job, or a series of jobs.

ADAMS: How many, would you say, Mr. Slaiman -- how many minority apprentices are there in New York City in the building trades today?

SLAIMAN: I don't have those figures. There are more than the Workers' Defense League program has placed, because some have come in from other sources.

LEVEY: What would the order of magnitude be? Would it be a couple of hundred -- a couple of thousand?

SLAIMAN: It would be more than a couple of hundred because the International Brotherhood of Electrical Workers Local 3 alone, in the past few years has taken in a great many.

LEVEY: Well, that could give a lopsided effect to the totals.

SLAIMAN: But there are a fair number in several other trades. Now, I could give you more specific figures about Washington, D.C. where the Information Center has performed some of the functions of this Workers' Defense League program.

Here you have had in the past few years, about a dozen electrical apprentices, eight or nine steam fitters, eight plumbers -- no, there are more than eight plumbers, there are about a dozen plumbers -- a number of iron workers, larger numbers of carpenters and bricklayers.

Now, in the carpenters and bricklayers you have larger numbers, because with a different competitive position, the trades agreed to develop pre-apprenticeship training programs which would bring in under-qualified youngsters or school dropouts, who didn't meet the usual high high school requirements. In these programs, where those youngsters filled out the first year of pre-apprenticeship -- that is, actually working on a job -- they then came in as first year apprentices.

LEVEY: Mr. Slaiman, those numbers are impressive, but they strike me, as an outsider who knows a little bit about this field, as being pitifully small. Do you think that the amount of money and effort that is being put into these programs, like the Workers' Defense League program in New York and various other foundation-sponsored programs, are really producing the kind of results that justify those programs?

SLAIMAN: Mr. Levey, I would say two things. One, the number, in magnitude of job creation -- new jobs for minority groups -- is small, because the number of openings in apprenticeships generally is small.

I think that many people in the Negro community and among the public in general, envision apprenticeships as the answer to the total employment problem of minority group youngsters. Of course, when actual numbers that are significant are produced, they seem pitifully far from that goal.

But, while the actual numbers of youngsters are relatively small, because apprenticeship is a small area of the job market, they are very significant. That is, it is significant that youngsters get into skilled trades -- not just production jobs, but skilled trades that Negroes were not in before.

It's important not only psychologically and symbolically, but it's important as an entry into all sections of the American labor force.

For instance, even if it were only a thousand in a year throughout the country -- one thousand youngsters getting into programs to prepare them to be electricians and plumbers and pipe fitters and iron workers, it would be significant for a number of reasons.

First of all, these skilled craftsmen today are getting opportunities to go into business for themselves and into supervisory jobs. A youngster graduating from a skilled trades apprenticeship -- in the higher skilled trades, mechanical trades -- on a very high average will, within two or three years become a construction superintendent. They are more skilled than the old journeymen who came into the trades 20 years ago. Down the road many of them will become contractors in their own right. Entry into this area of the American labor force, I think, is very important, not only for the individual youngsters, but for the minority group community as a whole.

ADAMS: Well, you cite, Mr. Slaiman, several cities -- New York, Washington, D. C. Are there similar successes, or even partial successes, in other cities around the country?

SLAIMAN: Mr. Adams, I know of a number of cities where there has been movement, but not as good as New York and Washington.

Philadelphia, where the Reverend Sullivan's Opportunities Industrialization Center has been getting cooperation from the trades, just informed me in the past period 65 Negro youngsters have entered construction apprentices.

Chicago, where the Information Center and some other out-reach programs have been entered into in December 1965 to stimulate the growth of minority group penetration in the trades, has been, in some ways, disappointing. But, it has produced about 100 new Negro apprentices.

ADAMS: Mr. Slaiman, there are in the building trades, currently, about three million craftsmen. And, there is also an unemployment level of about 8 percent now. What is the potential employment of Negroes, would you say, in the building trades, if these programs are successful?

SLAIMAN: Now, the three million figure is for all workers in the building trades. That includes hundreds of thousands of laborers among which there are a large number of Negroes already. Many of these people don't go through the apprenticeship program. They have been in these trades before, and so forth.

The number of apprentices currently in the building trades -- in all 50 states -- is about one hundred and a few odd-thousand. So, the number of apprentices doesn't range in the three million mark, and the possibilities of Negro employment in the trades is not limited to entry into apprenticeship, although it is the best avenue at the present time.

I say that because of the unemployment figure you mentioned. Now this unemployment isn't evenly distributed. Eight percent doesn't mean that in every city there is eight percent unemployment. In Los Angeles and San Francisco it is nearer to 20 percent. In Chicago it is down to maybe two or three percent. So the condition of the local labor market has a lot to do with new entries into the trades.

LEVEY: Mr. Slaiman, I think the question that has been bothering me, and that I have been sort of approaching in talking to you is, in terms of the real seriousness of the problem -- the civil rights problem and the labor union relationship to it and Negroes and so on -- do you think that it is proper that the solution for placing Negroes in building and construction trades jobs should, in the last analysis, rest with the unions?

In other words, should they have the final say so?

I know that theoretically, there is an apprenticeship program that involves the employers and so on. But a lot of us who have worked on this know that in the last analysis, it is the unions which decide who gets into the apprenticeship programs. Isn't this problem just too serious for that kind of old fashioned approach?

SLAIMAN: Mr. Levey, I don't even agree with your facts, let alone your possible conclusions.

I was at an apprenticeship conference in Wisconsin put on by the University of Wisconsin. There were two papers delivered by people at the University who had gone around to various small cities in the state. They found, actually, in more cases than not, that in the smaller cities it was the employer who not only selected the apprentices, but also brought in the apprenticeship applicants to the joint apprenticeship committees.

Now, it is true that in many places, especially in the larger cities, the union has the greatest interest in who comes into the apprenticeship program and the number of apprentices, because it affects the jobs and skill levels and so forth. But this is not the only entrance of people into the construction industry. So, it isn't really accurate to say that the union has everything to say about which people come in. We feel that the employers also have an obligation -- though they very often don't meet it -- to bring applicants to joint apprenticeship committees. They just pass off all the problems onto the unions -- you know, "passing the buck."

We do feel that the building trades unions -- and I'm not speaking of every local -- are assuming responsibility in this area. The Building Trades Department of the AFL-CIO is cooperating with these programs. We feel that when the job of getting people to know how you get into the trades has been done, that this will work in a more satisfactory way.

I'm not speaking only of apprenticeships, now. Very often, there are people who know of some skilled minority group mechanic and think that he can get into a particular union very simply. There too, it is very rare that applicants do come to the union. More often, there is knowledge of somebody who should be available, but in case after case, when the unions have invited people to apply -- and I'm not talking about applying for apprenticeship, but applying as journeymen -- the prospective applicants don't appear. Or, if they do appear, they don't have the qualifications that people thought they had.

Now, there are places where the building trades are out organizing non-union journeymen. In Washington, D. C. they are doing this.

ADAMS: Mr. Slaiman, if I could interrupt at this point -- The AFL-CIO policy, there is no doubt, is an anti-discrimination policy. Its officers have worked hard for this. But, how is this reflected on the local level, particularly in the building trades unions? There has been an explanation that the internationals can't order the local leaders to follow these policies, and in some cases they do not. Are the locals complying?

SLAIMAN: Well, this we could have as a whole half-hour program. I would have to take up our efforts to get compliance -- efforts to cooperate with the federal and state agencies.

I want to repeat what I said earlier: In spite of all the publicity, the facts are that with both federal and state agencies, the number of complaints that come in that we can work on is very small in the construction industry.

ADAMS: Well, what powers do you have to police?

SLAIMAN: Well, we are not policemen, but we do have effective ways of getting our international unions to work with their locals -- to encourage their locals to comply. And, we have done this in case after case.

FLANNERY: What kind of doers do you have? You said you have effective means of doing this.

SLAIMAN: Well, all complaints that come in to us are referred to the international unions. Most of the internationals have assigned an officer, on President Meany's request, to work on these things. We get investigations of the problem. We meet with them on what they find. Where they find, or we think the facts are that there has been discriminatory action, we get them to do something about it -- to resolve the matter in a satisfactory manner.

FLANNERY: Thank you, gentlemen. Today's guest on LABOR NEWS CONFERENCE was Donald Slaiman, director of the AFL-CIO's Department of Civil Rights. Representing the press were Alan Adams, Washington correspondent for Business Week magazine, and Stanley Levey, labor correspondent for the Scripps-Howard Newspapers. This is your moderator, Harry W. Flannery, inviting you to listen again next week. LABOR NEWS CONFERENCE is a public service of the AFL-CIO, produced in cooperation with the Mutual Radio Network.

1800 G St., N.W., Washington, D.C. 20506

FOR IMMEDIATE RELEASE FEB 16 1967 Phone: 343-5621

Via from JN

Apprenticeship

The first compulsory federal reporting systems on minority participation in apprenticeship programs and in labor unions were proposed today by Stephen N. Shulman, Chairman of the Equal Employment Opportunity Commission.

The proposed EEO-2 Apprenticeship Information Report, which is being sponsored jointly by the EEOC and the Department of Labor's Bureau of Apprenticeship and Training, and the EEO-3 Labor Organization Information Report will be discussed at a public hearing on Tuesday, March 7, 1967.

The hearing will begin at 10 A.M., in Conference Room B, Departmental Auditorium, Constitution Avenue, between 12th and 14th Streets, N. W., Washington, D. C. Comments and testimonies will be welcome from all interested parties. The reporting systems will become effective only after approval by the Bureau of the Budget.

Form EEO-2 will be filed annually by August 31, by all joint labor-management apprenticeship committees in all industries, and by employers and labor organizations in the construction industry which operate apprenticeship programs other than labor-management programs, in accord with Title VII of the Civil Rights Act of 1964. Form EEO-3 will be filed annually by October 31, by labor organizations subject to Title VII. The record keeping systems necessary for compiling the reports must be instituted several months prior to the filing dates.

The information on apprenticeship -- with separate reports for each trade and craft -- will include the number of apprentices by sex and selected minority groups (Negro, Spanish American, American Indian and Oriental). Detailed information about standards and selection procedures will also be required.

(OVER)

67-11

EEOC

The labor organization form will feature a breakdown by sex and minority group for the total membership, persons who applied for membership and referral during a three-month period beginning no earlier than May 1 and ending no later than September 30, and those who were referred and hired during that period. Only unions with hiring halls or referral arrangements are required to file these statistics.

All unions subject to Title VII, however, must file EEO-3, answering questions about discriminatory or anti-discriminatory measures of their constitutions, collective bargaining agreements or membership divisions.

Coverage under Title VII for the EEO-2 and EEO-3 forms includes all employers with 50 or more employees, and all labor organizations with 50 or more members, and those which operate hiring halls or referral arrangements, regardless of size. All joint labor-management apprenticeship committees that represent one or more employers or labor organizations subject to Title VII are also required to file reports.

The Commission suggests five methods of getting the necessary data on race, ethnic group and sex: existing records; visual survey; tally from personal knowledge; self identification; and, if all other methods fail to give an accurate account, by direct inquiry. The requirement for recording such data for the EEO forms supersedes all state and local laws which may prohibit such inquiries or record keeping.

Copies of the proposed reporting systems are available for inspection at the Office of the Federal Register, National Archives Building, Washington, D. C., and at the Equal Employment Opportunity Commission, Office of Research and Reports, 1800 G Street, N. W., Washington, D. C.

Apprenticeship

NEWS from the AFL-CIO

NA. 8-3870

FOR RELEASE UPON DELIVERY, EXPECTED AT 10:00 A.M.
TUESDAY, JULY 11, 1967

Following is the text of an address by AFL-CIO Secretary-Treasurer William F. Schnitzler before the Seventh Biennial Middle Atlantic States Apprenticeship and Training Conference at the Golden Triangle Motor Hotel, Norfolk, Virginia, on Tuesday, July 11, 1967

It is a pleasure for me to come before your conference and be given this opportunity to meet with many old and new friends from the Middle Atlantic states.

This conference is on problems and accomplishments of apprenticeship and training in the area that runs from Pennsylvania to North Carolina and westward to West Virginia -- six states and the District of Columbia.

We here represent that which is typically American. In these six states there is the industrial north and the rural south; the poverty of Appalachia and the affluence of suburbia; the complex life of megalopolis and the simple existence of the pastoral community. We have "right-to-work" states and free states; runaway plants and responsible firms. We have high quality, efficient apprenticeship programs and jack-of-all-trades handymen. We have stable companies with long histories of industrial peace; we have fly-by-night anti-union operators. They're all here -- a part of the society that we have made, full of promise and beset by problems.

But weighty as the problems may be in these states, our nation, our government, labor and employers are aware of them and are seeking solutions. This fact alone makes solutions possible. This fact alone marks the great progress that we are making in our nation.

Ten days ago I was in another Navy town, Bremerton, Washington, for the commissioning of the USS Samuel Gompers. And during those ceremonies -- while touching on the achievements of Gompers in his lifetime -- those of us present were made aware once again that united pursuit of problems was not a virtue until quite recently. Our nation did not always accept a collective responsibility to its citizens -- nor did many others.

There was a time not long ago when workingmen and their children lived amid wretched slums, disease, ignorance and primitive conditions while the breadwinner suffered the toil and insecurity of the wage system.

That was the depressing environment in which Samuel Gompers lived. And it was in that environment that Gompers and men like him built the first fragile structure that became the American labor movement. They brought together men of differing backgrounds, of divergent ethnic and cultural origins, of many languages and many degrees of skill. They brought together mechanics' societies, fraternal, burial and social groups, workers' lodges and trade unions, and they built the forerunner of today's AFL-CIO.

Gompers and his associates overcame the most burdensome of problems in the face of incalculable odds; and for those problems they did not solve, they provided the machinery whereby succeeding generations could cope with them. Yes, we still have slums, disease and illiteracy, but they are giving away -- and rapidly -- to a united onslaught, made up mostly of organizations represented here today.

An important weapon in that fight -- yesterday and today -- has been apprenticeship and training. Apprenticeship programs are of themselves evidence of industrial peace and mutual understanding. They represent well-paid workers, an assurance of security in liberal fringe benefit programs and protectives against erosion of wages or work standards.

In this atmosphere -- this environment -- workers for generation on generation have found the means for a better life, a new life, a secure life for themselves and their children after them.

The problems of workingmen -- of the poor and their children -- are not new to the apprenticeship programs. There has been, however, a great deal of attention paid to these programs since enactment of the Civil Rights Act of 1964, with its guarantee of equal opportunity in employment.

In the two years that this title of the law has been in effect, enemies of unions, panacea-peddlers, ill-informed politicians and ax-grinders have fallen upon the apprenticeship programs with glee. The selfish unions, they say, refuse to allow Negroes to become apprentices. Unions, they say, keep the doors closed, stifling the Negro's attempt to help himself out of poverty. Such criticism makes a lot of headlines, but I say this is sheer, unadorned bunk.

I want to say here and now that the American labor movement need never be defensive nor ashamed of the great good the union-employer apprentice programs have done, both as the training ground for millions of youths from all backgrounds and as the means of breaking the poverty cycle for thousands of youths of minority groups today and in the future.

Until America's schools improve the quality of education for Negroes and other minorities and raise these youths' qualifications -- and send far more on to college -- the union-employer apprentice programs will serve as the single greatest road to success and security for Negro youths in America.

Labor's apprentice programs provide education, a skill, an excellent income and a secure future. Not a dead-end job, but a meaningful career. Our apprentice programs provide a means of escape from poverty, both for the worker and his children. Our apprentice programs provide the opportunity for young men from minority groups to become sought-after craftsmen and supervisors. (Statistics show that an apprentice has a 50-50 chance of becoming a supervisor within two years after he is a journeyman.) Our apprentice programs open the door for a man to become a contractor in his own right and employ other youths as apprentices.

The vistas that are open to Negroes, Puerto Ricans and other disadvantaged youngsters in America who participate in apprentice programs are almost limitless. And we in the labor movement can be proud of every program we have established and proud of every young man we have made into a craftsman and sent into the working world.

Who dares to criticize the goodness of these programs and the young men they are helping? Certainly not the anti-union employer who race-baits his workers to keep out a union and then hires a Negro in the mail room to demonstrate that he has lowered the color bar. Yet too often the plaudits for enlightened self-interest have gone to just such an employer; and too often the brickbat of scorn has been thrown at the union. I let you decide who has made the genuine contribution.

It is not that the facts are unavailable. They are there for all to see, but there are those who do not want to see. As Secretary of Labor W. Willard Wirtz told the Building and Construction Trades Department legislative conference in Washington last month, it is unfortunate that the word is not being put forth of the accomplishments of the apprenticeship programs in behalf of minority youths. He said he would settle for just ten percent favorable stories -- for which there is a wealth of material available -- instead of the almost 100 percent negative stories which appear at the present time.

At that same conference, Mr. Wirtz said that it is totally unfair for the finger of racial discrimination to have been pointed at the building trades for the last four years. There has been, he said in praise, as much serious effort in the building trades to meet this problem as there has been in any other American institution in the labor movement or outside the labor movement.

-more-

I can report that within the AFL-CIO, with no exceptions, a fully cooperative attitude by all AFL-CIO unions, each having pledged itself to a program of non-discrimination to which it has diligently applied itself and is making successful.

But still the stories continue.

A favorite numbers game is to charge that there are no Negroes, or one, or five, or ten, or whatever the figure may be, in a particular union's apprenticeship program. The facts -- if any -- are usually distorted; the story with the true picture doesn't get into the paper. Such accounts not only dishonor the building trades unions, they do a disservice to potential Negro apprentices who are thus discouraged from applying.

It would be far more helpful to the Negro youngster if an attempt were made instead to understand the apprentice program and help make it work. But the headline is the story; the smear becomes the accepted fact.

To this I say without reservation, as a member of the President's Committee on Equal Employment Opportunity and as Chairman of the AFL-CIO Civil Rights Committee, that if all problems of employment for jobless Negroes and non-whites were handled with the same concern for an individual's needs and rights as are the apprenticeship programs, the festering sore of racial unrest would be largely healed.

It is time that we put to death the myth that apprenticeship programs are sanctuaries of lily-white youths, following in the carefully directed footsteps of their fathers.

Similarly, there is no special preferance for Negroes or other minority groups. Apprentice programs are opportunities for the best qualified young men in the area to become journeymen and craftsmen in a particular skilled trade.

The pity is that the industry is so limited in total employees that the number of apprentices -- white, Negro, Puerto Rican -- will never number more than a few thousand.

If this were a program of tremendous scope embracing numbers equal to those new workers who each year enter the auto industry or the steel industry or the communications industry, we could swiftly solve a sizable part of the problem of training qualified young Negroes and other non-whites for meaningful employment. The auto factories have hired, and the auto workers union has taken into membership, 842,200 workers in the last four years.

Against this let's put into perspective this whole matter of apprenticeship. There are an estimated 50,000 apprentice openings yearly, but the dropout rate has consistently been around 50 percent, which leave about 25,000 men to complete their apprenticeship and become journeymen each year. Civil rights groups and others who have been actively involved with Negro participation in these programs have set a hoped-for goal of 15 percent apprenticeships by non-whites. That is, they hope that they can eventually put forth this number of qualified youngsters to take the examinations and pass. They have stated, however, that this long-range goal can be attained only if the quality of public education of Negroes improves and a larger percentage of Negroes who are qualified show an inclination to enter the apprenticed trades. Most Negroes who can qualify for the tests have set their sights on college or some other advanced training program.

But assuming that the magic number of 15 percent participation is attained, that would mean that 7,500 apprentice openings yearly would be filled from minority groups. When the 50 percent dropout rate is factored in, only 3,750 non-white journeymen would be graduated each year.

So, 3,750 apprentice-to-journeymen each year from minority groups is a hoped-for maximum. This is hardly in numbers of sufficient to provide a major impact on unemployment. This is hardly the panacea that the uninitiated believe the apprentice program can be for Negro youths.

-more-

Today there is a minimum of 111,000 jobless male non-white youths between 16 and 21.

Contrast with this a hoped-for maximum of 3,750 graduates yearly of non-whites in apprentice programs.

There must be other solutions.

But not only are the number of apprenticeships few in relationship to America's work force of more than 72 million, but there is a genuine problem to find qualified applicants for programs currently under way.

Now, I'm sure that there are a lot of young fellows -- Negro and white -- who would eagerly accept a journeyman's card in the electrician's union or the plumber's union if it were offered to them. But who would hire these fellows? The union could swell its dues-paying ranks by the tens of thousands, but it would be a terrible fraud upon these youths. They obviously would be unable to perform their jobs and for this they must be trained. But unless they are schooled in the basics of education, they cannot fathom shop math, read a blueprint nor comprehend the ever-changing problems of the trades.

No one in his right mind suggests that engineers' licenses or airline pilots' licenses be handed out at will to disadvantaged youngsters. Yet, somehow, because our work is done in overalls, it is different. We say there is no difference.

It is simple. A young fellow must have a basic education to become an apprentice. If he does not have it, the blame should be laid to our school system, not at the door of the union. If a young fellow cannot get into a college or an engineering school, we do not throw rocks at the place of higher learning. We take a look at his school, his grades and his college entrance examination. They usually tell us the sad story.

There are, of course, young Negroes and non-whites who are qualified and who want to learn a skill and make their careers as electricians or plumbers or carpenters -- and we want them to do so. But, despite reports to the contrary, there are not thousands of these youngsters standing outside a high barrier marked "keep out," while inside thousands of apprentice jobs are left unfilled because there aren't enough white qualified youths. This simply is not the truth; it simply is not the desire of the union.

After all, it is an axiom in the labor movement that you fill the job with a union member or the boss fills it with someone off the street. To let jobs go by default is hardly the way to protect high standards of craftsmanship and union conditions.

Instead of that imaginary high fence, there are actually recruiting campaigns being undertaken to insure that these programs are fully utilized and every potential apprentice be given the opportunity to compete for the openings.

But it has been found that in order to get youngsters of minority backgrounds who are potentially qualifiable for apprenticeship programs, they have to be found, brought forth and informed. It is not easy.

There has to be a concerted -- and sincere -- effort made by agencies, schools, organizations, churches and unions to make young men aware of available apprenticeship programs. Young men have to be made aware of the desire within the industry for their potential skills. The youths have to be made aware of the system of selection and when and where tests are to be given.

This is being done, and with great vigor throughout the United States wherever legitimate apprenticeship programs are under way.

In many instances commendable work is being done in preparing youngsters for the tests. Sometimes the help comes from unions, sometimes from joint programs and in other instances from totally independent organizations. These tutoring programs have been very worthwhile. Certainly no one can quarrel with tutoring, with preparatory programs to familiarize youngsters with the problems they will face in the examination and refresh their grasp of math and other related subjects. This is fine. This is commendable.

But let me caution here that we must be careful of the label that is given to this sort of preparation. In some quarters it is called pre-apprenticeship training. I frankly feel this phrase should be avoided entirely because it is misleading and can be confused with other programs.

-more-

There is one program, for instance, whereby young men are put to work at lower levels of pay, at lower levels of work and with lesser qualifications than the normal apprenticeship program. To some, this is pre-apprenticeship.

And then there is a third operation where young men are put on job sites where there are apprenticeship programs, but these youngsters are employed in capacities where they do menial labor, take part in no program of training and fulfill no evidence of preparation for apprentice work.

What sort of apprentice training these youngsters are engaged in, I fail to see; to some persons this is referred to as pre-apprenticeship.

So, we must be careful of the phrase. The important role, to my way of thinking, is to fill the positions in the established, high-standard apprenticeship programs, and to do so we must make as much information as possible available to potential applicants. We have found that where youngsters have been properly informed, the number of young men to sit for the tests and to pass them increases dramatically -- including the candidates from minority groups. Consequently, the number of non-whites to flow into the trades has become considerably greater. And, in so doing, an exhaustive study of the Negro in apprentice programs has disclosed that there is no discrimination nor resistance to anyone who passes the examination. Whoever passes the test and goes to work is accepted fully.

The only resistance is the refusal by unions to dilute or erode the apprentice standards of training that are applied equalty to all.

In the District of Columbia, where I have seen at first-hand how the program works, the Apprenticeship Information Center, since it opened in 1963, has placed 789 youths in accredited apprenticeship programs. More than 58 percent of these youths were from minority groups. They came to the Center as referrals by schools, churches and neighborhood centers.

In the D.C. program, the unions have set qualification levels at what they have learned is the realistic need of the prospective apprentice in a particular trade. In some instances, a high school education or its equivalent have been found to be necessary to prevent wholesale dropouts. In others, a ninth grade education has been found to be sufficient.

The apprenticeship information program -- excellent as it is -- revealed not the shortcomings of the union programs, but the woeful failings of the D.C. educational system. The many hundreds of applicants who failed to qualify were found, for the most part, to be unable to read sufficiently well to cope with the tests.

Near to Washington, in Baltimore, there is LEAP -- Labor Education Advancement Program -- a program established by the Urban League and the AFL-CIO with the aid of a Ford Foundation grant. Working in conjunction with the Department of Labor, the Baltimore Building Trades Council is recruiting 300 disadvantaged Baltimore youths to participate in the educational preparatory program aimed at placing them into apprenticeable construction trades.

Farther north, there is the pioneering program of the Workers Defense League, which has the full cooperation of the AFL-CIO, and was set up in conjunction with the A. Philip Randolph Education Trust and the Department of Labor.

The Workers Defense League program took itself into Brooklyn's Harlem in 1964 -- into the Bedford-Stuyvesant section -- and through its educational preparatory program enabled 74 youngsters from minority groups to enter apprenticeship programs. These men are now working as apprentices in sheetmetal, elevator construction, electrical, printing, stone derricks and ironwork. Similar programs of the Workers Defense League are now being undertaken in Buffalo and New Rochelle.

But all is not achieved by these methods alone. Local 3 of the IBEW in New York has more than 200 non-white youngsters in training at this time, all of whom were recruited through the customary channels. Other unions are also carrying out long-standing programs where youths of minority groups have always made up a sizable percentage of those being trained.

Let's look at some other cities. In Philadelphia, 64 Negroes have entered construction apprenticeships; in Chicago, there are about 100 new Negro apprentices in training; in Oklahoma City 13 youngsters from minority groups entered construction trade apprenticeships this month alone.

Meanwhile, in Detroit, the Trade Union Leadership Council, in co-operation with the building trades councils there, is carrying out a program of training some 200 Negro youths for apprenticeship examinations; and in Phoenix, Arizona, union bricklayers are carrying on training-to-apprenticeship for 20 disadvantaged youths.

These examples are few, I know. I am also aware that among those who are critical of the apprenticeship programs, there is an inclination to find little that is praiseworthy in the apprenticeship establishment, as they choose to call us. They point out that those of us involved in operating these programs are likely to emphasize the absence of qualified Negro applicants and to emphasize the relative progress that has been made despite great difficulties. To this charge I plead quilty.

But by the same token, according to an in-depth study of Negroes in apprenticeship programs by Professor Ray Marshall at the University of Texas, the civil rights spokesmen are also likely to emphasize discrimination by unions, by employers and by apprenticeship agencies and see a minimum of change.

The professor said the problem was too complex for such simple explanations. I agree. But he also pointed out that anti-discrimination legislation -- the Civil Rights Act -- only stops discrimination, it does not cause affirmative action to take place.

The fact that affirmative action is taking place at the instigation of the labor movement in conjunction with community organizations, schools, government and civil rights groups, should mute some critics. But most important the affirmative action should help produce the needed apprentices and tomorrow's craftsmen.

This step beyond non-discrimination and into participation and encouragement of Negroes, Puerto Ricans and other non-whites is evidence of good faith and of a genuine desire to prove that apprenticeship programs are open to all who can qualify.

That is the goal of the AFL-CIO and it is, I am confident, the goal as well of all who truly believe in apprenticeship.

NEWS from the AFL-CIO

NA. 8-3870

LABOR NEWS CONFERENCE PROGRAM 38, SERIES 7

FOR RELEASE, A.M. PAPERS, WEDNESDAY, JANUARY 10, 1968

More Negroes hold skilled jobs in construction than in most other industries, and apprenticeship opportunities in construction are widening, the AFL-CIO's Director of Civil Rights said today in a network radio interview.

Donald Slaiman pointed out that the latest government report on construction employment in larger firms with federal contracts shows that Negroes make up 16.6% of the blue collar work force -- the most solidly unionized segment of the industry. But, he said, in the mostly unorganized white collar part of the industry, Negroes hold less than 1% of the jobs.

Questioned by reporters on LABOR NEWS CONFERENCE, Slaiman said that aside from "isolated cases of discrimination" in construction jobs, the main problem now is to "recruit, train, motivate and prep" minority group workers for apprenticeship programs, "and get them to come through the doors when the doors are open." The AFL-CIO produced public service program was broadcast Tuesday at 7:35 p.m. EST, on the Mutual Radio Network.

Slaiman credited union-supported programs of the Workers Defense League and the Urban League that recruit and prepare apprentices, with bringing more minority group youngsters into the skilled trades.

In the last three years, such programs have brought "more than 1,000 Negro and Puerto Rican apprentices" into construction jobs in 16 cities, he said. He acknowledged that the number of recruits "is still small," but said that the two-pronged drive of "insuring non-discrimination, plus insuring that there will be qualified applicants," is producing significant results.

Slaiman said that with job requirements rising -- "both educational background and actual mechanical skill --" there has to be a "massive effort among all parties, communities, employers and unions," to upgrade youngsters for the skilled trades and give them "meaningful work" while they build their capabilities.

Reporters questioning Slaiman were Stanley Levey of the Scripps-Howard Newspapers and Alan Adams of Business Week magazine.

LABOR NEWS CONFERENCE
Mutual Broadcasting System

PROGRAM 38, SERIES 7
Tuesday, January 9, 1968

SUBJECT : Apprenticeship Opportunities for Minority Group Youngsters

GUEST : Donald Slaiman, Director, AFL-CIO Department of Civil Rights

PANEL : Alan Adams, Washington correspondent for Business Week magazine
Stanley Levey, labor correspondent for the Scripps-Howard Newspapers

MODERATOR: Frank Harden

HARDEN: LABOR NEWS CONFERENCE. Welcome to another edition of LABOR NEWS CONFERENCE, a public affairs program brought to you by the AFL-CIO. LABOR NEWS CONFERENCE brings together leading AFL-CIO representatives and ranking members of the press. Today's guest is Donald Slaiman, director of the AFL-CIO's Department of Civil Rights.

The apprenticeship system -- both on-the-job experience and classroom study -- has long been the traditional avenue for young workers into the skilled trades. The department Mr. Slaiman heads works closely with unions, employers and other community groups to help minority group youngsters enter apprenticeship programs. Here to question Mr. Slaiman about apprenticeship opportunities today, are Stanley Levey, labor correspondent for the Scripps-Howard Newspapers, and Alan Adams, Washington correspondent for Business Week magazine. Your moderator, Frank Harden.

And now, Mr. Levey, I believe you have the first question.

LEVEY: Thanks, Mr. Harden.

Mr. Slaiman, what are the facts about Negroes in the construction trades? Are they or aren't they getting into unions, and, are they or aren't they getting jobs?

SLAIMAN: Well, the fact is, there are large numbers of Negroes who have jobs in the construction industry -- especially in many of the union construction jobs.

The problem is, that as in all industries in the United States, Negroes and other minorities tend not to be in certain jobs -- that is, the highest-paid jobs in the industry. This is due to patterns of discrimination that existed in the past. It is also due to the fact that when the discrimination is ended, few Negroes have the experience or training to enter the higher-skilled jobs.

Now, in the construction industry, because of the nature of unionism, especially, most of the jobs are skilled jobs, so there are more Negroes in skilled jobs in the construction industry than in most other industries.

This leaves us with the fact that although they are in skilled jobs as bricklayers, carpenters, plasterers, roofers, etc., they have entered some of the trades in any numbers, only very, very recently.

But, even in those cases, the percentages may be higher than in some other industries. Overall in the construction industry, the Negroes' penetration into skilled trades is far higher in almost every part of the country than it is into white collar jobs.

ADAMS: Well, Mr. Slaiman, there are some three million skilled tradesmen in the industry. Do you have any idea of the number of Negroes -- the percentage of Negroes -- among them?

SLAIMAN: No, we don't have that kind of figures. We should get them shortly after the EEO 2 and EEO 3 forms are filed with the Equal Employment Opportunity Commission.

But, I can give you some figures which are some indication -- figures compiled from the employer forms submitted by construction industry employers with government contracts. I don't know how accurate the figures are, but the first figures they got for contractors throughout the country with government contracts and 100 or more employees, showed 466,800 workers last year.

In the white collar section of the industry, .8 percent were Negro -- those are all non-union jobs. In the blue collar section of the industry, they had 16.6 percent Negro. This is a fairly good percentage. Naturally, a good part of these were laborers, carpenters, bricklayers and so forth. But, even so, you will note that in the construction industry, union laborers make at least $3.50 an hour. Carpenters' and bricklayers' wages tend to be much higher. So, among these contractors, a good percentage of the blue collar work force was Negroes working at good-paying jobs, even though they may not have been heavily concentrated in the best-paying jobs.

ADAMS: Well, if the picture is as favorable as you say, Mr. Slaiman, why are the construction unions being singled out on the subject of civil rights? I know that at last month's AFL-CIO Convention, a civil rights leader ran down a list of local unions that he said had no Negroes, and had had none in their apprenticeship programs for years.

SLAIMAN: Well, you see, what's picked out are the five highest-paid of 20 different trades. These do have a small percentage of minority group workers.

Now, we are working to see that the percentages increase there. Thirty or 40 years ago, you could find, in many of the local unions, barriers or simply no Negroes. But, that is not the situation today.

Today, we have to deal with a situation in which, aside from isolated cases of discrimination, the real problem is insuring that even when there is non-discrimination, there are qualified applicants. In many cases, this means somebody to recruit, and motivate, and train, and prep minority group youngsters and older workers -- and to get them to come through the doors when the doors are open. That is, when there is not discrimination.

Take some of the things cited at the Convention. It was mentioned that in five trades, there were only about six Negro apprentices as of some date -- April 1966, I believe. Well, the Workers Defense League has gone into Cleveland, with the cooperation of the trades, and in the last three months, has placed 17 Negro apprentices -- 10 ironworkers and seven electricians -- which is four times the number mentioned in 1966.

Now, let's take it on a national basis. In that same speech, Mr. Wilkins, (Roy Wilkins, Executive Director of the National Association for the Advancement of Colored People) said that from 1950 to 1960, the number of Negro apprentices in all trades -- not only building trades, but in all trades in the United States -- increased by only one. But, from 1960 to 1967, these out-reach programs of the Workers Defense League, and the Urban League, that have been recruiting youngsters, have placed -- within the last three years, by themselves, in just the construction industry, in just 16 cities -- more than 1,000 Negro and Puerto Rican apprentices. So, while the number of jobs in these trades is still small, when we work on insuring non-discrimination, plus insuring that there will be qualified applicants, we are beginning to get significant movement.

LEVEY: Mr. Slaiman, who can take credit for the changes that you cite? Can the construction unions in question take that credit? Isn't it a fact that these changes you speak of -- and they are good -- isn't it a fact that they have been literally forced upon the major construction unions by a variety of sources?

SLAIMAN: Well, the programs I am talking about have produced results -- and they have produced more results, as Mr. Wilkins has pointed out, than the demonstrations, and compliance cases, and whatnot. He pointed out that after many years of demonstrations and compliance cases, there was very little movement. The programs that have brought significant results have all had the cooperation of the unions involved. There has been an occasional friction point, such as the early problems of Local 28 of the Sheet Metal Workers in New York, but even these have been taken care of. A recent New York Times piece mentions that Local 28 is cooperating with the Workers Defense League program. And, I might mention that there are now 54 Negro and Puerto Rican sheet metal apprentices in Local 28 in New York City.

ADAMS: If I could go back to the speech at the Convention, which I thought was highly critical of the AFL-CIO, Mr. Wilkins, said he felt that the voluntary approach wasn't working effectively among the craft locals, and that he felt the government would have to do something more drastic to succeed. Do you think this is right? What is your approach?

SLAIMAN: Well, I think the question is really incorrectly posed. To just wait in any civil rights area, for voluntary approaches, has always proved inadequate.

That is why we, as well as Mr. Wilkins, have supported legislation and have agreed that sound implementation of the legislation must have support and cooperation.

But we found, especially in the apprenticeship skilled trade areas, as Mr. Wilkins has found, that individual cases -- and even court cases -- take a long time and produce limited results. Only when you have a massive effort among all parties -- that is, communities, employers and unions cooperating -- will you get significant results in skilled jobs, as opposed to just opening up the door to semi-skilled jobs, which require only limited ability.

LEVEY: Didn't the threat, Mr. Slaiman -- did't the threat of court action in Cleveland very largely help produce the results you cited just a few minutes ago?

SLAIMAN: The threat of court action, as well as negotiations at the same time, had an impact on one local union -- the one case in which apprentices were recruited and passed. There was a question of whether they were fairly treated. But, the activities of the Workers Defense League and the unions cooperating with them, I don't think primarily came from that threat.

I think the results came from the fact that when the Workers Defense League went in, other building trades leaders assured the local building trades people that they had a constructive program. They gave it a chance and saw good results. As a result, in each case where a Joint Apprenticeship Council has announced a test, Ernest Green, director of the Joint Apprenticeship Committee of the Workers Defense League, has obtained the information on the time and place of the test and how to apply -- and has also got the applicants prepared and ready, and found very little problem in any of the trades, so far.

LEVEY: Mr. Slaiman, just how realistic are these standards that the construction trades insist upon as requirements for apprenticeships? I notice that at the Building Trades Department meeting in Miami, preceding the AFL-CIO Convention, Neil Haggerty, the president of the Department, and AFL-CIO President George Meany, both said that they favor improved conditions for Negroes, but not at the cost of relaxing standards. Now, just the other day, President Johnson said, that in order to fight massive unemployment, we've got to go out and find jobs -- and, if necessary, the government has to be the employer of last resort for Negroes. Isn't it up to the unions in the construction industry, at this critical point, to adopt a similar philosophy of emergency, take another look at these standards of theirs, and ask themselves honestly, whether they are really standards for young men coming into the trade, or whether they are really barriers to the young men?

SLAIMAN: Well, you have raised a number of problems, Mr. Levey.

The problem of providing jobs for completely unskilled people -- some are those thought to be unemployable -- some have no real job experience -- means that the government has to be the employer of last resort, to provide unskilled jobs that are socially necessary. That means work that cities should be doing, but can't afford. Jobs as nurses' aides and educational aides -- or repairing and fixing up parks.

Private industry is asked to find suitable jobs for these people, too, and when necessary, give them some minimal training.

But, you are not going to take somebody with no work experience, and very little educational background, and make them a highly-skilled person very easily.

Now, in some cases, the trades have met this problem. The Carpenters Union, the Operating Engineers Union, the Bricklayers Union, the Painters Union, have set up free apprenticeship programs, in which they take under-qualified people who normally wouldn't qualify, not only as a journeyman, but wouldn't meet the minimum requirements for apprenticeship, because they don't have enough to take the academic work and learn. They have set up programs to raise the background levels of these people, so that they will be able to enter as first-year apprentices after some pre-work -- both school and practical work.

But, generally speaking, as to skilled and technical jobs -- and this is not limited to the construction industry -- there are tool makers in the auto industry, highly skilled steel workers and draftsmen -- by-and-large, there are many minority group people -- youngsters and otherwise -- who are under-employed now, who are not the hard-core unemployed, who should be moving up into these trades. It is no advantage to reduce the standards, if those who come in are unable to do the jobs. The fact is, that the requirements -- both educational background and actual mechanical skill requirements -- in most of these trades, is rising not falling. It is just an illusion to think that the hard-core unemployed can be taken care of in the highly-skilled trades.

We have to upgrade the educational backgrounds of people, so that they can go into the highly-skilled trades. And while the hard-core unemployed are getting their standards raised, provide them with meaninful work now, even if it is not of the most highly-skilled variety. Then, those who make it -- those who get jobs -- those who get some skills --those who are making a living now -- if they take extra training and extra education, may move up the ladder into more highly-skilled jobs.

As I say, this is a general problem. It is not confined to just the construction industry. When the automobile industry in Detroit agrees to hire thousands of hard-core unemployed, they are not agreeing to hire them as tool makers; they are putting them in at the lower levels. Now, I said lower levels, but they are putting them into better jobs than they ever thought of getting. But, they are not starting at the skilled journeyman jobs.

ADAMS: On that point, Mr. Slaiman, these unskilled people going into auto industry jobs -- are they going into the union -- into the United Auto Workers?

SLAIMAN: Yes. Sure.

ADAMS: Well, would they, in the case of construction, go into the construction unions, even at lower level jobs that take less skill?

SLAIMAN: Of course. When a man goes into the Laborers Union at $3.50 or more an hour, he is going into the type of job that is semi-skilled in industry, with equivalent pay -- maybe higher.

When you speak of a laborer in the construction industry, you are not speaking of an unskilled sweeper. They do many types of work. Now, when a man goes in as an apprentice -- as an apprentice carpenter, for instance, starting maybe at $2.00 or $2.25 an hour -- he joins the union long before he is a full-fledged journeyman. Even those youngsters who go into pre-apprenticeship programs at a lower level than the first-year bricklayer are in the union.

LEVEY: I wanted to get on to another point. One of the biggest problems, and apprently, one of the biggest programs of the Administration, will be in rebuilding the nation's cities -- the Model Cities Program. This should mean thousands -- perhaps, millions of jobs for construction workers. Now, are the construction unions taking part in these programs, or, what solutions do you have for these people?

SLAIMAN: Well, most of these programs are still on the drawing board. The construction unions are aware of both the problems and potentialities of these programs. They are beginning to look for ways they can get some of this work as union, and, at the same time, provide union membership for increasing numbers of minority group workers who will undoubtedly be on a lot of this work.

Now, the details of how this is to be done are not simple. No blueprints have been laid out by the government, by the unions or by the employers, as yet. I think this will be an important aspect of the work, providing far more job opportunities than the limited number of apprenticeships. The blueprints aren't fully laid out. All I can say at this time is that there is an interest. There was an expressed determination at the Building Trades Convention by both the government and the construction unions, to find the best way to meet this program.

LEVEY: Mr. Slaiman, doesn't that Model Cities Program provide a very strong whip for the government to push recalcitrant construction trades unions into a more responsible position with respect to Negroes?

SLAIMAN: Well, I don't think the unions are recalcitrant on this. Not only Mr. Haggerty of the Building Trades Department, but many other union leaders expressed; one, a firm policy of non-discrimination; two, an interest in more than just a non-discrimination policy -- affirmative action to assure entry; and three, numerous expressions of the importance of exploring the Model Cities and Rehabilitation Programs, and finding ways to see that these are well-paid and unionized jobs, rather than cheap jobs.

ADAMS: One of the points Mr. Haggerty raised at the Convention, Mr. Slaiman, was that he felt that the construction unions should seek out young Negroes and other minorities in the ghetto areas for pre-apprenticeship training. How would that work?

SLAIMAN: Well, one of the reasons why we support programs like those of the Workers Defense League, the Urban League, and other groups that are recruiting, is that we have found that it isn't

easy to recruit applicants for jobs -- especially jobs that have some requirements and some history that shows youngsters have stayed away from these jobs -- that they had a disincentive, because they thought it was no use.

The business agent of a small local might not be very productive in finding people. Therefore, in those programs, you have full-time people who know the ghetto, who know the community, who know where the youngsters are -- people who know what's in the schools -- go out and do the recruiting, preparing and motivating needed. You get a much better flow of applicants that way.

LEVEY: Mr. Slaiman, how long do you think it is going to be until Negroes represent a substantial part of the three million skilled craftsmen in the United States?

SLAIMAN: It's very hard to estimate. I think that if we do the kind of job we are doing in apprenticeships on a broad scale across the country -- in all industries and in all parts of the country -- that the pace will be rather rapid. But, that is also, if we have a high level of employment, and, if our school and ghetto problems are generally eased. Under such circumstances, it won't take long. But, if these other things aren't taken care of, we're in trouble.

HARDEN: Thank you, gentlemen. Today's LABOR NEWS CONFERENCE guest was Donald Slaiman, director of the AFL-CIO's Department of Civil Rights. Representing the press were Alan Adams, Washington correspondent for Business Week magazine, and Stanley Levey, labor correspondent for the Scripps-Howard Newspapers This is your moderator, Frank Harden, inviting you to listen again next week. LABOR NEWS CONFERENCE is a public affairs production of the AFL-CIO, produced in cooperation with the Mutual Radio Network.

Dear Friend

Enclosed is an exchange of letters between Secretary of Labor Willard Wirtz and President Neil Haggerty of the Building and Construction Trades Council, AFL-CIO. President Haggerty's letter outlines a program of affirmative action re the recruitment of minority youth for apprenticeship programs.

Over 25 cities are now involved in such programs with the cooperation of local building trades councils and organizations like the Joint Apprenticeship Council of the Workers Defense League/A. Philip Randolph Educational Fund and the National Urban League.

My "Labor News Conference" (also included) of January 10 details some of the experiences and problems in this area.

With warm regards.

Cordially,

Don Slaiman

AMERICAN FEDERATION OF LABOR — CONGRESS OF INDUSTRIAL ORGANIZATIONS

815 SIXTEENTH ST., N.W. • WASHINGTON, D. C. 20006

District 7-1461

February 1, 1968

Honorable W. Willard Wirtz
Secretary of Labor
Washington, D. C. 20210

Dear Mr. Secretary:

The Building and Construction Trades Department, desiring to implement the action taken by its 54th Convention which endorsed affirmative action generally and in principle for the purpose of preventing any possible discrimination in the operation of local unions chartered by its affiliated International Unions, proposes to undertake, both directly and through the individual General Presidents, subscribing hereto, the following:

(1) To foster, with the cooperation of appropriate management organizations:

(a) Programs of recruitment of qualified applicants for apprenticeship from the Negro population and other minority groups, and

(b) Programs for special attention to deficiencies affecting the full qualification of Negro and other minority group applicants, if such exist, and remedy the same if practical;

(2) To endorse and support projects such as OUTREACH AND LEAP in those 48 cities where such projects have been undertaken and in other cities where such projects are started in the future, urging local unions to give full cooperation, not only by disseminating information concerning the apprenticeship program to those who operate the project, but also by working actively with the project so that it may be better able to recruit applicants specifically according to the needs and requirements of the apprenticeship program;

(3) To counsel and urge its affiliates to consider appropriate means whereby suitable minority candidates may be recruited;

(4) To recommend that apprenticeship programs, sponsored or co-sponsored by its local unions, disseminate full information concerning program entrance and necessary qualifications, not only to the Bureau of Apprenticeship and Training, but also to one or more sources of potential minority candidates within the community;

(5) To urge upon all affiliate local unions the social and economic necessity of striving for satisfactory minority participation;

(6) To recommend that affiliate local unions and joint apprenticeship committees explore mutual problems with appropriate organizations directly representative of minority groups within the community.

Each segment of the industry will adapt and adopt this proposal according to its structure and requirements with full recognition of the joint characteristics of the apprenticeship program. There will be maximum utilization of responsible civil rights organizations willing to join in a cooperative effort to effect this proposal with full recognition of the necessity for industry to formulate its requirements for employment and entry in the trade.

We offer this form of public-private cooperation as a means of recognizing and meeting social responsibilities in full and voluntary support of government efforts to eliminate, once and for all, discrimination on the basis of race, creed, color, or national origin, with the endorsement of the Department's Executive Council.

Sincerely yours,

C. J. Haggerty

C. J. Haggerty
President

CJH/s
OPE1U#2

U. S. DEPARTMENT OF LABOR

OFFICE OF THE SECRETARY

WASHINGTON

February 2, 1968

Mr. C. J. Haggerty, President
Building and Construction Trades
Department, AFL-CIO
815 Sixteenth Street, N. W.
Washington, D. C. 20006

Dear President Haggerty:

I am gratified to receive your letter of February 1, 1968 in behalf of the Building and Construction Trades Department and subscribing General Presidents. In your letter, you express in detail an affirmative action program to eliminate any discrimination in apprenticeship programs, thereby proposing to implement action taken by your 54th Convention.

When these proposals are carried out, they will, in my opinion, represent a strong and progressive forward step toward answering, once and for all, complaints that building trades unions may not be exerting their best efforts in full support of private and public action to eliminate discrimination on the basis of race, creed, color, or national origin.

This action of yours is entirely in accordance with my remarks to you at your convention, and I welcome your complete expression of cooperation with the thought that best possible solutions may lie in voluntarism by the unions themselves, in cooperation with appropriate management organizations. This is, indeed, recognizing and meeting social responsibilities in support of government efforts under law. You are to be commended for the forthright position you have taken.

Meanwhile, in the light of these assurances and in furtherance of my responsibilities under Executive Order 11246 and the Fitzgerald Act, P. L. 75-308 (August 16, 1937), I propose to continue carrying out anti-discrimination provisions concerning apprenticeship, contained in 29 CFR 30, without change or amendment, through the

Bureau of Apprenticeship and Training, in accordance with present regulations. Any conflict between governmental action under these regulations and the activities of the Office of Federal Contract Compliance shall be called to the attention of the Under Secretary of Labor for satisfactory resolution.

Sincerely,

Willard Wirtz

Secretary of Labor

Apprenticeship

Week of August 26, 1968

530 APPRENTICE AND JOURNEYMAN PAINTERS
TO BE TRAINED ON THE JOB

WASHINGTON -- Over 300 disadvantaged or jobless youth will train as painter-decorators and paperhangers under a $500,000 on-the-job training contract, Secretary of Labor Willard Wirtz has announced.

A total of 530 persons will be trained -- 320 youths selected mainly from apprenticeship preparation projects, and 210 journeymen who need skills upgrading to forestall layoffs.

The contract was signed with a labor and management committee called the National Joint Painting and Decorating Apprenticeship and Training Committee representing programs in 22 States and the District of Columbia.

The 320 from Apprenticeship Outreach programs, funded by the U.S. Department of Labor in 36 cities, will be given six weeks of pre-job training before beginning 20 weeks of training on the job.

Outreach programs are the cooperative efforts of the Building and Construction Trades Councils, AFL-CIO, and minority civil rights organizations.

The contract will help combat critical skill shortages in the painting and decorating industry. It will provide unemployed and disadvantaged persons a chance to gain skills through apprenticeship. It will also develop and carry out journeyman training programs necessary to offset skill obsolescence in 80-hour courses.

The total Labor Department investment is $496,521. Of this amount, $164,175 is for the cost of on-the-job training, $232,422 is for supplementary classroom instruction, and $99,924 is for training allowances for the apprentices.

The contractor will plan, develop and promote subcontracts with local joint apprenticeship and training committees, local unions and district councils of the Brotherhood of Painters, Decorators and Paperhangers of America. It

(MORE)

will assist these subcontractors in developing training guides, plans and schedules to assure thorough training.

The subcontractor will receive a flat fee of $100 for each trainee who successfully completes the 20 weeks of on-the-job training. On finishing this on-the-job training, the trainee will continue his apprenticeship for an additional 2-1/2 years.

William Duval, director of education for the Brotherhood of Painters, Decorators and Paperhangers of American, AFL-CIO, and Glen Craven, executive director of the Painting and Decorating Contractors of America, will supervise the administrative staff and serve as liaison between the contractor and the Department of Labor.

Apprenticeship

OAKLAND CONSTRUCTION TRADES TO TAKE IN OVER-AGE MINORITY APPRENTICES

WASHINGTON -- Apprenticeships in the construction trades will be open to 100 minority group workers, mostly in their 30's and 40's, in the Oakland, Calif., area, Secretary of Labor Willard Wirtz has announced.

The Department of Labor has agreed to an 18-month contract with a nonprofit corporation called Project Upgrade to conduct the program. It is being supported by $440,000 in Labor Department funds and a $110,000 grant from the Ford Foundation.

The program is a joint endeavor of the Alameda County Building and Construction Trades Council, AFL-CIO, and the Alameda County Contractors' Association, in cooperation with Oakland area minority groups.

Project Upgrade, Inc., will promote the employment of minority workers as journeymen in the construction trades. It

(MORE)

will also locate, motivate, guide, and help minorities to qualify for journeyman status through apprenticeship.

Trainees will be selected from minority applicants who have backgrounds or aptitudes in mechanical skills, the physical ability to perform the work, strong motivation to enter the construction field, and are over the normal apprenticeable age.

They will be selected by review committees composed of an equal number of representatives of contractors and building-trade unions in the various trades.

The selected trainees must be judged by the review committees to be at least 50 percent proficient in the trade of their choice, and must attend related classroom instruction at least six hours a week at Laney College in Oakland.

Participating contractors must pay trainees the prevailing union wage rates and all fringe benefits normally provided a union journeyman and provide union working conditions.

Contractors will receive reimbursement pegged to a sliding scale based upon the rated proficiency of the trainees, decreasing every three months.

The Ford Foundation grant was made to offset administrative costs of the program, permitting all of the Labor Department funds to be used for salaries of instructors and the cost of training incurred by the building and construction contractors.

Apprenticeship

70 MINORITY YOUTH IN TAMPA, SAN DIEGO
GET APPRENTICESHIP CHANCE

WASHINGTON -- Two new projects to help 70 minority youth pass apprenticeship tests in the building and construction trades through "cram" courses have been announced by Secretary of Labor Willard Wirtz.

Level of Bldg Trade involvement & are goals needed?

Agreements have been signed for Apprenticeship Outreach programs in Tampa, Fla., and San Diego, Calif., with local AFL-CIO building and construction trades councils and social-action agencies.

The Tampa program will place 30 minority applicants in apprenticeship preparation projects with a Federal investment of $45,896.

The Tampa program is conducted by the Urban League. Its programs, known as Labor Education Advancement Programs (LEAP), now operate in 19 cities, including the one just announced.

The San Diego program will be conducted by the San Diego Construction Industry Affirmative Action Committee. The San Diego Apprenticeship Outreach program will prepare 40 minority applicants for apprenticeship openings, with a Federal investment of $52,047.

In each city, expert guidance and coaching will be provided for apprenticeship candidates by the area's AFL-CIO building and construction trades council.

This brings to 44 the number of cities where Apprenticeship Outreach programs are being conducted.

(MORE)

Under the Manpower Administration's Apprenticeship Outreach programs, 2,425 unemployed youths are being put through 4-to 10-week courses for specific examinations in 18 building and construction trades, such as carpentry, sheet metal working, and plumbing.

Youth are recruited in each city from local State Employment Service agencies.

Apprenticeship sommittee members and other familiar with the examinations assist in developing study materials and in coaching and tutoring applicants. Mock oral tests are given, and extensive coaching and tutoring help them score well in tests held by joint apprenticeship committees.

The tutoring concept, now called Apprenticeship Outreach, was created and conducted by the Workers' Defense League (WDL) in New York City three years ago with considerable success. WDL currently operates Apprenticeship Outreach programs in six communities.

Other agencies conducting Apprenticeship Outreach programs include:

-- The Urban League, the largest contractor, with LEAP programs operating in 19 cities.

-- The building and construction trades councils, AFL-CIO, with 11 independent programs. The councils also assist with advice and guidance in all outreach programs.

Outreach Plan Spurs Negro Apprentices

Apprentice Outreach programs are given a big share of the credit for the doubling of the number of Negroes participating in apprenticeships in the past 18 months.

Sec. of Labor Willard Wirtz said an estimated 8,100 Negroes are currently in apprenticeship programs registered with the Labor Dept. or state apprenticeship agencies.

The outreach programs are currently being conducted in 44 industrial areas by manpower and social action agencies in conjunction with the AFL-CIO Building & Construction Trades Councils.

The number of Negroes entering apprenticeship has risen dramatically in the past two years, Wirtz said. About 1,800 were enrolled in 1966 and more than 2,630 in 1967. In the first six months of 1968 more than 1,400 were registered, he added.

The Workers Defense League, the Urban League's LEAP program and other minority organizations, working with the AFL-CIO councils, have placed more than 1,650 Negroes in apprenticeships, the Labor Dept. said.

5,600 HARD-CORE JOBLESS TO GET CIVIL SERVICE JOBS AT DEFENSE FACILITIES

WASHINGTON -- More than 5,600 hard-core jobless youths and adults will be placed in training for Federal Civil Service jobs at Defense Department facilities in 41 metropolitan areas, Secretary of Labor Willard Wirtz has announced.

The Departments of Labor and Defense have worked out an agreement to use the Concentrated Employment Program (CEP) structure in those cities that have CEP. Persons already interviewed and gauged for their abilities by the CEP's will be recruited for the new job opportunities.

They will be given work experience through the type of program the Neighborhood Youth Corps has been operating and then given permanent Civil Service status without written tests.

Initial work experience will be provided trainees in office and production occupations, mostly clerical and helper categories. At least half of the jobs are expected to lead to careers in the fields of drafting, printing, data processing and some of the skilled trades in shipyards and airbases.

Wages will be paid by the Labor Department during the work experience and training phases. It is estimated that trainees will be ready for permanent jobs at the Defense facilities in nine months or less.

(MORE)

Recruiting will begin in January 1969, through the local State employment service offices and will continue over a period of several months as civilian jobs at the facilities open up. The program is called Project Value.

The wage structure for the trainees will conform to Neighborhood Youth Corps regional scales and will progress upward for six months. NYC out-of-school pay rates range from $1.40 to $1.60 an hour.

To guard against the kind of failure the hard-core jobless have experienced with written tests, they will be permitted to qualify under the Worker-Trainees Supplement to the Maintenance and Service Worker Examination. This new rule, adopted in June 1968, by the Civil Service Commission, allows an applicant to qualify on the basis of:

1. Reliability and dependability.
2. Dexterity and safety.
3. Ability to handle weights and loads.
4. Ability to follow directions.
5. Likelihood to succeed in the job assignments.

Project Value has a single objective: to provide permanent employment with opportunity for career progression in the regular work force for disadvantaged men and women 16 or older who have been previously considered unemployable.

(MORE)

Each trainee will be given a two-week orientation which will include counseling, testing, grooming, and job information. A remedial education course will be developed to run concurrently with on-the-job training for an average of 5½ months, according to the trainee's need.

The Project Value agreement avoids a return to the school atmosphere that has proven to be unsuccessful with these trainees.

When they meet full employment standards, they go on the Department of Defense payroll with a GS rating for white collar jobs or a Wage Board rating for blue collar. Minimum wages under the Wage Board vary from trade to trade and city to city, but for a GS employee the present minimum is $3,889.

The trainees will also be provided with transportation and medical services, when necessary.

The agreement also provides that:

"Although a trainee may not meet minimum standards of performance of the job for which he is being trained, as long as he... is trying to be a responsible worker he will be continued in the program and be considered for reassignment to another occupational area....

"By the end of the nine months, all trainees should be placed in permanent jobs with the host activity.... He may be given

(MORE)

permanent employment at any stage of the training program.... The program will be successful only if trainees completing the program are placed in permanent employment."

The 41 areas and the number of trainees to be employed in each are:

OPERATING ENGINEERS TO TRAIN
800 JOBLESS AND UNDEREMPLOYED

WASHINGTON -- Nearly 800 jobless or disadvantaged underemployed youth will be trained as operating engineers under a U.S. Department of Labor contract just announced by Secretary of Labor Willard Wirtz.

The International Union of Operating Engineers, AFL-CIO, signed a $2-million contract authorizing a coupled (on-the-job and classroom) training program under the Manpower Development and Training Act (MDTA) in eight States.

Training will take place in the District of Columbia, 50 trainees; Alabama, 100; Arizona, 100; California, 118; Connecticut, 100; Indiana, 100; Ohio, 100; Pennsylvania, 100, and Wisconsin, 100.

The two-year contract will provide 26 weeks of on-the-job training for 98 preapprentice operating engineers and 20 preapprentice water treatment engineers. Six weeks of on-the-job training has been slated for 555 apprentice-entry operating engineers, 70 heavy-duty mechanics, and 40 technical engineers (surveyors).

The trainees will receive classroom instruction related to their respective occupations.

The Labor Department has allocated more than $2 million in MDTA funds in the program: $583,556 for on-the-job training costs; $772,107 for supplement classroom instruction, and $662,180 for training allowances.

Manpower – Training

Factory manager and psychologist watch illiterate workers test skills on experimental "work samples."

'Graduate' at left checks production in factory area, as ghetto work

LABOR

Tests that sharpen work skills

'Work samples' method devised to guide European refugees in 1930s now serves hardest-core unemployed

Techniques invented to test and develop the work abilities of European refugees—and later of physically and mentally handicapped patients—are being applied successfully to the hardest-core unemployed: workers who cannot read English at the sixth-grade level. The experimental method bypasses the whole issue of functional illiteracy—indeed, of language as a measure of work ability. It uses a series of industrial tasks to evaluate—and strengthen—the worker's ability to hold down a productive job, often for the first time in his life.

For 10 months, the Philadelphia Jewish Employment & Vocational Service has been applying its "work samples" test method to functionally illiterate ghetto residents. The experiment has proved so productive that the Labor Dept.—which financed it—has expanded the project to nine additional cities and one rural area. JEVS officials are currently teaching work samples techniques to employment counselors from hard-core areas of Boston, Buffalo, Pittsburgh, Detroit, Milwaukee, St. Louis, San Francisco, Phoenix, Washington, D. C. and the Mississippi Delta.

Since the 1960 U. S. census found 11-million out of 126-million adults to be either entirely or functionally illiterate, the importance of the technique is obvious.

Battery of tests. Basically, the JEVS method consists of a battery of 28 skill tests given in an industrial setting, coupled with psychological and guidance counseling. Originally it was developed in the 1930s to analyze the skills of European Jewish refugees who could not speak or write English well enough to take conventional, language-oriented tests. Since then, it has been refined to evaluate the capabilities of—and to some extent motivate—the physically and mentally handicapped.

Emphasis is on the realism of the industrial setting, which includes a factory that subcontracts assembly and packaging work from the government and private industry. Recently, for instance, it fulfilled subcontracted assembly jobs for the Burpee Seed Co. and for Black & Decker, a tool manufacturer.

"We're not testing them on toys," says Bernard Orr, JEVS director of the $142,000 Labor Dept. project. "Everything here has a direct relationship to industrial tasks—including the time clocks."

The Labor Dept. decided to expand the project because 34% of the 270 ghetto volunteers who had combined two-week testing in JEVS work samples with job counseling by the Pennsylvania State Employment Service were still employed three months afterward. At first glance an unimpressive statistic, the 34% compared well with the 19% of the control group who were still on the job after receiving only the job counseling.

Higher hurdles. The JEVS system is designed to place increasing d

worker (center) tackles a simple task, and girl (right) puzzles out a more complex operation.

mands on the worker as he proceeds through the various work samples—from the simple counting of nuts and bolts and clerical and sorting tasks to soldering and the disassembly and reassembly of a complicated door lock mechanism. The tasks are performed under time-clock pressures, and the testing area is ringed by counselors who grade the worker at each step.

The door lock test, for instance, provides an opportunity to grade the worker on ability to perceive spatial relationships, hand coordination, finger dexterity, and frustration level.

Other tasks may require the worker to sort pieces of colored tile—to spot color-blindness—or to weigh packages on a post office-type scale—to determine both his accuracy and arithmetical skills.

An important task requires him to thread a hundred nuts halfway up the shafts of a hundred bolts. The result measures his ability to continue to follow instructions carefully through a long, repetitious, boring job.

After two weeks, the worker receives grades on his adjustment to industrial routine, punctuality, skill potentials, working relations with associates, and reaction to supervision. The State Employment Service uses these grades to match him to a job or pass him on to further training.

Job hunters. Indeed, the State Employment Service reports that many graduates of JEVS work samples testing and employment service counseling don't wait for the service to find them jobs; they go out and find them on their own.

The service lists other benefits:

- Work samples graduates get a broader selection of job and training offers, with more opportunities for advancement, than the average employment service counseling graduate.
- Some employers accept the work samples test results as a substitute for a high school diploma or job history.

The JEVS and the State Employment Service naturally are eager to encourage this trend.

"We're getting excellent feedback from employers who hired workers on the strength of the work samples program instead of putting them through the usual paper and pencil tests," says an employment service official. "Now we're hoping that word of mouth will begin to operate and other employers will become willing to hire on a work samples basis. "What we really need is a widespread commitment from important companies in the business world to use this method."

For ghetto trainees with emotional problems, the JEVS factory frequently provides the moment of truth: a strong dose of real-life working conditions, with production line pressures, foremen breathing down their necks, and pay computed on a piecework basis. The factory's five

Worker is timed and graded on down-to-earth test of changing a tire.

Supervisors get tougher as tasks do. Lorenzo Fauntleroy is the toughest.

areas—like the work samples tests—become more complex as the worker moves from one to another.

Tougher bosses. Supervision, too, becomes harder to take as the worker progresses. The foreman in No. 1 area is Frank Calciano, a genial and outgoing type. No. 5 area foreman is Lorenzo Fauntleroy, a 6-ft.-3-in. former Army warrant officer who practices a gruffer and less direct style of supervision. The slackening of supervision is designed to instill self-confidence; its increasingly abrasive nature tests the worker's ability to stand the gaff. A trainee who can't take it may be recommended for sheltered shop work.

Since the factory operates under psychologists' supervision, conflicts occasionally arise between the foremen—concerned about profits—and the psychologists—concerned about their clients.

Once, when production was down, the plant took on a subcontract that obviously distressed many of the trainees. Despite the loss of income, factory director David Yusem threw it out. "In the final analysis," he says, "we're here to help our clients' future progress."

Psychologists on the job. As a result, JEVS psychologists spend much of their working day on the factory floor.

Since most of the JEVS workers have a history of welfare dependency, motivating them to work is a major task—sometimes unsuccessful. Many hard-core unemployed simply see no logic in giving up a steady—albeit low—income for the vagaries of a job they're pretty well convinced won't be much.

"After all," points out Yusem, "there's greater stability in welfare than in a marginal job."

Aid to dropouts. In addition to the pilot project with functional illiterates, JEVS has participated in a project with potential high school dropouts that offers perhaps even more hope.

Under a three-year Labor Dept. grant that ended last June, the Philadelphia school system sent the agency some 300 high school students who had been judged ready to drop out and join the ranks of the unemployed—and perhaps permanently unemployable. JEVS applied the same work samples and factory experience techniques to this group.

"It was highly worthwhile," says a school official who's hoping the Labor Dept. will finance the project again. "It made many students aware of the possibilities. They discovered they could do a job. We believe it kept a lot of them from quitting."

Labor briefs

Rubber workers covered by supplementary unemployment benefit plans divided $5-million in yearend bonuses under United Rubber Workers contracts. URW's plans provide for an annual division of employer payments in excess of what is needed for maximum funding of reserves. The spillover, which varied from company to company, ranged from $35.07 each for 19,921 workers in the Uniroyal chain to $72 for 20,203 Goodyear workers and $83 for 3,386 employed by Armstrong Rubber. Some smaller groups got up to $100 each in pre-Christmas checks.

Long-term stability in the U. S. shipbuilding industry is an objective of the International Union of Marine & Shipbuilding Workers. IUMSWA and the Quincy (Mass.) Div. of General Dynamics have just signed a contract expiring Mar. 16, 1974. It provides for $1.07 an hour in economic benefits. A union spokesman says that only shipbuilders "with such stability can expect to participate successfully in major shipbuilding programs in the future."

Vacation bonuses ranging from $30 to $120 over regular vacation pay and other fringe gains negotiated by the United Steelworkers in 1968 went into effect Jan. 1—but the industry's 400,000 workers aren't uniformly happy. The fringe package is an important plus for the workers, but there is no wage increase until Aug. 1.

Strike funds are growing. The United Auto Workers reports that its strike fund topped $70-million in November—UAW's biggest war chest ever—and that its "defense" income currently is $1.5-million a month above expenditures. The United Steelworkers' first strike fund, set up in early 1968, amassed $25-million in reserves in its first five months.

Legislatures meeting in 1969 and 1970 could mean "some difficult times" for unions, says AFL-CIO. The labor federation is concerned about the influence that 31 Republican governors will have when or if states take up labor legislation.

Sugar plantations in Hawaii face demands by the International Longshoremen's & Warehousemen's Union that could add $25-million to the industry's labor costs through Mar. 31, 1971. Among other things, ILWU wants a 50¢-an-hour pay hike for 10,500 workers on 23 plantations.

Manpower - Apprenticeship

OKLAHOMA BUILDING TRADES SURPASS MINORITY GOALS, START NEW EFFORT

WASHINGTON -- The AFL-CIO building trades council in Oklahoma City will prepare another 40 minority youths for skilled-craft apprenticeships under an agreement with the U.S. Department of Labor.

A one-year Apprenticeship Outreach contract for $48,625 has been approved with the Southwestern Oklahoma Building and Construction Trades Council.

In its previous contract completed last month, the Council nearly doubled its goal of 40 successful minority applicants and placements. It placed 70 in 10 building trades.

Construction trades placements includes 7 bricklayers, 6 carpenters, 14 cement masons, 2 electricians, an ironworker, an operating engineer, a painter, 5 pipe tradesmen, 28 roofers, and 5 sheetmetal workers.

To accomplish this, the council recruited and prepared 338 candidates in the southwestern counties of Oklahoma.

In addition to the 70 candidates hired as apprentices, another 10 have passed their examinations and are waiting for placement.

This brings to 2,024 the total number of minority apprentices hired through the national outreach program in the past 24 months.

The Apprenticeship Outreach program was first developed by the Workers' Defense League in New York City. It is designed to "reach out" to minority youngsters, motivate their interest in becoming skilled craftsmen, and help them pass apprenticeship tests.

The program is basically a recruitment and tutorial project which prepares minority candidates for specific apprenticeship examinations, principally in 18 building and construction trades. It entails 4 to 10 weeks of concentrated study in mechanical reasoning and spatial relations as well as test-taking techniques. Part of the preparation involves mock oral examinations with volunteers acting the role of interviewers.

Manpower - Apprenticeship

UAW JOINS GROWING LIST OF APPRENTICESHIP OUTREACH SPONSORS

WASHINGTON -- The United Automobile, Aerospace and Agricultural Implement Workers of America (UAW) has become the 10th major organization to sponsor an Apprenticeship Outreach Program, Secretary of Labor Willard Wirtz has announced.

The UAW will prepare at least 100 minority youths for apprenticeship entrance tests through tutor and cram courses in the Detroit area. The UAW will be assisted by $83,705 in Federal funds to complete the project.

This brings to almost 3,000 the number of minority youth sponsored for apprenticeships by civil rights, social action and labor groups in 51 cities in the past two years.

Of the 3,000 more than 2,000 have already been hired as apprentices, mostly in the building and construction trades.

The UAW is the first labor organization outside the building and construction trades to sponsor such a project.

Apprenticeship Outreach, a program supported by the U. S. Department of Labor, searches among minority youth for potential skilled craftsmen. Its sponsors guide young minority applicants into the skilled crafts by finding them, motivating them, and preparing them for specific examinations by providing person-to-person coaching and counseling to enable them to pass entrance tests.

The Outreach program is based upon a tutoring concept first developed by the Workers' Defense League in New York City. Four-to-ten-week "cram" courses were designed to help apprentice candidates prepare for specific

(MORE)

examinations in the building and construction trades, such as carpentry, sheet metal working, and plumbing. Mock oral tests, extensive coaching and private tutoring helped them score well in tests held by joint apprenticeship committees.

The UAW contract announced today indicates that the Apprenticeship Outreach Program is now beginning to enlist the active support of labor unions outside the building and construction trades.

BALTIMORE SUN JAN 16, 1969

Training The Unskilled For Well-Paying Jobs

By Ann L. Drees

DOZENS of unemployed men walk the streets of a northern ghetto day after day while a few blocks away jobs in an industrial plant go unfilled for lack of qualified applicants.

A Mexican-American family migrates from place to place in a truck, following the crops, while an electronics firm near their home in the Southwest searches for skilled workers.

In a southern community a frozen foods company needs trained technicians, but displaced farm workers living nearby have lost all hope of earning a decent living.

The key to matching men to well-paying jobs today is training.

Cooperating Agencies

In its efforts to aid the disadvantaged, the Economic Development Administration of the United States Department of Commerce seeks to attract industry into areas of high unemployment and create new jobs. But often, before new plants will hire the local unemployed, an extra step—training—is needed. For this reason, Commerce participates in the development of training programs.

In fiscal, 1968, more than 14,495 of the nation's hard-core unemployed and underemployed were trained for well-paying jobs in programs sponsored by Commerce and other cooperating agencies.

Establishment of skill centers, where trainees are taught things as basic as cleanliness, grooming and getting to work on time as well as vocational skills, has helped open up new opportunities for those whom President Johnson has called "the last in line."

Under the Manpower Development and Training Act, $22 million has been set aside annually since fiscal 1966 for training of the hard-core unemployed in various designated areas. Commerce cooperates with the Departments of Labor and Health, Education and Welfare to carry out this program.

When the Manpower Administration of the Department of Labor receives an application for a training project from an area designated by Commerce as qualified on the basis of high unemployment or low family income, a committee of representatives from Commerce, Labor and HEW reviews the project and recommends whether it should be approved. Once a project is approved, HEW enters into a contract with the training agency to finance the actual training, while the Department of Labor pays weekly allowances to the workers being trained. Sometimes, the training agency is an industrial firm, which assumes responsibility for paying the trainees.

New Start

In assessing the needs of a community and the assistance required in getting training programs underway, Commerce officials meet with city and state officials as well as private employers and community groups in target areas. For many Americans, the result has been a new start in life.

"I didn't believe it could happen to me." These are the words of a young Negro girl who rushed up to greet the field representative of the San Diego Skill Center in California, as he paid a follow-up visit to the data-processing company where she worked. She had gone to the Skill Center with a ninth-grade education and a police record. After a few basic courses she was hired by the data firm as an electronic assembly trainee starting at $1.60 an hour. She had gradually become a valued employee, gaining new self-respect as well as a raise in salary.

Spoke No English

The people at the San Diego Center also tell about the 45 Mexican-Americans who spoke no English. They were divided into three classes of 15 each and given 20 weeks of language training in industry-oriented English — words applying to tools, safety, etc. They were also taught how to fill out job application forms. At the end of the course, 39 were placed in jobs, 20 with an aircraft company which paid them $2.47 an hour to file the rough edges off metal. They now earn $3 an hour. They take great pride in their work and improved standard of living.

The San Diego center was started with a public works grant from Commerce to remodel and equip a vacant school building for the training program.

Skill Center

In Newark, N.J., another area with a severe hard-core unemployment problem, a Commerce-assisted skill center has also been successful. It opened in 1966 on the site of a former teachers' college. Today men and women of all ages — most from minority groups — take a variety of courses ranging from cooking and typing to drafting, tool grinding, shoe repairing, upholstering and landscape gardening.

The response to this project has been so enthusiastic Commerce recently approved a grant of $1,541,000 to help build and equip a new center in Newark with a 1,500 student capacity.

Meanwhile, the center is planning to experiment with a new program to prevent high school students from dropping out. They will be invited to spend a few hours of each school day at the center learning automobile and radio repair. The aim is to keep students in school by applying their personal interests to vocational training for the future.

Along with the Interfaith Interracial Council of the Clergy and various federal agencies, the Commerce Department also participates in a program aimed at enabling once-jobless workers in the Philadelphia area to learn construction skills while rehabilitating slum houses. At a starting salary of $1.75 an hour which goes up as skills increase, the trainees are learning to spread concrete and install plumbing and electrical wiring. In addition to giving these workers a new start in life, the project means a new home for low-income families who buy the finished product.

Lumber Business

Commerce's extensive planning for the economic development of low-income Indian reservations is also beginning to pay off in trained men for jobs such as those created by a new tribal lumber business on the Umatilla Indian Reservation in Oregon. Under the Manpower Training program, Indians on the reservation have been trained as heavy equipment and power saw operators, engineering helpers and for other jobs related to the new business, enabling them to work together toward a brighter economic future for themselves and their community.

Training is but part of Commerce's overall economic development mission, but helping disadvantaged Americans get off relief rolls onto the payrolls and tax rolls is an essential part.

AFL-CIO NEWS, WASHINGTON, D. C., JANUARY 11, 1969

Labor to Train 4,000 In 11 Appalachian States

The AFL-CIO Appalachian Council will train 4,000 jobless and underemployed workers in depressed urban and rural areas of the 11 states in the Appalachian region under a Labor Dept. contract.

Labor Sec. Willard Wirtz said the federal government will invest almost $4 million in two training programs being developed by the council.

States affected by the project are Alabama, Georgia, Kentucky, Maryland, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Virginia and West Virginia.

The AFL-CIO proposals for both projects are coupled programs, covering on-the-job and classroom training. A variety of employers will cooperate in the programs throughout the region.

The larger of the two programs will aid 3,000 people in nonrural sections with an investment of $2,648,500 in Manpower Development & Training Act funds.

The second proposal calls for training opportunities for 1,000 rural residents with an investment of $1,256,160 in MDTA funds.

The jobless or underemployed workers will be drawn from the Neighborhood Youth Corps, the Job Corps work experience programs and from the ranks of the disadvantaged unemployed. Trainees will receive wages and fringe benefits in accordance with existing bargaining agreements.

Acting as prime contractor, the Appalachian Council will negotiate subcontracts with private employers throughout the 11 states to hire and train workers.

The programs will be directed by Miles C. Stanley, chairman of the AFL-CIO Appalachian Council, and Richard L. Wilkes.

Manpower — Training

Minority Areas, Firms Begin New Jobs Plan

3-Man Team Trying to Make Industry, Communities More Relative to Each Other

BY JACK JONES
Times Staff Writer

"We're feeling our way because no one has ever done this before," says the head of a three-man team attempting to keep minority communities and those companies with hire-the-hard-core programs really tuned in on each other.

"We have to throw away the old industrial rule book," says Carl B. Kludt, one-time personnel development manager for Hughes Aerospace Group and now director of the Ford Foundation-backed Community Affairs Program of the American Society for Training and Development (ASTD).

Kludt is hoping to be heard by more of the nearly 400 local ASTD members and the nearly 7,000 nationally who are training and personnel men in industry.

Life has taken a turn for training and personnel people since private industry began finding itself up to its earlobes in programs —either with or without federal subsidies—to hire and train "unemployables" from poverty-stricken minority areas.

Status Changes

The training director, Kludt says, "used to be just the guy they called in to update the manuals. Now we're change agents."

The ASTD community affairs program is trying to do what Harold M. Jacobs, its associate director for industry, calls "making industry and the community more relative to each other."

This entails changing attitudes on both sides of the line—in the minority communities about the companies — and in the companies about the culture and behavior patterns of trainees from ghettos and barrios.

Ernest Preacely, one-time neighborhood adult participation project official and now Jacobs' counterpart (associate director for the community) in ASTD, the community program, has compiled with Kludt a list of "threatening spectres" to which the project presumably must respond.

Industry, Preacely points out, feels that it is "doing the right thing by the community" with its training programs, but is unaware that many in minority areas see companies as colonizers.

No Self-Determination

The present application of manpower training, Preacely and Kludt have concluded, "is pure colonization without self-determination for the community."

Defining that a little further, Kludt wrote:

"Blacks and browns are just becoming aware that their communities are being 'built up' to be controlled from a 'home base' outside their community.

"They are becoming aware that industry can 'turn it off' at any time. The franchise, subsidiaries and 'branch plants' are really vehicles of colonization, not black and brown self-determination."

In other words, says Kludt, "What happens when the top executive in the home office of some company decides they've had enough and shuts down the program?"

While minority-group people want "some control for self-determination reasons," industry might say:

"Hell, no. What's wrong with you people? We're trying to help with our money!" suggests the Kludt-Preacely projection for future approaches to the problem.

When Northrop Corp. was ready to launch its program training the hard-core in Venice for jobs at its Norair Division in Hawthorne, the ASTD community program group was involved in helping prepare plant supervisors for the shock.

This involved bringing the Sons of Watts, young men with street-gang backgrounds, into the plant to exchange ideas and attitudes with foremen and others.

"Both sides," says Jacobs, "got new respect for each other."

When North American Rockwell Corp. was setting up its NARTRANS Corp. subsidiary, hiring exclusively hard-core jobless from Watts and East Los Angeles, the Kludt group was called in to precondition the staff.

R. C. Robinson, NARTRANS vice president and general manager, credits the ASTD team with much of the company's success in turning its trainees into effective workers.

In Robinson's view, ASTD saved his company about six months because "the staff began talking to each other right away."

The ASTD project originally received Ford Foundation funds in early 1966 along with the Management Council and the Opportunities Industrialization Center to bring together industry resources with the OIC training operation in the black community.

For one reason or another, the OIC-Management Council-ASTD tieup visualized by the Ford Foundation was never really effective.

Last February ASTD got a second Ford Foundation grant ($147,600 for two years) "to provide technical and other services to manpower training programs serving the disadvantaged and to industrial training efforts."

This has involved calling on one company's training specialist to help another firm suddenly finding itself dealing with the hard-core or getting some firm's expert to devote time to the East Los Angeles Youth Training and Employment Project or similar antipoverty set-up.

In a way, says Jacobs, "we are simply talent brokers."

ASTD also is working closely with community groups in East Los Angeles, Watts and other areas to promote job clearing houses for the trading of job information and the luring of companies to "hire on the spot" sessions that sidestep formal procedures.

Just how effective ASTD can be in making industry innovative in its attack on the hard-core unemployment problem remains to be seen.

POVERTY
(continued)

from the present $30-million to $100-million. Under this program, the Government helps poor families pay their rent.

In addition to increasing present programs, Mr. Johnson called for creation of an Urban Developemnt Bank to help cities finance public facilities, such as parks and buildings.

The bank would issue [redacted]erally guaranteed bonds, on which the Federal Government would subsidize interest. Mr. Johnson said this would involve "little direct cost to the Federal Government."

The President called for a $458-million increase, to $3.5-billion, for the Government's array of manpower training programs administered largely by the Labor Department and the Office of Economic Opportunity.

Under the Administration's plans, he said, the poor will comprise more than 85 per cent of those to be trained. Included in this is the program sponsored by the National Alliance of Businessmen, which trains the hard-core unemployed.

For feeding the poor, President Johnson called for an increase of $291-million, to a total of $956-million for the fiscal year 1970 in food stamps and direct assistance.

Under the Johnson Administration plan, about $675-million of this would come, for the first time, from a special fund received by the Agriculture Department from customs duties.

In signing the budget today in the East Room of the White House, President Johnson said he considered it "progressive and responsible." His only reservation, he said, was that "it doesn't go as far as I want it to in the funding of many domestic programs."

Manpower – Training

Week of January 20, 1969

STAFF TRAINING PUSHED AS 47,000 ARE HELPED OFF WELFARE ROLLS

WASHINGTON -- The U.S. Department of Labor is training teams of employment specialists in most cities to ease welfare clients into job training or full-time jobs.

A special staff training program is being emphasized for personnel connected with Work Incentive (WIN) programs already under way in 34 States, the District of Columbia, Puerto Rico and Guam.

Eighteen week-long training sessions have been conducted across the country in the last three months by employment specialists from the Manpower Administration headquarters. More than 500 State employment service people from 48 States have been provided the special knowledge needed to handle the local WIN programs.

Enrollments are moving ahead rapidly. By the end of January 47,000 persons will have been enrolled.

The program will be launched within the next six months in the other 16 States, where changes in State laws must first be made, and in the Virgin Islands.

The Federal Government finances 80 percent of the cost of the WIN program and the States finance 20 percent.

Federal funds totaling $117.5 million were appropriated for the first fiscal year to conduct work and training projects, and to provide day-care facilities for children whose mothers are enrolled.

US Dept Labor News-Digest

(MORE)

As of the start of 1969, $74 million of the Federal funds have been approved for projects involving 80,000 participants, and State governments have put up an additional $15 million.

The funds appropriated by the Congress would provide for the enrollment of 100,000 persons by the end of June.

WIN enrollments will not exceed the 100,000 level until after June when the program, by then operating in all 50 States and the four territories, may be expanded as it begins it second year.

Purpose of the WIN program is to restore to economic independence the employable persons in families receiving "Aid to Families with Dependent Children" (AFDC). There are close to 1-1/2 million families whose members may be eligible for referral to the WIN program.

Program participants remain on welfare while they are enrolled and preparing for a job. The WIN staff does not recruit, but waits for referrals from the welfare agencies.

WIN is a new concept, and its launching has involved some innovations.

One is that the local offices will assign teams to work exclusively with persons on welfare rolls. These specially-trained five-man WIN teams, employed by the State and paid from Federal funds, will be assigned to the local employment service staffs in areas having a large number of welfare clients. Initially each team will have a maximum case load of 200.

Social and medical services, including child care, are supplied by the public welfare agencies which refer public assistance clients to WIN.

The local WIN teams, through the organizational facilities of the Federal-State employment service, supply counseling and testing, job orientation, basic education, training in communications and employability

(MORE)

skills, work experience, skill training either in classrooms or on the job, and special job development and placement services.

The WIN program was ordered by the Congress last year in amendments to the Social Security Act. Its administration was delegated to the Department of Labor, and is being conducted by the Department's Manpower Administration.

RESEARCH IN APPRENTICESHIP TRAINING:
PROCEEDINGS OF A CONFERENCE

Papers included in this volume were presented at the Conference on Research in Apprenticeship Training held in Madison, Wisconsin in September 1966. The conference was co-sponsored by The Office of Manpower Policy, Evaluation, and Research, U.S. Department of Labor, and the Center for Studies in Vocational and Technical Education, The University of Wisconsin.

The objectives of the conference were: to present the findings of scholarly research; to provide balanced participation--both in presentations and attendance--by bringing together representatives from universities, government, labor, and management; and to stimulate a dialogue among the various groups interested in apprenticeship training.

Apprenticeship training was discussed from the broad perspective of the labor market. Particularly important here was the identification of forces which have controlled the supply of and demand for apprentice-trained labor. Papers also dealt with more specific issues: problems of related instruction, the role of joint apprenticeship advisory committees, the use of pre-apprenticeship training, and minority groups in apprenticeship.

Contents of this Proceedings:

Apprenticeship in the United States: Labor Market Forces and Social Policy	David J. Farber
Discussion:	Jack Barbash A. Harvey Belitsky
Apprenticeship and the American Labor Movement	Vernon E. Jirikowic
The Pursuit of Excellence in Apprenticeship Training: Research Procedures, Instruments, and Challenges	Alfred S. Drew
Discussion:	Frank G. Musala
Related Instruction: Basic Problems and Issues	George Strauss
Discussion:	Morris A. Horowitz Don Vial
A Study of Registered Joint Apprenticeship Committees in Wisconsin Building Trades	Alan C. Filley Karl O. Magnusen
Discussion:	Charles F. Hanna Herbert A. Perry

A Perspective on Apprenticeship Today	Hugh Murphy
Increasing Apprenticeship Opportunities Through Pre-Employment Training	John S. McCauley
Discussion:	Paul V. Johnson
National and State Apprenticeship, 1960-1966: Up to Date or Out of Date?	F. F. Foltman
Discussion:	Leon S. Tunkel Sol Swerdloff
Negro Participation in Apprenticeship Programs	Ray Marshall
Discussion:	Don Irwin
The Negro, Apprentice Training Programs, and Testing	Irving Kovarsky
Discussion:	Ernest Green

Apprenticeship —
Preparatory Training

1. How many people are at a hearing if 16 are men and 5 are women?

2. If it takes a man two hours to put together a machine, how many machines can he put together in one week (5 days) working 6 hours per day?

3. A man puts in the following hours of work in one week:

Monday - 9 hours		
Tuesday - 6 hours	a)	How many hours did he work in one week?
Wednesday - 9 hours		
Thursday - 12 hours	b)	If he is supposed to work a 35 hour week, how many hours of overtime did he work?
Friday - 10 hours		

4. Going to work by car takes 1 hour 10 minutes. Because of delays the trip to work took 2 hours 5 minutes. How many more minutes did the trip take?

5. Jim gets 14 miles per gallon on his car. Bob uses up 15 gallons in travelling 225 miles. Whose car is more economical?

6. A truck cost $8496 and a man makes monthly payments of $708. How many months will it take him to pay off the car?

7. The cost of an article increased 4 times over a period of 2 years. If the article then cost $2.07, what is the present cost of the article?

8. The number of inches in 4 yards is ... ?

9. If 2 feet of wire is to be cut from a roll 6 yards long, how many inches will be left?

10. It takes 12 minutes to complete a trip by Lotus around Monza. How many trips can the car complete in 2 1/2 Hours?

11. Two rings are to be placed one inside the other. One ring has a diameter of 6.8 and the other has a diameter of 3.7486. What is the difference in diameter?

12. A room measures 16 feet by 24 feet. How many square feet of tile will be be needed to cover the floor?

13. If 6 inch strips can be cut from a length of rope 8 3/4 feet long, how many strips can be cut?

PERSONALITY CHARACTERISTICS IMPORTANT IN APPRENTICESHIP

1. Willingness to ask questions and learn.

2. A degree of caution because of hazards involved, yet not scared.

3. Ability to work with others because of the teamwork involved on the job.

4. Will not be deterred by weather conditions.

5. Willingness to do jobs that are not flattering such as running errands.

6. Give friendly attitude, not antagonistic.

7. Wear shirt, tie, and jacket.

ABILITY TO COMMUNICATE

1. Explain yourself clearly on the job.

2. Ask questions precisely.

WILLINGNESS TO ACCEPT OBLIGATION OF APPRENTICESHIP

1. Attend all classes during apprenticeship.

2. Follow union obligations, pay dues, attend meetings, etc.

3. Willingness to adjust to economic comditions of craft - lay-offs, etc.

4. Willingness to travel anywhere to work.

5. Not deterred by time factor involved in training program. Will stick with program for full term of apprenticeship.

INTEREST AND MOTIVATION

1. Interesting work: chance to get a union card, along with the benefits offered. Chance to be a member of a union that is noted for looking afters its members. Chance to participate in the organization by becoming a full journeyman.

2. Offers security and an opportunity to provide material goods for the family, an opportunity that has never been offered before.

4. Sense of responsibility in an occupation that has its hazards.

5. From own observation - always interested.

REMARKS:

Interviewed by _____

1. How many pens are in a box if 15 are blue and 8 are red?

2. If a contractor can build 7 houses in a week, how many can he build in 2 months?

3. If John puts in 13 hours of overtime when his normal work week is 42 hours, how many hours did he work in a week?

4. If it takes 55 mins. to fly to Washington and 3 hrs and 5min. by monorail, how much longer does it take to travel by monorail?

5. A shop had 15 employers one year and 7 times as many people the next year. How many people are now employed?

6. A V. W gives 23 miles on a gallon of gas, how many miles can he travel on 15 gallons?

7. A girl spent 1/3 of her allowance on candy. If her allowance is 50¢, how much did she spend on candy?

8. To pay for an article costing $4440 what will be the monthly payments if you pay for it in one year.

9. If 4 inches are cut off from a piece of rope 4 ft. long, how many inches will be left?

10. If you can type one page in 12 minutes, how many pages can you type in 2 1/2 hours.

11. The diameter of 2 circles is 2.7 and 1.988 inches respectively. What is the difference in their diameter?

12. A man bought a house for $4,281 and sold it at a loss of $385.65. What was the selling price?

13. A piece of cloth 3 3/4 feet wide was divided into strips 3 inches wide. H ow many strips can you cut off?

14. If a highway 1290 miles long has 40 percent unpaved, how many miles are unpaved?

15. If you answer 21 out of 35 questions correctly on a test, what percent did you get correct?

16. Find the area of a floor 23 ft. by 17 ft.

17. $3.60 is to be divided among 3 people. The first receives 1/4 of the total amount, the second 1/3 of the total amount. How much did the 3rd individual receive?

18. A house is assesed at two-thirds of its value. The house is valued at $6,000. If the tax is $2.75 per $100 assessessed valuation, what is his bill?

Mathematical Reasoning

1. Find the number of people in a room if 6 are men and 8 are women.

2. How many trucks ca a man build in 6 months if he can build 8 in one month?

3. John worked a 35 hour week. How many hours did he work if he worked 15 hours overtime?

4. It takes 35 minutes to get to work by subway and 1 hr. 10 min. by car. How much longer does it take by car?

5. Because business improved this summer a contractor will hire 3 times as many electricians as he did last summer. How many men will he hire this summer if he hired 15 last summer?

6. A car uses 15 miles per gallon. How far can it travel on 13 gallons?

7. If you sleep 1/3 of your life away, how many years have you slept if you are 22 years old.

8. A man bought a car for $4812. How much will each monthly payment be if he wants to pay it off in a year?

9. If you cut an 8 inch piece of rope from a piece 3 yards long, how many inches will be left?

10. If each person is allowed to speak 12 minutes, how many people can speak in a 2 1/2 hour discussion?

11. Find the difference between 2.876 and 2.6.

12. John bought a house for $3716 and sold it at a loss of $310.85. What did he sell it for?

13. How many square feet of grass is needed to cover a lawn 72 ft. by 15 ft?

14. Find 40% of 1200.

15. If on a test a pupil answered 34 of 40 questions correctly, what % did he get correct?

16. An office is divided into three sections, A.B, and C. In section A there are 8 typists and each can cut 12 stencils in one day, Insection B there are 12 typists and each can cut 7 stencils per day and in section C there are 9 typists each of whom can cut 11 stencils per day. How many stencils can the office cut in one week?

Instructions

On the inside pages there are two tests. One of the tests consists of pairs of names and the other of pairs of numbers. If the two names or the two numbers of a pair are *exactly the same* make a check mark (√) on the line between them; if they are *different,* make no mark on that line. When the examiner says "Stop!" draw a line under the last pair at which you have looked.

SAMPLE

Select one of the drawings of objects (A,B,C,D) That could be made from the flat piece drawn at the left. if this flat piece were folded on the dotted lines shown in the drawing.

Drawing "B" is the correct answer. A good way to get the correct answer quickly is to build the object mentally as it is shown below ↓

Do the following questions. Write answers on the answer sheet only.

STATEMENT OF POLICY

ON

EQUAL EMPLOYMENT OPPORTUNITY

ADOPTED BY THE

55TH CONVENTION

OF THE

BUILDING AND CONSTRUCTION TRADES DEPARTMENT (AFL-CIO)

SEPTEMBER 22, 1969

AT

ATLANTIC CITY, NEW JERSEY

Statement of Policy of the Building and Construction Trades Department (AFL-CIO) on Equal Employment Opportunity

In these times of heated and emotional controversy over the issue of Negro employment in the building and construction industry, which is carried on under the barely concealed threat of violence, The Building and Construction Trades Department deems it appropriate to present a factual review of the union side of the controversy. Fair minded people in and out of the labor movement will want to hear both sides before forming any judgments.

The Building and Construction Trades Department and its affiliates have not contented themselves with so-called passive non-discrimination programs. Whether or not legally required, the Department and its affiliates have undertaken affirmative action to increase Negro employment in the building and construction trades. At its 1967 Convention, the Building and Construction Trades Department adopted a resolution stating that it "endorses generally the principle of affirmative action to assist Negroes and other minority group persons in finding suitable employment and improving their economic and social status." In a later communication from the President of the Department to the Secretary of Labor, the Department proposed to implement the resolution, among other things, by fostering "with the cooperation of appropriate management organizations programs of recruitment of qualified applicants for apprenticeship from the Negro population and other minority groups."

The Kerner Commission (The National Advisory Commission on Civil Disorders) commended the Department for its action in this regard and recommended that this commitment be intensified and implemented (at page 25).

We believe this recommendation has been heeded. The Apprenticeship Outreach Programs

recorded a six month high of 1,537 minority youths accepted as apprentices in the skilled trades from January 1 to June 30, 1969. The total number accepted as apprentices through Outreach since the commencement of the Federally funded program in 1967 is 3,862. Ninety-three percent of the total number were indentured in the building and construction trades although these trades represent 56% of the total registered apprentices in all industries. To get 3,862 apprentices indentured, Apprenticeship Outreach sponsors recruited 27,494 interested candidates.

Citing the six-month achievement, Secretary of Labor Shultz said: "This is but one example of what can be done in attacking a manpower problem, if we study the problem together, devise a workable plan to resolve it, *establish attainable goals*, and stick to timetables."

Apprenticeship Outreach Programs operate with the cooperation or direct sponsorship of local Building and Construction Trades Councils in more than fifty cities. Among these cities are: Atlanta, Dallas, Knoxville, Miami, San Antonio, Jacksonville, Nashville and Tampa. As of April 1969, Federal funds budgeted for the Outreach Programs amounted to $3,885,287.

To gain an understanding of the Apprenticeship Outreach Programs, it is necessary to turn back to 1963 when it was thought that removal of the race bar and the provision of equal competitive conditions would result in a significant increase in Negro and other minority participation in the apprenticeable trades. The Regulations of the Department of Labor on non-discrimination in apprenticeship and training provided, among other things, for the proper dissemination of full information about the availability of apprenticeship opportunities, the posting of such information at the normal place of application for apprenticeship, and dissemination of such information to the local employment service and the local schools. It was found, however, that minority group youngsters were not applying for existing apprenticeship programs for a variety of reasons, including the fact that high school counselors seldom advised youngsters to enter what was generally considered a blue collar field. Apprenticeship Information Centers (now operating in thirty-five cities) were established to provide all available information on apprenticeship opportunities in

the community in which the particular Center operates and give all necessary support and assistance to young people who wish to become apprentices in the skilled trades. Although the Department of Labor claims that nearly 1,600 minority applicants were indentured during the fiscal year ending June 30, 1969, through the Apprenticeship Information Centers, it appears that many of these persons were also processed through the Apprenticeship Outreach Programs.

Apparently, the provision of information and other assistance through Apprenticeship Information Centers was not sufficient. More intensive effort was required by paid personnel to recruit, train and place minority youth. The pilot Outreach programs in this regard were established by the Workers Defense League—A. Philip Randolph Education Fund in cooperation with the building and construction trades. Most of the WDL apprenticeship candidates came from academic high schools. WDL staff found early that the vocational high schools produced youngsters less able to compete in this job market. They also recognized the need for intensive tutoring before the examination. The tutoring concentrates on mathematics and reading comprehension. Tutorial programs frequently require six to twelve weeks. WDL staff members frequently provide transportation from home to union hall for the applicants checking on why they may have missed a tutoring class and counseling them on personal problems. Practice interviews are held and when birth certificates, high school diplomas, and health records are needed, WDL staff help applicants to secure them. It is apparent that these and other services provided by substantial Federal funds and the cooperative efforts of the Building and Construction Trades Councils together with the Urban League, the Workers Defense League and other organizations constitute affirmative action to satisfy a significant social need.

Some idea of the overall improvement of the racial situation with respect to apprentices is provided by comparing the statistics of 1960 and 1968. The 1960 census statistics show that non-whites made up 2.5% of the total 85,682 apprentices in the United States. In the first half of 1968 of the 26,156 apprentices newly enrolled, approximately 9.4% came from minority groups.

The following statistics show that the construction industry compares favorably with

manufacturing industry insofar as ethnic ratios are concerned:

Apprentices in Federally Serviced Workload as of December 31, 1968

	No. Active	% Minority	% Negro
Construction Industry	91,177	7.2	4.0
Metal Mfg. Industry	39,686	4.3	3.0
Mfg. Non-Metal	10,747	5.3	3.2

The building and construction trades have not limited their efforts to apprenticeship. They have developed plans and procedures for bringing into the industry older minority workers. In July 1968, after an unsuccessful effort to secure an agreement with employer trade associations for the employment of area residents under the Model Cities Program, the General Presidents of the seventeen National and International Unions affiliated with the Building and Construction Trades Department adopted their own policy statement and guidelines on this subject. The General Presidents' program covered three groups: (a) those fully qualified to be laborers or mechanics; (b) those with appreciable construction work experience but not qualified to be mechanics or laborers; and (c) those with little or no construction work experience.

It was recommended that "the agreement provide for additional instruction and basic education for such residents of the area who may benefit from such instruction under Government or industry financed programs. These programs, for a period of time, may result in the work week for such employees being divided between on-site work and specified classroom instruction."

Four experimental programs for the upgrading of journeymen have been initiated in Oakland, California; Buffalo, New York; Boston, Massachusetts; and St. Louis, Missouri. The goals of these programs in the four cities involve the training of 365 minority workers. The Federal budget for the four programs totals $968,-634. Negotiations are under way for other programs in twelve of the fifty-two cities involved in the Outreach programs. These programs present many complex problems and are obviously in a trial and error stage.

The record of effort and concrete results, including the allocation and expenditure of millions of Federal dollars, does not justify the attempt to cast the building and construction trades unions in the roles of scapegoat or whipping boy for all the current ills on the racial scene. The detractors of the building and construction trades unions—the sneerers and the scoffers—use a statistical device to accomplish their end. They elbow aside substantial overall ratios of Negro employment in the building and construction trades by saying, "Oh, that's the laborers." They elbow aside substantial ratios of Negro employment in highly paid occupations in the building and construction trades by saying, "Oh, that's the trowel trades." They confine public attention to trades such as the mechanical trades where lesser ratios of Negro participation may be attributable to higher educational requirements and other cultural factors not related to employment discrimination. They then seek to use these lesser ratios of Negro participation in particular trades as proof that the industry is "lily white."

Even Government officers have fallen for this tactic. The Assistant Secretary of Labor in charge of the Office of Federal Contract Compliance issued the Philadelphia Revised Plan, establishing a quota system, without consultation or hearing on the basis of a figure of 1.6% minority group membership in seven so-called "critical trades." The Plan was ruled illegal by the Comptroller General of the United States on August 5, 1969. It became the subject of a hearing on August 27, 1969, for the purpose of determining so-called rate ranges. At this hearing representatives of the Building and Construction Trades Council of Philadelphia testified that more than 30% of the members employed on unionized jobs within its jurisdiction are black. It was also testified that the following high paying trades had locals with substantial Negro membership: Boilermakers—20%, Carpenters—20%, Cement Masons—37%, Lathers—20%, Operating Engineers—10%, Painters—10%, and Reinforced Rod Setters—30%.

Even with the deduction of the laborers (who received hourly wages and fringe benefits ranging from $4.25 to $4.65 per hour or from $170 to $186 for a 40-hour workweek) from the calculation, the ratio of black participation among the remaining crafts was 12%. It may be noted that even the accuracy of the figure with respect to the "critical trades" was vigorously disputed by

the Philadelphia Building and Construction Trades Council.

It is interesting to observe the effect of the application of this technique of selecting arithmetic ratios in particular occupational brackets in other industries. At hearings before the United States Equal Employment Opportunity Commission in New York City, January 1968, the executives of a prominent and highly regarded newspaper testified they had three Negro reporters out of a total of 200; and one Negro out of 220 officials and managers. When asked for an explanation about the lack of equitable representation of Negroes among its reporters, the newspaper executive testified as follows:

> "I do not think there is—at the journeymen level, there is not a large number of people to come in and start off as staff members who have the qualifications in large numbers to start therein."

When advised that the Commission was not talking about "very large numbers," the executive testified "we're not very happy with two." These hearings disclosed that the situation described is not confined to this New York newspaper. A National Associated Press survey of 300 daily newspapers, October 24, 1967, revealed that 119 Negro reporters and no Negro editors were employed by those newspapers. The 1967 EEOC research report on communications industry in New York City shows the following:

	% Negro officials and managers	% Negro professionals
Radio-TV	0.9	1.9
Periodical publishing	0.7	1.0
Newspaper publishing	less than 0.1	1.2

The same unwarranted accusation which has been made against the building and construction trades is now being leveled against the United States Government in a major lawsuit against every member of the Cabinet which has been filed by Julius Hobson (who initiated the important landmark school case resulting in the Skelly Wright decision). It is alleged that, although the Negro ratio of Federal employees is 14% on an overall basis (roughly equivalent to the 14% ratio of blacks in the population), the ratio of black employees in Grades 13 and above is only 1.5%. On the basis of this allegation and other recitals in the complaint, the plaintiffs are

asking the Federal court in the District of Columbia to direct the defendants to adopt necessary procedures to achieve "equitable" representation in *every unit* of the Federal departments or agencies containing fifty or more persons in regard to composition by race. The departments or agencies will be allowed to vary from this standard in those areas in which the department or agency can demonstrate that the population percentage of plaintiff's classes is lower than the national average. The "equitable" representation requirement applies to all classification grade and step increase levels.

The statistical pattern of concentration of Negro employment in lower grade jobs and the declining ratio of such participation in higher grade positions is typical of many industries other than communications and Government.

The Building and Construction Trades Department is of the considered view that the failure of the communications industry and the Government to maintain an objective attitude is inflammatory and prejudicial to the sound and proper solution of the racial issue in the building and construction industry and other segments of American life. We support the right of the Negro to justice. But we cannot accept the simplistic idea that the arithmetic of a population ratio shall become the standard for selection and entry into employment in the building and construction industry.

We favor the acceleration and extension of the Apprenticeship Outreach Programs which have proved successful in actual operation.

We make the flat and unqualified recommendation to local unions throughout the United States that for a stated period of time they should invite the application of qualified minority journeymen for membership in their respective local unions and should accept all such qualified minority journeymen provided they meet the ordinary and equally administered requirements for membership.

We also recommend that the local unions and the local council explore and vigorously pursue training programs for the upgrading of minority workers who are not of apprenticeable age. Such programs should be developed in such manner as to prevent undercutting the established apprenticeship programs. The recommendations which have been previously made on Model Cities should furnish an appropriate guideline for

development of these journeymen training programs.

In carrying forward these programs to make effective the rights of Negroes and other minority workers, it must also be recognized that there is a correlative right in the existing members of the organized work force regardless of their color or race. Many of them have fought during their working lives to preserve and advance their unions against the attack of strong anti-labor forces. They have organized in the teeth of the anti-labor provisions of the Taft-Hartley and Landrum-Griffin Acts. They have endured strikes and the picket line to preserve their wage standards. They have played a large part in creating the favorable labor standards of the present time and deserve to have their status in the industry protected and not to lose their rightful share of employment opportunities.

We are convinced that the goal of increasing Negro and other minority worker participation in the building and construction trades can be accomplished with due regard to the rights of the existing organized work force. We think such an approach is preferable to unthinking actions which tend to pit one part of the population against the other.

We also wish to make it clear that we do not favor acceptance of unreasonable demands. The mere assertion of a proposal by a minority group does not necessarily mean that it is in the interest of the black worker, other workers, or the industry.

For example, a militant group involved in a current dispute with the building and construction trades in Pittsburgh has proposed that "There shall be forty percent (40%) black membership in each of the several craft unions to be gained over the next two years" and "No training program in pursuit of [this objective] will exceed eight (8) months in length, irrespective of the craft."

The extravagance of the percentage is self evident. It should also be obvious that a stroke of the pen will not transform the learning process so as to graduate a qualified, skilled craftsman in 8 months when the existing system of apprenticeship has required 4 years. This proposal and others like it compare with the current efforts to establish special curriculums for minority college students. There have been strong expressions from responsible sources that such

educational proposals cheat the black student because they will fit him for a "sheltered work shop occupation" rather than competition in the open market. It has been our approach through the Apprenticeship Outreach Program and the experimental development of journeymen training programs to raise less qualified applicants to meet industry standards rather than to lower the standards to meet the lack of qualifications. We do not believe that it is in the interest of the nation, the industry, or the black worker to take "the easy way."

We shall also continue to oppose unsound or unlawful Government measures. The Building and Construction Trades Department objected vigorously to the original "Philadelphia Plan" which was abandoned by the Government after the Comptroller General of the United States ruled it illegal. The Department takes equally strong objection to the "Philadelphia Revised Plan" which is a quota system no matter how it may be dressed up in legal verbiage. We are unalterably opposed to the quota system. The Comptroller General, who certainly cannot be accused of partiality to the Building and Construction Trades unions, has ruled that the "Philadelphia Revised Plan" is also illegal. His basic position is that the "Philadelphia Revised Plan" violates the provisions of the Civil Rights Act of 1964 which provide that nothing in the law shall be authorized to grant preferential treatment to any group because of racial imbalance. He has also stated that: . . . "we believe there is a material difference between the situation in those cases, where enforcement of the rights of the minority individuals to vote or to have unsegregated educational or housing facilities does not deprive any member of a majority group of his rights, and the situation in the employment field, where the hiring of a minority worker, as one of a group whose number is limited by the employer's needs, in preference to one of the majority group precludes the employment of the latter. In other words, in those cases there is present no element of reverse discrimination, but only the correction of the illegal denial of minority rights, leaving the majority in the full exercise and employment of their corresponding rights."

It would have been better, in our judgment, if the hearing on the "Philadelphia Revised Plan" had been held before, rather than after,

the Plan was adopted. We trust that the deliberative and consultative procedures of the Government in similar matters will not be abandoned because of activist pressures or the desire for hasty or untimely action.

SEGREGATED HOUSING REPORTEDLY CREATES
SUBURBAN LABOR SHORTAGES

WASHINGTON -- Severe artificial labor shortages are being created in America's all-white suburbs by housing patterns that confine blacks and other minorities to decaying inner cities, according to the National Committee on Discrimination in Housing, a nonprofit corporation concerned with housing and civil rights.

Suburban housing must be opened to low and moderate income families to bring the jobs and the jobless together, according to an article in the September 1970 MANPOWER magazine.

These minorities want and need the new jobs being created in the suburbs, but cannot overcome the transportation problems involved in getting to them daily, according to the Committee's research director, Ernest Erber. His conclusions, in an article entitled "Jobs Go Where the Poor Can't" are based on a year-long study of housing and employment patterns in New York City and seven surrounding suburban counties.

Unless exclusionary zoning practices of suburban communities are discarded to make low-priced housing available, suburban growth will be arrested by labor shortages, the cities stand in danger of becoming wards of the State, and "angry ghetto dwellers may be provoked to disorders," Erber says.

Another article in the magazine points out that by April 30, 1970 the Work Incentive Program (WIN) had placed 27,000 people in jobs and moved more than 10,000 off welfare. Entitled "WIN Report -- Problems, Progress, Prognosis," the article traces the manpower program's successes and setbacks from the time funding began in mid-July, 1968.

"As of April 1970, about 153,000 persons had been enrolled," according to the article. "More than 72,000 were still being trained. . .and more than 53,000 had dropped out. WIN placed about 26,000 people of the 27,000 at work in regular jobs, primarily in private industry. The rest were in special work projects."

Other articles in Manpower's September issue:

-- "Mine Mechanics Dig Their Prospects," a report on how more than 200 unemployed and underemployed men in Pennsylvania have been retrained as mine maintenance mechanics.

-- "A Dropout Fights Back," a feature on a Mexican American mother of 12 children who worked her way up from a motel maid to a licensed psychiatric technician.

-- "Improving Job Services For the Handicapped," a report on a study that maintains that "the effects of poverty -- and not their physical or mental disabilities -- are the greatest obstacles for many handicapped persons in their search for work."

(MORE)

-- "Technological Change - How Fares the Worker?", which reports on a research study that shows that automation has been beneficial to most workers affected by it.

-- "Building Better Bridges," the story of how skilled craftsmen, the Labor Department and the University of Missouri Dental School are cooperating to train poor people as dental laboratory technicians.

JAZZ PIANIST 'FATHA' HINES TO CUT RECORD
URGING YOUTH TO STAY IN SCHOOL

WASHINGTON -- Earl "Fatha" Hines, who has thrilled audiences throughout the world since the 20's with his jazz piano, is doing his part to encourage young people to get a good education.

He will be asking young people to stay in school on a recording that he is doing for the Stay-in-School Campaign conducted by the Department of Labor in conjunction with the President's Council on Youth Opportunity.

"Young people are the leaders of tomorrow," Mr. Hines said. "Certainly, education is the only step they can take to put them in a position to be able to handle the problems of the future."

Mr. Hines,whose own schooling included study of classical piano, has won many honors as one of the world's foremost jazz pianists. He traveled to Russia in 1967 with his band to do a musical tour for the State Department.

The famous musician visted the Department of Labor recently while performing in the Nation's Capital and met with Secretary of Labor J.D. Hodgson.

"I have followed your music for years," Secretary Hodgson said, extending a warm welcome to Mr. Hines, who agreed to pitch in and help cut the Nation's school dropout rate.

The goal of the Stay-in-School campaign is to encourage young people to remain in school and get all the education they can.

"Fatha" Hines joins a long list of popular performers who have done recordings for the Stay-in-School Program. They include James Brown, Tony Bennett, Pearl Bailey, Greg Morris, Roger Williams, Dionne Warwick, Johnny Mathis, O.C. Smith and Tom Jones.

FOR RELEASE: Sunday Editions, November 22, 1970, or thereafter

SOUTHEASTERN BUILDING TRADES WAGE SCALES ADVANCE IN THIRD QUARTER OF 1970 TO $5.09 AN HOUR

Union hourly wage scales for building trades workers in the Southeast 1/ averaged $5.09 an hour on October 1, 1970, according to Brunswick A. Bagdon, Southeastern Regional Director of the U.S. Department of Labor's Bureau of Labor Statistics. Nationally, these trades averaged $6.27 an hour.

The all-trades average in the Southeast rose by 14.5 cents during the third quarter of 1970--an increase of 2.9 percent. Among individual trades, increases in the Southeast ranged from 8.0 cents for carpenters to 38.8 cents for plumbers and averaged 8.3 cents for building laborers, 10.4 cents for painters, 15.1 cents for plasterers, 23.7 cents for electricians, and 24.1 cents for bricklayers.

The level of hourly wage scales in the region on October 1, 1970 was 50.5 cents above the previous year, an increase of 11.0 percent. The year-to-year advance varied from 39.0 cents for building laborers to 83.1 cents for plumbers.

Among the six journeymen crafts, plumbers had the highest average scale as of October 1, 1970--$6.50 an hour. The basic scale for plumbers varied from $5.25 an hour in Columbia, South Carolina and Charlotte and Raleigh, North Carolina to $7.40 in Jacksonville, Florida. For the other journeymen trades, regional average hourly scales were painters $4.98, plasterers $5.20, carpenters $5.30, bricklayers $5.66, and electricians $6.15.

1/ Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

Building laborers' scales averaged $3.32 an hour, ranging from $2.20 in Montgomery, Alabama to $5.30 in Miami, Florida.

Changes in union scales over the quarter and year and the rate levels on October 1, 1970 are shown below. In computing the changes in rates, the increases in each trade were averaged among all workers in the trade, whether or not they received raises. Data for the separate crafts, by city, are shown in the accompanying table.

Trade	Change in Average to October 1, 1970 from --				Average Rate	
	July 1, 1970		October 1, 1969		October 1, 1970	
	Percent	Cents	Percent	Cents	Average	Range
Bricklayers.....	4.4	24.1	7.6	39.9	$ 5.66	$4.65 - 6.89
Carpenters.....	1.5	8.0	9.8	47.2	5.30	4.05 - 6.70
Electricians.....	4.0	23.7	12.6	68.6	6.15	4.75 - 8.08
Painters.....	2.1	10.4	9.9	44.9	4.98	4.00 - 6.40
Plasterers.....	3.0	15.1	9.6	45.5	5.20	4.25 - 6.85

Data not comparable with Southeastern averages published prior to July 1, 1969 due to a change in regional definition.

Union scales are the minimum wage rates (excluding holiday and vacation payments made directly to the worker each pay period) agreed upon through collective bargaining and reported to the Bureau by local respondents. The scales do not reflect rates for apprentices or for premium work. Overtime beyond established maximum daily and weekly hours is excluded.

A Slow Start

The Philadelphia Plan To Integrate Unions Called Failure by Some

Hiring Goals Still Not Met; Blacks Shifted Among Jobs To Fool U.S. Inspectors

M-Bld Trades

But Backers See Potential

12/3/70

By ELLIOT CARLSON
Staff Reporter of THE WALL STREET JOURNAL

PHILADELPHIA—One of the few blacks to make it in the building trades, Clarence W. doesn't much care where he works.

So when he was recently yanked off one job and placed on another, it was okay with him. But the switch mattered a great deal to his boss. Indeed, it helped the Philadelphia builder comply with the controversial Philadelphia Plan, the Nixon Administration's prototype effort to increase minority employment in the skilled building trades.

Critics, mainly in the civil rights movement, charge such tactics are subverting the plan, which requires builders to seek given numbers of minority craftsmen for Federally aided jobs. In many cases, say the critics, builders comply by following the example of Clarence's boss. They allegedly take Negroes already at work on privately financed projects—which aren't covered by the Philadelphia Plan—and transfer them to Federal ones—which are.

Also, some builders are said to move blacks from one Federally aided project to another by motorcyle to fool Federal inspectors. "Sure, contractors are complying," says Carleton Smith, a community organizer for the Philadelphia Urban League. "But it's mostly a form of 'motorcycle compliance.'" Mr. Smith charges that contractors are actually recruiting or training few new blacks.

Boding Ill for Nixon Plan

This is just one reason the Philadelphia Plan isn't working now—and perhaps won't for some time. There are other reasons: The plan got off to a slow start this year after being mired in litigation; it continues to face resistance from craft unions and builders; and Government officials have been accused of laxity in both enforcing the plan and setting up what were to be special training programs.

The plan hasn't met its early hiring goals, and even some Administration officials are unhappy with its progress. "The parties involved haven't been putting out a 100% effort to make it work," says Arthur Fletcher, Assistant Secretary of Labor.

The Philadelphia Plan's woes bode ill for the Administration's drive to integrate building-trades unions nationally. Originally, the plan was conceived as a device that could be imposed in other cities where contractors and unions couldn't voluntarily agree on integration plans. But with the Philadelphia Plan floundering, critics say, its value as a threat is fast receding and progress thus has slowed elsewhere. Of 102 target areas cited by the Labor Department, only 13 have fashioned voluntary plans.

Mixed Results Elsewhere

Even in these 13 areas, the results have been mixed. Pittsburgh and St. Louis integration plans have been plagued by numerous delays. In Chicago, whose plan called for the immediate entry of 1,000 blacks into craft unions, only 75 were admitted after eight months, the U.S. Civil Rights Commission recently reported.

Worried that cities may use the voluntary approach to stall, the Labor Department's Mr. Fletcher insists that extension of the compulsory Philadelphia Plan to other cities hasn't been ruled out. Although admitting this isn't contemplated any time soon, he argues the plan may yet prove to be the most effective means of integrating the building trades.

The plan was imposed on Philadelphia-area contractors after hearings disclosed that blacks constituted only 1.6% of the membership of six high-paying crafts here. Under the plan, contractors are required to make "good faith" efforts to hire specified percentages of Negroes for Federally financed projects costing $500,000 or more.

From a work force calculated to be 30% black, builders must pledge to try to hire in the six trades work crews at least 4% black this year, 9% next year, 14% the following year and 19% thereafter. The plan empowers the Government to withdraw contracts from companies that flagrantly defy its requirements.

"Figures Have Little Meaning"

Smarting from criticisms that the plan isn't working, Federal agencies have issued orders against 31 Philadelphia-area contractors and subcontractors asking them to "show cause" why their contracts shouldn't be voided. Ten later complied with the plan's requirements, and 20 still have time to do so. But one, Edgely Air Products Inc. of Levittown, Pa., is accused of failing to comply. Edgely has denied any wrongdoing and is contesting the Government's proposed action in court. The case is pending.

The Labor Department asserts such pressure tactics are paying off. In September, the department reported that of 180 persons actually at work in five crafts on 25 Federally aided projects in the Philadelphia area, at least 41, or 23%, were minority group members—an amount well above the required 4%. (The sixth craft was omitted because it hasn't yet been employed on a project covered by the plan.)

Yet critics remain unimpressed. "These figures have little meaning," charges Howard Mitchell, director of the Human Resources Center at the University of Pennsylvania. "They certainly don't mean the labor pool builders draw on has been increased by 41 blacks." He adds: "There's no telling how many of them were already in the work force."

For one thing, he says, the number of craft workers now employed is so small that it's easy for builders to comply by shuffling around the few blacks already on jobs. Just how easy is suggested by the tactics of Clarence W.'s boss, a mechanical contractor. When he received a Federal contract to install pipes in a downtown building, he put four of his regulars on the job. One was Clarence, who had been working on another site. Result: The builder was 25% in compliance.

At another construction site, one black

A Slow Start: The Philadelphia Plan To Integrate Unions Called Failure

Continued From First Page

turned up among four electricians. Again, the black, a young apprentice, hadn't been recruited for this job from outside union ranks. He was placed on the Federally aided project after working a few months on a privately financed church.

It's clear the Philadelphia Plan is nowhere near meeting its original hiring goals. In 1969 the Labor Department predicted the plan would help nearly 500 blacks gain craft-union membership after two years and 2,000 after four years. Yet checks at locals of five of the six affected crafts turn up black membership figures little higher than those disclosed in 1969, when unions testified to having about 100 black members.

A case in point is Iron Workers Local 401; only seven of its 905 members are black, and none has been signed on as a result of the Philadelphia Plan, says Michael Trobich, the local's business agent. He disputes the Government's theory that contractors, in order to meet the hiring goals, would tap a labor pool of about 1,200 experienced blacks who, for one reason or another, had never acquired union membership.

"There just aren't enough blacks around interested in this kind of work," Mr. Trobich says. "The contractors have referred us a few, but they don't turn out to be steady workers. They last a few days and then leave."

Nonetheless, builders employing iron workers have legally satisfied their hiring requirements. In its September survey, the most recent available, the Labor Department reported that of 70 iron workers employed on Federally aided projects here, 21, or 30%, were black—well above the required 4%. Critics concede the figures indicate that contractors are, at least to some extent, seeking workers outside the established work force.

"Motorcycle Compliance"

Even if the Government figures are accurate, critics nonetheless assert that high proportions of black workers have often been the product of "motorcycle compliance." "The builders knew in advance that inspectors were coming", claims Mrs. Joyce Rush, a consultant who was paid by the Government to interpret the Philadelphia Plan to the black community. "So you can draw your own conclusions on how they handled the matter."

Adds the Urban League's Mr. Smith, who has been making independent checks at construction sites: "Whenever the firms know I'm coming, there always seem to be more blacks at work than when I drop in by surprise."

The Labor Department concedes that compliance efforts haven't always been foolproof. Last summer, Assistant Secretary Fletcher assailed Congress for not giving the department more money to beef up its Office of Federal Contract Compliance.

At the same time, Mr. Fletcher charged that the compliance officers of many Government agencies, such as the Departments of Defense, Interior and Health, Education and Welfare, weren't tough enough in enforcing job integration requirements on Federal contractors. "It's no secret they have not been working at it," Mr. Fletcher said.

A Failure? "Not Yet"

Despite such troubles, the Labor Department argues it's premature to call the Philadelphia Plan a failure. Since there are already so few blacks in the labor force, "there's a limit how far builders can go practicing (motorcycle compliance)," reasons John Wilks, director of the OFCC. He figures that next year, when the black hiring goals will roughly double, builders will have to try harder to find new sources of black manpower.

But this, according to critics, won't necessarily help black workers obtain journeyman positions inside unions, which favor their own in distributing work assignments. The trouble with the Philadelphia Plan, they say, is that while it spurs builders to hire Negroes for specific jobs, it does little to get them union membership. As a result, "many jobs generated for blacks may well be temporary," since nonunion members are the last to be chosen for construction work, explains Donald Laiman, director of the AFL-CIO's department of civil rights.

For blacks to get journeymen's cards, unions prefer to have them work their way up; that usually means spending three to five years in an apprenticeship program, passing a Federally approved journeyman's test and plunking down a lump sum that may range from $1,000 to $2,000. To get applicants started on this road, union officials favor reliance on the AFL-CIO-sponsored Outreach program, which readies promising minority youths for entrance into apprenticeship training.

But the Labor Department's Mr. Fletcher complains such training programs aren't enough, since, nationally, they have a substantial dropout rate. "Reliance on the Outreach program is a way to keep blacks out of the crafts," he charges. He advocates special Federal programs to upgrade the skills of blacks already possessing some construction experience and thus enable them to avoid the lengthy apprenticeship programs.

So far, however, no Government program has been started. One high Administration official blames the Labor Department's manpower administration; he contends it has failed to move because it is reluctant to go against the wishes of big labor.

"Representatives of Philadelphia's blacks have made 18 visits to Washington seeking funds for a training program," says the official. "Yet their proposals are always found somehow faulty."

Asserting such proposals have indeed been full of holes, a spokesman for the manpower administration retorts it is pointless to launch training efforts that unions don't actively support. But without such a program, integration advocates believe there's little chance the black labor pool in Philadelphia can be enlarged.

Labor Department officials concede the Philadelphia Plan is weakened by another shortcoming: It fails to require contractors to integrate jobs financed privately. For this reason, Labor Secretary James Hodgson prefers voluntary plans for integrating both private and Federal construction projects.

Also, the Labor Department is pushing its Washington Plan, which is the only compulsory job integration effort besides the Philadelphia Plan. Unlike the Philadelphia Plan, it covers private as well as Federal work. If it works, say officials, builders would find it futile to switch blacks from private site to Federal site as in Philadelphia.

A few contractors defend such tactics on the ground that the Philadelphia Plan is unfair, since it applies only to their hiring and not to union membership practices. "It's not our fault the unions refuse to train more blacks," grumbles a mechanical contractor here.

To block the plan, the Contractors Association of Eastern Pennsylvania this year sued in Federal District Court here charging that the plan violates the 1964 Civil Rights Act, which, among other things, prohibits racial quotas in hiring. The court, however, upheld the Labor Department, which contends the plan's goals constitute "ranges," not "quotas." An appeal is pending.

THE WALL STREET JOURNAL, Thursday, December 3, 1970

would be "longer than that."

Minority Hiring Plan In the Building Trades Widened in Philadelphia

Change to Cover Private Work of Federal Contractors in Area, As in Similar Washington Plan

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON — The Labor Department said the Philadelphia Plan, the Nixon administration's effort to increase minority employment in the skilled building trades, has been expanded to cover the private work of federal contractors in the Philadelphia area.

The change, which becomes effective next Monday, represents a significant broadening of the controversial program. Imposed on Philadelphia-area contractors late in 1969, the plan originally required builders only to seek given numbers of minority craftsmen for federally aided jobs.

But under the new plan, a contractor with federal contracts will be required to commit himself to make the same "good faith" effort while working on private contracts, Arthur A. Fletcher, Assistant Secretary of Labor, told a news conference in Philadelphia Friday.

Covers Five Counties

The plan covers six higher-paying construction trades in five Philadelphia-area counties.

Discussing the extension, Mr. Fletcher said: "It is a much-needed part of the Philadelphia Plan. It will result in a more equitable role for minority workers throughout the Philadelphia area." He noted that the Washington Plan, the only other plan to be imposed on any community besides the Philadelphia Plan, also requires builders to meet minority employment goals on both federal and private projects.

In the past, the Philadelphia Plan has been attacked by critics in the civil rights movement for covering only federally aided work. According to critics, this limitation enables contractors to switch black workmen from private sites to federal sites and thus come into compliance with the plan. Some observers believe the government's expansion of the Philadelphia Plan should make such practices difficult, if not impossible.

No Change of Emphasis

Mr. Fletcher cautioned that the Philadelphia Plan's extension didn't mean the Labor Department was reducing its emphasis on the "home-town-solution" approach to increase minority employment in the building trades. Under this approach, members of the minority community, unions and contractors voluntarily negotiate the entry of more blacks into the skilled trades.

"This remains the very best method of assuring equal employment opportunity for minority craftsmen," Mr. Fletcher said, adding that 20 "home-town" plans are in effect.

In a related development, the Labor Department said that it has awarded two one-year contracts totaling $648,000 to the Philadelphia Urban Coalition, a nonprofit community action group, to recruit, train and place 180 minority trainees in five construction trades.

Transmitted by:	PETER FLAWN [redacted] ~~Executive Director~~ Office of Sponsored Projects The University of Texas Austin, Texas 78712 Area Code 512, 471-5338
Date:	December 21, 1970

1. Can we get atlanta BT cooperation?
2. How?
3. Would national unions help?
4.

PROBLEM

Nonapprentice Entry to Selected Construction Trades

The supply of skilled manpower is important for social as well as economic reasons. Considerable controversy surrounds efforts by Negroes and other minorities to enter this industry. Moreover, public officials and economists have criticized unions for restricting entry into the skilled trades, thereby creating labor shortages which are alleged to exert considerable inflationary pressure as public policies attempt to reduce unemployment while maintaining stable prices and free institutions. In spite of this controversy, however, surprisingly little is known about the nonapprentice processes whereby workers acquire journeyman status, although it is clear from the studies of Foster[1] and others that a majority of workers in the construction industry have attained journeyman status without serving apprenticeships.

In view of the importance of this question and the limited information about it, it is imperative that comprehensive research be done to analyze the routes through which workers gain access to construction jobs. Such research would illuminate the effects of many institutional forces acting on the supply of labor (and therefore on racial equality, wages, labor costs, and prices) in this vital industry. We propose to make a study of the various processes which unions use to (1) admit members to their organization and (2) confer journeyman status upon them. Also considered will be the standards or criteria used to judge workers for journeyman status and the procedures by which workers outside a local's jurisdiction are permitted to work in that jurisdiction.

---

[1]See Howard G. Foster, "Nonapprentice Sources of Training in Construction," Monthly Labor Review, Vol. 23 (February, 1970), pp. 21-26.

We have noticed in particular that in the various negotiated plans for promoting minority group entry into construction (the Chicago Plan, the Pittsburgh Plan, the Denver Plan, the New Orleans Plan, etc.), the process and the standards agreed upon show considerable variation by craft and by place. Since minority groups are underrepresented in union apprenticeship programs and since there is a considerable time lag between entry into apprenticeship and the attainment of journeyman status in most crafts, the nonapprenticeship routes to journeyman status take on an added significance as means through which minorities can gain more rapid access to employment in the construction industry.

We therefore propose to study the process and standards for a selected cross section of crafts in the building trades -- sheet metal workers, plumbers and pipefitters, electricians, iron workers, bricklayers, and carpenters -- in the following cities:

(1) Chicago

(2) Pittsburgh

(3) New York City

(4) San Francisco-Oakland or Los Angeles

(5) Houston

(6) Atlanta

(7) A smaller city in the South -- e.g., Jackson, Mississippi; Little Rock, Arkansas; or Charlotte, North Carolina

Specifically, we plan to raise such questions as the following:

(1) How do the standards and selection committees of the union operate? What is their composition, and how are the members of the committees selected?

(2) How formalized are the arrangements for entrance into unions? Do the standards for admission change over time and in response to changing conditions within the labor market? How have these standards evolved historically, and when were the present standards adopted?

(3) When a test is required for journeyman certification, what type of test is given? Who designs it? Who grades it? How is it graded? What exceptions to testing requirements are made, and for what reasons? Is the same test required of apprentices who want to qualify for journeyman status? Have the tests been validated with respect to job performance?

(4) What are the concerns of union leaders and union members with regard to the standards and qualifications issue? With regard to the union entry and journeyman certification process?

(5) What role do the international unions play in determining the process and journeyman standards?

(6) How common is the practice of allowing nonunion members, or union members from other jurisdictions, to work on permit? What are the functions and implications of this arrangement?

(7) What classifications of journeyman certification exist, and what is the degree of transferability among these types of certifications? What sort of work is available to workers in each classification?

This study will build on the other studies we have made on the construction industry, particularly those of the Negro and apprenticeship and our study of black contractors.

OBJECTIVES

The objectives of the study are:

(1) to examine the process by which nonapprentice workmen become journeymen and the standards used to judge them to be qualified as journeymen;

(2) to describe, step by step, the process by which workers gain entry into building trades unions and achieve journeyman status;

(3) to describe variations in this process and these standards by city, craft, and union;

(4) to explain the reasons for the variation; and

(5) to offer suggestions which will help to establish a process in which the legitimate interests of all parties -- unions, the public, minorities, and employers -- are considered.

RESEARCH PROCEDURES

The study will encompass two phases. In Phase I (January 1, 1971, to September 30, 1971), we plan to carry out a pilot study in two cities -- one in the South and one in the North (probably Atlanta and Chicago) -- to determine the feasibility of the overall project and to perfect our research procedures for use in the five remaining cities. Phase II (September 30, 1971, to September 30, 1972) will be devoted to the study of the five cities outside the pilot project and to the preparation of the final report.

In gathering our information, we intend to conduct interviews with employers, union leaders, union members, civil rights leaders, educators, and other knowledgeable persons. In each city, we plan to interview the presidents and business agents of local unions to obtain information regarding the form of the admission and certification process, their concerns regarding this process, a history of the procedures currently in use, and the role of the international in determining the procedures. We intend to talk with the members of the selection or admissions committee in each union to obtain data concerning the operations and administrative practices of the committee. We also intend to interview scientifically selected samples of journeymen and workers on permits for each craft in each city in order to learn how they gained admission to the union and became journeymen.

In addition, we intend to talk with administrators of private vocational schools and public vocational education programs in order to learn what experiences their graduates have had with unions. We plan to interview civil rights leaders to learn what the experiences of minority applicants have been in encounters with unions.

Finally, we propose to talk with members of local building trades councils, local contractors' associations, and other knowledgeable individuals to reveal such matters as the shared concerns of persons in the industry regarding the admission process and changes in the process occasioned by market fluctuations. We plan to obtain as much information as possible from existing sources and to coordinate with others studying construction manpower, particularly Professors John Dunlop and Quinn Mills, who are examining the effects of cyclical variations on employment and employment practices in construction.

In all phases of the study, the research director will play a major role, particularly in the initial phases of the project in which he will make the contacts with the leaders of the international unions and other concerned parties whose cooperation is indispensable if the study is to be a success. As the study progresses, he will continually oversee the interviewing processes and sampling techniques to be used and will coordinate the efforts of all of the research participants in order to provide the continuity and exchange of information necessary to the smooth operation of the project.

BUDGET FOR PHASE I

(January 1, 1971 -- September 30, 1971)

Personnel

Research Director (one month -- summer, 1971; 1/10 time -- January-May)	$ 5,235
Research Assistant (one at $835 per month -- nine months)	7,515
Secretary (one at $500 per month -- nine months)	4,500
Social Security	885
Travel (University of Texas regulations regarding travel rates will be strictly adhered to)	5,000
Supplies and Telephone	1,500
Consultants and Interviews	2,000
Overhead (43.5 percent of direct wages and salaries)	7,402
TOTAL	$34,037

Salaries and Wages

Salaries paid from grant funds at The University of Texas at Austin conform to the rates approved by the Board of Regents for salaries paid from regular university funds.

Fringe Benefits

Federal Social Security (5.2 percent of first $7,800 of each salary)

Workmen's Compensation Insurance (.5 percent of applicable salaries)

Coverage, as may be required by University regulations, under the University's self-insuring plan. Under University accounting procedures, these items are direct costs.

MANPOWER RESEARCH MONOGRAPH NO. 20

Toward the Ideal Journeyman

M — Bld Trades

DEC 77 REC'D

Volume 1. AN OPTIMUM TRAINING SYSTEM IN APPRENTICEABLE OCCUPATIONS

U.S. DEPARTMENT OF LABOR Manpower Administration

January 25, 1971

Board of Alderman
City of Atlanta
City Hall
Atlanta, Georgia

Gentlemen:

This is regarding the atlanta coliseum, this Local Union recognizes the valuable asset to the city of Atlanta which will be realized by the construction of the coliseum as approved by the Board of Aldermen of the City of Atlatna and Commissioners of Fulton County. In order to bring about the expidious construction of the coliseum, this Local Union agrees as follows:

1. As called upon by the contractor or sub-contractors, three to five black apprentices or journeymen, when made available, will be referred for employment, provided only that a sufficient number of qualifiable black men are available and present themselves for entry into our apprenticeship program.

2. Qualified black applicants for entry into the apprenticeship program of this Local Union will be admitted without descrimination.

3. This Local Union will aid and cooperate to the fullest degree in connection with the above, but is understood that qualifiable men must be made available through the Atlanta Urban League for the Apprenticeship Program, and that the Local Union assumes no responsibility to find qualifiable men.

Yours very truly,

_____

Coliseum Wins In Racial Test

Pub-Aldermen, Sam

Black Aldermen's Job Demand Nearly Snags Project Here

By MAURICE FLIESS

Atl Journal 1-27-71

In a highly unexpected, three-act drama, played before a shocked audience of developers, contractors and public officials, Atlanta aldermen came within a whisper of shooting down the city's proposed $16,650,000 indoor arena.

Twice, an ordinance setting forth final approval of the coliseum contracts was defeated Tuesday by a hastily arranged coalition of five black and three white aldermen.

Two-thirds of those voting are required to place an ordinance on second and final reading, and the coalition left the Board of Aldermen split at 8-8.

Only after some hasty lobbying by a visibly shaken Mayor Sam Massell, his staff, officials of Cousins Properties, Inc., and other persons involved in the coliseum project did the five black aldermen agree to change their votes and thus allow the ordinance to pass by a vote of 13-3.

The black aldermen were angry because the prime contractor, the Ira H. Hardin Co., had guaranteed earlier that it would secure from five craft unions promises on union letterhead stationery that three to five qualified black apprentices from each union would be employed on the project.

THE BLACKS contended that this pledge had not been lived up to in full, that two of the unions' pledges had been made on ordinary stationery.

At this juncture Finance Committee Chairman Wade T.

Turn to Page 12A, Column 1

Coliseum Survives Racial Job Clash

Mitchell asked for and got a 10-minute recess.

An 11th-hour meeting was held in an adjacent committee room during which the black aldermen, knowing they held the balance of power, spelled out their demands in detail.

Alderman Marvin Arrington, who moments before had cast a highly unusual dissenting vote which prohibited the mayor from addressing the aldermanic board, accused the Hardin Co. and the Downtown Development Corp. (the Cousins subsidiary in charge of the arena project) of "pussyfooting" over the past two weeks.

An angry Arrington reminded the arena proponents that two weeks ago the black aldermen had set forth a list of demands which they said must be met before their final votes on the coliseum would be favorable.

AMONG THOSE demands was the one requiring the five unions to make their pledges to hire blacks on union letterhead stationery.

According to the developers, only in the tense moments leading up to Tuesday afternoon's showdown meeting were they able to bring two of the local unions into the fold—the Sheet Metal Workers Local 85 and the Glaziers Local 1940.

Because these were last-minute agreements, the developers explained, the pledges from these two unions were on plain bond paper.

Continued from Page 1-A

Alderman Ira Jackson charged that if the developers and contractor initially had taken the black demands seriously, they would have obtained these pledges in the proper form long before Tuesday.

Only after 20 minutes of fist pounding, shouting and bickering back and forth were the black aldermen appeased. They were assured that the pledges, although not on letterhead paper, had been properly witnessed, notarized and thus are legally binding.

THEY ALSO were told that identical pledges on letterhead stationery would be arranged for them Wednesday.

Thus, shortly before 6:30 p.m., the aldermen voted to reconsider their previous actions, and they subsequently approved the contracts in final form.

As they have throughout the history of the proposed arena, Aldermen Richard Freeman, Gregory Griggs and John Flanigen voted against it.

At the time of the final vote, black Alderman Joel Stokes rose and said that as a result of the unions' concessions, Tuesday will be remembered as a milestone for Atlanta in terms of minority employment.

The day started off auspiciously enough for proponents of the 16,500-seat arena to be located in the downtown sector on the Techwood viaduct.

BIDS on the revenue bonds to be issued by the Atlanta-Fulton County Recreation Authority were opened at noon. All four were under a 5.2 per cent interest rate, and the best bid of a fraction above 5.03 per cent was accepted.

Following that, the Fulton County Board of Commissioners voted 2-0 in favor of the final documents.

But, meanwhile, at City Hall, the black aldermen caucused and decided to block the arena at least temporarily until the developers and prime contractor showed genuine concern for the need for nondiscriminatory employment practices on the massive construction job that the arena would entail.

Word of this caucus leaked out, triggering an afternoon full of scurrying back and forth, involving the aldermen, officials of the Downtown Development Corp. and of the Hardin Co., and members of the mayor's staff.

AWARE of what the black aldermen might do, Finance Committee Chairman Mitchell delayed consideration of the coliseum as long as possible. But finally, about 5 p.m., he brought the matter up for the first time. The ensuing 8-8 vote sent reverberations through the corridors of City Hall.

After the 8-8 stalemate became a 13-3 vote in favor of the arena, Lloyd Whitaker, president of the Downtown Development Corp., announced that the ground-breaking could be held as soon as next week if Cousins Properties, Inc., decides to arrange interim financing until March, when money from the sale of the bonds will be available.

Black Aldermen Held Coliseum 'Life' In Hands

The Atlanta Inquirer
1/30/71

Atlanta's proposed new coliseum went over the hump toward reality this week, but only after all five black aldermen who, along with three white aldermen hitting other issues holding the balance of voting power, were assured blacks would be hired in all phases of development.

The black aldermen charged that five labor unions had not bound themselves to hire blacks and were peeved at pledges of fair hiring that were signed, but not on official stationery.

"Why do we have to insist on our rights all the time?" heatedly demanded sophomore alderman Marvin Arrington, the only alderman not given a committee chairmanship or vice-chairmanship by Mayor Sam Massell in his appointments earlier this month.

Arrington also voted at Tuesday's hearing on the coliseum not to permit Massell to speak before the full board. It was only the second time in ten years that an Atlanta mayor was refused the podium.

Two votes on the issue were taken and eight only eight votes could be mustered. During a ten-minute recess, aftr an earlier 30-minute recess request was denied, officials were summoned to City Hall to verify the signature on the black-hiring agreements.

Aldermen Richard Freeman, Gregory Griggs and John Flanigen voted nay with the black aldermen. The white aldermen voting nay are wary of pronouncements

See COLISEUM, Page 2

Coliseum

1/30/71

continued from page 1

that the coliseum "won't cost the city a dime" and cited possible moneys that must be spent to develop the Techwood Drive viaduct area where the coliseum is to be built.

Atlanta Inquirer

Following assurances in verified signed pledges that blacks would be hired in all phases of coliseum development and operation, black aldermen voted yes, pushing the issue to fruition. The three white aldermen still registered their nay votes.

The coliseum, to be built by Cousins Properties, will house the Atlanta Hawks basketball team and a yet-to-be acquire d hockey team.

Groundbreaking may begin in two weeks on the $17 million facility that will be equal in height to a 12-story building and primed as the best in the country.

It was reported that, if favorable action on the coliseum had not come Tuesday, the structure was "going down the drain."

Did our black aldermen act wisely ?

Atlanta Voice 2/6/71

Power is relative in every insurance, and its exercise needs experience to go along with talent and common, sense, a combination which our leaders just could not have as yet, having been excluded most of their lives from "chess playing" circles where hard education was meted out.

And the statement is made because we wonder, now that the white press has built up this black power flexing of muscles, if they haven't seen the same Achilles heel that we have observed, and are still outplaying, outmaneuvering the black man for the umpteenth time.

The big vote came, of course on the vote for a coliseum, and our five black aldermen showed something we can all be proud of, a togetherness in holding off their approval of the measure as a body, which is supposed to have frightened Mayor Massell and the boys in power down at City Hall.

They held off until they were assured that blacks would be hired in all phases of the construction, which is good as far as it goes.

It just doesn't go far enough.

White Atlanta has just about gotten use to upgrading blacks.. . .This is a battle that has almost been won. It wasn't as much a concession as it seemed at first.

If a deal was to be made, try these on for size:

1. Returning black representation to the Finance, Zoning and Legislation Committees.

2. Voting for the money-making project in return for a guarantee that Mr. Massell and the white aldermen would give up their plans to annex more "white areas" which will shift the balance of power away from us.

The aldermen need to check with their voters. There is a fear, and it is highly justified, throughout black residential areas, that exclusion from these important committees and the progress of the annexation measures will really mean another repression against blacks, once again taking away the power that we have obtained so hard, through, blood, sweat and tears.

We did not lash our black aldermen. They are young, but they've got to learn the chess game like the whites.

They could have forced a much bigger swap, and handed us on a platter, a guarantee that we would get our areas uncrowded; that we would suddenly get in on the planning for the future in which the money yet to be asked for is spent for whites and their comfort.

But if you don't go along with this consider that this new structure will become the perfect buffer zone, that willkeep blacks from advancing from a crowded Westside. . . Consider that the erection will cost the black taxpayer, without immediate benefit, with the city financing something for 30 years.

And if we have this thing right, there will be five craft unions involved, with about five blacks per union, giving us only 25 blacks hired in return fr our agreement.

Clearly we have given too much for too little, and the annexation plan still lives, which may one day each black alderman his chance for reelection.

'Black Aldermen Deserve City's Praise'-Vice-Mayor

The Atlanta Inquirer

Not Obstructionist, Sen. Johnson Says

2/6/71

By D. L. STANLEY

While Atlanta's black aldermen have been the object of recent criticism from some quarters, Vice-Mayor Maynard Jackson and Senator Leroy Johnson have both praised them for the way they handled themselves on the question of approving or rejecting a coliseum for the city, and Alderman Marvin Arrington has answered the criticism with "We're not trying to destroy the city!"

"On the coliseum question, the black aldermen 'took care of business,' " Jackson stated. "As a group, the black municipal officeholders exercised a higher degree of political sophistication and maturity in the legislative process than at any other time in the memory of our city.

"It is often said that nothing succeeds like success," the vice-mayor continued, "and the fact that those of us on the Board of Aldermen directly involved in these (coliseum) negotiations were able to deliver the goods is a testimony to the dedication and the intelligent representation these men(aldermen) are giving to all of Atlanta. The breakthrough in

VICE-MAYOR JACKSON

employment of blacks by major building and construction trade unions in positions of apprentices and qualified journeymen was spectacular and will benefit every Atlantan, black and white, union member and non-union member.

"We have now taken important steps," Jackson added, "toward settling a potentially disruptive issue."

The vice-Mayor also pointed out that the executive director and staff of the Atlanta Urban League "served Atlanta well by being of inestimable value to the black city officials in the development of the coliseum employment plan. They did a great job," he said.

"All in all," he said, "I would say that we had a banner day in behalf of all Atlantans and that we should not listen to the voices of negativism that have complained about us doing our job."

Senator Leroy Johnson, following the aldermanic decision to approve construction of the proposed coliseum, issued a statement in which he criticized "certain newspapers" which presented black alderman in a bad light.

"I find it necessary to speak out against the obvious attempts on the part of certain newspaper writers to reflect an image of irresponsibleness of black elected alderman," said Sen. Johnson.

See ALDERMEN, Page 12

Aldermen Deserve Atlanta's Praise

continued from page 1

Referring to a newspaper headline which stated "Coliseum Survives Racial Job Clash," Sen. Johnson said the headlines tend to suggest that the Black aldermen were obstructionist. "One job of a newspaper," he said, "is to create an atmosphere of fairness and justice in a society. This to my knowledge can better be done by positive headlines, reflecting the news.

"The truth of the matter," he continued, "is that the black aldermen acted in the best spirit of Democracy. They used the political process to bring about a desired social end--that of equal job opportunities for all people. The black aldermen were 'architects of progress' not obstructionists. Instead of headlines, such as 'Coliseum Wins in Racial Test,' it could have well have been "Justice and Fair Play Triumph over Mortar and Bricks.

"I endorse the action of the Black aldermen," said the Senator. "Their actions reflect their skills and astuteness which brought about job opportunities in areas formerly closed to black people (jobs in Electrical, Sheet Metal, Plumber and Glazier Unions).

"Thus black elected officials must now serve notice on Atlantans that in all future action where the future of this city is involved, black people intend to share in the decision making, the employment, the operation and all the benefits that flow therefrom.

The coliseum is good for this city," he said, "only if it serves from its inception to its completion all of the people."

A later newspaper story, which stated that the black aldermen "held up approval of the sports coliseum until they were satisfied their demands for commitments from unions on hiring blacks during construction would be met," said the five black aldermen "showed their white colleagues, Mayor Sam Massell, and the entire city what black power really is last week."

The article quoted Sen. Johnson as saying "the boys (black aldermen) really flexed their muscle over there yesterday, didn't they?" and suggested that as long as blacks stick together, they could hold the balance of power on most matters.

"The black aldermen obviously know this," the article stated, "and white Atlanta had better recognize it. For right or wrong, the power has shifted considerably and the blacks will be considered or things just won't be done."

LABOR SECRETARY ISSUES
NEW APPRENTICESHIP REGULATIONS

WASHINGTON -- Secretary of Labor J. D. Hodgson has proposed major changes in the Federal regulations affecting equal opportunity and nondiscrimination in the selection of apprentices in the skilled trades and crafts.

"The new regulation," the Secretary said, "constitute yet another step forward in our quest for equal employment opportunity through affirmative action. For the first time we are adopting specific measures in the U.S. apprenticeship system to ensure that minorities will be afforded full and equal opportunity in all registered apprenticeship programs."

Central to the proposed regulation is the "affirmative action" principle which, more than passive nondiscrimination, requires employers to take positive steps to ensure full utilization of minority group persons in their apprenticeship programs, including an aggressive outreach-recruitment effort by program sponsors. The affirmative action concept has proven its effectiveness in a wide range of Federal programs.

Under the new regulations program sponsors with deficiencies in the utilization of minority apprentices must adopt an approved selection method or establish appropriate percentage goals and timetables as part of their affirmative action program.

The Secretary said that "the new apprenticeship regulations represent the substance of action sought by President Nixon last March when he said 'there can be no social justice until there is economic justice' and directed the Labor Department to recommend ways and means for improving and expanding the apprenticeship system. The President said then that 'apprenticeship is one of the best systems for training craftsmen.'"

(MORE)

The Secretary added, "In recognition of the Nation's need for skilled craftsmen we have given emphasis to apprenticeship training and plan to promote its expansion in the years to come."

The apprenticeship regulations on equal employment opportunity were first issued December 13, 1963. The revisions were published January 29, 1970 in the Federal Register. Interested parties will have 30 days to submit written views to the Secretary. After considering these views the Secretary will make modifications, if appropriate, and will adopt the new regulations.

In announcing the revised Title 29, Code of Federal Regulations, Part 30, entitled, "Equal Employment Opportunity in Apprenticeship and Training," the Secretary said that "approximately seven years of experience have shown some significant equal opportunity progress in apprenticeship programs.

"However," he observed, "there continues to be underutilization of minorities in apprenticeship in some circumstances indicating the need for revision of the regulations so that the Nation can make further progress in minority employment.

"By revising and strengthening our existing regulations, we ensure a more uniform level of effort and a broader commitment to provide equal opportunity for all Americans."

The new regulations apply to all apprenticeship programs registered with the Manpower Administration's Bureau of Apprenticeship and Training (BAT) and with State apprenticeship agencies recognized by the Bureau. The affirmative action requirements apply to all programs having five or more apprentices. An estimated 10,000 apprenticeship programs registered

(MORE)

either by State apprenticeship agencies or by the Federal bureau will be subject to the affirmative action requirements. An estimated 75 percent of all registered apprentices are in training in programs covered by the affirmative action obligations.

Program sponsors will be guided by labor-area census data furnished by the Labor Department in determining minority deficiencies in their programs using a number of factors, including:

-- The number of minority persons in the apprenticeship program;

-- The minority population in an area;

-- The minority labor force in an area; and

-- The availability of minorities with a present or potential capacity for apprenticeship.

Goals, appropriate to the selection method used, would be those which would bring about full utilization in the program as might reasonably be expected through a vigorous, determined, good faith effort. Performance by program sponsors would be subject to periodic review by the Department to ensure progress in meeting goals.

Where a sponsor with deficiencies submits inadequate goals or no goals, the Department will set goals and timetables for the sponsor.

Program sponsors have the option of choosing one of four methods of selecting apprentices:

-- Selection on basis of validated rank order from a pool of eligible applicants;

-- Random selection from a pool of eligible applicants by an impartial person or persons not associated with the program;

-- Selection from a pool of current employees on a nondiscriminatory basis; or

-- Any selection method meeting Labor Department standards if accompanied by acceptable goals and timetables for the selection of minority apprentices where the sponsor has minority employment deficiencies.

Covered program sponsors registered directly with the Labor Department will be required to develop and adopt affirmative action programs including, if required, approved goals, timetables and selection methods, within nine months of the regulations' effective date.

The 32 State apprenticeship agencies recognized by the Department of Labor are given six months to adopt plans conforming to the new requirements after the effective date. Programs registered with them must be in compliance witin one year after the effective date.

While State agencies would have primary responsibility for bringing State-registered programs into compliance, the Labor Department will retain the authority, under the new regulations, to conduct compliance reviews and be empowered to withdraw recognition, if need be.

Programs which already are operating under acceptable equal employment opportunity plans approved under Executive Order 11246 or Title VII of the Civil Rights Act of 1964 will not be required bo submit affirmative action programs or selection methods under the regulations.

To ensure compliance, the Bureau of Apprenticeship and Training of the Labor Department will conduct regular audits consisting of analyses and evaluations of each program, including on-site investigations.

(MORE)

Continuing evidence of noncompliance will constitute a basis for deregistration proceedings of referral of the matter to the Attorney General for suit under Title VII of the Civil Rights Act of 1964.

M — Blk Trades — Outreach

WEEK OF FEBRUARY 22, 1971

11 AREAS GET U.S. CONTRACTS TO PREPARE MINORITY YOUTH FOR APPRENTICESHIP

WASHINGTON -- Apprenticeship Outreach projects have been approved for 11 areas in six States to prepare 910 minority youths for apprenticeship entrance examinations in the building and construction trades.

Manpower Administrator Paul J. Fasser, Jr., announced recently that the youths will be trained in Albuquerque, Chattanooga, Cincinnati, Dallas, Fort Worth, Houston, Oakland, Sacramento, Salt Lake City, San Francisco and Santa Ana.

The Department will invest $1,111,000 in the 11 renewed contracts, all of which run one year.

In the previous contracts, the 11 sponsors placed 1,574 apprentices in 18 building and construction trades.

The Outreach Program calls for up to 10 weeks of training, using "tutor and cram" techniques to help youths pass written and oral examinations given by joint apprenticeship committees representing management and labor.

Apprenticeship Outreach sponsors also counsel and assist the youth until their apprenticeships are completed.

Skilled craftsmen and other specialists develop materials and coach the prospective apprentices. A project director maintains liaison with employers, unions, joint apprenticeship committees, and the Labor Department.

Candidates are recruited through local State Employment Service offices, Apprenticeship Information Centers, and community agencies.

(MORE)

The newly approved contracts are:

-- The Albuquerque-based New Mexico Building and Construction Trades Council, to prepare 45 minority apprentices with $48,048 in Federal funds. In two previous contracts, the Council placed 88.

-- The Chattanooga Building and Construction Trades Council, to prepare 30 apprentices, with $51,927. Previously, with a goal of 30, it placed 34.

-- The Cincinnati-based Preparation Recruitment Employment Program, to prepare 50 apprentices, with $83,989. In two previous contracts, it placed 79.

-- The Dallas Building and Construction Trades Council, to prepare 60 youths, with $48,703. In two previous contracts, it placed 230.

-- The Fort Worth Building and Construction Trades Council, to prepare 50 apprentices, with $48,979. Previously, the Council placed 48 minority apprentices and provided skill upgrading for 21 journeymen.

-- The Houston Gulf Coast Building and Construction Trades Council, to prepare 60 minority apprentices with $50,225. In two previous contracts, the Council placed 151.

-- The Oakland-based Bay Area Construction Opportunity Program (BACOP) to prepare 230 apprentices, with $285,622. Under prior contracts, with a combined goal of 400, BACOP placed a total of 546 apprentices, 498

(MORE)

of them minority youths. Under the new contract, councils in San Benito, Santa Cruz, and Monterey counties will participate.

-- The Sacramento-based Valley Area Construction Opportunity Program, operating in Sacramento, Stockton, Marysville-Yuba City, Modesto, Fresno, and Bakersfield, to prepare 100 apprentices, with $136,573. In a prior contract, the program exceeded its goal of 70 by placing 81 and upgrading the skills of one journeyman.

-- The Salt Lake City-based Utah Building and Construction Trades Council to prepare 30 apprentices with $52,062. Previously, the Council placed 79 apprentices, 19 over its two-year goal of 60.

-- The San Francisco Apprenticeship Opportunities Foundation, supported by the AFL-CIO Building and Construction Trades council, to prepare 125 apprentices with $135,669. Previously, the Council had placed 140.

-- The Santa Ana-headquartered Southern California Area Construction Program, serving Orange County, Riverside, San Bernardino and Long Beach, to prepare 130 apprentice candidates with $169,200. In its previous contract, with a goal of 100, the project placed 98 minority youths and upgraded the skills of five journeymen.

The Apprenticeship Outreach Program is administered by the Bureau of Apprenticeship and Training in the Labor Department's Manpower Administration. The program has prepared 8,500 minority youths for apprenticeship since January 1968.

PHILADELPHIA PLAN BOOSTED BY
JOURNEYMAN TRAINING PROJECT FOR 180

WASHINGTON -- The Philadelphia Plan has been given added impetus with the award of two one-year contracts totaling $648,400 to the Philadelphia Urban Coalition, a nonprofit community-action organization, to recruit, train, and place 180 trainees in five construction trades, Secretary of Labor J.D. Hodgson announced recently.

The Philadelphia Plan requires all contractors on Federal building projects to meet minority employment goals.

Under one of its two contracts, funded for $188,400, the Philadelphia Urban Coalition will recruit, evaluate, counsel and provide additional follow-up services for 180 selected candidates with full or partial journeyman construction trade experience and place 40 each as sheet metal workers, plumbers, steamfitters and electricians and 20 as elevator constructors.

To provide the needed training vehicles, building and construction trades contractors are being encouraged to sponsor manpower training programs.

The workers will be credited for their previous building and construction trade experience and placed in manpower training programs operating in the Philadelphia area to acquire the additional training and experience they will require to gain full journeyman recognition in the construction trades.

The completion of recruitment and counseling by the Coalition is expected to coincide with the activation of such construction skills training programs.

Should this not transpire, the Coalition, under its second contract totaling about $460,000 in Federal funds, will itself sponsor the manpower programs needed to provide training in each of the five trades for the 180 advanced construction trainees.

(MORE)

The training schedule is planned to include eight weeks of institutional training and from 18 to 36 weeks of on-the-job training.

The training will begin as soon as 20 trainees in any of the five trades have been recruited. If a contract is signed with any other contractor to provide the necessary trade training for the Coalition-recruited journeymen trainees, the Coalition's training contract responsibilities will be correspondingly reduced.

Some of the recruitment, evaluation, counseling and follow-up services authorized will be subcontracted to the Philadelphia Negro Trade Union Leadership Council.

The two contracts were approved at this time to enable the Urban Coalition to have its project well under way before the construction season begins with the advent of milder weather.

Secretary Hodgson said, "The combination of the Philadelphia Plan goal requirements and the Philadelphia Urban Coalition recruitment and training program will sharply improve the employment picture for minorities in the city's construction industry."

Week of March 1, 1971

EXTENSION OF PHILADELPHIA PLAN TO
COVER PRIVATE CONSTRUCTION ANNOUNCED

WASHINGTON -- The Philadelphia Plan has been extended to private construction of Federal contractors in the area beginning March 1, Assistant Secretary of Labor Arthur A. Fletcher announced.

Mr. Fletcher told a news conference that, under the new plan, a contractor with Federal contracts will be required to commit himself to make the same "good faith" effort while working on private contracts.

John L. Wilks, director of the Office of Federal Contract Compliance, noted that previous to this announcement, the Philadelphia Plan required only that Federal contractors meet minority employment goals on the basis of the "good faith" effort on their Federal work.

The plan covers six higher-paying construction trades in five Philadelphia-area counties. Commenting on the extension, Mr. Fletcher said, "It is a much-needed part of the Philadelphia Plan. It will result in a more equitable role for minority workers throughout the Philadelphia area." The Washington Plan, he said, also contains this requirement for contractors in the Washington, D.C. area.

"Further, the firm policy of this Department remains that of a 'home-town' solution, negotiated among members of the minority community, the unions and the constractors. It remains the very best method of assuring equal employment opportunity for minority

(MORE)

craftsmen," Mr. Fletcher said, adding that 20 'home-town' plans are in effect.

On February 12, 1971, Mr. Fletcher noted, the Philadelphia Plan was given added impetus with the award of two one-year contracts totalling $648,400 to the Philadelphia Urban Coalition, a non-profit community-action organization, to recruit, train and place 180 trainees in five contruction trades.

Under one of its two contracts, funded for $188,400, the Philadelphia Urban Coalition will recruit, evaluate, counsel and provide additional follow-up services for 180 selected candidates with full or partial journeymen construction-trade experience. It will place 40 each as sheet metal workers, plumbers, steamfitters and electricians, and 20 as elevator constructors.

To provide the needed training, building and construction trades contractors are being encouraged to sponsor manpower training programs. Should this not transpire, the Coalition, under its second contract totalling about $460,000 in Federal funds, will itself sponsor the manpower programs needed to provide training in each of the five trades for the 180 advanced construction trainees.

The six higher-paying trades affected by the Philadelphia Plan are: iron work, plumbing and pipefitting and steamfitting, sheet-metal work, electrical work and elevator construction work.

The five Philadelphia-area counties affected are: Bucks, Chester, Delaware, Montgomery and Philadelphia.

Washington, D. C. 20410 (202) 755-5280

March 8, 1971 Vol. 2 No. 6

President Suspends Davis-Bacon

On February 23 . . . President Nixon issued a Proclamation suspending the Davis-Bacon Act. The Act . . . passed in 1931 . . . requires that prevailing union wage scales be paid on all Federal and federally-assisted construction. In taking the action, the President said: "Wage rates on Federal projects have been artificially set by the law rather than by customary market forces . . . . This means that many of the most inflationary local wage settlements in the construction industry have automatically been sanctioned and spread through Government contracts."

Citing wage settlements and high unemployment rates in the construction industry as the reason for the "emergency" action . . . along with the urgent need to control inflation in the industry . . . the President chose this course of action rather than several other alternatives open to him . . . and which had been discussed for some time. One alternative action . . . which the President rejected at this time was wage-price control . . . which can still be invoked if the Davis-Bacon suspension does not slow down the cost spiral.

Some action by the President has been expected for some time . . . as a result of the continued higher rate of construction labor wages compared to general wage rates. The Bureau of Labor Statistics has issued figures for the 6-year period of 1965-70 . . . showing comparative average hourly wage figures:

Year	Manufacturing	Construction
1965	$2.61	$3.70
1966	2.72	3.89
1967	2.83	4.11
1968	3.01	4.41
1969	3.19	4.78
1970	3.36	5.22

In 1970 . . . construction wage contracts called for increases of 18.3 percent . . . compared to 8.1 percent in general manufacturing. At the same time unemployment in construction trades reached over 11 percent at the end of 1970.

All HUD Regional Directors, Area Directors, and FHA Insuring Office Directors have been informed of the steps to be taken to implement the President's Proclamation.

Current Trends

Most analysts believe the worst is over and that the mortgage money scarcity will soon be a thing of the past. This opinion is bolstered by many reports from various sources . . . plus the continuing drop in prime money rates and the reduction to 7 percent in the FHA-VA mortgage interest rate. Another straw-in-the wind: $531 million of tax-exempt local housing notes were sold at an average interest rate of 2.25 percent . . . down from last month's 3.083 percent . . . the lowest rate since April 1967.

The Home Loan Bank Board has expanded the territory in which savings and loan associations may make loans. They may now make loans within 100 miles of each branch office . . . and anywhere within the State in which the association's home office is located.

Lease and Grievance Procedures Issued

The Department has announced new policies designed to give greater protection to the rights of tenants living in public housing . . . and strengthen tenant-management relations.

The new policies, which govern lease and grievance procedures, will apply to the entire low-rent housing program, except leased housing . . . and affect more than 2.8 million persons living in 857,000 public housing units administered by some 1,900 local housing authorities throughout the Nation.

All local housing authorities, for the first time since the low-rent program was started in 1937, will be required to adopt lease and grievance procedures that meet minimum standards.

In signing the new policies, Norman V. Watson, HUD Acting Assistant Secretary for Renewal and Housing Management, said:

"Historically, the balance in landlord-tenant law has strongly favored the landlord, both in private and public housing. The time has come to make a fresh start to improve tenant-management relations through the development of credible and open communication processes. These new policies offer real hope of ushering in a new era in the management of housing for low-income families."

The policies are the result of more than a year of intensive discussions and negotiations on the part of a HUD-appointed Task Force, consisting of representatives of the National Association of Housing and Redevelopment Officials (NAHRO) and the National Tenants Organization. Mr. Watson said both organizations have officially endorsed the policies.

☆

Upcoming Conferences

The 37th Annual National Planning Conference of the American Society of Planning Officials (ASPO) . . . will be held at the Hotel Jung, New Orleans, March 27 to April 1. Among the participants will be HUD Assistant Secretary Samuel C. Jackson. 3,000 professional planners, public officials, civic leaders, educators, students and others will examine alternative ways of influencing future growth patterns of human settlements . . . and to consider the goals and mechanics of the intergovernmental relations of national urban growth policies.

Details and registration: ASPO, 1313 East 60th Street, Chicago, Ill. 60637.

The National Urban Coalition Lower Income Housing Development and Management Seminars are scheduled for:

March 22-24	**Albuquerque, New Mexico**
April 5-7	**Birmingham, Alabama**
April 19-21	**Kansas City, Missouri**
May 17-19	**New York, New York**
June 14-16	**Chicago, Illinois**
July 12-14	**Portland, Oregon**

Each Seminar covers 1½ days of activity. Costs are $60 for the Development Section and $60 for the Management Section . . . with a $110 rate for the combination.

For Further Information: John O. Butler, Conference Director, Nonprofit Housing Center, Inc., 1717 Massachusetts Ave., N.W., Washington, D.C. 20036 - Phone: (202) 265-2224.

More on the Census

The Census. . . the Nation's decennial head count. . . reveals many fascinating facts beyond the number of people in each State and how many Congressmen each State shall have. Some interesting revelations. . . while the cities and suburbs are growing at a tremendous rate. . . the country is still mostly vacant land. A recent article in *Business Week* says: "Since the official closing of the frontier in 1890, the population of the U.S. has increased four-fold. Yet the country never really 'filled up.' As anyone who has traveled from coast to coast can testify, the emptiness in places is almost frightening. Even domesticated New England has more unused land today than it had at the turn of the century. As a matter of fact, the high point for lived-on land in the Nation as a whole was 1920. The trend has been the other way ever since. Increasingly, the population has been concentrated on a fraction. . . perhaps one-tenth. . . of the Nation's land area, huddling along the coasts, the Great Lakes, and the Gulf of Mexico. **In 1960, about two-thirds of the U.S. population was urbanized; in 1970 the proportion is pushing three-quarters."**

How can the paradox of greater concentration of population and decreased use of land be explained? The high rate of migration from rural to urban areas is the answer. About one-half of the Nation's counties lost population in the decade. . . farm population decreased one-third from 15.6 million in 1960 to 10.3 million in the 1960-1970 period.

The number of farms. . . according to a Department of Agriculture estimate . . . dropped over a million. . . from 3.962 to 2.924 million in the same period. This resulted in an abandonment of farm land. . . reducing the total acreage of land used for crops, pasture, grazing, and other agricultural uses from 1.177 billion in 1960 to 1.121 billion in 1970. **So. . . while subdivisions and other types of development are gobbling up land in the urban and suburban areas. . . total overall land use is going down.**

☆

Turnkey III

The HUD-developed Turnkey III program . . . first tested in Gulfport, Mississippi in a project **sponsored by the National Council of Negro Women . . . has attracted considerable attention throughout the country.** Built by private builders under contract with the local housing authority . . . 200 homes were sold under lease-purchase agreements . . . which gave the families financial incentives for maintenance and repair work they did. The Council has been advising housing authorities in other localities . . . 36 communities in 10 States . . . on undertaking similar projects. **A Ford Foundation grant of $315,000 has been given to the NCNW to make possible the continuation and expansion of its advisory services . . .** to explore new techniques of self-help housing programs . . . and develop training programs for home-buyer associations which will take over the management and maintenance of future projects.

☆

Census Bureau Surveying Minority Businesses

A mail survey . . . designed to determine the extent of business ownership by minority businessmen is underway. The Bureau of the Census has sent forms for the survey . . . seeking information about the number and kind of businesses, employment, receipts, legal form of ownership, and geographic location of businesses owned by Black, Mexican-American, Puerto Rican-American, Cuban-American, and other minority people. Results will be available in July, 1971.

Basic aim of the survey is to fill the existing gap in economic data about minority participation in business. **The information gathered will be used as source material for measuring the impact and efficiency of Federal programs designed to stimulate minority participation in the national economy.**

Notes From Here and There

Anthropologist Margaret Mead . . . speaking to the American Association for the Advancement of Science . . . called the suburban housing boom of the past 25 years "one of the greatest disasters in American history." **"The suburbs are an outrage . . ,all the problems that people moved to the suburbs to avoid . . . crime, defective schools, and now drug addiction . . . have followed them from the cities into the suburbs."** Dr. Mead's prescription: Attract people back to the city . . . make the city streets safe to walk . . . provide mass transportation . . . improve the schools . . . make it possible for the elderly to continue to live in their homes . . . and end this apartheid society.

The cost of collecting roadside litter in the 50 States has increased from $19.7 million in 1963 to $34.4 million last year . . . a 70 percent escalation, according to *Keep America Beautiful, Inc.*

Successful urban renewal projects are reported from many cities. **In Seattle, the South Seattle Project has produced a 1,300 percent increase in jobs in the area. Annual tax revenues have gone up 322 percent . . . from $55,000 to $245,000 . . . and private investment in the redevelopment came to $9 for every $1 of city expenditure.** Formerly a badly blighted marginal area . . . described as "plagued with summer dust and winter floods" . . . it is now an attractive industrial park. **More than 2,000 employees work in the 78-acre area where only 140 were employed** . . . even though nine acres are still undeveloped.

Grants have been approved in the amount of $141 million in HUD's five-year old Neighborhood Facilities Program for one-stop neighborhood centers in some 463 low-income areas to provide coordinated community service programs. **The multipurpose centers are in 46 States, the District of Columbia, Puerto Rico, and the Virgin Islands.**

The volume of rehabilitation activity . . . financed with Section 312 loans . . . in urban renewal and code enforcement areas passed $100 million since the program began. $41 million was accomplished in 1970.

☆

Women Consider Domestic Issues Paramount

The crisis in environment, public education, the economy, and concern over the responsiveness of government to citizen and social needs. . . have emerged as the dominant concerns of the 170,000-member American Association of University Women.

The four topics. . . selected for study and action. . . were drawn from over 3,000 emerging issues submitted by AAUW branches throughout the country:

This Beleaguered Earth. So universal was the environmental concern. . . that for the first time a current Association topic was extended for two more years;

A Dollar's Worth. This topic considers the price tags carried by constructive social goals;

We the People. The responsiveness of government to the needs and wishes of the people. . . and the frustrations of private citizens in trying to influence governmental policies and actions; and

The Crisis in Public Education.

MEMORANDUM

TO: Concerned Organizations and Individuals

FROM: C. F. McNeil

Enclosed is a copy of The National Assembly's Position Statement on Racial Discrimination in the Construction Industry recently approved by our Executive Committee.

You will also be interested in the attached editorial which appeared in The New York Times on February 12, 1971. We believe that this editorial and news accounts of recent events in this field underscore the timeliness and importance of our statement.

In adopting this Statement, the Executive Committee urged the widest possible distribution to concerned organizations and individuals and asked that all persons receiving the Statement give leadership in implementing its recommendations.

Single copies of The New York Times editorial and The National Assembly's Position Statement are available without charge. The Position Statement on Racial Discrimination in the Construction Industry may be reproduced provided credit is given to The National Assembly for Social Policy and Development.

In keeping with our agreement with The New York Times Company, the editorial, if reproduced by you, must be an exact copy as attached.

POSITION STATEMENT ON RACIAL DISCRIMINATION IN THE CONSTRUCTION INDUSTRY

The achievement of full and equal employment is one of the most urgent and justifiable demands of racial minorities. In recent years, the construction trade unions have become a major target of much of the effort to end discrimination and create equitable employment opportunities. While both management and labor share reponsibility for discrimination, yet the focus on the construction trade union is a logical one. Both highly visible and pivotal to the life of the nation, they offer workers opportunities for rewarding employment at excellent rates of pay, and the backlog of unmet housing and construction needs holds out the promise of a growing demand for construction labor; if the current economic logjam is broken, the present supply of skilled labor will be inadequate.

Moreover, the seasonal, mobile nature of the industry, which fostered union emphasis on controlling a restricted labor supply to compensate for the lack of secure, year-round employment, created a de facto pattern of racial exclusion in many construction trades. The labor-management job referral system that developed-of hiring halls, union membership limited largely to relatives and friends, "umbrella agreements" between unions and all contractors in a local market - may have sought initially to protect and benefit one group rather than to penalize others, but as the system developed the effect was to exclude racial minorities. When these minortiy groups mounted campaigns to equalize job opportunities, the construction trade unions were a natural target.

To some extent, the construction unions and their management counterparts have acted to remedy past inequities. To cite one important statistic, labor-management apprenticeship programs enrolled 11% minority group apprentices in 1969, compared to 2.5% in 1960 - the effect in great part of apprentice "outreach" programs sponsored by the AFL-CIO and other interested organizations. Since the increasing technological demands of the construction trades indicate that future entry into these trades will be primarily by way of apprenticeship (rather than the "blanketing in" that formerly accorded journeyman status to those without such training) this is a particularly significant development. The fact that it took place during a period culminating in a federal cutback in public construction and fiscal restraints on private construction, which have created high unemployment rates in the building trades, makes it doubly significant.

Top-level statements stressing the responsibility of the unions (such as that issued by the AFL-CIO Construction Trades Department in September 1969) and local affirmative action plans sensitive to the interests of all concerned (such as that under way in Chicago) testify that some progress is being made. Nevertheless, the efforts to date are simply not enough in view of the dimensions of the problem and the emotions generated by past exclusion of minority groups, emotions that have led to open conflict in many cities.

To meet this challenge, The National Assembly for Social Policy and Development calls upon the AFL-CIO and the international headquarters of the construction trade unions to take the lead in promoting and negotiating a nationwide series of local "affirmative action," area-wide, multiple-party agreements. These should include local goals and target dates based on appraisals of current local job markets and estimates of future expansion. It recommends that government agencies and private civic groups help to create and support these agreements while recognizing the primary role of minority groups, construction unions and construction employers.

Certain basic principles should apply to all such agreements:

1. Locally developed "affirmative action" programs must include provision for opening full union membership to all qualified journeymen, special training and placement for partially qualified workers who may be beyond apprentice age, and vigorous recruitment and placement of sharply increased numbers of minority youths in apprenticeship programs. Flexibility is vital. For instance, a young man who has received limited training in an electrical or metal skill in the armed forces should be slotted into the appropriate stage of apprenticeship instead of being required to start from the bottom. An energetic, imaginative approach to pre-apprenticeship preparation is also vital to overcome the handicaps of inferior education and stunted motivation for many minority youths.

2. Programs should be area-wide in coverage - essential because of the fragmented nature of construction employment - and should include both the unions and the contractors, as well as representatives of government, minority groups and appropriate civic organizations.

3. Such programs should contain specific goals and target dates and should provide for objective evaluation, review and public accountability. The group charged with monitoring each program should be widely representative and should include persons with established expertise in the field. Where the programs fall seriously short of their goals, litigation should be undertaken to enforce compliance with provisions of the Equal Employment Opportunities Act.

4. The rights of existing union workforce members should be protected by building workforce changes on a combination of growth and normal attrition, an approach which has proved workable elsewhere. Since high unemployment rates in the construction industry must inevitably inhibit attempts to expand the construction labor supply, a truly broad-based attack on the problem

should include political efforts to loosen government restraints on construction.

5. All of the foregoing principles should lead to journeyman status and union membership as the most normal means to permanent jobs or reasonable assurance of future employment in this industry. This is clearly to the interest of both unions and minority workers. It assures unions that their standards will not be undercut by non-union labor and it assures minority workers that they will not be used as a temporary, cut-rate work force.

The National Assembly urges this course in furtherance of its Policy Statement of Racial Discrimination, which identified racial inequity as "the major and most pressing social problem of our times" and committed itself to work actively for its elimination in public policy and private behavior. Employment opportunity and advancement was the first of the areas of change cited in the statement.

The National Assembly feels strongly that the time has come to press for substantial, measurable results in the building trades as part of the continuing effort to establish equitable employment opportunities in all sectors of the economy. Widely publicized, such results will do more than any other measure to dissipate the tensions and civic disturbances generated by past controversies. More important, they will constitute a basic step toward the elimination of racial discrimination from the American scene.

EDITORIAL APPEARING IN THE NEW YORK TIMES FRIDAY, FEBRUARY 12, 1971

Breaking Down Job Walls

The love affair between the Nixon Administration and the hardhats in the construction unions seems to have foundered on the age-old rock of freer entry for blacks into skilled building jobs. The unions have announced their determination to fight new apprenticeship rules proposed by the Labor Department, even though two years of top-level negotiation preceded their issuance last month. They have also spurned the President's plea for joint action with the contractors to curb the runaway wage-price spiral in their industry.

Progress toward increased job opportunity for minority workers, slow in every field, has been made slower still by the construction slump. But the recent report of the Equal Employment Opportunity Commission on the standstill of black membership in crafts with ironclad job monopolies makes it plain that the much-touted programs devised by the unions and the construction industry will never really open up this industry without a vigorous governmental push.

The holdback is much less pronounced in the international unions than in the locals, where effective control over admissions resides. It was the resistance of many locals to the no-discrimination guarantees incorporated in the A.F.L.-C.I.O. constitution that prompted George Meany to press for inclusion of fair-employment requirements in the omnibus Civil Rights Act of 1964.

But even that prod has proved insufficient, as is indicated by the virtually imperceptible effect of such admirable programs as the one initiated a year ago by the Plumbers Union to bring 500 black plumbers into the field. The need for "affirmative action" plans of the kind envisaged in the new apprenticeship regulations and in the Government's "Philadelphia Plan" is underscored by the investigation just concluded by the independent National Assembly for Social Policy and Development.

It dismisses all the self-help programs as "simply not enough" and calls for specific goals and target dates to promote realistic breakthroughs in the battle to eliminate racial barriers to good jobs.

Nat Bldg Trades Project

March 19, 1971

Mr. Ray Marshall, Chairman
Department of Economics
University of Texas
Austin, Texas 78712

Dear Ray:

I don't know if you have seen the enclosed memorandum on OFCC hearings related to the construction trades in Atlanta. I am sending a copy to Hefner and Glover. Should we consider the possibility of Hefner making a statement, if he is interested. I thought that the hearings might be of some side interest to Glover for his current project.

I am still uncertain as to whether April 25 will be a good day for our employment discrimination strategy seminar. Would you do two things for me: (1) Send me dates, preferably for two days together, one you could make in May. (2) I would welcome suggestions from you for others who should attend the seminar. Certainly some of the people who have worked on your projects should attend. Just remember that we are attempting to

keep the size of the group small. We would like to try to have mainly southerners and racial balance is crucial.

Best personal wishes.

Sincerely,

Emory F. Via, Director
Resources Development Center

Dear Emory:

I just received your letter of March 19. Thank you for the notice of the upcoming OFCC hearings, March 31-April 2.

I will not be able to attend the hearings; but I would like to keep in touch with what happens during them and with the results.

I am currently finishing my work in Houston and expect to come to Atlanta in the latter part of April. I will contact you then.

Best regards.

Sincerely,

Bob

Robert W. Glover ?

reinstatement in the study. The first, and most important, of these is the size of the company. When the company is very large, there may be more chance for the discriminatee to be lost in the whole operation; when it is very small, the employees and the manager may deal with each other on a more personal basis. In any case, in very large or very small companies the chances of successful reinstatement are considerably better.

The second factor which seems to lead to successful reinstatement is a change in the management. Management here can mean only one person, anyone from the foreman on up. At times the anti-union sentiment in a company can be traced to one man. If he leaves the company, there is an excellent chance that reinstatement will be successful.

The third factor in successful reinstatement is a fast growth of the company. The discriminatees who go back are those with higher seniority and more experience. A large increase in business and the addition of new employees suddenly puts a premium on such people.

These were what the study found to be the most important factors affecting reinstatement. They are factors which the NLRB can neither anticipate nor control. In the study of these factors, two appraisals of the cases were made by using different definitions. Under an optimistic appraisal, the act was effectuated in a little more than 30 percent of cases; under a more pessimistic one, the figure was about 10 percent.

It is hard to escape the overall conclusion that reinstatement under section 8(a)(3) needs many changes before it is a success. □

———*FOOTNOTES*———

[1] Section 8(a)(3) reads in part: "(a) It shall be an unfair labor practice for an employer . . . (3) by discrimination in regard to hire or tenure of employment to encourage or discourage membership in any labor organizations. . . ."

[2] The sample for the study contained 71 8(a)(3) cases settled between July 1, 1962, and July 1, 1964, by the NLRB's First Region Office (New England). These cases supplied the all-important empirical data. Of the 71 companies involved, 36 were in manufacturing, 21 in services, and 14 in sales. Sixty-two of the cases arose from union organization drives, and most cases (50 out of 71) were settled informally. The 71 cases involved 194 discriminatees.

To the extent that the First Region is typical and that these 2 years are typical, the information in this study should have general validity. No significance tests were applied to the numerical results of the study, largely because the conclusions were drawn not only from the numbers but also from discussion with the people involved. The numbers give structure to the conclusions, but the other sources are just as important in their formulation.

NLRB'S REGULATION OF UNION JOB CONTROL

MONTHLY LABOR REVIEW
March, 1971, Vol 94 No. 3

PHILIP ROSS

THE PURPOSE of section 8(a)(3) and 8(b)(2) of the Labor Management Relations Act is clear, although it may be variously phrased.[1] After its enactment, Senator Robert A. Taft said that it was aimed at prohibiting the closed shop "because the Congress felt that it destroyed the freedom of American youth to choose their own occupation in life, and particularly to select that occupation which they considered best suited to their abilities." More broadly, Justice Stanley Reed, speaking for the Supreme Court, noted: "The policy of the act is to insulate employees' jobs from their organization rights. Thus section 8(a)(3) and 8(b)(2) were designed to allow employees to freely exercise their right to join unions, be good, bad or indifferent members, or abstain from joining any union without imperiling their livelihood," subject only to a modified union shop.[2]

Since 1947 the National Labor Relations Board has received and investigated tens of thousands of charges alleging a violation of section 8(b)(2), and the Board and the courts have issued hundreds of decisions. For all of this, what can be said about the impact of this part of the law? Is it working? How and to what extent has it affected union behavior?

Conventional wisdom, which can be defined as the consensus of everybody with an opinion, has a firm answer: section 8(b)(2) does not work.

This extraordinary agreement about the ineffectiveness of section 8(b)(2) must be carefully scrutinized. To say that a statute which has been in effect for nearly a quarter of a century does not work is a serious matter. It raises questions about the effectiveness of the law as an instrument of

social policy and casts doubts about the meaningfulness of the NLRB.

Violations in fiscal 1968

I have examined all cases closed by 15 regional offices during fiscal 1968 involving alleged violations of 8(b)(2) in that year. The 15 regions represent about 40 percent of the agency's total case load and are scattered throughout the country. The overwhelming majority of charges are dismissed or withdrawn as without merit, which is characteristic of unfair labor practices generally. Of the meritorious cases, a very small number are closed after a Board or a court order. Most violations of section 8(b)(2) are settled informally, and it is to this hitherto unexplored category that we must turn to gain the broadest perspectives on the operation of the statute.

There were 112 cases closed prior to litigation in which the regional office found a violation of section 8(b)(2). Most of these cases were closed after compliance with a written settlement agreement, but a significant number were withdrawn after the respondent union agreed to remedy its unlawful practices.

These cases can be grouped in three categories according to the context in which the disputes arose: First, the violations which originated in the enforcement or attempts to enforce union security agreements; second, unlawful union disciplinary action; third, cases in which the hiring hall is the tool of unlawful discrimination. While these categories are not mutually exclusive, the few classification difficulties which arose are unimportant. The number of violations was: 36 cases developed out of union security, 34 in union discipline, and 42 in hiring-hall situations.

UNION SECURITY. The law on union security is straightforward. A proviso to section 8(a)(3) authorizes a union representing an uncoerced majority of the employees within an appropriate unit to cause an employer to discharge a nonmember pursuant to a union security agreement, if the employee has declined to tender dues and initiation fees uniformly established after 30 days of employment. Innumerable Board cases have laid down specific safeguards interpreting employees' financial obligations towards the collective bargaining representative, the lawfulness and scope of the contract, the timeliness of the request, the good faith of the union, and the like.

Nearly all these cases fall into three subgroups with roughly equal frequency: dues checkoff violations, unlawful demands for dues and assessments, and the existence or enforcement of an otherwise lawful union security clause in a contract at a time when the union was not the majority representative. About half of the cases did not involve discharges, particularly in checkoff cases where the most common violations were the collection of dues without written authorization or when the authorization was purposely revoked.

Discharges commonly accompanied violations in the other categories where dues were required during the statutory grace period, where former members were obligated to pay past dues, or where the payment of fines and assessments was made a condition of employment. On a few occasions, unlawful behavior resulted from a union security arrangement which was not validated by a contract or was invalidated by a State right-to-work law. The charging parties were frequently other unions in situations where the respondent union did not represent a majority of employees.

The stock remedies for section 8(b)(2) violations were applied in these informally settled cases, which meant that monetary reimbursement of dues and assessments was made, reinstatement was offered and in nearly all cases accepted, and unlawful contracts including recognition agreements were abrogated.

UNION DISCIPLINE. Although the ability of unions to discipline members is nominally protected by the proviso to section 8(b)(1)(a), section 8(b)(2), read together with section 8(a)(3), insulates the employment relationship from all forms of union discipline. In all the regions, the most prominent reasons for unlawful discipline were violations of union working rules, the engaging in dual union activity, opposition to incumbent officers or to union policies and procedures, and the filing of charges against the union or of representation petitions to oust the union.

In most of these cases fines were either levied or the employee was expelled, and in many cases the member was discharged. The unlawfulness of the union action and the remedy applied depended, of

Black Employment in Atlanta: Special Implication For Federally-Involved Construction

Statement of

James A. Hefner

Chairman, Department of Business and Economics
Clark College

before the

Office of Federal Contract Compliance
United Stated Department of Labor

April 2, 1971

Black Employment in Atlanta:
Special Implications For Federally-Involved Construction

by

James A. Hefner

I greatly appreciate the opportunity to share with the Office of Federal Contract Compliance, United States Department of Labor, my views on black employment in federally-involved construction in the Atlanta area. Because I believe that employment opportunities afforded blacks in the construction industry are interdependent of employment opportunities in other areas of the economy, it seems to me that I might make a modest contribution to these hearings by viewing in brief the employment patterns of black Atlantans, some factors responsible for the patterns, and ways of dealing with the patterns. I shall speak as an economist and only rarely will I speak of noneconomic matters (such as the "psychological impoverishment" wrought by lack of employment opportunities available to black Atlantans).

On the basis of my analysis of the employment data available to me, I have concluded that very few blacks have any "meaningful" employment opportunities available to them in the Atlanta area. This is true not only for the blacks who reside in the ghettos that form an arc around the Central Business District, but is also true for the black youngsters who graduate from the all-black institutions in the Atlanta University Center. The types of jobs that these blacks get is worthy of discussion.

Private and Public Employment

Table I gives black employment in Atlanta's 15 leading industries and Tables II, III, and IV give a summary of black employment in government jobs. Although the data in the tables are for the years 1966 and 1967, subsequent data* that have been made available to me, that cover the year 1969, show no real significant changes from those of 1966. Therefore, the information contained in the tables is worthy of our attention.

According to our data, it is clear that white-collar jobs were overwhelmingly "white", and lower paying blue-collar jobs, in most instances, were largely "black" in metropolitan Atlanta's top fifteen industries. Although there was a slight improvement in the occupational position of black females (in clerical, professional and technical jobs) between 1950 and 1960, they still occupied very low occupational positions in 1966. Their employment representation was lowest in the Motor Freight Industry and highest in the Food and Kindred Products Industry. As for black males, there was no discernible improvement in their occupational position between either 1950 and 1960 or 1960 and 1966. Yet, black males generally were better represented than were black females along every step of the occupational ladder. Although they occupied better jobs than did black females, black males were still holders of the traditional "colored jobs", i.e., services and laborers. Their employment representation was lowest in the Communications Industry and highest in the Food and Kindred Products Industry. For blacks as a whole, employment representation was the lowest in the Insurance Industry and the highest in the Food and Kindred Products Industry.

* Supplied by the Equal Employment Opportunity Commission.

Of the 86,914 blue-collar jobs in Atlanta's top fifteen industries in 1966, almost 34 percent, excluding craftsmen, were held by blacks. Yet blacks constituted only 15.2 percent of total employment of 221,021 employees in these industries. On the white-collar level, blacks accounted for 2.3 percent of the total 106,859 jobs; however, 83 percent of those jobs were in the lower-paying sales and clerical areas. To a large degree, blacks on the managerial and professional occupational levels in 1966 were employed in the black community, where they managed black-owned banks and insurance companies.

Employment opportunities for blacks were generally better in the public than in the private sector. Black employment was better in city, county, and federal governments than in Atlanta's top fifteen industries. Of the governmental units, black employment was lowest in state government. Here the majority of black employees were in white-collar positions, as they were in county government. Yet, as a percent of total employment, black employment opportunities were best in the federal government, followed by the City of Atlanta.

Of those blacks employed by the federal government, almost half were in the Atlanta Post Office. Yet, on both the Postal Field Service (PFS) and General Schedule (GS) levels, there was little about which to be enthusiastic; blacks were under-represented in the PFS - 9 and above occupations, and were heavily concentrated in the lower paying jobs--GS - 1 through 4 and PFS - 1 through 4.

Until after 1968, no blacks headed any departments in Atlanta's city government, nor did they appear to be assistants to department heads. Then (as now) most black Atlantans who worked for the city were in the lower-paying blue collar positions, laborers and services. And, as in all governmental units, blacks seem to have been most heavily employed either in traditional dirty, menial, or otherwise undersirable jobs, or in jobs which serve black clients.

In categories other than these, black employment rarely exceeded takenism.

Unions as Determinants of Black Employment

Although Atlanta's black employment patterns are relatively clear, the determinants of these patterns are not as clear, especially if we look for detailed and specific causal factors. In a general sense, of course, we know that institutional discrimination is a root cause of the blacks' disadvantage, but it is necessary to look more specifically at the ways in which discrimination manifests itself in the labor market. One such manifestation is the behavior of unions. Other manifestations, which will not be discussed, are (1) poor educational facilities provided blacks; (2) recruitment, selection, and promotion practices of firms; (3) the location of firms; (4) the scope of public transportation facilities; and (5) objectives of manpower programs.

Behavior of Unions

The role that unions play in the overall employment status of blacks is well documented in the works of Northrup[1] and Marshall[2]. In a rough sense, these scholars dichotomize unions into two groupings: those that are egalitarian and those that discriminate. Marshall, in discussing the race problem in the South, notes that:

> Indeed, it can probably be demonstrated that a forthright egalitarian racial position will cause the unions to gain more than they lose.[3]

On the other hand

> One of the ironies of employment in Atlanta and other cities in the South is the fact that local affiliates of some labor unions--well known on the national level for nondiscriminatory policies--contribute directly to discrimination against Negroes on the local scene.[4]

In addition,

> Consider several cases in point. The union hall of an automobile workers union is segregated and until a year ago Negro members were required to hold their meetings on separate dates. At a large steel plant, Negro union members stated that they are not allowed to bid for jobs held by whites. Only two unions in the city employ Negroes in their own offices--a packing house local and a garment workers local. Negroes are barred altogether from at least two trade unions--sheet metal workers and plumbers. In the electrician union, Negroes hold membership in the industrial section, but not in the craft section, and the musicians union has one local for Negroes and one for whites.[5]

Reason for the Behavior

Now let me briefly discuss some of the reasons for this behavior. It appears from the above that we are dealing with the same old sing-song, "embodied" racial discrimination--that is, discrimination embodied in the nonblack decision-making process. And we are. On the other hand, the nonblack union decision process seems always to attract accomplices, however unwittingly. For instance, the behavior of the Atlanta Labor Education Advancement Program (LEAP) contributes greatly to the racially discriminatory decision process of the local union. Let me briefly describe the workings of LEAP.

In June, 1968, the Atlanta LEAP, a project under the sponsorship of the National Urban League with the objective of increasing substantially the number of minority youths in apprenticeship programs of the building trades and construction crafts, began its operation from an office within an Economic Opportunity Atlanta (EOA) target area. Yet, in 1969, the Atlanta LEAP indentured fewer black apprentices than the unions themselves.

In order to place Atlanta LEAP efforts in their proper perspective, it is necessary to compare its retention rate with the rates of three other southeastern cities which had LEAP programs in December, 1969. The Jacksonville, Florida program had a retention rate of 55 percent; the Miami LEAP project had a 73 percent retention rate; while the New Orleans, Louisiana figure was 81 percent. The Atlanta figure, which I estimated to be 27 percent, was therefore, half that of the lowest of the other three cities.

The point that I am making is this: unless projects such as LEAP are not used to augment the number of black apprentices in the building and trades unions, there will continue to be the paucity of black apprentices in these unions. The apprenticeship outreach programs of the building and trades unions are only delay actions. What seems clear to me is that the better the job pays, the shorter are the arms of the unions in reaching out. But this is not say that unions should not be given any responsibility to find qualifiable blacks. They should.

Concluding Remarks

Policy Recommendation

Because institutional discrimination in the labor market accounts for the general pattern of black employment in Atlanta, no one agency or institution can cast a stone at the other. In terms of their decision-making process which excludes the interests of black people, all are responsible for the lack of employment opportunities available to blacks at the present time. This applies to the building and trades unions, as well as to the city government, state government, county government, state employment agencies, school boards, etc. Yet, the building and trades unions have the opportunity of coming forward, of taking affirmative steps in a direction so badly needed to augment the life styles of the Atlanta black community.

In all candor, I must insist that almost all of the problems facing black people in the construction unions are initiated in the decision-making process of these unions. Here is where the decision to accept or reject black applicants along with the specified conditions are made. Not only must blacks be involved in the decision-making process, but also mechanisms for enforcing decisions must be rendered more effective than any of those now in effect.

Where does all this lead us with respect to policy? I would think along with the National Assembly that the following principles might be pursued.

1. Locally developed "affirmative action" programs must include provision for opening full union membership to all qualified journeyman, special training and placement for partially qualified workers who may be beyond apprentice age, and vigorous recruitment and placement of sharply increased numbers of minority youths in apprenticeship programs.
2. Programs should be area-wide in coverage and should include both the unions and the contractors, as well as representatives of government, minority groups and appropriate civic organizations.

3. Such programs should contain specific goals and target dates and should provide for objective evaluation, review and public accountability. Where the programs fall seriously short of their goals, litigation should be undertaken to enforce compliance with provisions of the Equal Employment Opportunities Act.

Obviously, the above principles should lead to greater employment of black workers in the construction industry. And should make Atlanta, which is now the transportation, distributional, financial, and government center in the South; the hub of six interstate highways; the third busiest airport in the nation with respect to passengers handled; the land made famous by Henry Grady, Sidney Lanier, Joel Chandler Harris, Ralph McGill, Coca Cola, Gone With the Wind, and General Sherman; the home of numerous regional offices of the federal government, as well as offices or plants of over 400 of the Fortune 500 top firms; the largest black business community in the South; the home of the most influential black leaders in the nation; and the home of the Atlanta University Center, the only black consortium in the nation--indeed these principles will move Atlanta along the realization of its name as a "city too busy to hate."

to screen out minorities. In setting minimum education or skill requirements, "The touchstone is business necessity," the court said. (See MIS, March 24, 1971, pages 316 and 330, for a review of the case.)

In another recent court decision, this one by the United States District Court in Minnesota, the all-white Minneapolis Fire Department was ordered to develop an affirmative action plan and to give absolute preference to 20 black, Spanish-speaking, or American Indian applicants qualified for fire fighter positions to raise minority representation on the force. This decision was handed down on March 9, the day after the Supreme Court's Griggs decision.

Among other things, the District Court rejected non-job-related requirements pertaining to applicants' police records. The court said that unless the unlawful behavior were found by a written Civil Service Commission report to interfere with the duties of a fire fighter, no applicant convicted of a felony, misdemeanor, or other crime should be turned down by the Fire Department.

Test Validation

Because of the lack of further administrative or court rulings on selection procedures, participants in the National Civil Service League (NCSL) conference voiced contrasting views on the meaning of the court decisions. The issue of validating tests to assure they are job-related was one subject on which different interpretations were evident.

William Enneis, staff psychologist at the Office of Research, Equal Employment Opportunity Commission (EEOC), discussed validating tests to determine what relationship there is between the predictor (test or other selection technique) and the person's actual job performance. A NCSL survey shows that barely half of all state and local jurisdictions validate any of their tests. Enneis urged employers to take steps quickly in this direction on their own, since failure to do so may spell court action that could take their prerogatives away from them. He cautioned employers, however, against assuming that tests can be validated by quick and easy methods. For example, he said, a test cannot be made more valid simply by eliminating the individual items that good performers tend to answer incorrectly. Nor can personnel administrators expect to validate their tests merely by getting supervisors' opinions on whether an employee is performing as well as his test scores would lead one to expect.

Eliminating Tests

Lawyer Craig Sawyer, of the EEOC's Office of General Counsel, observed that merely validating the content of selection tests may not be enough to assure compliance, however, if the employer's work force still does not represent the local population. The Griggs case showed that racially neutral policies that operate against minorities are discriminatory, Sawyer pointed out.

Noting that he had seen few cases of test validation that were truly effective, Sawyer suggested that testing itself may be the problem. An alternative might be to eliminate all tests for certain jobs, hiring instead on a first-come basis followed by a probationary period. "I think it's quite possible you could eliminate tests completely without its making any difference in the results," he said.

Taking issue with Sawyer was Anthony Mondello, General Counsel of the U.S. Civil Service Commission. The Supreme Court does not outlaw setting qualifications for jobs, he argued. It only tells employers to remove arbitrary requirements that are "invidiously" discriminatory.

Robert Galloway, director of personnel in Phoenix, enumerated some probable effects of the court ruling on public service personnel systems to the 250 representatives of state and local civil service systems in attendance. He foresees a rise in so-called preferential hiring of minorities, as ordered in the District Court case of Carter and Minneapolis Commission on Human Relations *v.* Hugh Gallagher, et al. There is no law prohibiting this practice, he said, since "preferences can only be possible when there's equality to begin with." Other trends will be to drop high school diploma requirements, increase job analysis to fit jobs to people, redefine "merit" hiring, and expand hire now, train later employment.

"Public employers talk piously but are among the most biased employers," asserted Robert McCulley, special assistant to the Commissioner of Personnel in Connecticut. Present merit system testing procedures disenfranchise a large percentage of the citizens the public agencies are supposed to serve, he said. One step Connecticut is taking to make merit hiring more equitable is to replace its "rule of three" selection pro-

APPRENTICE TRAINING STUDIED IN LIGHT OF NEW FEDERAL GUIDES

A breakthrough is needed, says Assistant Secretary of Labor Malcolm R. Lovell, Jr., to resolve the conflicting demands of apprentice training—the need for skilled workers in a technological society, and the inability of the educational system to come to grips with training people to be skilled workers. Speaking to the National Apprenticeship and Training Directors Conference conducted April 12 and 13 in conjunction with Labor's Bureau of Apprenticeship and Training (BAT), Lovell called on the business and union leaders to "take a look at apprenticeship programs . . . to set goals and timetables for development of affirmative action plans."

The conference's lengthly discussion of the recently modified apprenticeship regulations in Title 29, Code of Federal Regulations, part 30 (29 CFR 30), was aimed at providing those attending with a better under-

standing of 29 CFR 30, and to answer questions on how the federal government wants those regulations implemented. (For excerpts from the federal regulation, see MIS, February 10, 1971, page 261.) "We wanted to make this a first overview for those people in executive positions with apprenticeship and training programs," said a BAT spokesman, "and to resolve their fears as to what this meant for their practicular programs." What, in effect, 29 CFR 30 means is that any apprenticeship program involving more than five workers *must* comply with the provisions concerning selection of minority groups in apprentice training. The four selection methods from which a company may choose are (a) selection by rank from a pool of eligible applicants; (b) selection at random from a pool of eligibles; (c) selection from a pool of currently employed persons wishing to enter apprentice training; or (d) an alternative selection method developed by the company and approved by a BAT field representative. The Secretary of Labor and a department level review board approve or disapprove exceptions to these guides.

Other action on the part of the company called for are:

- Outreach and recruitment efforts in bringing minorities into apprentice programs in numbers commensurate with their proportion in the local population.
- Cooperation with high schools and vocational education systems in facilitating access to the program through job oriented education.
- Development of "good faith" plans aimed at concrete results, rather than empty promises, in providing apprentice training to minorities.
- Careful scrutiny of testing and selection procedures in apprentice training, with an eye to the recent Supreme Court ruling that tests must be job-related. (See MIS, March 24, 1971, Pages 316 and 330.)

"In substance," says Lovell, "what 29 CFR 30 means is that an employer must take positive steps to ensure full utilization of minority apprentice applicants." Many companies are already doing this. Wayne E. Grimm, director of the Chrysler Institute, addressed the conference on the strides Chrysler's apprentice program has made in the past five years. However, those who do not make an honest effort to comply must begin to do so or face withdrawal of recognition for their program by Labor, as well as place themselves in jeopardy of prosecution under other laws, such as Title VII of the Civil Rights Act, or Executive Order 11246. Punitive action of this sort is not wanted by anyone. "Cooperation," says Lovell, "is the key to what's needed in apprentice training."

MOUNTING BUSINESS CONCERN CITED IN NEW INDUSTRY DRUG ABUSE SURVEY

The growing concern about drug abuse within industry's employee ranks (see MIS, December 2, 1970, page 129) has been confirmed by a recent survey of drug use in businesses throughout the United States. Conducted by the Conference Board of New York City, the survey indicates that while most companies have had only limited experience with drug abuse, they believe the problem to be mushrooming.

The Conference Board canvassed 222 firms, representing a geographical cross section and a wide range of industrial categories, to develop further data on industrial drug abuse. Of the 222 participants, 131 were manufacturing concerns and 91 were nonmanufacturing companies ranging in size from 250 employees to 250,000.

Survey Content and Results

In conducting its survey, the Conference Board sought to identify the nature and extent of the drug problem in business as perceived by management; company experience with employees using or abusing drugs; implications for corporate policy and practice with regard to drug abuse; company involvement in community drug addiction education, treatment, and rehabilitation programs; and company posture on drug abuse and law enforcement.

An analysis of the survey response reveals:

- More than half the companies are planning in-company programs to counteract drug abuse.
- Companies in large urban centers report a higher incidence of employee drug abuse, or at least they are more aware of it, but neither geographical location nor size of company makes a difference.
- Despite the same rate of incidence, nonmanufacturers are more apt to fire an employee for drug abuse while manufacturers are a little more likely to call the police.
- The use of "soft" drugs such as amphetamines is more prevalent than hard drugs such as heroin. But a majority of the companies do not seem to care if their employees use marijuana, unless it affects productivity.

While nearly 40 per cent of the surveyed firms state there is no drug problem in their organization —at least not yet—and 9 percent do not know about drugs, 117 firms (53 percent) are aware they have a company drug problem. However, most companies in the "aware" group classify their drug problems as "minor instances," which range from the isolated heroin user to widespread employee use of marijuana. The report quotes the vice president of an office equipment company as saying, "I'm aware of the smell of marijuana in the men's room quite often and occasionally on the shop floor. But that really doesn't bother me since I haven't actually observed joints being passed around, and I'm not aware of any effects 'grass' smoking has on productivity unless someone is stoned all the time."

420 MINORITY YOUTHS IN 3 AREAS GET CHANCE FOR APPRENTICESHIP

WASHINGTON -- Some 420 minority youths will be prepared for apprenticeship entrance test in the construction trades through Federal funding of Apprenticeship Outreach projects in New Jersey, Southern Illinois, and the District of Columbia, Manpower Administrator Paul J. Fasser, Jr., recently announced.

Total Federal investment in the three projects is $254,628.

-- The State of New Jersey Department of Labor and Industry will prepare 350 minority youths in Camden, Jersey City, New Brunswick, and Paterson, under a one-year $170,241 contract with the Labor Department.

-- The Business Representatives Council of Southern Illinois, based in Collinsville, will prepare 40 minority youths in East St. Louis and in Southern Illinois counties, under a one-year $43,095 contract. Under two previous contracts the council helped 86 become building trades apprentices.

-- The Christ Child Settlement House, Washington, D.C., will prepare 30 minority youths to take carpenter-apprentice tests, with a 10-month $41,292 contract. Under two previous contracts, the sponsor placed 56 minority youths as carpenter apprentices.

Objective of the Apprenticeship Outreach program is to prepare minority youths to take and pass written and oral apprenticeship entrance tests through a concentrated tutoring program of up to 10 weeks per trainee, tailored to each individual's learning needs.

Over the three-year period since this Manpower Administration program became fully organized, more than 8,700 minority youths have become apprentices.

Week of April 12, 1971

OKLAHOMA UNIONS ACCEPT 143 MINORITY APPRENTICES, GET 4TH CONTRACT

WASHINGTON -- Some 40 minority youths will be prepared to pass construction trades entrance tests and become apprentices by the Southwestern Oklahoma Building and Construction Trades Council under its fourth contract awarded by the Department of Labor.

Manpower Administrator Paul J. Fasser, Jr., announced that the new one-year contract will run until March 1972, supported with $48,818 in Apprenticeship Outreach program funds.

Under its three previous contracts, the Oklahoma City-based council placed 143 apprentices. Of all apprentices placed by the council, 9 were bricklayers, 17 carpenters, 5 cement masons, 5 electricians, 4 ironworkers, 17 painters, 5 plasterers, 6 plumbers and pipefitters, 66 roofers, and 9 sheet metal workers. The council represents 55 Southwestern Oklahoma counties.

The Manpower Administration's Apprenticeship Outreach program prepares minority youths to pass tests and become apprentices, mostly in 17 building and construction trades, using a concentrated tutoring technique programed to each individual's needs.

Since it was fully organized in January 1968, through December 1970, 8,700 minority youths became apprentices through the Apprenticeship Outreach program. They include blacks, Spanish-surnamed, Indians, and Orientals.

Building Industry Here Could Dodge U.S. Rule

By CHARLES LAMBETH

Atlanta's construction industry still has a chance to dodge a federal integration plan, a senior Labor department official said here Monday.

But, he added, a federal order setting percentages for minorities in Atlanta's work forces and construction unions, is being written "right now," in case it is needed.

Arthur Fletcher, an assistant secretary of labor, said he would not make public a date by which Atlanta must write its own plan. "But we have one in mind," he cautioned.

Fletcher said he would not reveal the deadline because it has been his experience that minority groups, hoping for strict federal action, walk out of local discussions when the government sets a deadline.

The Black Coalition and Metro Atlanta construction and union officials started talks to develop a "home town" industry integration plan over a year ago. The talks broke down before Christmas and the Labor department held hearings here two weeks ago.

Staff Photo—Hugh Stovall
DEADLINE IN MIND
Arthur Fletcher

The hearings showed that construction trades discrimination in Atlanta is "worse" than in other cities "in certain crafts," Fletcher said Monday.

He said he favors federal intervention in such cases.

Fletcher said the Labor department policy for two years has been to support "home town" plans, written in the cities in which they are imposed. Experience has shown this to be "idealistic," he said.

Federal plans are "showing more results in paychecks" for minorities, he explained. "I am pushing for a change in policy," the assistant secretary said, "but I haven't won yet.

He said he would "go along" with an Atlanta "home town" plan if it would truly get blacks and other minorities "sharing those jobs."

The federal investigators said after the Atlanta hearings that they had heard testimony showing discrimination in the highest-paid of Atlanta's trade unions and failure of many federal contractors here to employ more than a token number of blacks.

Fletcher said the result "might well be" discrimination suits against local unions and action to bar discrimination suits against local unions and action to bar dicriminating contractors from federal contracts. He said such action depends on his legal staff's evaluation of the testimony gathered in Atlanta.

Fletcher dismissed a proposal by the Atlanta NAACP that all federal funds be cut off for local projects until the unions and contractors toe the line.

"At law, you can't do it," he said, "without due process."

"Due process, he said, would require the government to go into court against each affected union and contractor. Washington, he said, "does not have that many lawyers."

ANTI-UNION AND ANTI-BLACK

by Bayard Rustin

An alliance is now taking shape which, despite the professed intentions of some of its members, will set back the black struggle for economic advancement. It is an alliance between liberals who think they are helping blacks by hurting unions, and conservatives who want to appear to be helping blacks precisely in order to hurt unions. The basis of agreement is to smash unions by using the open shop and other anti-union measures. The effect will be to irreparably harm blacks who depend upon unions for their economic security, all the "liberal" cant to the contrary notwithstanding.

The Nixon Administration, with its sophisticated brand of conservatism, provides the ideal setting for such an alliance to take shape. The Administration's policies, which have hurt both unions and blacks, have been vigorously denounced by the trade union and civil rights leadership. In order not to lose votes as a result of its policy failures, the Administration has unleashed Agnew to win over "the worker," and it is trying to appeal to Negroes by attacking unions in the name of fighting union discrimination in the construction industry.

The most forthright expression of this "pro-black", anti-union posture was given by Assistant Secretary of Labor Arthur A. Fletcher in a speech delivered last month before a meeting of open shop contractors. Mr. Fletcher had nothing but praise for "a President and an Attorney General who support a specific anti-discrimination program in this field." There was no attempt to analyze why the President and the Attorney General--Attorney General Mitchell, that great friend of the Negro!--

might be taking this course. Mr. Fletcher was interested only in proclaiming, with great exuberance, that the Administration had finally "whipped" the unions.

Mr. Fletcher, let us remember, was speaking to open shop contractors, people who don't care about the color of a worker's skin, as long as he's not in a union and does not have to be paid union wages. The open shop contractors applauded his speech not because they like Negroes and are interested in their welfare, but because they don't like unions. They would hardly have applauded if Mr. Fletcher had called for full and equal participation of black workers in the building trades at union wage scales.

Mr. Fletcher warned the open shop contractors that they should not take advantage of the assault on unions by exploiting a new source of cheap black labor. "Too often in history," he said, "black people have been used as strike breakers, only to be put aside by management, and discriminated against by employers, when they had served the purpose of breaking the union." But the contractors applauded just the same because they've been around too long. They know full well that breaking unions and getting cheap labor go hand in hand, and that the appeals to higher motives are only icing on the cake. "It is your responsibility," Mr. Fletcher said, "to see that the civil rights movement is not perverted into an anti-labor, anti-worker movement." It is shocking that Mr. Fletcher could seriously make this appeal to open shop contractors who have never made any effort to hide their hostility to unions. They know what he doesn't know--that business is business, and that the objective of the businessman is not to fight for racial justice but to make money, and if that means cutting wages, then so be it. It is for this very reason that unions were formed in the first place.

What Mr. Fletcher did not tell the non-union contractors is that Negroes depend on unions even more than whites. According to a study just released by the U.S. Department of Commerce, "For Negro men working year-round full-time in blue-

collar occupations, union members earned about 50 percent more than their nonunion counterparts." The ratio of union to nonunion wages for whites was a good deal lower.

It is one thing to call for full and equal opportunities for minority groups workers in the building trades. It is an entirely different matter to call for union busting, yet this is what Mr. Fletcher has done. I am sure he will not welcome the terrible consequences this will have for Negro workers, yet he (and the conservative Administration he represents) is following this course anyway. One thing is clear: that when Mr. Fletcher spoke before the meeting of open shop contractors, his audience understood what he was saying better than he did himself. He said, "The fight is for racial justice," but they heard, "The fight is against unions." What they knew, and what Mr. Fletcher seems incapable of grasping, is that the fight against unions is ultimately a fight against blacks as well.

Dear Dr. Via:

Dr. Marshall has requested that I send the enclosed papers to you.

One is a description of our project to compare apprentice and nonapprentice entry into selected construction trades; the second is the questionnaire which we plan to use, at least at this stage.

If you have any questions, please let me know.

Sincerely,

Susie Turner

PROBLEM

A Comparison of Journeymen

Who Have and Have Not Completed Apprenticeships

The supply of skilled manpower is important for social as well as economic reasons. Considerable controversy surrounds efforts by Negroes and other minorities to enter this industry. Moreover, public officials and economists have criticized unions for restricting entry into the skilled trades, thereby creating labor shortages which are alleged to exert considerable inflationary pressure as public policies attempt to reduce unemployment while maintaining stable prices and free institutions. In spite of this controversy, however, surprisingly little is known about the nonapprentice processes whereby workers acquire journeyman status, although it is clear from the studies of Foster[1] and others that a majority of workers in the construction industry have attained journeyman status without serving apprenticeships.

In view of the importance of this question and the limited information about it, it is imperative that comprehensive research be done to analyze the routes through which workers gain access to construction jobs. The major objective should be to study the work experiences and stability of income and employment of journeymen who have and have not served apprenticeships. Such research would illuminate the effects of many institutional forces acting on the supply of labor (and therefore on racial equality, wages, labor costs, and prices) in this vital industry. We propose to make a study of the various processes which unions use to (1) admit members to their organization and (2) confer journeyman status upon them. Also considered will be the standards or criteria used to judge workers for journeyman status and the procedures by which workers outside a local's jurisdiction are permitted to work in that jurisdiction.

---

[1] See Howard G. Foster, "Nonapprentice Sources of Training in Construction," Monthly Labor Review, Volume 23 (February, 1970), pages 21-26.

We have noticed in particular that in the various negotiated plans for promoting minority group entry into construction (the Chicago Plan, the Pittsburgh Plan, the Denver Plan, the New Orleans Plan, etc.), the process and the standards agreed upon show considerable variation by craft and by place. Since minority groups are underrepresented in union apprenticeship programs and since there is a considerable time lag between entry into apprenticeship and the attainment of journeyman status in most crafts, the nonapprenticeship routes to journeyman status take on an added significance as means through which minorities can gain more rapid access to employment in the construction industry.

We therefore propose to study the process and standards for a selected cross section of crafts in the building trades -- sheet metal workers, plumbers and pipefitters, electricians, iron workers, bricklayers, and carpenters -- in the following cities:

(1) Chicago

(2) Pittsburgh

(3) New York City

(4) San Francisco-Oakland or Los Angeles

(5) Houston

(6) Atlanta

(7) A smaller city in the South -- e.g., Jackson, Mississippi; Little Rock, Arkansas; or Charlotte, North Carolina

Specifically, we plan to raise such questions as the following:

(1) How do the standards and selection committees of the union operate? What is their composition, and how are the members of the committees selected?

(2) How formalized are the arrangements for entrance into unions? Do the standards for admission change over time and in response to changing conditions within the labor market? How have these standards evolved historically, and when were the present standards adopted?

(3) When a test is required for journeyman certification, what type of test is given? Who designs it? Who grades it? How is it graded? What exceptions to testing requirements are made, and for what reasons? Is the same test required of apprentices who want to qualify for journeyman status? Have the tests been validated with respect to job performance?

(4) What are the concerns of union leaders and union members with regard to the standards and qualifications issue? With regard to the union entry and journeyman certification process?

(5) What role do the international unions play in determining the process and journeyman standards?

(6) How common is the practice of allowing nonunion members, or union members from other jurisdictions, to work on permit? What are the functions and implications of this arrangement?

(7) What classifications of journeyman certification exist, and what is the degree of transferability among these types of certifications? What sort of work is available to workers in each classification?

This study will build on the other studies we have made on the construction industry, particularly those of the Negro and apprenticeship and our study of black contractors.

OBJECTIVES

The objectives of the study are:

(1) to examine the process by which nonapprentice workmen become journeymen and the standards used to judge them to be qualified as journeymen;

(2) to describe, step by step, the process by which workers gain entry into building trades unions and achieve journeyman status;

(3) to describe variations in this process and these standards by city, craft, and union;

(4) to explain the reasons for the variation; and

(5) to offer suggestions which will help to establish a process in which the legitimate interests of all parties -- unions, the public, minorities, and employers -- are considered.

RESEARCH PROCEDURES

The study will encompass two phases. In Phase I (January 1, 1971, to September 30, 1971), we plan to carry out a pilot study in two cities -- one in the South and one in the North (probably Atlanta and Chicago) -- to determine the feasibility of the overall project and to perfect our research procedures for use in the five remaining cities. Phase II (September 30, 1971, to September 30, 1972) will be devoted to the study of the five cities outside the pilot project and to the preparation of the final report.

In gathering our information, we intend to conduct interviews with employers, union leaders, union members, civil rights leaders, educators, and other knowledgeable persons. In each city, we plan to interview the presidents and business agents of local unions to obtain information regarding the form of the admission and certification process, their concerns regarding this process, a history of the procedures currently in use, and the role of the international in determining the procedures. We intend to talk with the members of the selection or admissions committee in each union to obtain data concerning the operations and administrative practices of the committee. We also intend to interview scientifically selected samples of journeymen and workers on permits for each craft in each city in order to learn how they gained admission to the union and became journeymen.

In addition, we intend to talk with administrators of private vocational schools and public vocational education programs in order to learn what experiences their graduates have had with unions. We plan to interview civil rights leaders to learn what the experiences of minority applicants have been in encounters with unions.

Finally, we propose to talk with members of local building trades councils, local contractors' associations, and other knowledgeable individuals to reveal such matters as the shared concerns of persons in the industry regarding the admission process and changes in the process occasioned by market fluctuations. We plan to obtain as much information as possible from existing sources and to coordinate with others studying construction manpower, particularly Professors John Dunlop and Quinn Mills, who are examining the effects of cyclical variations on employment and employment practices in construction.

In all phases of the study, the research director will play a major role, particularly in the initial phases of the project in which he will make the contacts with the leaders of the international unions and other concerned parties whose cooperation is indispensable if the study is to be a success. As the study progresses, he will continually oversee the interviewing processes and sampling techniques to be used and will coordinate the efforts of all of the research participants in order to provide the continuity and exchange of information necessary to the smooth operation of the project.

QUESTIONNAIRE

SECTION I. To be completed only by members who hold journeyman cards in Local Number _____. Workers on permit should complete only Section II.

1. What is your age? _____ Race? _____White
_____Negro
_____Spanish Surnamed American
_____American Indian
_____Oriental
_____Other (specify) _____

Marital status? _____single
_____married
_____widowed
_____divorced

2. In what year were you admitted to journeyman status? _____

3. Did you graduate from an apprenticeship program sponsored by any local of this union or by a joint apprenticeship committee composed partially of representatives from any local of this union? _____Yes _____No

If you answered "yes" to Question 3, complete Part A below.
If you answered "no" to Question 3, skip Part A, and complete Part B below.

Part A

1. Was your apprenticeship program sponsored by the local in whose jurisdiction you now work? _____Yes _____No

2. From what source or sources did you become interested in apprenticeship in this union? (Check as many as apply to you.)

_____father was a union member
_____encouraged by other relatives in the union
_____had friends in the union
_____trained for the trade in school
_____trained for the trade in the military
_____worked at the trade at nonunion jobs
_____trained for the trade in other industry (e.g., manufacturing)
_____other (specify) _____
_____

3. How long was your apprenticeship program? _____years

4. In your apprenticeship, were you given credit for

vocational training _____ yes _____ no
_____ years

prior experience in the trade _____ yes _____ no
_____ years

5. In high school, did you pursue a general academic, business, vocational, or college preparatory program? (Underline the best choice)

6. Did you receive a high school diploma? _____ yes _____ no
If not, did you receive a General Equivalency Diploma? _____ yes _____ no

7. Did you ever attend college? _____ yes _____ no
If so, for how long? _____ years

8. At the end of your apprenticeship, were you required to
(a) pass a written test over your knowledge of the trade? _____ yes _____ no
(b) pass a practical test (working with the tools)? _____ yes _____ no
(c) submit to an interview by members of the JAC or a selections committee? _____ yes _____ no
(d) pay an initiation fee? _____ yes _____ no
If yes, what was the amount? $_____

9. Give a brief description of the kind of work you do. Do you do a wide variety of work, or do you specialize in only one or a few tasks? Do you work primarily in residential, commercial, or industrial construction?

10. If your union issues different kinds of journeyman cards, what class of card do you hold? _____

11. Can you do other types of work within the jurisdiction of this local besides the kind of work you do now? _____ yes _____ no

12. Can journeymen working at other tasks also do your type of work? _____ yes
_____ no

13. Is there any classification of work at which only journeymen holding a particular type of card can be employed? _____ yes _____ no
If yes, what classification is it? _____

14. Can you advance to a higher or more skilled type of work by undergoing advanced journeyman training conducted by this union? _____yes _____no

15. Have you ever been advanced in the above manner? _____yes _____no

16. Approximately how many weeks did you work last year under the jurisdiction of this local?
_____45-50 weeks
_____40-45 weeks
_____35-40 weeks
_____less than 35 weeks

Part B

To be completed only by journeymen who did not graduate from a union apprenticeship program.

1. In what year were you admitted to journeyman status? _____

2. Did you complete any portion of a union apprentice program? _____yes _____no
If yes, was it your present local? _____yes _____no
How many years did you complete? _____less than one year
_____one to two years
_____more than two years

3. Were you admitted to journeyman status by this local? _____yes _____no

4. How old were you when you became a journeyman? _____years

5. Were you employed in construction at the time you were admitted to the union, or did the union refer you to a job? _____was already employed in construction
_____union referred me to a job

6. In which of the following ways did you gain the experience and training which qualified you as a journeyman? (Check as many as apply to you.)
_____trained for the trade in school
_____trained for the trade in the military
_____worked at the trade on nonunion jobs
_____picked up the trade by working as a helper
_____trained for the trade in another industry (e.g., manufacturing)
_____learned in government training programs
_____other (specify) _____

7. In high school, did you pursue a general academic, business, vocational, or college preparatory program? (underline the best choice)

8. Did you receive a high school diploma? _____yes _____no
If not, did you receive a General Equivalency Diploma? _____yes _____no

9. Did you ever attend college? _____yes _____no
If so, for how long? _____years

10. Were you admitted to the union as a journeyman after working on permit?
_____yes _____no

11. In order to become a journeyman, were you required to
(a) pass a written test over your knowledge of the trade? _____yes _____no
(b) pass a practical test (working with the tools)? _____yes _____no
(c) submit to an interview by members of the JAC or a selections committee? _____yes _____no
(d) pay an initiation fee? _____yes _____no
If yes, what was the amount? $_____

12. Give a brief description of the kind of work you do. Do you do a wide variety of work, or do you specialize in only one or a few tasks? Do you work primarily in residential, commercial, or industrial construction?

13. If your union issues different kinds of journeyman cards, what class of card do you hold? _____

14. Can you do other kinds of work within the jurisdiction of this local besides the kind of work you do now? _____yes _____no

15. Can journeymen working at other jobs also work at your job? _____yes _____no

16. Is there any classification of work at which only journeymen holding a particular type of card can be employed? _____yes _____no
If yes, what classification is it? _____

17. Can you advance to a higher or more skilled type of work by undergoing advanced journeyman training conducted by this union? _____yes _____no

18. Have you ever been advanced in the above manner? _____yes _____no

19. Approximately how many weeks did you work last year under the jurisdiction of this local?
_____45-50 weeks
_____40-45 weeks
_____35-40 weeks
_____less than 35 weeks

QUESTIONNAIRE

SECTION II. To be completed only by workers on permits.

1. What is your age? _____ Race? _____White
_____Negro
_____Spanish Surnamed American
_____American Indian
_____Oriental
_____Other (specify) _____

Marital status? _____single
_____married
_____widowed
_____divorced

2. How long have you worked on permits issued by this local? _____

3. Do you hold a journeyman card in another local of this union? _____yes _____no
If so, which local? Number _____

4. If you are not a union member, what were the most significant sources of your training? (Check as many as apply to you.)
_____picked up the trade while working as a helper
_____worked at the trade on nonunion jobs
_____trained for the trade in another industry (e.g., manufacturing)
_____trained for the job in school
_____trained for the trade in the military
_____learned the trade through government training programs
_____trained by relatives or friends
_____other (specify) _____

5. Do you pay one fee or weekly or monthly fees for your permit? _____
Are your fees the equivalent of union dues? _____yes
_____fees are higher than dues
_____fees are lower than dues

6. Give a brief description of the kind of work you do. Do you do a wide variety of work, or do you specialize in only one or a few tasks? Do you work primarily in residential, commercial, or industrial construction?

7. Are there any types of work which are not available to you? _____yes _____no
If so, what are they? _____

8. Do you receive the full journeyman rate of pay? _____yes _____no

9. In high school, did you follow a general academic, business, vocational, or college preparatory program? (underline the best choice)

10. Did you receive a high school diploma? _____yes _____no
If not, did you receive a General Equivalency Diploma? _____yes _____no

11. Did you ever attend college? _____yes _____no
If so, for how long? _____years

12. Why are you working on permit?
_____hope to become a full union member
_____am on probation for membership status
_____am working only temporarily in this area
_____don't want to become a union member because _____
_____
_____
_____other (specify) _____
_____

13. Approximately how many weeks did you work last year under the jurisdiction of this local?
_____45-50 weeks
_____40-45 weeks
_____35-40 weeks
_____less than 35 weeks

Washington Trip

Firing Demanded

Edward J. Carlough, president of the AFL-CIO Sheet Metal Workers, demands that President Nixon fire Assistant Labor Secretary Arthur Fletcher on grounds that Fletcher hinted that White House action to curb wage increases was really designed to weaken unions.

In a letter to President Nixon, Carlough says that he was "shocked and angry" to learn that according to Fletcher President Nixon's suspension of the Davis-Bacon Act was not to control inflation but rather to weaken and even destroy the construction unions.

Carlough quoted Fletcher as having told a group of non-union contractors in a speech March 12 that "the era of arrogance and discrimination by some trade unions has ended. The union grip on the processes of government has weakened."

Fletcher says he was trying to get across his idea that some groups, including labor unions, have in the past used governmental processes to get the best-paying jobs for their own members and freeze out other groups, often blacks and other minorities.

Houston Task Force

The Equal Employment Opportunity Commission Houston Task Force continues its attack on job discrimination against blacks, Chicanos, and women, according to a progress report announced by EEOC Chairman William Brown. The Task Force was established in June 1970 after hearings in Houston revealed widespread employment discrimination by the area's major employers and unions.

Brown gives the following status report on the Task Force's 68 cases:

- Action has been instituted in federal district court by charging parties in four cases.
- One case is being readied for court action.
- Five cases are undergoing settlement efforts.
- Investigations have been completed in 54 cases.
- Three investigations are near completion.
- One investigation is administratively closed for lack of jurisdiction.

Some Houston firms have been cooperative, Brown says, but for the most part, those charged with discrimination have not voluntarily complied with the law.

Ohio Laws Superseded

In another court test involving questions of conflict between state and federal laws, the U.S. District Court for the Southern District of Ohio rules that certain sections of the Ohio State law governing employment of women are in conflict with and superseded by Title VII of the 1964 Civil Rights Act.

The court says that specified sections are invalid because they conflict with and frustrate the policy and purpose of the Civil Rights Act produced by Congress. The litigation focused on those provisions in the Ohio law limiting the occupations women may hold, limiting weight lifting, and limiting the hours they may work. The court's view is that the provisions specified in Ohio state laws on employment of women do not establish "bona fide occupational qualifications" within the meaning of Title VII of the Civil Rights Act. (Redinger v. General Motors Corp.—USDC SOhio)

Pre-Hearing Probe

A massive interrogation of the American Telephone & Telegraph Company and its subsidiaries in 30 cities is being conducted by the Equal Employment Opportunity Commis-

sion in preparation for its coming hearing before the Federal Communications Commission, where the EEOC and six civil rights organizations have been given the right to intervene in the consideration of long distance rate increases. They charge AT&T with racial discrimination.

Questionnaires have been sent to the companies in the Standard Metropolitan Statistical Areas that contain the largest aggregations of blacks and Spanish-surnamed Americans.

The FCC hearing examiner postponed the hearing originally set for March 29 to allow time for the company to answer EEOC's request for records and answers to its questions regarding employment practices of the operating companies.

EEOC has been assured by the telephone company that it can expect the "bulk" of the voluminous information it is requesting by July 1.

Whitney Young Memorial

The federal government will establish the "Whitney M. Young, Jr., Skills Center" at Shelbyville, Ky., where Young spent his early life, as a memorial to the late civil rights leader. The plan for the memorial, originally suggested by Kentucky Governor Louie B. Nunn, was announced by Labor Secretary J. D. Hodgson and Whitney M. Young, Sr., after conferring with President Nixon.

The project, scheduled to cost $1,875,000 a year, will be financed by the Labor Department and the Department of Health, Education and Welfare under the Manpower Development and Training Act. The Louisville, Ky., city schools have agreed to act as sponsor.

Plans for the center call for the accommodation of 300 youths in training, 125 commuting daily. Initially the school will provide only non-residential training, but future plans include residential trainees. Shelbyville is located near suburban Louisville and transportation for the first non-resident enrollees will be provided by the Louisville school system.

Training will be available in welding, automobile mechanics, secretarial skills, cooking, data processing, and sales. Additionally, basic and job related training, counseling, job development, and placement will be available.

EEO Workshop

A target goal of 500,000 minority jobs a year on government contracts has been set by the Office of Federal Contract Compliance, and it hopes that by the end of the 70's, minority workers will make up 17 percent of the construction industry workforce, Assistant Labor Secretary Fletcher tells an equal employment workshop sponsored by the Washington Personnel Association at George Washington University.

Noting that he opposes the proposed transfer of OFCC to EEOC, Fletcher points out that presently OFCC's work is reviewed at regular cabinet meetings, whereas if OFCC were transferred, its work would be discussed only if and when the EEOC chairman were invited to attend.

EEOC Chairman Brown tells the workshop that several hurdles still block the way to equal employment opportunity. These are:

- "Neutral" employment selection procedures are used that disqualify a disproportionate number of minorities.
- Employers are reluctant to allocate money for EEO programs.
- Where a particular company has an EEO program, the EEO officer usually is not directly responsible to the chief executive and usually has myriad other duties that keep him from giving full attention to the EEO program.

JOBS Critique by GAO

The JOBS program's design, operations, and reported results are criticized in a study released by the General Accounting Office. The GAO report is based on an investigation of JOBS programs in five representative cities—Detroit, Portland (Ore.), San Francisco, Oakland, and Seattle—between the inception of JOBS in 1968 and June 30, 1970. Thirty-one federally-funded contracts were studied as well as 70 non-contract employers.

The report notes that the JOBS program is hampered by the fact that it was conceived during a period of high employment and that adequate consideration may not have been given to the effect that an economic contraction would have on the program's operation. In the present economic climate, in order for an employer to participate in the JOBS program, he would have to give preference to disadvantaged persons over persons he would have hired normally in filling job vacancies; this has the effect of shifting the burden of unemployment from disadvantaged persons to others, the report continues. To rectify this situation, GAO recommends that the Labor Department's training efforts focus on skill shortage positions where displacement of other workers can be minimized.

JOBS contracting procedures, by which employers of 25 percent of JOBS trainees are reimbursed for extraordinary training costs, also are criticized. The study argues for the replacement of the present fixed-unit-price contracting procedure with cost-reimbursement contracts in certain cases. It notes that although the fixed-unit-price system involves less record-keeping and "red tape" for the employer, the system has resulted in over-payments in 17 of 31 contracts studied, due primarily to the difficulty of estimating the amount of training the enrollees need or its cost. GAO also says that employers' job pledges frequently are inflated and urges that more care be taken in the award of contracts to ensure that the employer can provide the number of job opportunities he promises. Likewise, it urges a closer watch by the Labor Department on the supportive services pledged by employers, since its study found many instances where promised services were not delivered even though contractors were paid as if they had been.

Finally, the study criticizes the scope of the JOBS program, charging that it serves so broad a spectrum of jobless persons that many of its enrollees are not any different from regular hires. Among non-contract JOBS enrollees, GAO finds so little evidence of enrollees' disadvantaged status that it declares "there is a very limited basis for confidence that employers are hiring only those persons who are disadvantaged." It urges that the Labor Department start making closer checks on information supplied by applicants, such as family income, and carefully screen candidates for non-contract, as well as contract, JOBS vacancies.

The Department of Labor and the National Alliance of Businessmen, who jointly sponsor the JOBS program, in responding to GAO's study, question whether GAO can draw such broad conclusions and recommendations on the basis of a review involving only five cities. Additionally, they acknowledge difficulties in data collection, but warn against complicated reporting or contracting procedures which will deter employers from participating in the JOBS program.

WEEK OF APRIL 19, 1971

BLACKS, OTHER MINORITY YOUTH TO BENEFIT FROM GOVERNMENT ACTION TO WIDEN APPRENTICESHIP OPPORTUNITIES

WASHINGTON -- A major new step has been taken by the Nixon Administration to help black and other minority group youth gain skilled jobs through apprenticeship programs.

Secretary of Labor J. D. Hodgson recently announced that revised regulations governing equal opportunity in the selection of apprentices have been put into effect.

"For the first time, the U.S. Apprenticeship system will have specific measures to ensure that minorities will be afforded full and equal opportunity in all registered apprenticeship programs," the Secretary said.

The new regulations, proposed by the Labor Secretary on January 29, require program sponsors to take positive steps to ensure full utilization of minority group persons in their apprenticeship programs, including an aggressive outreach-recruitment effort.

"Program sponsors with deficiencies in the utilization of minority apprentices must adopt an approved selection method or establish appropriate percentage goals and timetables as part of their affirmative action program", Hodgson said.

Although the number of minority group apprentices in registered programs has increased over the past few years, there is little doubt that there exists wide gaps in acceptance of qualified minority apprentices in many skilled trades," the Secretary said.

"For example, in the construction trades, blacks represented 5.2 percent of all apprentices in 1970. This is an improvement over the less-than-two percent participation they had in 1964.

(MORE)

"But, there is clearly room for improvement and these new regulations are necessary not only to close the gaps that exist but to maintain the improvements noted," the Secretary said.

The new regulations modify Title 29, Code of Federal Regulations, Part 30, of 1963 entitled, "Equal Employment Opportunity in Apprenticeship and Training."

Minor changes have been made in the January 29 proposal as the result of comments and suggestions made to the Secretary during the past-proposal period.

The new regulations apply to all apprenticeship programs registered with the Manpower Administration's Bureau of Apprenticeship and Training (BAT) and with State apprenticeship agencies recognized by the Bureau.

Covered program sponsors registered directly with the Labor Department will be required to develop and adopt affirmative action programs including, if necessary, approved goals, timetables and selection methods, within nine months of the regulations' effective date, April 8, 1971.

The 32 State apprenticeship agencies recognized by the Department of Labor are given six months to adopt plans conforming to the new requirements after the effective date. Programs registered with them must be in compliance within one year after effective date.

The affirmative action requirements apply to all programs having five or more apprentices. An estimated 10,000 apprenticeship programs registered either by the State apprenticeship agencies or by the Federal bureau will be

(MORE)

subject to the affirmative action requirements. An estimated 75 percent of all registered apprentices are in training programs covered by the affirmative action obligations.

CARPENTERS' UNION TRAINS OVER 7,800,
GETS NEW CONTRACT TO TRAIN 3,000

WASHINGTON -- After training 7,856 disadvantaged jobless workers in 30 months, the AFL-CIO Carpenters Union will train almost 3,000 more under an on-the-job training contract Manpower Administrator Paul J. Fasser, Jr. reports.

The 18-month contract between the Labor Department and the United Brotherhood of Carpenters and Joiners of America will run through May, 1972, in 46 States and the District of Columbia.

More than $2,646,000 in Federal funds has been obligated -- $1,319,796 for on-the-job training costs; $808,612 for supplemental classroom instruction, and $517,592 for trainee allowances.

Fifty percent of the nearly 3,000 trainees will be recruited from among minority groups and persons identified as disadvantaged by local State employment agencies.

Prospective participants will apply either to their nearest State employment service office or the nearest carpenter's local or any community action agency.

Under its previous contract, the carpenters completed training for 7,856 workers, 2,241 over its contract goal.

At the beginning of the year, 2,862 trainees were in active contract programs of preapprenticeship, apprentice-entry, and journeyman skill-upgrading.

Of those who completed training through the end of last year, 1,436 were preapprenticeship trainees, 715 entry apprentices, and 5,705 journeymen.

The training was administered under 973 separate subcontracts in 41 States and the District of Columbia.

(MORE)

The new contract calls for the continuing development and expansion of apprenticeship and training opportunities in carpentry and woodworking occupations.

The union's new training program emphasizes three major training areas:

-- Preapprenticeship (990 trainees). Combines 8 weeks of classroom instruction on tools, material and equipment with 18 weeks of on-the-job paid training at work sites.

-- Apprentice Entry (1,020 trainees). Provides closely supervised training and instruction during the first 6 months of a formal apprenticeship program to minimize the dropout rate in this crucial period of apprentice training.

-- Journeyman Training (975 trainees). Provides skill improvement courses of at least 40 classroom hours over a 7-week period to familarize journeymen in the trade with new techniques, methods and materials.

The contractor will promote and develop subcontracts with joint apprenticeship and training committees, union locals, and district councils.

Local Cooperative Area Manpower Planning System (CAMPS) agencies and State employment agencies will cooperate.

The Carpenters program was contracted under the Manpower Development and Training Act, administered by the Labor Department's Manpower Administration.

A State breakdown of projected training opportunities, costs, and allowances follows:

(MORE)

No Bond, No Job; No Job, No Bond

Black Construction Contractors Find Selves Cut Out of Lucrative Long-Term Contracts

By BURT SCHORR
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON—The rise of J. B. Caldwell Jr. seems to be what the American system is all about.

As a black youngster in South Carolina, Mr. Caldwell had to quit school to help out on his father's small cotton farm. He left the farm to become a construction laborer, and eventually he rose to foreman. Six years ago, he bought his own dump truck and hired out as a hauler. Mr. Caldwell used his profits to buy a second truck, then a third and a fourth. Today his C&C Hauling Co. here owns 20 dump trucks, and its 1971 hauling fees probably will exceed $300,000.

Yet he feels the system is stacked against him and his fellow Negro dirt-haulers, even in this predominantly black city. For they remain limited to one-shot, hourly-rate hauling jobs. So far, the door to more secure, more lucrative lump-sum contracts has remained closed to them.

"We get the leftovers, and we never know when another hauler will take the job away by offering to do it for a few dollars less," complains Mr. Caldwell.

The issue is far from academic. Downtown Washington currently is torn up by one of the nation's biggest earth-moving operations: construction of a $2.9 billion subway system, backed in part by Uncle Sam, that ultimately will extend from the District of Columbia into Maryland and Virginia suburbs.

Wanted: A Chance

Hoping to get a piece of the action, Mr. Caldwell and other black haulers in this area last fall incorporated themselves as Minority Truckers Inc. They almost landed a $1.2 million earth-hauling subcontract, but when they couldn't obtain a performance bond the prime contractor gave the job to an established white hauling company. A bid on a second hauling job went to another established company that had sewn up a more convenient dump site and thus could figure 25 minutes less in round-trip time for its trucks.

"Minority truckers can do the same thing as any white contractor," insists Mr. Caldwell. "We can dig it, we can load it and we can haul it. The number one thing we need is a chance."

Despite more than three years of government and private discussions of how to help them, the country's estimated 8,000 minority-group construction contractors, most of them black, largely remain trapped with limited opportunities.

The Chicago Economic Development Corp., which has worked with minority contractors since 1967, finds lack of financing, lack of influence with suppliers and lack of contacts with big general contractors as burdensome as ever for Negro and Spanish-speaking operators. Most vexing of all is the black contractor's inability to get bonding.

"The surety company requires experience in the particular kind of job under consideration before issuing a bond," says Garland C. Guice, executive director of the nonprofit Chicago organization. "But the black contractor needs a contract to do that kind of job to get the experience. He cannot acquire the contract without a bond. And so it goes, much like the bad housing, poor education and lack of employment cycle confronting blacks in other areas."

A Partial Solution

A partial solution seems in the offing. Under a new law, the Small Business Administration can guarantee 90% of any losses on construction performance bonds up to $500,000 in face value. The SBA is offering this backing on a pilot basis in Kansas City and Los Angeles, and surety companies have pledged to cooperate. Officials hope to expand the program to other cities by the end of this year.

But at the moment nonwhite firms, which make up less than 1% of the nation's building contractors, remain far outside the mainstream of U.S. construction. Even their total number, puny as it is, is misleading because the term "contractor" frequently exaggerates a company's actual role. Headquartered in an auto trunk or the back of a pickup truck, it may do little of the sophisticated planning usually associated with contracting.

Nonwhite firms, moreover, are heavily concentrated in traditional skills like carpentry, plastering, painting and masonry. They are conspicuously few in more technical fields like plumbing, sheet metal and electrical work. (Union discrimination has been one big reason for this.)

For all its shortcomings, though, the existing cadre of nonwhite building contractors has been regarded by the Johnson and Nixon administrations as an important resource for stimulating business ownership by racial minorities. Indeed, some minority companies have experienced fairly rapid growth in the past few years.

Some Success Stories

New York City's F. W. Eversley Inc., for example, has built churches, banks, community centers and industrial plants since Fred Eversley, a Barbados-born engineer, founded the Harlem company in 1963. Mr. Eversley expects contract volume to reach $50 million this year, about double the 1970 figure.

Trans Bay Engineers & Builders Inc. of Oakland, Calif., evolved only three years ago from a consortium of small black firms helped by Ford Foundation funds and a $3 million line of credit underwritten by Occidental Petroleum Corp. (Occidental gets a 20% share of Trans Bay's profits.) The firm expects to do jobs totaling $8 million this year, a 60% jump from last year, says Joseph Debro, vice president. Trans Bay projects include a school, a health center, a bank branch and housing for Navy personnel.

More typical, perhaps, is the experience of Washington's Charles Colbert, who until last year was mostly repairing junked refrigerators for resale to welfare families and servicing air-conditioning equipment. Then his firm, Colbert Refrigeration Inc., was taken under the wing of Malcolm Garfink, a suburban Maryland builder who awarded it the mechanical and air-conditioning subcontract for a 137-unit apartment-and-townhouse project.

Mr. Colbert says he ended up with a $20,000 loss on his $95,000 bid "because of quite a few mess-ups" on the job, many of them resulting from his own greenness. However, the Garfink concern, Urban Housing Contractors Inc., covered his debts, helped him reorganize and gave him two additional contracts totaling $170,000. Mr. Colbert, who has hired a veteran white plumber and a sheet metal worker to assist him, says the first of the two new jobs promises to show a profit.

$5 Million in Contracts

The government, in its efforts to buoy up minority building contractors, is trying to funnel more of its construction, renovation and repair jobs to them.

Between February 1970, when the SBA awarded its first such contract, and March 31 of this year, minority firms received 128 contracts totaling $5 million. In the year starting July 1, though, work assigned to black or Spanish-speaking contractors will soar to $30 million to $40 million, promises Leonard S. Cole, director of the SBA Office of Business Development.

In an experiment, the Department of Housing and Urban Development has set aside for minority contractors a $21 million project for 1,000 new units of federally assisted low- and middle-income housing in the Los Angeles area. Now assistant HUD secretary Samuel J. Simmons is asking his boss, George Romney, to extend the set-aside concept to all HUD programs, including water and sewage projects.

In many communities, however, mere talk of help for minority contractors could fuel their frustrations.

"White society is playing games with blacks in a very subtle way," storms Eric Powell, a small general contractor who heads the Contractors Association of Boston, representing some 70 black firms. "The multimillion-dollar big white contractors here are negotiating with subcontractors every day, and no black contractor is getting a dollar's worth of work."

Mr. Powell is especially bitter about what he says is the failure of Boston-area educational institutions to include black contractors in their building plans and about the continued inability of his association's members to get the bonding that is mandatory for city, state and federal work.

In defense of surety underwriting companies, Elver Pearson, manager of the American Insurance Association's Washington office, contends that they are "color blind," but he concedes their local agents sometimes aren't. "Let's face it, the agent doesn't move in the leading edge of social change," Mr. Pearson says.

THE ATLANTA CONSTITUTIO

Integration Plan Could Slow Builders

By CHARLES LAMBETH

The integration plan imposed on Atlanta's construction industry this week could cause problems for the city's airport and rapid transit plans, a federal official says.

In other cities — Washington and Philadelphia — federal integration orders have been followed by a cutback in federal investments, according to Jodie Eggers, director of the local Labor Department contract compliance office.

Eggers would be in charge of monitoring compliance with such an order here.

The Labor department said Wednesday it will enforce an Atlanta integration formula but gave no starting date. Federal plans, written in Washington by Labor Department attorneys, have been imposed in Philadelphia and in the nation's capital.

RACIAL RATIONS

Based on the experience of those two cities, Eggers said, this is what happens when a federal order is applied setting racial rations on federally-supported construction projects:

The federal order first specifies what percentage of black workers must be employed in each trade on each federally aided job in the city. (For Atlanta, that would mean every U.S.-backed project in Fulton, DeKalb, Gwinnett, Cobb and Clayton counties.)

Contractors who bid on these post offices, federal office buildings, hospitals, and even FHA-financed homes and apartments would have to promise to employ those percentages of black workers on each and every job.

NOT COMPLYING

The first few projects are started and the Labor Department checks compliance. Most of the contractors are not complying. They are not employing as many blacks as the law requires.

The contractors report they cannot get enough qualified black workmen. The Labor department reports this to the other branches of government.

And, government agencies start "pulling back" in that city.

Thus, the post office promised for a suburb is not built. There are suddenly no funds available for a new hospital wing. The federal court decides to stay in its old building a few more years. Model Cities money starts drying up.

ATLANTA

In Atlanta, Eggers warned, such a pull-back could take these forms:

1. The Department of Transportation finds itself unable to come up with the right amount of money at the right time to help Atlanta build a rapid transit system.

2. Roadblocks appear in the path of new airport construction. The Civil Aeronautics Board balks, and so does transportation. Every time there is federal money or federally guaranteed loans involved, there seems to be endless delays.

The federal pull-back is already evident in Philadelphia and Washington, Eggers said, and Atlanta would be no exception.

IT HURTS

It hurts the contractors, Eggers said—there are fewer federal projects.

It hurts the unions, he noted —there are fewer jobs for their men, black and white.

It hurts the monorities, he said—unions with veterans sitting on the union hall bench waiting for work are reluctant to train new men of any race.

This is why, Eggers said, he had hoped Atlanta's builders, unions and black leaders could come up with an "Atlanta" integration plan.

The federal hearings on Atlanta's construction industry, held here in early April, brought home the problem, Eggers said.

It has been over a month since the hearings ended with a threat of a federally imposed plan.

Yet, Eggers said, the people who could write such a plan are not even talking to one another.

Eggers said he knows of no negotiation sessions, formal or otherwise, since the hearings ended.

"Cruel Hoax" Says Jones

Atl. Bldg Trades Project

Model City Plans 5 Month Carpenters

THE VIRGINIA OBSERVER 5/28/71

Editorial — Page 4

NORFOLK — The Model City Agency will spend $70,000 in tax funds to give five months training to 20 students to learn 'he "theory of carpentry" and how "to build forms."

Students will be paid $1,960.00 for the 22 week course — as opposed to a $2,572.00 figure earned by first year apprentice carpenters.

To pay the $39,200 in wages to the trainees — will require in tax funds — $12,600.00 to pay two instructors for five months, $13,200.00 in supplies and materials . . . and, strangely, $5,000.00 for rent.

The $13,200.00 amount for supplies and materials was termed "high" by William "Bill" Jones — Business Agent of Carpenters Union-Local 331.

Since the training will be conducted in a building wholely owned by the Model City Agency — the $5,000.00 five months rent charge is inexplicable.

The $12,600.00 five months salaries to the two instructors equals an annual wage of $15,000.00, or about double the average wage earned by journeyman carpenters and $5,000.00 a year less than carpenter foremen.

Jones noted that both the State of Virginia and the U.S. Department of Labor required contractors and the union to to have four year apprenticeship program — and termed as "a cruel hoax" for the Model City Agency to "lead people to believe" that the five months program could adequately meet the federal and state four year requirements.

Jones noted that another federal program — "Operation Outreach" was actively enlisting applicants from minority groups for the apprenticeship program, and at starting and finishing wages higher than those advocated by the Model City Program.

Saddest Model Program

In the Beginning...the Congress created the Model City Program to prevent the deterioration of the cities.

The formula was simple, save and restore the houses that could be saved...tear down the ones past saving — and build new dwellings.

The federal government asked the building industry and the construction unions to employ the residents in the Model City sections in the process.

To rebuild and restore the Model City areas, both business and labor entered into an agreement with the U.S. Deaprtment of Labor — to employ the citizens, create a new wage category above apprentice — but below journeyman, and after the work was finished — the unions pledged to retain as journeyman members the Model City residents.

Thus was accomplished — a city was saved, and a wage standard permanently insured.

But it has not happened that way. The Model City tax money has gone for paper projects. It has been squandered, wasted, spent on known crooks.

Out of $4 million dollars — only $78,000.00 has been spent to improve housing conditions...and most of that small amount was given to incompetent contractors...who did not pay the prevailing wage scales...who did not employ or train the Model City residents -- and who did not, in the main, fulfill the obligations of their contracts.

The Black population of Norfolk has every reason to be saddened by the poor performance of the Tarzan-syndrone-directed agency and its Black leaders.

But its saddest performance results in the false proposition and waste of tax funds — that it can train carpenters in five months — while the U.S. Deaprtment of Labor says it requires four years of on-the-job training — plus attendance at night school courses.

The Model City Agency is creating a fraud. And in so doing will pay far less wages than business and labor agreed to pay.

In the beginning, more wages would have been paid — more taxes restored to the community — permanent employment created.

The present plan is a model in mockery...that will surely sow the seeds for continued turmoil, discontent an future riots.

Say what you may about the federal 4-year plan...but no one can suggest that it can be condensed into 5-months.

'SAN FRANCISCO PLAN' FOR WIDENING EMPLOYMENT IN CONSTRUCTION AMONG BLACKS, OTHER MINORITIES UNVEILED

WASHINGTON -- Secretary of Labor J.D. Hodgson has announced implementation of a "San Francisco Plan" that sets equal employment opportunity standards in the construction industry.

Signing the order establishing the minority-hiring plan were Secretary Hodgson, Assistant Secretary Arthur A. Fletcher and Director John L. Wilks of the Office of Federal Contract Compliance (OFCC).

The plan, which went into effect upon publication in the Federal Register on June 4, brings to three the number of Federally-imposed minority-hiring efforts for construction. Philadelphia and Washington, D.C, have similar plans.

The latest plan, applying to the City and County of San Francisco, envisions an increase of about 1,100 minority-group workers in five covered trades over the next four years.

Trades covered by the plan are electrical work, plumbing, pipefitting and steamfitting, structural metal work, sheet metal work and asbestos work.

Since several crafts are not covered by the plan, OFCC is continuing to gather data to determine if other trades should be covered by the plan or if other Federal action is necessary to assure equal employment opportunity.

Under the plan, no contracts or subcontracts will be awarded for Federally-involved construction projects exceeding $500,000 unless the bidder agrees to specific minority-hiring goals.

The contractor or subcontractor involved in these projects is required to make a "good-faith" effort to achieve these goals both in his Federally-involved and non-Federally-involved construction work.

(MORE)

TP A+1 Bldg Trades

The plan was initiated after findings of public hearings held last December by the Labor Department showed minority workers -- Negroes, Spanish-surnamed Americans, Orientals and American Indians -- have been prevented from fully participating in certain construction trades.

The findings revealed, for instance, that while the overall minority population in the City and County of San Francisco is about 30 percent, minority representation among journeymen in the area's construction industry is approximately 15.5 percent. Few of these minorities, it was found, are employed in certain skilled trades.

The following percentages, constituting "acceptable" ranges within which a prospective contractor or subcontractor must establish his minority-utilization goals, are established over the next four years under the San Francisco Plan for the five covered trades:

May 1, 1971 to April 30, 1972: Electricians, 10% to 12%; plumbers, pipefitters and steamfitters, 7% to 9%; structural metal workers, 10% to 12%; sheet metal workers, 12% to 14%, and asbestos workers, 14% to 20%.

May 1, 1972 to April 30, 1973: Electricians, 12% to 13%; plumbers, pipefitters and steamfitters, 9% to 10%; structural metal workers, 12% to 15%; sheet metal workers, 14% to 15%, and asbestos workers, 20% to 27%.

May 1, 1973 to April 30, 1974: Electricians, 13% to 15%; plumbers, pipefitters and steamfitters, 10% to 12%; structural metal workers, 15% to 17%; sheet metal workers, 15% to 17%, and asbestos workers, 27% to 33%

May 1, 1974 to April 30, 1975: Electricians, 15% to 17%; plumbers, pipefitters and steamfitters 12% to 14%; structural metal workers, 17% to 20%; sheet metal workers, 17% to 19%, and asbestos workers, 33% to 40%.

(MORE)

After the first year of the program, its standards will be reviewed to determine if the projections on which the standards are based adequately reflect the construction labor market situation in the area at that time.

It is expected that new job openings for the five crafts covered by the plan will total about 2,200 over the next four years. If new and vacated positions are filled on the basis of one minority worker for each non-minority worker, the increase in minority employment in those trades will be approximately 1,100 by May 1975.

"By establishing ranges which anticipate good-faith efforts by construction contractors to fill new and vacated jobs on at least a one-to-one minority-to-non-minority basis through May 1975," the order establishing the plan states, "contractors may recruit from available minority manpower without displacing any existing craftsmen and without discriminating against any non-minority applicant for employment."

The Labor Department's Manpower Administration is committed to make available "such funds as may be necessary to carry out reasonable and effective training programs" which further the objectives of the plan and which are consistent with President Nixon's March 1970 directive calling for a 50-percent increase in construction skills training over the next five years.

The rules and regulations establishing the San Francisco Plan were published in the Federal Register.

Builders put a lid on overtime pay

A nationwide clampdown on scheduled overtime work in construction is beginning to take hold, helped by a softness in labor markets. The result could be an easing of construction costs—one of the hottest factors in inflation.

Union Electric Co. in St. Louis became the latest major builder to take a tough stand against regularly scheduled overtime, at premium wage rates, when its president, Charles J. Dougherty, ordered all "unnecessary" overtime eliminated on two large power plant projects. This followed an analysis of "inflated" costs for a project under way five years.

Overtime costs totaled $10-million, between 4% and 5% of the entire labor cost, and Union Electric found no offsetting gain in productivity: Costs per manhour of work rose disproportionately.

In 1969, contractors offered 10 hours of overtime each week in an effort to get needed skilled workers. Under Union Electric pressures to cut costs, the guarantee was later cut to five hours. Recently, when the utility made a change in contractors, a 40-hour week was put into effect, with overtime scheduled only on an emergency basis.

Unions accept. The cutback order has not affected the morale or productivity of workers, according to Dougherty. Unions have gone along with the decision, and skilled workers have been available as needed. An easing of the labor market has helped.

Dougherty said that Union Electric acted independently, but what it did was in line with a wider effort to put building trades work on a sounder basis. The National Constructors Assn. (NCA) and the Building & Construction Trades Dept. of the AFL-CIO worked out an agreement earlier this year to curb restrictive work practices and, among other things, to hold down avoidable overtime. The Nixon Administration has also urged this. And the Construction Users' Anti-Inflation Round Table, headed by United States Steel Corp.'s retired chairman, Roger M. Blough, has been working nationally against scheduled overtime on industrial projects.

Round Table studies of the part of the industry represented by NCA indicated that 23% of all projects in 1968 were on a scheduled overtime basis. The studies also showed that 66% of the overtime was paid to attract labor and 34% to maintain or accelerate construction schedules. The Blough organization is urging corporations to avoid "unrealistic" schedules that require overtime for completion.

Leonard Nadel

Blough directs "Roger's Round Table," which is scoring with its overtime stand.

Where it works. Generally, the campaign against scheduled overtime fails to take hold wherever there is intense competition for skilled workers, or where there are short-workweek provisions in union contracts. New York City is cited as a glaring example of both: Its massive World Trade Center project has created shortages of skilled labor and set off sharp competition by using the lure of high overtime pay. And some contracts require an hour or more overtime daily.

The softer the local labor market, the less likely overtime will be guaranteed. Corning Glass Works, like Union Electric, has eliminated scheduled overtime on new plant projects at Fairburn, Ga., and Huntsville, Ala., as a matter of company policy. An executive, John Vyverberg, said that its independent studies showed that scheduled overtime runs up costs and results in lower per-hour productivity rates.

Trumbell Blake, of E. I. du Pont de Nemours & Co., said that no scheduled overtime is being worked on 30 construction jobs from Texas to the Carolinas, and that the company is having no difficulty getting work done on schedule. Blake, du Pont's director of construction, says employers are coming to the realization that "getting work done by scheduling overtime doesn't pay." He reports that "I don't know any projects in areas where we're active that are now regularly scheduling overtime work."

A quick survey of other major companies by the Blough organization found that overtime clampdowns have been ordered by such other pacesetters as Dow Chemical Co., Shell Oil Co., and American Electric Power Co. ■

HOUSING

A new pressure on housing bias

The Nixon Administration this week came down harder on housing segregation in the suburbs than anyone even a week ago might have suspected. It left zoning authority exactly where it has been all along, in the hands of local officials. But it served notice that localities where zoning could be construed as "racially motivated" may find the Justice Dept. facing them in court.

Attorney General John Mitchell filed such a case against a St. Louis suburb. And Housing & Urban Development Secretary George Romney has issued a new regulation that requires developers and builders to use an "equal housing" logotype or slogan in their advertising. This approach in advertising will soon be mandatory for all subdivisions and multi-family housing projects under Federal Housing Administration grants or insurance when they involve 25 or more lots or housing units.

Consistency. Only a week earlier, suburbanites who had been worrying about federal action to help blacks and other minorities move into their neighborhoods were sure they detected a different message in the President's own long-awaited statement on equal housing opportunity. In a 7,000-word document touching all legal and social bases, Nixon seemed to stress that the federal government could do little, even if it wanted to, and that "the kinds of land-use questions involved in housing site selection are essentially local in nature."

The Nixon statement had been thrashed out for months by three key officials. On one side was Romney, the man most committed to open housing. On the other side were Mitchell and John D. Ehrlichman, assistant to the President, both of whom are lawyers with long experience in zoning issues before they came to Washington. Nixon wanted to take a broad policy stand on the federal government's role before allowing the Justice Dept. or the Housing & Urban Development Dept. to proceed with new cases.

Black Jack, the St. Louis suburb, was one of the cases on the waiting list; last year Romney recommended Justice Dept. action, calling the town's conduct a "blatant" violation of the law and of the Constitution. This week Mitchell agreed that the citizens and officials had shown "racial motivation." They had incorporated their town last Au-

Res.

An ally for admen against the FTC

The Federal Trade Commission has given the advertising industry its sharpest warning to date that its attempts at self-policing may be too little and too late. But in the process, it has raised the ire of the White House as well as the admen.

In a surprise move last week, the FTC said it wanted to require advertisers to submit data proving the specific quantitative claims they make for their products. Under its plan, the agency would scrutinize one industry at a time, beginning with automobiles, and would publish the data.

The move naturally upset advertisers and their agencies, but it also turned up opposition from an unexpected quarter. Herbert G. Klein, President Nixon's communications director, said that he does not like either the FTC's claims-substantiation requirement or the commission's plan to hold hearings this fall to explore the question of persuasion in advertising.

Klein told a meeting of the Public Relations Society of America in Little Rock, Ark., that the FTC's proposal was "the kind of thing that will lead toward further restrictions on an economic basis of the press and broadcast media." He faulted the FTC for moving "systematically" against advertising without thinking through what he sees as a dire economic impact on the press as well as on advertising.

Copy to PA, AC, BA

Symbol of equality in housing must soon appear in some realty advertising.

gust and had quickly adopted zoning rules that barred a housing project sponsored by a St. Louis church group, which had already acquired land and obtained HUD approval.

Mitchell said that he does not expect to file many suits like the one against Black Jack. But he also told newsmen that he would file similar suits against any other community that showed similar racial motivation, violating the fair-housing provisions of the 1968 Civil Rights Act as well as the 13th and 14th amendments to the U. S. Constitution. ■

Reactions. Elsewhere, the Administration's reaction was ambiguous. An attempt to get support for the FTC move from Virginia Knauer, Nixon's consumer aide, failed, partly because it would have seemed an indirect endorsement of a bill introduced by Democratic Senators Frank E. Moss (D-Utah) and George S. McGovern (D-S. D.). This measure would go further than the FTC action by requiring all advertisers to make documentation of claims available to consumers.

The FTC did, however, get some clear support from the commissioner of the Food & Drug Administration, Dr. Charles C. Edwards, who is moving against drug ad claims himself.

Miles W. Kirkpatrick took over as FTC chairman only last September, after he had been chairman of an American Bar Assn. study that was highly critical of the agency. He and his consumer protection chief, Robert Pitofsky, already have proved to be more sympathetic to consumer activists than their predecessors. Their claim-substantiation move was a partial response to a petition Ralph Nader filed last December.

Outlook. In the months ahead, advertisers will be watching the FDA, which is tightening its rules on drug effectiveness claims. Last March and April, for example, the FDA called a halt to ads in ethical drug publications for antibiotics and ordered some manufacturers to run "corrective" messages. "For a month or so, we lost the commission on the regular ads we would have placed, and we could not collect commission on the corrective ones," says a media man at a major ethical drug agency. The FDA also will act to sharpen food nutrition labels.

Meanwhile, advertisers are nervously watching the Federal Communications Commission, which is studying possible new rules on TV advertising aimed at children. And the FTC is preparing its September hearings on what Pitofsky chillingly refers to as "coercive advertising."

Just this week the Senate Commerce Committee approved a bill that would give the FTC stronger authority to make rules covering advertising and other business behavior of entire industries. An example of such rules is one currently in the works proposing that detergent makers warn consumers about phosphate. ■

A gloved rap at corporate bigotry

After nearly two years of debate, the Nixon Administration has drafted guidelines to help end religious discrimination in executive suites. Unlike the Administration's controversial Philadelphia Plan for combating racial discrimination in the construction industry, the guidelines contain no mandatory timetables. And penalties are not mentioned. The Administration's intent is to attack the problem by focusing public attention on it.

"There are no goals and timetables because that's not the kind of effort the concerned groups are asking for," says John Wilks, director of the Labor Dept.'s Office of Federal Contract Compliance, which can use its leverage on companies doing business with the government to enforce guidelines. "The new guidelines are really a procedure which a contractor can follow to really deal with the problem."

Samuel Freedman, director of the American Jewish Committee's Business & Industrial Div., with whom the Administration consulted in drafting the guidelines, agrees with their light-handed approach and the lack of penalties. Says Freedman: "It is an attempt to call attention to a problem by a process of head-counting. Most corporations know the number of Jews or Catholics in the executive suite." He seems hopeful that the guidelines will prod companies into taking affirmative action, such as persuading their own recruiters that they will no longer tolerate religious discrimination.

Ethnic approach. Issuance of the guidelines could be held up for some time by Labor Secretary James Hodgson's insistence that they first be combined with guidelines to fight ethnic discrimination at the high corporate level. There are few hard statistics on this problem. But both Freedman and Wilks oppose delay. Asserts Freedman, "We see no reason to hold up religious guidelines until they develop national origin guidelines."

In theory, at least, both sets of guidelines will apply to all companies under the Civil Rights Act of 1964. However, Hodgson calls them a form of "technical assistance" for government contractors, and he has sent a memorandum to all federal contracting agencies reminding them that corporate discrimination by reason of religious or national origin is not only illegal, but "inconsistent with American principles." ■

LABOR DEPARTMENT SETS CONTRACT BID CONDITIONS FOR HIRING MINORITIES IN SEATTLE AREA CONSTRUCTION WORK

WASHINGTON -- Specifications for expanding minority job opportunities in Seattle area construction crafts have been issued by Secretary of Labor J. D. Hodgson.

Signing the order that requires the bid specifications were Secretary Hodgson, Assistant Secretary Arthur A. Fletcher and Director John L. Wilks of the Office of Federal Contract Compliance.

The specifications, or "bid conditions," for Federally-involved contract work are essentially the terms of an agreement reached by local construction contractors, craft unions and the minority community.

Effective immediately, these specifications set goals and timetables for achieving equal job opportunity in all construction trades in King County.

The "hometown" agreement on which the specifications were largely based proved to be ineffective. It provided for minority training and employment goals equal to the area's 1970 minority population.

The action by the Labor Department represents a disapproval, at this time, of that "hometown" agreement as a means by which government contractors may meet Federal equal employment requirements.

The Department has funded a program for training construction workers as a part of a total equal employment effort in the Seattle area. The action does not include a decision to terminate that training program.

(MORE)

But the status of the training program "is under constant review," Secretary Hodgson said. "If the program proves to be effective, it will make an important contribution to equal employment in the Seattle area construction industry and will provide qualified minority craftsmen to assist contractors in meeting their goals under the bid conditions."

The Secretary said that "if the program is ineffective, it will be terminated."

To be eligible for Federally-involved contracts, contractors and subcontractors must submit, as a part of their bid, a written affirmative action plan embodying these two elements:

-- Specific goals and timetables of minority utilization (minorities include Negroes, Spanish-surnamed Americans, Orientals and American Indians).

-- Specific affirmative action steps directed at increasing utilization of minorities through "good-faith" efforts.

The conditions set the following minority utilization goals for the bidder and all contractors and subcontractors for all trades on projects in King County over the next 3 years:

-- From the present to December 31, 1971, 3.2% to 6.5%.

-- From January 1, 1972 to December 31, 1972, 6.5% to 9.7%.

-- From January 1, 1973 to December 31, 1973, 9.7% to 13%.

These percentage ranges are to be expressed in terms of man-hours of minority training and employment as a proportion of the total man-hours logged by the entire work force of the bidder,

(MORE)

contractor or subcontractor in trades on all projects in the county. During the life of his Federally-involved contract or subcontract, a contractor must meet the bid requirements on all of his work -- private as well as Federally-involved.

In order for training hours to count toward meeting the contractor's goal, the minority trainee must be employed by the contractor during the training period.

The transfer of minority employees or trainees from employer to employer and from project to project solely to meet the contractor's or subcontractor's goals will violate these conditions.

Failure to meet goals within the specified time frame will not mean that a contractor or subcontractor is not complying with bid conditions which were issued under Executive Order 11246. The contractor will be given an opportunity to demonstrate that he has taken all of the specific "affirmative action" steps under the conditions and has made "every good faith effort" to make these steps work toward the attainment of his goals within his timetables, "all to the purpose of expanding minority manpower utilization ..."

All trades are covered by the bid conditions, but certain contractors and subcontractors are not required to submit goals and timetables. These include contractors and subcontractors who are, by contract or otherwise, dependent upon labor organizations covered by the court's order or the consent decree for the supply of their employees. These include:

THE CRISIS IN CONSTRUCTION

By

M. R. Lefkoe

198 pp. Indexed $12.50

What can the construction industry do about shortages of skilled manpower, excessive absenteeism, turnover, escalating wage rates, fringe benefits, guaranteed overtime, unethical union practices, and detrimental legislation?

Answers to these questions and others are offered in the provocative book, *The Crisis in Construction,* by M. R. Lefkoe, a prominent management consultant retained by several large construction firms to analyze the labor-related problems of the industry and to propose remedies. This book, the first of its kind to be published in over 20 years, sets forth radical proposals for the cure of major ills confronting the construction industry—among them a plan to allow contractors to assume complete responsibility for all phases of the construction process. Businessmen, educators, and citizens concerned about spiraling wage rates and other costs in construction will find Mr. Lefkoe's recommendations of the utmost interest.

WESTERN EUROPEAN LABOR AND THE AMERICAN CORPORATION

Edited by

Alfred Kamin

574 pp. Indexed $16.50

This landmark volume contains a splendid collection of comparative labor relations law studies by internationally-renowned authorities in the fields of business, labor, education, law, and government. As a whole, the book presents a series of clear-cut expositions of the problems inherent in attempts to transplant bargaining methods and habits of handling industrial relations from one country to another, and provides valuable illuminations of both the short-term and the long-term consequences of the rise of multinational corporations and the emergence of common market organizations aspiring to the harmonization of rules of economic behavior. *Western European Labor and the American Corporation* constitutes a superb analysis of the labor climate in Western European countries and an illuminating evaluation of the overseas labor relations policies of American companies that conduct manufacturing activities in Western Europe.

THE CRISIS IN PUBLIC EMPLOYEE RELATIONS IN THE DECADE OF THE SEVENTIES

Edited by

Richard J. Murphy

and

Morris Sackman

256 pp. Indexed $14.50

In this volume, well-known specialists in public employee relations problems bring into focus the causes of bargaining impasses, representation hassles, switches in bargaining agents, demands for arbitration, walk-outs, and stepped-up organizing campaigns in the public employment sector. The book is at once a capsule history and practical operations manual for practitioners and students of public employee relations, and it is especially recommended to administrators of government instrumentalities of every kind, to the legal counsel of government employers and of public employee unions, and to union officials. To its penetrating studies of all the major problems currently bedevilling the public employment field its editors have added a comprehensive record of developments through July of 1970, extensive annotations of individual contributors' remarks, observations on the landmark postal strike, and a glossary of labor relations terms.

COLLECTIVE BARGAINING TODAY: 1969

Proceedings of the First Annual Collective Bargaining Forum, 1969

504 pp. Indexed $15

This volume constitutes a major contribution to the literature of labor relations and is "must" reading for labor attorneys, industrial relations executives, union officials, arbitrators, educators, and students.

It offers a remarkable collection of penetrating papers on the collective bargaining process by 48 nationally known authorities, drawn from business, labor, and government. These addresses were originally presented as conference papers at the First Annual Collective Bargaining Forum of the Institute of Collective Bargaining and Group Relations, held in New York in May 1969.

Eight major aspects of collective bargaining come under scrutiny by the Forum speakers—the bargaining process as it exists today, problems and strategies of effective bargaining, bargaining in the public sector, the impact of the social environment on bargaining, trends in the economic climate, methods of resolving impasses, automation and technical change as factors in bargaining, and labor and the law.

Collective Bargaining Today brings within the covers of a single volume a wealth of expert opinion, knowledge, and experience of the collective bargaining process in all its ramifications. The book is unhesitatingly recommended as a stimulating "refresher" for knowledgeable labor relations practitioners and as a first-class introduction to the techniques and problems of bargaining for newcomers to the field.

M- Minority

31 MINORITY CONSTRUCTION CONTRACTORS PREPARING TO HELP REBUILD BEDFORD-STUYVESANT

WASHINGTON -- Thirty one minority construction contractors are preparing themselves to participate in the rebuilding of the nation's second largest black neighborhood, New York's Bedford-Stuyvesant area.

Most of them black and a few of them Puerto Rican and all of them from Bedford-Stuyvesant, the contractors have attended nine weeks of classes in construction estimating at Brooklyn's Pratt Institute. Most plan to continue in two upcoming courses, advanced construction estimating and construction management.

The builders have learned the terminology of estimating, and the process of breaking out the quality and quantity of materials called for in a construction job.

Setting up sample jobs, they broke them into their component parts: excavation and concrete masonary, plastering, tile and ceramic work, roofing and sheet metal work, plumbing and carpentry.

They also learned to process these components and decide on those they could handle and those they should subcontract. They went into the subjects of overhead, contractor markups and the cost involved in carrying out a job.

The Pratt Center for Community Improvement is developing a repeat course for other minority builders and is trying to improve the course by uncovering the imperfections in the first one.

Two thirds of the first course was paid for by the builders and the other third by the Pratt Center which gets grants under the Higher Education Act and from the Rockefeller Brothers Fund.

(MORE)

Seymour Berger, vice-president of a Manhattan construction consultant and engineering firm and an instructor in the class, feels that estimating cannot be taught in a course. He feels that what these builders are learning, however, gives them an important beginning.

A major problem facing the builders is meeting the bonding requirements for city, State, Federal and often private contracts.

Bonding has been a serious barricade to minority contractors because bonding companies have been reluctant to furnish them with necessary bonds because the construction companies are usually small and not well established.

The National Association for the Advancement of Colored People in New York City is studying the various problems confronting groups in construction contracting. Last July, the U.S. Department of Housing and Urban Development awarded a contract to this NAACP branch to collect information on minority contractors, their resources and their problems.

The story of the estimating course is carried in the October Issue of the Labor Department's Manpower Magazine.

Atl. Bldg Trades

Memorandum February 27, 1970

To: Emory Via

From: Standley Alexander

I talked with a person at the Youth Opportunity Center about the testing techniques for securing employment. I was told the following:

(1) No high school diploma is required.

(2) If applying for an apprenticeship program, a high school diploma is not needed.

(3) The examination could not be failed completely, because a certain number of points are given and there are five seperate for each examination.

(4) The aptitude test and the apprenticeship tests are the same.

(5) If the examination is failed, five years would have to elapse before it could be taken over.

(6) The test is the SATB which is given on Tuesdays and Thursdays.

I called the Youth Opportunity Center again, and I talked to Mr. Forest Humphries, the Director. He gave me the following information:

(1) A high school diploma or GED is necessary in order to take the examination for the printing apprenticeship program.

(2) Anyone can apply for the apprenticeship program if there is an opening.

(3) If the examination is failed by an applicant, it would be permanent for a year.

(4) Only one examination is required.

Telephone conversation with Mr. Lloyd Smith:

(1) SATB is a general aptitude test.

(2) GATB is the test for the apprenticeship program.

(3) If a person is in the LEAP, he can take the test over in the same year, month, or the next day.

(4) The GATB is given on the basis of age and educational factors.

(5) The high school diploma is required.

(6) The GATB will allow you to take an examination for a particular apprenticeship trade.

Proposed Rule Making

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[24 CFR Part 76]

[Docket No. R-71-100]

EMPLOYMENT OPPORTUNITIES FOR LOWER INCOME PERSONS IN CONNECTION WITH ASSISTED PROJECTS

Notice of Proposed Rule Making

The Department of Housing and Urban Development is considering amending Title 24 of the Code of Federal Regulations to include a new Part 76 entitled "Employment Opportunities for Lower Income Persons in Connection with Assisted Projects." The proposed amendment, issued pursuant to section 3 of the Housing and Urban Development Act of 1968, 12 U.S.C. 1701u, would establish procedures to encourage the employment on assisted projects of lower income persons residing in the project locale, and the award of project-related contracts to businesses similarly located.

The proposed regulations, the purpose of which is more fully set forth under § 76.1, relate to public property, loans, grants, benefits, or contracts, and are not subject to the rule making requirements of 5 U.S.C. 553. However, recently announced Department policy provides that rules and regulations, as broadly defined by the promulgating notice, 36 F.R. 4291, will be published for proposed rule making. Accordingly, interested persons are invited to participate in the making of the proposed rule by submitting written data, views, or statements with regard to the proposed regulations. Communications should identify the proposed rule by the above docket number and title and should be filed in triplicate with the Assistant Secretary for Equal Opportunity, Department of Housing and Urban Development, Washington, D.C. 20410. All relevant material received on or before July 19, 1971, will be considered by the Assistant Secretary before taking action on the proposal. Copies of comments submitted will be available during business hours, both before and after the specified closing date, at the above address, for examination by interested persons.

The proposed rule is issued pursuant to section 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

The proposed Part 76 reads as follows:

PART 76—EMPLOYMENT OPPORTUNITIES FOR BUSINESSES AND LOWER INCOME PERSONS WITHIN THE PROJECT LOCALE

Subpart A—General

Sec.
76.1 Purpose and scope of part.
76.5 Definitions.
76.10 Delegation to Assistant Secretary for Equal Opportunity.
76.15 Determination of the area of a section 3 covered project.
76.20 Assurance of compliance with regulations.
76.25 Bidding and negotiation requirements.
76.30 Other applicant and recipient obligations.
76.35 Effectuation of applicant obligations in direct and indirect relationships.

Subpart B—Utilization of Lower Income Area Residents as Trainees

76.40 General.
76.45 Establishing number of trainees.
76.50 Good faith effort.

Subpart C—Utilization of Lower Income Area Residents as Employees

76.55 General.
76.60 Good faith effort.

Subpart D—Utilization of Business Located in or Owned in Substantial Part by Persons Residing in the Area

76.65 General.
76.70 Development of an affirmative action plan.

Subpart E—Participation in Approved Programs

76.75 Participation as evidence of compliance with section 3 requirements.

Subpart F—Grievance and Compliance Review

76.80 Who may file grievance.
76.85 Content of grievance filings.
76.90 Form of grievance filings.
76.95 Place of filing.
76.100 Time of filing.
76.105 Processing of grievance filings.
76.110 Hearings.
76.115 Compliance reviews and procedures.

Subpart G—Miscellaneous

76.120 Reporting and recordkeeping.
76.125 Implementing procedures and instructions.
76.130 Labor standards.
76.135 Effective date.

AUTHORITY: The provisions of this Part 76 are issued under section 3 of the Housing and Urban Development Act of 1968, 12 U.S.C. 1701u, and sec. 7(d), Department of HUD Act, 42 U.S.C. 3535(d).

Subpart A—General

§ 76.1 Purpose and scope of part.

(a) The regulations set forth in this part contain the procedures established by the Secretary of Housing and Urban Development for carrying out his responsibilities under section 3 of the Housing and Urban Development Act of 1968, 12 U.S.C. 1701u. That section requires that:

In the administration by the Secretary of Housing and Urban Development of programs providing direct financial assistance in aid of housing, urban planning, development, redevelopment, or renewal, public or community facilities, and new community development, the Secretary shall—

(1) Require, in consultation with the Secretary of Labor, that to the greatest extent feasible opportunities for training and employment arising in connection with the planning and carrying out of any project assisted under any such program be given to lower income persons residing in the area of such project; and

(2) Require, in consultation with the Administrator of the Small Business Administration, that to the greatest extent feasible contracts for work to be performed in connection with any such project be awarded to business concerns, including but not limited to individuals or firms doing business in the field of planning, consulting, design, architecture, building construction, rehabilitation, maintenance, or repair, which are located in or owned in substantial part by persons residing in the area of such project.

(b) In the development of these regulations the Secretary has consulted with the Secretary of Labor and the Administrator of the Small Business Administration and mutual agreement has been reached with respect to the coordination of employment and training efforts and contracts awards under these regulations by the Department of Housing and Urban Development, the Department of Labor, and the Small Business Administration.

(c) The Secretary will issue such further regulations in connection with his responsibilities under section 3 of the Housing and Urban Development Act of 1968, as he finds appropriate and may, as needed, amplify any regulations issued pursuant to section 3, through guidelines, handbooks, circulars, or other means.

§ 76.5 Definitions.

As used in this part—

(a) "Applicant" means any entity seeking assistance for a section 3 covered project including, but not limited to, mortgagors, developers, local public bodies, nonprofit or limited dividend sponsors, builders, or property managers.

(b) "Business concerns located within the section 3 covered project area" means those individuals or firms located within the relevant section 3 covered project area as determined pursuant to § 76.15 which are small and owned by persons considered by the Small Business Administration to be socially or economically disadvantaged.

(c) "Business concerns owned in substantial part by persons residing in the section 3 covered project area" means those business concerns which are 51 percent or more owned by persons residing within the relevant section 3 covered project as determined pursuant to § 76.15 and which are small and owned by persons considered by the Small Business Administration to be socially or economically disadvantaged.

(d) "Contracting party" means any entity which contracts with a contractor for the performance of work in connection with a section 3 covered project.

(e) "Contractor" means any entity which performs work in connection with a section 3 covered project.

(f) "Department" means the Department of Housing and Urban Development.

(g) "Lower income resident of the area" means any individual who resides within the area of a section 3 covered project and whose family income does not exceed 80 percent of the median income in the Standard Metropolitan Statistical Area (or the county, if not within an SMSA) in which the section 3 covered project is located.

(h) "Political jurisdiction" means a politically organized community with a

governing body having general governmental powers.

(i) "Recipient" means any entity who received assistance for a section 3 covered project including, but not limited to, mortgagors, developers, local public bodies, nonprofit or limited dividend sponsors, builders or property managers.

(j) "Secretary" means the Secretary of Housing and Urban Development.

(k) "Section 3" means section 3 of the Housing and Urban Development Act of 1968, 12 U.S.C. 1701u.

(l) "Section 3 clause" means the contract provisions set forth in § 76.20(b).

(m) "Section 3 covered project" means any project assisted by any program administered by the Secretary in which loans, grants, subsidies, or other financial assistance are provided in aid of housing, urban planning, development, redevelopment, or renewal, public or community facilities, and new community development (except where the financial assistance available under such program is solely in the form of insurance or guaranty).

(n) "Subcontractor" means any entity (other than a person who is an employee of the contractor) which has agreed or arranged with a contractor to undertake a portion of the contractor's obligation or the performance of work in connection with a section 3 covered project.

§ 76.10 Delegation to Assistant Secretary for Equal Opportunity.

Except as otherwise provided in this part, the functions of the Secretary referred to herein will be delegated to the Assistant Secretary for Equal Opportunity.

§ 76.15 Determination of the area of a section 3 covered project.

(a) The area of a section 3 covered project shall be determined as follows:

(1) The boundaries of a section 3 covered project located within a geographic area designated pursuant to the provisions of title I of the Housing Act of 1949, 42 U.S.C. 1450, or pursuant to the provisions of title I of the Demonstration Cities and Metropolitan Development Act of 1966, 42 U.S.C. 3301, shall be coextensive with the boundaries of that geographic area.

(2) The boundaries of a section 3 covered project not located within a geographic area designated pursuant to title I of the Housing Act of 1949, or title I of the Demonstration Cities and Metropolitan Development Act of 1966 shall be coextensive with the boundaries of the smallest political jurisdiction in which the project is located.

(3) To the extent that goals (established pursuant to Subparts B, C, and D of this part) cannot be met within a section 3 covered project area as determined pursuant to subparagraph (1) of this paragraph, the boundaries of the smallest political jurisdiction in which the section 3 covered project is located shall be designated as the relevant section 3 covered project area.

(b) The Department's Regional Administrator, Area Office Director, or FHA Insuring Office Director, as appropriate, shall determine the boundaries of each section 3 covered project; develop a "Project Area Map" if the project area is determined pursuant to paragraph (a)(1) of this section, showing the section 3 covered project area, and the smallest political jurisdiction in which it is located, except where the project area is a Model Cities area which is coextensive with the city itself; and publish the "Project Area Map" in a newspaper serving the community in which the section 3 covered project area is located.

§ 76.20 Assurance of compliance with regulations.

(a) Every contract or agreement for a grant, loan, subsidy, or other direct financial assistance in aid of housing, urban planning, development, redevelopment, or renewal, public or community facilities, and new community development, entered into by the Department of Housing and Urban Development shall contain provisions requiring the applicant or recipient to carry out the provisions of section 3, the regulations set forth in this part, and any applicable rules and orders of the Department issued thereunder prior to approval of its application for assistance for a section 3 covered project.

(b) Every applicant, recipient, contracting party, contractor, and subcontractor shall incorporate, or cause to be incorporated, in all contracts for work in connection with a section 3 covered project, the following clause (referred to as a section 3 clause):

A. The work to be performed under this contract is on a project assisted under a program providing direct Federal financial assistance from the Department of Housing and Urban Development and is subject to the requirements of section 3 of the Housing and Urban Development Act of 1968, as amended, 12 U.S.C. 1701u. Section 3 requires that to the greatest extent feasible opportunities for training and employment be given lower income residents of the project area and contracts for work in connection with the project be awarded to business concerns which are located in, or owned in substantial part by persons residing in the area of the project.

B. The parties to this contract will comply with the provisions of said section 3 and the regulations issued pursuant thereto by the Secretary of Housing and Urban Development set forth in 24 CFR ------, and all applicable rules and orders of the Department issued thereunder prior to the execution of this contract. The parties to this contract certify and agree that they are under no contractual or other disability which would prevent them from complying with these requirements.

C. The contractor will send to each labor organization or representative of workers with which he has a collective bargaining agreement or other contract or understanding, if any, a notice advising the said labor organization or workers' representative of his commitments under this section 3 clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment or training.

D. The contractor will include this section 3 clause in every subcontract for work in connection with the project and will, at the direction of the applicant for or recipient of Federal financial assistance, take appropriate action pursuant to the subcontract upon a finding that the subcontractor is in violation of regulations issued by the Secretary of Housing and Urban Development, 24 CFR ------. The contractor will not subcontract with any subcontractor where it has notice or knowledge that the latter has been found in violation of regulations under 24 CFR ------ and will not let any subcontract unless the subcontractor has first provided it with a preliminary statement of ability to comply with the requirements of these regulations.

E. Compliance with the provisions of section 3, the regulations set forth in 24 CFR ------, and all applicable rules and orders of the Department issued thereunder prior to the execution of the contract, shall be a condition of the Federal financial assistance provided to the project, binding upon the applicant or recipient for such assistance, its successors, and assigns. Failure to fulfill these requirements shall subject the applicant or recipient, its successors, and assigns to those sanctions specified by the grant or loan agreement or contract through which Federal assistance is provided, and to such sanctions as are specified by rules, regulations, or applicable policy of the Department of Housing and Urban Development governing the program under which Federal assistance to the project is provided.

§ 76.25 Bidding and negotiation requirements.

(a) Every applicant and recipient shall require prospective contractors for work in connection with section 3 covered projects to provide, prior to the signing of the contract, a preliminary statement of work force needs (skilled, semiskilled, unskilled labor and trainees by category) where known; where not known, such information shall be supplied prior to the signing of any contract between contractors and their subcontractors.

(b) When a bidding procedure is used to let the contract, the invitation or solicitation for bids shall advise prospective contractors of the requirements of these regulations. When the contract is let pursuant to negotiation or methods other than formal bidding procedures, prospective contractors shall be advised by the contracting party of the requirements of these regulations as part of the contract specifications.

§ 76.30 Other applicant and recipient obligations.

Every applicant and recipient shall assist and actively cooperate with the Secretary in obtaining the compliance of their contractors and subcontractors with the requirements of these regulations, including cooperation and assistance in distributing and collecting forms and information, and in notifying contracting parties and contractors of violations of these regulations, and shall refrain from entering into any contract with any contractor after notification by the Department that the contractor has been found in violation of these regulations pursuant to § 76.110(j).

§ 76.35 Effectuation of applicant obligations in direct and indirect relationships.

(a) Where the applicant for assistance under a section 3 covered project and the recipient of such assistance are not one and the same, the recipient shall be regarded as the successor in interest of

the applicant and shall have the same obligations as the applicant with respect to compliance with these regulations. These obligations shall be incorporated specifically or by reference in the loan or grant agreement or other contract or agreement through which the assistance is provided to the recipient.

(b) Where the applicant or recipient itself will perform all or part of the work in connection with a section 3 covered project within the meaning of these regulations, with either permanent or temporary staff by force account, it will provide the Department with all forms and assurances required of a contractor or subcontractor by these regulations prior to the execution of any loan or grant agreement or other contract or agreement through which assistance is provided.

(c) Where the applicant, recipient or contractor sells, leases, transfers or otherwise conveys land upon which work in connection with a section 3 covered project within the meaning of these regulations is to be performed (for example, under the Urban Renewal or Neighborhood Development program), it shall include in each contract or subcontract for work on such land a clause requiring the purchaser, lessee, or redeveloper to assume the same obligations as a contractor for work under section 3 of these regulations (including the incorporation of the Assurance of Compliance language specified in § 76.20).

(d) Each such purchaser, lessee, or redeveloper shall be relieved of such obligations upon satisfactory completion of all work to be performed under the terms of the redevelopment contract.

Subpart B—Utilization of Lower Income Area Residents as Trainees

§ 76.40 General.

Each applicant, recipient, contractor or subcontractor undertaking work in connection with a section 3 covered project shall fulfill his obligation to utilize lower income project area residents as trainees to the greatest extent feasible by:

(a) Utilizing the maximum number of persons in the various training categories in all phases of the work to be performed under the section 3 covered project; and

(b) Filling all vacant training positions with lower income project area residents except for those training positions which remain unfilled after a good faith effort has been made to fill them with eligible lower income project area residents.

§ 76.45 Establishing number of trainees.

(a) For the building construction occupations, the number of trainees or apprentices for each occupation shall be determined pursuant to regulations issued by the Secretary of Labor.

(b) For nonconstruction occupations or for any building construction occupations for which ratios are not determined pursuant to regulations of the Secretary of Labor, the number of trainees for each occupation shall be that number which can reasonably be utilized in each occupation on each phase of a section 3 covered project. The applicant, recipient, contractor, or subcontractor shall initially determine the maximum number of trainees for each occupation and submit that determination along with its justification to the Department.

§ 76.50 Good faith effort.

(a) Each applicant, recipient, contractor, or subcontractor seeking to establish that a good faith effort as required by § 76.40 has been made to fill all training positions with lower income area residents shall, as a minimum, set forth evidence acceptable to the Secretary that it has:

(1) Obtained from the Department's Regional Administrator, Area Office Director, or FHA Insuring Office Director having jurisdiction over the section 3 covered project, the "Section 3 Project Area Map," if available; and

(2) Attempted to recruit from the appropriate areas the necessary number of lower income residents through: Local advertising media, signs placed at the proposed site for the project, and community organizations and public or private institutions operating within or serving the project area such as Service Employment and Redevelopment (SER), Opportunities Industrialization Center (OIC), Urban League, Concentrated Employment Program, or the U.S. Employment Service.

(3) Maintain a list of all lower income area residents who have applied either on their own or on referral from any source, and employ such persons, if otherwise eligible and if a trainee vacancy exists. If the contractor has no vacancies, the applicant, if otherwise eligible, shall be listed for the first available vacancy.

(b) Any applicant, recipient, contractor, or subcontractor which fills vacant apprentice or trainee positions in its organization from sources other than those specified in paragraph (a), subparagraph (2) of this section immediately prior to undertaking work pusuant to a section 3 covered project shall set forth evidence acceptable to the Secretary that its actions were not an attempt to circumvent these regulations.

Subpart C—Utilization of Lower Income Area Residents as Employees

§ 76.55 General.

Each applicant, recipient, contractor or subcontractor undertaking work in connection with a section 3 covered project shall fulfill his obligation to utilize lower income project area residents as employees to the greatest extent feasible by:

(a) Identifying the number of positions in the various occupational categories including skilled, semiskilled, and unskilled labor, needed to perform each phase of the section 3 covered project;

(b) Identifying, of the positions identified in paragraph (a) of this section, the number of positions in the various occupational categories which are currently occupied by regular, permanent employees;

(c) Identifying, of the positions identified in paragraph (a) of this section, the number of positions in the various occupational categories which are not currently occupied by regular, permanent employees;

(d) Establishing, of the positions identified in paragraph (c) of this section, a goal which is consistent with the purpose of this subpart within each occupational category of the number of positions to be filled by lower income residents of the section 3 covered project area; and

(e) Making a good faith effort to fill all of the positions identified in paragraph (d) of this section with lower income project area residents.

§ 76.60 Good faith effort.

(a) Each applicant, recipient, contractor, or subcontractor seeking to establish that a good faith effort as required by paragraph (e) of § 76.55 has been made to fill all employment positions identified in paragraph (d) of § 76.55 with lower income project area residents shall, as a minimum, set forth evidence acceptable to the Secretary that it has:

(1) Obtained from the Department's Regional Administrator, Area Office Director, or FHA Insuring Office Director having jurisdiction over the section 3 covered project, the "Section 3 Project Area Map", if available; and

(2) Attempted to recruit from the appropriate areas the necessary number of lower income residents through: Local advertising media, signs placed at the proposed site for the project, and community organizations and public or private institutions operating within or serving the project area such as Project Area Committees (PAC) in urban renewal areas, Model Cities citizen advisory boards, Service Employment and Redevelopment (SER), Opportunities Industrialization Center (OIC), Urban League, Concentrated Employment Program, or the U.S. Employment Service.

(b) Any applicant, recipient, contractor, or subcontractor which fills vacant § 76.55(d) employment positions in its organization immediately prior to undertaking work pursuant to a section 3 covered contract shall set forth evidence acceptable to the Secretary that its actions were not an attempt to circumvent these regulations.

(c) When lower income resident workers apply, either on their own initiative or on referral from any source, the recipient, contractor, or subcontractor shall determine the qualifications of such persons and shall employ such persons if their qualifications are satisfactory and the contractor has openings. If the recipient, contractor, or subcontractor is unable to employ the workers, such persons shall be listed for the first available opening.

Subpart D—Utilization of Business Located in or Owned in Substantial Part by Persons Residing in the Area

§ 76.65 General.

Each applicant, recipient, contractor, or subcontractor undertaking work on a

section 3 covered project shall assure that to the greatest extent feasible, contracts for work to be performed in connection with the project are awarded to business concerns located within the section 3 covered project area or business concerns owned in substantial part by persons residing in the section 3 covered area. The Department, in consultation with the Small Business Administration will establish for the section 3 covered project area a registry of business concerns which meet the definition contained in § 76.5 (b) and (c) of these regulations. Each applicant, recipient, contractor, or subcontractor undertaking work in connection with a section 3 covered project shall fulfill his obligations to utilize business concerns located within or owned in substantial part by persons residing in the section 3 covered project area by developing and implementing an affirmative action plan.

§ 76.70 Development of an affirmative action plan.

In developing an affirmative action plan, each applicant, recipient, contractor, and subcontractor preparing to undertake work pursuant to a section 3 covered contract shall:

(a) Set forth the approximate number and dollar value of all contracts proposed to be awarded to all businesses within each category (type or profession) over the duration of the section 3 covered project in question.

(b) Analyze the information set forth in paragraph (a) of this section and the availability of eligible business concerns within the project area doing business in professions or occupations identified as needed in paragraph (a), of this section, and set forth a goal or target number and estimated dollar amount of contracts to be awarded to the eligible businesses and entrepreneurs within each category over the duration of the section 3 covered project.

(c) Outline the anticipated program to be used to achieve the goals for each business and/or professional category identified. This program should include but not be limited to the following actions:

(1) Insertion in the bid documents, if any, of the affirmative action plan of the applicant, recipient, contractor, or subcontractor letting the contract; and

(2) Identification within the bid document, if any, of the applicable section 3 project area.

(d) Indicate the anticipated process and steps which have been taken and/or will be taken to secure the cooperation of contractors, subcontractors, and unions in meeting the goals and carrying out the affirmative action plan developed pursuant to this subpart.

(e) Take steps to insure that the appropriate business concerns included in the Department's registry for the section 3 covered project area are notified of pending contractual opportunities either personally or through locally utilized media.

(f) Take steps to insure that contracts which are typically let on a negotiated rather than a bid basis in areas other than section 3 covered project areas, are also let on a negotiated basis, whenever feasible, when let in a section 3 covered project area.

(g) Where competitive bids are solicited, require the bidders to submit their utilization goals, and their affirmative action plans for accomplishing their goals, and in evaluating each bid, to determine its responsiveness, carefully evaluate the bidders' submission to determine whether the affirmative action plan proposed will accomplish the stated goals.

(h) Where advantageous, seek the assistance of local officials of the Department in preparing and implementing the affirmative action plan.

Subpart E—Participation in Approved Programs

§ 76.75 Participation as evidence of compliance with section 3 requirements.

Any applicant, recipient, contractor, or subcontractor may fulfill his obligations under Subparts B, C, and D of this part, respectively, to utilize lower income project area residents as trainees or employees on section 3 covered projects, and to award contracts to business concerns located in, or owned in substantial part by residents of, section 3 covered project areas by presenting evidence satisfactory to the Secretary that he is a cooperating participant in a federally assisted or other public program approved by the Department of Housing and Urban Development which provides training, employment, and/or business opportunities to lower income persons and business concerns which meet the definition in § 76.5 (b) and (c). The Secretary shall, from time to time, make public a list of those training, employment, and/or business opportunity programs approved by the Department.

Subpart F—Grievance and Compliance Review

§ 76.80 Who may file grievance.

Any lower income resident of the project area, for himself or as a representative of persons similarly situated, seeking employment or training opportunities with an applicant, recipient, contractor, or subcontractor, or any business concern located in, or owned in substantial part by persons residing within a project area seeking contract opportunities from any applicant, recipient, contractor, or subcontractor, for itself or as a representative of persons or firms similarly situated, may personally or by an authorized representative file a grievance alleging noncompliance with section 3, these regulations, or obligations undertaken pursuant thereto.

§ 76.85 Content of grievance filings.

(a) The grievance should include: (1) The name and address of the grievant, (2) the name and address of the grievant's business, if applicable, (3) the name and address of the applicant, recipient, contractor, or subcontractor (in this subpart called "respondent"), (4) a description of the acts or omissions giving rise to the grievance, and (5) the corrective action sought.

(b) Where a grievance contains incomplete information, the Secretary shall seek promptly the needed information from the grievant. In the event such information is not furnished to the Secretary within sixty (60) days of the date of such request, the grievance may be closed.

§ 76.90 Form of grievance filings.

Each grievance shall be in writing and signed.

§ 76.95 Place of filing.

A grievance may be filed by mailing it to the Assistant Secretary for Equal Opportunity, Department of Housing and Urban Development, Washington, D.C. 20410, or by presenting it at any Regional Office, Area Office, or FHA Insuring Office of the Department. Any employee of the Department receiving a grievance shall forward the same directly to the Assistant Secretary for Equal Opportunity.

§ 76.100 Time of filing.

A grievance must be filed not later than ninety (90) days from the date of the action (or omission) upon which the grievance is based, unless the time for filing is extended by the Secretary upon good cause shown.

§ 76.105 Processing of grievance filings.

(a) Upon receipt of a grievance a copy thereof shall be furnished the respondent by certified mail or through personal service.

(b) The Secretary shall conduct an investigation of each grievance filed, and shall give notice in writing to the grievant and the respondent as to whether he intends to resolve it.

(c) Notwithstanding paragraphs (a) and (b) of this section, where the allegations of a grievance on their face, or as amplified by the statements of the grievant, disclose that the grievance is not timely filed or otherwise fails to state a valid claim for relief under these regulations or any other authority within the jurisdiction of the Department, the Secretary may dismiss the grievance without further action. To the extent that Executive Order 11246 relating to Equal Opportunity in Employment applies to the subject matter of the grievance, the procedures required by applicable regulations implementing that order shall be followed.

(d) If the Secretary decides not to resolve a grievance, or to dismiss it under paragraph (c) of this section, he shall advise the grievant of the disposition of his grievance. Respondent shall also be notified in any case where he has been served with a copy of the grievance.

(e) Any party adversely affected by a determination under paragraph (b) or

(c) of this section may, within 5 days of receipt of a notice of determination, request that the Secretary reconsider his action. Such request for reconsideration will be granted only on the basis of additional material evidence not previously available to the party requesting reconsideration or for other good cause shown.

(f) If the Secretary decides to resolve a grievance, he shall endeavor to eliminate or correct the matters complained of in the grievance by informal methods of conference, conciliation, and persuasion.

(g) In conciliating a grievance, the Secretary shall attempt to achieve a just resolution of the grievance including (1) specific relief for the grievant, (2) affirmative actions by the respondent to relieve the effects of past violation and preclude the occurrence of future violation, and (3) appropriate reporting requirements. Notice of a proposed disposition of a grievance and of the terms of a proposed settlement, if any, shall be given to the parties, or their representatives, by the Secretary, in writing. If satisfactory, the proposed settlement shall be signed by the grievant and the respondent, or their representatives, and approved by the Secretary. The Secretary may, from time to time, review compliance with the terms of any settlement agreement and may, upon a finding of noncompliance, reopen the grievance or take such enforcement action as is provided for under the settlement agreement or as may otherwise be appropriate.

(h) Should a respondent fail or refuse to confer with the Secretary or fail or refuse to make a good faith effort to resolve the grievance, or should the Secretary find for any other reason that voluntary agreement is not likely to result, the Secretary may terminate his efforts to conciliate the dispute. In the latter event the parties shall be notified promptly, in writing, that such efforts have been unsuccessful.

(i) If the Department is unable to obtain voluntary compliance, the Secretary shall advise the parties in writing of his proposed resolution of the grievance. Such resolution shall become final and binding on the parties, unless within 15 days after the receipt of notification, either party files with the Secretary a written request for a hearing on the matter.

§ 76.110 Hearings.

(a) Whenever a hearing is requested, reasonable notice shall be given by registered or certified mail, return receipt requested, to the parties. This notice shall advise the parties of the action proposed to be taken, the specific provision under which the proposed action is to be taken, and the matters of fact or law asserted as the basis for this action. In addition, it shall either (1) fix a date not less than 20 days after the date of such notice within which the parties may request of the Secretary that the matter be scheduled for hearing or (2) advise the parties that the matter in question has been set down for hearing at a stated time and place. The time and place so fixed shall be subject to change for cause. The requesting party may waive a hearing and in lieu thereof submit written information and argument for the record. The failure of the requesting party to appear at a hearing for which a date has been set shall be deemed to be a waiver of the right to a hearing and consent to the making of a decision on the basis of such information as is available.

(b) Hearings shall be held in or near the section 3 covered project area in question, or at such other location as will serve the convenience of parties and witnesses, at a time fixed by the Secretary. Hearings shall be held before the Secretary or, at his discretion, before a hearing examiner designated in accordance with 5 U.S.C. 3105 and 3344.

(c) In all proceedings under this section, the respondent and grievant, if any, shall have the right to be represented by counsel.

(d) The hearing, decision, and any administrative review thereof shall be conducted in conformity with 5 U.S.C. 554–557, and in accordance with such rules of procedure issued by HUD as are proper relating to the conduct of the hearing, the issuance of notice except that provided in paragraph (a) of this section, the taking of testimony, exhibits, arguments, and briefs, requests for findings, and other related matters. HUD, the respondent, and the grievant, if any, shall be entitled to introduce all relevant evidence on the issues as stated in the notice of hearing or as determined by the officer conducting the hearing at the outset of or during the hearing.

(e) Technical rules of evidence shall not apply to hearings conducted pursuant to this paragraph but rules or principles designed to assure production of the most credible evidence available and to subject testimony to test by cross-examination shall be applied where deemed reasonably necessary by the officer conducting the hearing. The hearing officer may exclude irrelevant, immaterial, or unduly repetitious evidence. All documents and other evidence offered or taken for the record shall be open to examination by the Department of Housing and Urban Development, the respondent, and the grievant, if any, and opportunity shall be given to refute facts and arguments advanced on either side of the issues. A transcript shall be made of the oral evidence except to the extent the substance thereof is stipulated for the record. All decisions shall be based upon the hearing record and written findings shall be made.

(f) If the hearing is held by a hearing examiner, he shall either render an initial decision, if so authorized, or certify the entire record, including his recommended findings and proposed decision to the Secretary for a final decision. A copy of such initial decision or certification shall be mailed to the respondent and the grievant, or their representative, by certified or registered mail, return receipt requested. Where the initial decision is made by the hearing examiner, the respondent or grievant may within 30 days of the mailing of such notice of initial decision file with the Secretary exceptions to the initial decision, with reasons therefor. In the absence of exception, the Secretary may on his own motion, within 45 days after the initial decision, serve on the respondent and grievant, a notice that he will review the decision. Upon the filing of such exceptions or of such notice of review, the Secretary shall review the initial decision and issue his own decision thereon including the reasons therefor. If no exception is taken or notice of review issued, the initial decision shall constitute the final decision of the Secretary.

(g) Whenever a record is certified to the Secretary for decision or he reviews the decision of a hearing examiner pursuant to paragraph (f) of this section, or whenever the Secretary conducts the hearing, the respondent and grievant shall be given reasonable opportunity to file briefs or other written statements of their contentions, and a copy of the final decision of the Secretary shall be given in writing to the respondent, and to the grievant by certified or registered mail, return receipt requested.

(h) Whenever a hearing is waived pursuant to paragraph (a) of this section, a decision shall be made by the Secretary on the record and a copy of such decision shall be given in writing to the respondent, and to the grievant, by certified or registered mail, return receipt requested.

(i) Each decision of a hearing examiner or the Secretary shall set forth his ruling on each finding, conclusion, or exception presented, and shall identify the requirement or requirements of section 3 of the Housing and Urban Development Act of 1968 or the regulations which the respondent has not complied with.

(j) The final decision may contain such terms, conditions, and other provisions as are consistent with, and will effectuate the purposes of section 3 and these regulations. The decision may also include provisions designed to assure that no contract will thereafter be entered into with a respondent determined by such decision to be in default in its performance of its contractual obligations or to have otherwise failed to comply with these regulations, unless the respondent corrects its noncompliance and satisfies the Secretary that it will fully comply with section 3 and these regulations.

(k) The General Counsel shall represent the Department at all hearings and shall receive copies of all notices, decisions and other documents which are forwarded to the parties.

(l) The applicant or recipient, if not a party, shall be invited to participate in the hearing and shall receive copies of all notices, decisions, and other documents which are forwarded to the parties.

§ 76.115 Compliance reviews and procedures.

In order to determine whether the responsibilities imposed upon him by section 3 and these regulations are being properly carried out, the Secretary shall periodically conduct section 3 compliance

reviews of selected applicants, recipients, contractors, and subcontractors. A compliance review shall consist of a comprehensive analysis and evaluation of each aspect of the aforementioned section 3 policies, and conditions resulting therefrom. Where deficiencies are found to exist, reasonable efforts shall be made to secure compliance through the conciliation process set forth in § 76.105(g). Compliance reviews may be conducted prior to award of contracts in any case where the Secretary has reasonable grounds, based on a substantiated grievance, the Department's own investigation, or other substantial evidence, to believe that the applicant, recipient, contractor, or subcontractor or will be unable or unwilling to comply with section 3 and the provisions of this part.

Subpart G—Miscellaneous

§ 76.120 Reporting and recordkeeping.

In order to insure that the Secretary is kept informed of the progress being made by the applicant, recipient, contractor, and subcontractor in meeting their obligations under these regulations, each applicant, recipient, contractor, and subcontractor is required to:

(a) Maintain such records and accounts and furnish such information and reports as are required by the Secretary under these regulations or pursuant thereto and permit the Secretary access to books, records and premises for purposes of investigation in connection with a grievance or to ascertain compliance with these regulations or the rules and orders of the Department issued thereunder.

(b) Advise the Secretary within 15 days of the award of any contract under a section 3 covered project of the steps which have been and will be taken to comply with the requirements of Subparts B, C, and D of this part.

§ 76.125 Implementing procedures and instructions.

Assistant Secretaries of the Department administering programs subject to this regulation may issue such procedures and instructions as are necessary to implement the provisions of section 3 and this part. A copy of such procedures and instructions shall be forwarded to the Secretary for approval prior to issuance.

§ 76.130 Labor standards.

All labor standards applicable by statute, regulations, or other administrative issuance shall apply to section 3 covered projects.

§ 76.135 Effective date.

This part shall become effective on [ ] 1971 for all applications for assistance under section 3 covered by projects which are made after such date within the meaning of the program in question. However, nothing in this part shall effect requirements already imposed on applicants, recipients, and contractors, and subcontractors pursuant to section 3.

GEORGE ROMNEY,
Secretary of Housing and Urban Development.

Assistant Secretary for Employment Standards

John L. Wilks
Director, Office of Federal Contract Compliance

SUBJECT: Atlanta Plan

The "Atlanta Plan," a copy of which is attached, has been executed and transmitted to the Federal Register for publication.

Effective upon publication, all Federal and Federally-assisted construction contracts for projects in the Five County Atlanta, Georgia Standard Metropolitan Statistical Area of Fulton, DeKalb, Cobb, Clayton and Gwinnett, whose estimated cost exceeds $500,000, will be subject to the requirements of the Atlanta Plan.

All agencies are hereby directed to comply with the requirements of the Atlanta Plan.

Inquiries concerning the operation and effect of the Plan should be transmitted to Mr. John L. Wilks, Director, Office of Federal Contract Compliance.

TITLE 41 - PUBLIC CONTRACTS AND
PROPERTY MANAGEMENT

Chapter 60 - Office of Federal Contract Compliance
Equal Employment Opportunity
Department of Labor

PART 60-8 -- ATLANTA PLAN

Affirmative Action Program to Assure Compliance with Equal Employment Opportunity Requirements of Executive Order 11246 for Federally-Involved Construction Contractors

Published June 25, 1971 + Plan in effect till Dec 31

Pursuant to a notice of hearing appearing in the Federal Register on March 16, 1971, (36 F.R. 5020), representatives of the Department of Labor conducted public hearings in Atlanta, Georgia, on March 31, April 1 and 2, 1971, for the purpose of determining what action should be taken to ensure equal employment opportunity in the construction industry in Atlanta, Georgia. As a result of the findings made during those hearings, the Atlanta Plan is hereby issued and published in the Federal Register. A copy of the findings made as a result of the above noted hearings has been submitted with these regulations and is on file.

Therefore, and pursuant to Executive Order 11246 (30 F.R. 12319, 3 CFR 1964-65 Comp., p. 406) and Sections 60-1.1 and 60-1.40

of Title 41 of the Code of Federal Regulations, Chapter 60 of these regulations is hereby amended by adding a new part 60-8 to read as set forth below.

Subpart A - Purpose; Applicability; Background

Section:

60-8.1 Purpose of the Atlanta Plan

60-8.2 Applicability

60-8.3 Background

Subpart B - General Findings; Minority Participation in Specific Trades; Availability; Need for Training; Impact upon Existing Labor Force

60-8.30 Appendix A

Authority: The provisions of this part are issued under Sections 201, 202, 205, 211, 301, 302, and 303 of Executive Order 11246, (30 F.R. 12319, 3 CFR 1964-65 Comp., p. 406) and Sections 60-1.1 and 60-1.40 of Title 41 of the Code of Federal Regulations.

Subpart A - Purpose; Applicability; Background

60-8.1 Purpose

The purpose of these regulations is to implement the provisions of Executive Order 11246, and the rules and regulations issued pursuant thereto, requiring a program of equal employment opportunity by Federal contractors and subcontractors and Federally-assisted construction contractors and subcontractors in Atlanta, Georgia.

When Pub. K signed & still operational then part. K must be covered but if part. goes longer than pub., then part. not covered part term of Pub.

60-8.2 Applicability

While a contractor or subcontractor is performing on Federally-involved (Federal or Federally-assisted) construction contracts for projects, in the five county Atlanta, Georgia Standard Metropolitan Statistical Area of Fulton, DeKalb, Cobb, Clayton and Gwinnett, the estimated cost of which exceeds $500,000, all construction activities (including all activities on non-Federally involved work) of such a contractor or subcontractor within the Atlanta area shall be subject to the requirements of these regulations;

would not cover work outside area —

covers only subsequent contracts — part. & Pub

Sub Contractor is covered from date of (signing) or date of starting work? Pearson (& then reversed & said as of signing

Project Value $500T & individual Sub-K is covered no matter how small —

provided, however, that if an area-wide agreement is developed for any trade covered by these regulations or any such trade is covered by a multi-trade agreement and such an agreement is among contractors, unions, and the minority community, then the Office of Federal Contract Compliance (OFCC) may, in its complete discretion, accept such program in lieu of any or all of the requirements of these regulations, subject to such terms and conditions as OFCC may specify.

Bontom could supersede if accepted by OFCC

60-8.3 Background

Public hearings were conducted by representatives of the Department of Labor in Atlanta, Georgia, on March 31, April 1 and 2, 1971, to determine what action should be taken to insure equal employment opportunity in the construction industry in Atlanta, Georgia. Testimony was heard and data received on the following:

(a) The current extent of minority group participation in the construction trades as journeymen, apprentices, trainees and helpers;

(b) The effectiveness of present employee recruitment methods;

(c) The availability of qualified and qualifiable minority group persons for employment in each construction trade, including where they are now working, how they may be brought into the trades;

(d) The effectiveness of existing training programs in the area, including the number of minorities and others recruited into

the programs, the number who complete training, the length and extent of training, employer experience with trainees, the need for additional or expanded training programs;

(e) The number of additional workers that could be absorbed into each trade without displacing present employees, including consideration of present employee shortages, projected growth of the trade, projected employee turnover;

(f) The availability and utilization of minority contractors on Federally-involved contracts;

(g) The desirability and extent, including the geographical scope, of possible Federal action to ensure equal employment opportunity in the construction trades;

(h) Recommendations of governmental compliance agencies active in the Atlanta, Georgia area.

Subpart B - General Findings; Minority Participation in Specific Trades; Availability; Need for Training; Impact upon Existing Labor Force

60-8.10 General Findings

As a result of the material presented at the public hearing in Atlanta and as a result of other investigations, it is apparent that minority workers (Negroes, Spanish Surnamed Americans, Orientals, and American Indians) have been prevented from fully participating

in certain construction trades. This exclusion is due in great measure to the special nature of employment practices in the construction industry where contractors and subcontractors rely on construction craft unions as their prime or sole labor source. Collective bargaining agreements and/or established custom between construction contractors and subcontractors and unions frequently provide for, or result in, exclusive hiring halls. Even where the collective bargaining agreement contains no such hiring hall provisions or the custom is not rigid, as a practical matter most people working in these classifications are referred to the jobs by the unions. As a result, referral by the union is a virtual necessity for obtaining employment in union construction projects. Minorities often have not gained admittance into membership of certain unions and into certain apprenticeship programs, and, thus, for these and other reasons, have not been referred for employment.

60-8.11 (a) Minority Participation in the Specified Trades

The over-all minority population in the Atlanta area is approximately 22.6 percent. Minority representation among journeymen employees in the Atlanta area construction industry is approximately 27.1 percent. However, very few of these minorities are located in certain "skilled" trades.

(b) Statistical Data

The most reliable data developed at the hearings reveal the following as the current minority representation in unions in selected trades, for the Atlanta area:

Asbestos Workers 8.5%	Laborers 91.4%
Bricklayers 33.0%	Lathers 53.3%
Carpenters 3.4%	Millwrights 1.0%
Electricians .5%	Painters 3.6%
Elevator Constructors 1.1%	Plasterers 62.5%
Operating Engineers 30.0%	Plumbers 1.6%
Glaziers 0%	Roofers 89.2%
Iron Workers 1.3%	Sheetmetal Workers 0%

It is apparent from the foregoing that certain trades evidence a significant underutilization of minority employees. Several of the above designated trades and others however, as supported by findings of fact in that regard, do not appear to be engaged in the underutilization of minorities and accordingly will not be included under the requirements of these regulations, at this time. These excluded trades are

the bricklayers, operating engineers, laborers, lathers, plasterers, and roofers. Therefore, the requirements of these regulations shall apply only to the trades of asbestos workers, carpenters, electricians, elevator constructors, glaziers, ironworkers, millwrights, painters, plumbers and the sheet metal workers.

60-8.12 Availability of Minority Group Persons for Employment

(a) Population

The April 1970 population estimate of the Atlanta area as found by the U.S. Census Bureau was 1,390,164 for a gain of 36.7 percent since the 1960 census. This population is disbursed among five counties that range in population from 607,592 residents in Fulton County to 72,349 in Gwinnett County, and includes a minority constituency of 314,015 or approximately 22.5 percent.

The total labor force in the Atlanta area is approximately 700,000 persons, all but 19,000 of whom are nonagricultural. The contract construction industry accounts for the employment of approximately 31,500 persons. The total unemployment rate in the Atlanta area as of January 1971 was 3.2%. Negro unemployment in the Atlanta area however, as has been true of the Nation generally, has rather consistently been approximately twice the unemployment rate in the white labor force. Data for the full 1969

fiscal year indicates that this was a fact of long standing particularly in the City of Atlanta by showing unemployment for Negroes in that area at 7.3% while white unemployment was placed at less than one-half that figure, 3.4%.

Based upon a statistical submission by the State of Georgia Department of Labor, in excess of 38,000 minority group persons are classified as underutilized, as employed part time for economic reasons, employed full time with total family income below the poverty level or excluded from the active work force altogether solely because of employment barriers. In addition there is the added problem of finding suitable employment for an estimated 1,500 returning minority group veterans during the present calendar year.

For the City of Atlanta, the panel found its civilian labor force to approximate 206,000 of whom 96,000 are Negro. Of this figure, an estimated 195,400 are employed including 89,000 Negroes.

(b) Training Programs

Although the Hearing Panel found that minorities have been and continue to be statistically underrepresented in certain construction trades and trade unions, this is not due to any lack of available qualified or qualifiable Negro and other minority applicants.

Rather, the Panel's analysis of all available data reveals that existing contractor and union recruitment efforts fall far short of the

type of affirmative action which would bring substantial numbers of available minorities into the construction trades.

Thus a total of 878 minority persons with either some or substantial experience in various construction trades, have registered with the Georgia State Employment Service seeking employment in the industry.

The Atlanta LEAP (Labor Education Advancement Program) has, in a two-year period indentured 128 minority youth and dropped only 18 of them, equipping the remainder with some measure of the skills necessary to work in the following trades:

> Bricklaying, Carpentry, Cement Masonry, Electrical Work, Operating Engineers, Lather, Machinists, Painting, Roofing and Sheet Metal Work.

The LEAP program's 1970 goal was to indenture 100 persons and tutor 275.

(c) Community Involvement

Testimony presented at the hearings revealed, and it has consistently been the Department's experience, that the effectiveness of efforts to recruit minority trainees and workers depends in large measure upon the active involvement of minority organizations in the community. Various representatives of minority organizations indicated that they would have little, if any, difficulty in recruiting minority workers for training and jobs in sufficient numbers to meet

the manpower needs of the Atlanta area construction industry.

(d) Minority Subcontractors

Information gained at the hearing indicated, and it is found, that a number of minority subcontractors are operating effectively within the Atlanta area. Utilization of these subcontractors, particularly by non-minority contractors, could significantly expand the participation of minority craftsmen on projects of Federally-involved construction contractors.

60-8.13 Need for Training

(a) Existing Programs

Total enrollment in the several Vocational Education full-time programs in the Atlanta area is estimated in excess of 80 for the construction trades of whom approximately 50 are minorities. In the night school there are additionally enrolled 234 minorities for training in the construction trades.

MDTA programs operating in the Atlanta area include seven minority group trainees acquiring skills in the construction trades.

A readily available source of minority manpower most of whom could be utilized in the skilled trades with skills refinement training only may be found in the number of minority laborers currently in labor unions having jurisdiction in the Atlanta area. This figure is currently placed at 2,550 Minority representation among the

unionized laborers is in excess of 91% of the total, an indication of their disproportionate placement and the underutilization of actual or potential skills by the industry.

Who knows how to reach these? are they all minorities

Additionally, there are substantial numbers of non-union employees and self-employed minorities currently employed throughout the industry, including 435 electricians, 417 plumbers and pipefitters, and 1,206 carpenters. (Barely! There wouldn't be 10 black electricians in the whole city)

(b) Trainable Persons

It is found and determined that a substantial number of minority persons can receive training annually in the Atlanta area through existing programs with additional funding. The Manpower Administration of the Department of Labor is committed to make available such funds as may be necessary to carry out reasonable and effective training programs in furtherance of the objectives of these regulations and consistent with the policies and standards of the Manpower Administration as amplified in the President's statement of March 17, 1970, directing a 50 percent increase in construction skills training over the next 5 years.

60-8.14 The Impact of the Program Upon the Existing Labor Force

(a) Contractors Commitments

A contractor could commit himself to minority hiring up to the annual rate of job vacancies for each trade without adverse impact upon the existing labor force. On the basis of specific information presented at the hearings indicating new jobs requirements and

replacement needs within the construction trades covered by these regulations, it is expected that there will be 3,000 new job opportunities in the Atlanta area through 1975. These projections are not inconsistent with conservative national statistics which reveal that approximately 7.5 percent of construction trade workers are replaced each year due to death, retirement, disability and outmigration.

(b) Timetable

In an effort to provide an affirmative action program and practical ranges for utilization of minority manpower which can be met by employers in hiring productive, trained minority craftsmen, these rules should be developed to cover an extended period of time. Testimony at the hearing indicated that a four year duration for the Plan is proper as the greatest need for additional manpower in the industry will take place during the first part of the decade. Therefore, it is found and determined that in order for these regulations to effect equal employment to the fullest extent, the standards of minority utilization should be determined for the next four years.

(c) Projected New Jobs

The annual percentage of new job opening per craft for selected trades from 1971-1975 are as follows:

1.	Asbestos Workers	-	10.0%
2.	Carpenters	-	7.5%
3.	Electricians	-	7.2%
4.	Elevator Constructors	-	6.5%

3000 openings ~~[illegible]~~ percentage of openings — based on total trade (not just union) & is attrition + growth —

5.	Glaziers	-	15.8%
6.	Iron Workers	-	4.4%
7.	Millwrights	-	6.5%
8.	Painters	-	9.4%
9.	Plumbers	-	6.6%
10.	Sheet Metal Workers	-	9.6%

60-8.15 Conclusions of Findings

(a) Current Minority Participation

It is found in the Atlanta area work force data submitted at the public hearings, that minority representation in the construction industry in general exceeds 27% while certain skilled trades in the same area and industry have an extremely low minority representation, e.g., electricians .5, elevator constructors 1.1, ironworkers 1.3, millwrights 1.0 and plumbers 1.6. Thus, it appears that the latter trades have a level of minority representation far below that which should have resulted from meaningful past participation in the industry without regard to race, color, or national origin. Therefore, it is determined that these rules are necessary to provide for minority participation in the following trades:

Asbestos Workers	Ironworkers
Carpenters	Millwrights
Electricians	Painters
Elevator Constructors	Plumbers
Glaziers	Sheet Metal Workers

(b) Effect of Plan

A construction contractor working in the Atlanta area could increase the minority participation in his trade significantly by hiring only minorities to fill new job openings (attrition plus growth). However,

to do so would inevitably result in the exclusion of qualified non-minorities from such job opportunities. Based upon the fact that the minority population in the Atlanta area is approximately 22.5 percent of the total population, upon the fact that the minority unemployment rate in the Atlanta area is greater than double that of non-minority unemployment, upon the fact that there exists substantial minority underemployment in the area and upon the further fact that significant and effective training programs now exist, it may be reasonably expected that in the filling of new and vacant jobs, effective affirmative action efforts should produce at least one minority applicant for each non-minority applicant for effective construction employment.

(c) Increased Minority Participation

If new and vacated positions in only the trades covered by these rules totaling approximately 3,000 through 1975 were filled by one minority worker for each non-minority worker, the resultant increased minority participation in those trades alone through June 1975 would be approximately 1,500 workers. On the basis of the findings indicated above, it is estimated that approximately 5,000 minority persons are presently available to fill such jobs, many of whom possess some degree of training. With the anticipated increase in those who should be available over the next four years, it appears that more than sufficient numbers of minority workers will be available to effectively fill new and vacated construction trade positions.

(d) Purpose of Ranges

By establishing ranges which anticipate good faith efforts by construction contractors to fill new and vacated jobs on at least a 1-to-1 minority-to-non-minority basis through June 1975, contractors may recruit from available minority manpower without displacing any existing craftsmen and without discriminating against any non-minority applicant for employment.

(e) Evaluation and Advisory Recommendations

The Department recognizes that the contractors, unions, and minority community, who must operate on a day-to-day basis under the requirements of these regulations, are in the best positions to evaluate the effectiveness of these regulations. Therefore, the Department shall make every effort to encourage and develop a voluntary committee representing these three groups, which committee shall periodically review the effectiveness of these regulations and make advisory recommendations to the Department in this regard.

Subpart C - Non-Discriminatory Purpose of the Plan; Requirements; Exemptions; Effective Date

60-8.20 Non-Discriminatory Purpose of the Plan

The purpose of the contractor's commitment to specific goals is to meet the contractor's affirmative action obligations and is not intended and shall not be used to discriminate against any qualified applicant or employee.

Pelison If sub has work force of 10 & they are permanent & he bids on that basis — & if he can't meet goal — then he should not bid not eligible — (Could lt part force based on Fed. K)

60-8.21 Requirements

After full consideration and in view of the foregoing it is determined that:

(a) No contracts or subcontracts shall be awarded for Federally and Federally-assisted construction in the Atlanta, Georgia area on projects whose estimated cost exceeds $500,000 unless the bidder completes and submits, prior to bid opening, the document identified as Appendix A, Notice of Requirement for Submission of Affirmative Action Plan to Ensure Equal Employment Opportunity or a substantially similar document, which shall include specific goals of minority manpower utilization for each trade designated below which will be used by the contractor on all of his work (both Federal and non-Federal) within the Atlanta, Georgia area, during the term of his performance of the contract, such goals to be established by the contractor at least within the ranges established in Appendix A of these regulations. Such Appendix is for all purposes a part of these regulations and shall be deemed a part of all contracts executed pursuant to these regulations. Minority manpower means, for the purposes of these rules, Negroes, Spanish Surnamed Americans, Orientals and American Indians. The trades utilizing the following classifications of employees are covered by these rules:

Asbestos Workers	Ironworkers
Carpenters	Millwrights
Electricians	Painters
Elevator Constructors	Plumbers
Glaziers	Sheet Metal Workers

(b) Each Federal agency shall include, or require the applicant to include, in the invitation for bids, or other solicitation used for a Federally-involved (Federal or Federally-assisted) construction contract, when the estimated total cost of the construction project exceeds $500,000, a notice stating that to be eligible for award, each bidder will be required to comply with Appendix A for the hereinbefore designated trades to be used during the term of the performance of the contract -- whether or not the work is subcontracted. The form of such notice shall be substantially similar to such Appendix A.

60-8.22 Exemptions

Requests for exemptions from these regulations must be in writing, with justification, to the Director, Office of Federal Contract Compliance, U.S. Department of Labor, Washington, D.C. 20210, and shall be forwarded through and with the endorsement of the agency head.

60-8.23 Effective Date

The provisions of this Part will be effective with respect to transactions for which the invitations for bids or other solicitations for bids, or additions or amendments thereto, are sent on or after the publication of these regulations.

Subpart D - Appendix A

60-8.30 Appendix A

For inclusion in the Invitation or Other Solicitation for Bids for a Federally-involved Construction Contract in the Atlanta, Georgia area, when the Estimated Total Cost of the Construction Project Exceeds $500,000.

NOTICE OF REQUIREMENT FOR SUBMISSION OF AFFIRMATIVE ACTION PLAN TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY

NOTICE

TO BE ELIGIBLE FOR AWARD OF THE CONTRACT, EACH BIDDER MUST FULLY COMPLY WITH THE REQUIREMENTS, TERMS AND CONDITIONS OF THIS APPENDIX A.

The following are hereby submitted by the undersigned bidder as its goals for minority manpower utilization ("minority" being Negro, Spanish Surnamed American, Oriental and American Indian) to be achieved on all work of the bidder within the Atlanta, Georgia area, during the terms of his performance of this contract in the trades specified below in conformity with the Requirements, Terms and Conditions of this Appendix A as hereinafter set forth:

Trade	Total number of Manhours to be Worked by Minority Persons on all Bidder's Projects within the Atlanta area including on this Contract, Expressed in Terms of a Percentage of the Total Number of Manhours to be Worked until June 30, 1972.
Asbestos Workers	
Carpenters	
Electricians	
Elevator Constructors	
Glaziers	
Ironworkers	
Millwrights	
Painters	
Plumbers	
Sheet Metal Workers	

Trade	Total Number of Manhours to be Worked by Minority Persons on all Bidder's Projects within the Atlanta area including on this Contract, Expressed in Terms of a Percentage of the Total Number of Manhours to be Worked from July 1, 1972, until June 30, 1973
Asbestos Workers	
Carpenters	
Electricians	
Elevator Constructors	
Glaziers	
Iron Workers	
Millwrights	
Painters	
Plumbers	
Sheet Metal Workers	

Trade	Total Number of Manhours to be Worked by Minority Persons on all Bidder's Projects within the Atlanta area including on this Contract, Expressed in Terms of a Percentage of the Total Number of Manhours to be Worked from July 1, 1973, until June 30, 1974.
Asbestos Workers	
Carpenters	
Electricians	
Elevator Constructors

Plumbers	
Sheet Metal Workers	

Trade	Total Number of Manhours to be Worked by Minority Persons on all Bidder's Projects within the Atlanta area including on this Contract, Expressed in Terms of a Percentage of the Total Number of Manhours to be Worked from July 1, 1974 until June 30, 1975.
Asbestos Workers	
Carpenters	
Electricians	
Elevator Constructors	
Glaziers	
Iron Workers	
Millwrights	
Painters	
Plumbers	
Sheet Metal Workers	

REQUIREMENTS, TERMS AND CONDITIONS

1. No contracts or subcontracts shall be awarded for Federal or Federally-assisted construction in the Atlanta, Georgia area on projects whose estimated cost exceeds $500,000 unless the bidder completes and submits, prior to bid opening, this document designated as Appendix A, or a substantially similar document, which shall include specific goals of minority manpower utilization for each trade designated below which will be used by the contractor on all his work (both Federal and non-Federal) within the Atlanta, Georgia area during the term of his performance of the contract, such goals to be established by the contractor at least within the ranges established by this Appendix in Section 3 thereof. Minority manpower means, for the purposes of this Appendix, Negroes, Spanish Surnamed Americans, Orientals, and American Indians. The trades utilizing the following classifications of employees are covered by this Appendix:

Asbestos Workers	Ironworkers
Carpenters	Millwrights
Electricians	Painters
Elevator Constructors	Plumbers
Glaziers	Sheet Metal Workers

A bidder who fails or refuses to complete or submit such goals shall not be deemed a responsive bidder and may not be awarded the contract or subcontract, but such goals need be submitted only for those trades which the contractor contemplates to be used in the performance

of the Federally-involved contract. In no case shall there be any negotiations over the provisions of the specific goals submitted by the bidder after the opening of bids and prior to the award of the contract.

2. The following ranges, constituting acceptable minimums within which a prospective contractor or subcontractor must establish his goals are hereby established as the standards for minority manpower utilization for each of the designated trades in the Atlanta, Georgia area for the next four years:

Trade	Range of Minority Group Employment Until June 30, 1972		
Asbestos Workers	13.5%	-	18.5%
Carpenters	7.1%	-	10.9%
Electricians	4.1%	-	7.7%
Elevator Constructors	4.3%	-	7.6%
Glaziers	7.9%	-	15.8%
Ironworkers	3.5%	-	5.7%
Millwrights	4.2%	-	7.5%
Painters	8.3%	-	13.0%
Plumbers	4.9%	-	8.2%
Sheet Metal Workers	4.8%	-	9.6%

Dillard: who left out and why -

Trade	Range of Minority Group Employment from July 1, 1972 Until June 30, 1973		
Asbestos Workers	18.5%	-	23.5%
Carpenters	10.9%	-	14.6%
Electricians	7.7%	-	11.3%
Elevator Constructors	7.6%	-	10.8%
Glaziers	15.8%	-	23.7%
Ironworkers	5.7%	-	7.9%
Millwrights	7.5%	-	10.7%
Painters	13.0%	-	17.7%
Plumbers	8.2%	-	11.5%
Sheet Metal Workers	9.6%	-	14.4%

Trade	Range of Minority Group Employment from July 1, 1973 Until June 30, 1974		
Asbestos Workers	23.5%	-	28.5%
Carpenters	14.6%	-	18.3%
Electricians	11.3%	-	14.9%
Elevator Constructors	10.8%	-	14.1%
Glaziers	23.7%	-	31.6%
Ironworkers	7.9%	-	10.1%
Millwrights	10.7%	-	14.0%
Painters	17.7%	-	22.4%
Plumbers	11.5%	-	14.8%
Sheet Metal Workers	14.4%	-	19.2%

Trade	Range of Minority Group Employment from July 1, 1974 Until June 30, 1975		
Asbestos Workers	28.5%	-	33.5%
Carpenters	18.3%	-	22.0%
Electricians	14.9%	-	18.5%
Elevator Constructors	14.1%	-	17.3%
Glaziers	31.6%	-	39.5%
Ironworkers	10.1%	-	12.3%
Millwrights	14.0%	-	17.2%
Painters	22.4%	-	27.7%
Plumbers	14.8%	-	18.1%
Sheet Metal Workers	19.2%	-	24.0%

goals apply to year when K signed &/or work expected to be performed — if signed in 1971, then 1971 goals apply — if a sub will perform in 1972 then that goal applies —

After the first year of the program, the standards (trades and ranges) set forth herein shall be reviewed to determine whether the projections on which these standards are based adequately reflect the construction labor market situation at that time. Reductions or other significant fluctuations in Federally involved construction shall be specifically reviewed from time to time as to their effect upon the practicality of the standards. In no event, however, shall the standards be increased or trades be added for the contracts after bids have been received.

The contractor's or subcontractor's goals established within the above ranges shall express the contractor's or subcontractor's commitment of the percentage of minority ~~personnel~~ on a hourly which would by who will be working in each specified craft on each of his projects (whether Federally involved or otherwise) within the Atlanta, Georgia, area during the term of the covered contract.

?

The man hours for minority workers must be substantially uniform throughout the entire length of the contract for each of the designated trades, to the effect that the percentage of minority workers in the designated trades must be working throughout the length of work on each project in each trade. The contractor or subcontractor shall be deemed to have met his commitment to specific goals for minority manpower utilization:

If total employment % by K^or is ok. then individual jobs may vary

α "a" on p26

(a) If the minority manpower utilization rate of the contractor or subcontractor itself meets the goals on the total of all of the contractor's or subcontractor's facilities within the Atlanta area provided, however, that if the contractor has denied equal employment opportunity, he shall not be in compliance with this Appendix, or

(b) If the contractor or subcontractor can establish that it is a member of a contractor's association or other employer organization or association, which has as one of its purposes the expanded utilization of minority manpower and the total utilization rate of minority craftsman by all member contractors and subcontractors of such an association or organization on all projects in which they are involved within the Atlanta area meets the contractor's or subcontractor's commitments, provided, however, that if the contractor has denied equal employment opportunity, he shall not be in compliance with this Appendix. or

(c) If the contractor or subcontractor can establish that it has a collective bargaining agreement with a labor organization, that it utilizes such organization as its source for over 80 percent of its manpower needs and (i) that the percentage total of minority membership of such organization and the total percentage of minorities referred for employment on all projects within the Atlanta area meets the contractor's or subcontractor's commitments or (ii) that such labor organization has made good faith efforts as described in 5. below in the referral of

If K^tr has K cancelled then, subs whose in compliant might be hurt (recourse to courts)

minorities for employment and the admission of minorities to membership, provided, however, that if the contractor has denied equal employment opportunity, he shall not be in compliance with this Appendix.

3. Whenever a contractor or subcontractor uses trades covered by this Appendix which were not contemplated at the time of his bid and he therefore does not submit goals for such trades, he shall be deemed to be committed to the minority group employment goal of the minimum percentage range for that trade for the appropriate year.

In the event that under a contract subject to this Appendix any work by a trade covered by this Appendix is performed after December 31, 1975, the minimum ranges of minority group employment for the year ending December 31, 1975, shall be applicable to such work.

4. The contractor's or subcontractor's commitment to specific goals is to meet affirmative action obligations and is not intended and shall not be used to discriminate against any qualified applicant or employee. Whenever it comes to the bidder's or contractor's attention that the goals are being used in a discriminatory manner, he shall immediately report that fact to the Office of Federal Contract Compliance of the U. S. Department of Labor in order that appropriate proceedings may be instituted.

5. The contractor's or subcontractor's (collectively hereinafter referred to as "contractor") commitment to specific goals for minority

manpower utilization as required by this Appendix A shall constitute a commitment that it or the labor organization described in 2(c) above, will make every good faith effort to meet such goals. If the contractor has failed to meet his goals, a determination of "good faith" will be based upon his efforts or those of such labor union to broaden its recruitment base which efforts shall include but not be limited to the following as applicable:

(a) Notification to the community organizations that the contractor or union has employment opportunities available and maintenance of records regarding the organizations' response.

(b) Maintenance of a file of the names and addresses of each minority worker referred by the union or to the contractor and what action was taken with respect to each such referred worker. If such worker was not sent to the union hiring hall for referral or if such worker was not referred by the union or not employed by the contractor, the file should document this and the reasons therefor.

(c) The contractor shall promptly notify the OFCC Area Coordinator when the union or unions with whom the contractor has a collective bargaining agreement has not referred to the contractor a minority worker sent by the contractor or the contractor has other information that the union referral process has impeded him in his efforts to meet his goal.

(d) Participation in training programs in the area, especially those funded by the Department of Labor.

(e) Dissemination of the contractor's or unions EEO policy within the respective organizations as applicable, by including it in any policy manual; by publicizing it in company or union newspapers, annual report, etc.; by conducting meetings to explain and discuss the policy; by posting of the policy; and by specific review of the policy with minority employees or members.

(f) Dissemination of its EEO policy externally by informing and discussing it with all recruitment sources; by advertising in news media, specifically including minority news media; and by notifying and discussing it with all contractors and subcontractors.

(g) Specific and constant personal (both written and oral) recruitment efforts directed at all minority organizations, schools with minority students, minority recruitment organizations and minority training organizations, within the contractor's or union's recruitment area.

(h) Specific efforts to encourage present minority employees or members to recruit their friends and relatives.

(i) Validation of all man specifications, selection requirements, tests, etc.

(j) Making every effort to provide after-school, summer and vacation employment to minority youths.

(k) Where reasonable, the development of on-the-job training opportunities and participation and assistance in any association or group training programs relevant to the contractor's or unions needs.

(l) Continuing inventory and evaluation of all minority personnel or members for promotional opportunities and encouragement of minority employees or members to seek such opportunities.

(m) Assuring that seniority practices, job classifications, etc. do not have a discriminatory effect.

(n) Assuring that all facilities and activities are non-segregated.

(o) Continual monitoring of all personnel activities to insure that its EEO policy is being carried out.

(p) The contractor shall solicit bids for subcontracts from available minority subcontractors with the trades covered by this Appendix, including circulation of minority contractor associations.

6. Each agency shall review contractors' and subcontractors' employment practices during the performance of the contract. If the contractor or subcontractor meets its goals or if the contractor or subcontractor can demonstrate that it or the labor union described in 2(c) above has made every good faith effort to meet those goals, the contractor shall be presumed to be in compliance with Executive Order 11246, the implementing regulations and its obligations under this Appendix.

and no formal sanctions or proceedings leading toward sanctions shall be instituted unless the agency otherwise determines that the contractor or subcontractor is not providing equal employment opportunities. Where the agency finds that the contractor or subcontractor has failed to comply with the requirements of Executive Order 11246, the implementing regulations and its obligations under its Appendix, the ageny shall take such action and impose such sanctions as may be appropriate under the Executive Order and the regulations. When the agency proceeds with formal action, it has the burden of proving that the contractor has not met the requirements of this Appendix, but the contractor's failure to meet his goals shall shift to him the requirement to come forward with evidence to show that he or his labor union has met the "good faith" requirements of this Appendix. Such non-compliance by the contractor or subcontractor shall be taken into consideration by Federal agencies in determining whether such contractor or subcontractor can comply with the requirements of Executive Order 11246 and is therefore a "responsible prospective contractor" within the meaning of the Federal procurement regulations.

7. Except as provided herein, it shall be no excuse that the union with which the contractor has a collective bargaining agreement providing for exclusive referral failed to refer minority employees.

Discrimination in referral for employment, even if pursuant to provisions of a collective bargaining agreement, is prohibited by the National Labor Relations Act, as amended, and Title VII of the Civil Rights Act of 1964. It is the long-standing uniform policy of OFCC that contractors and subcontractors have a reasponsibility to provide equal employment opportunity if they want to participate in Federally-involved contracts. To the extent they have delegated the responsibility for some of their employment practices to a labor organization which does not meet the criteria prescribed in 5 above and they are, thus, prevented from meeting the obligations pursuant to Executive Order 11246, as amended, such contractors cannot be considered to be in compliance with Executive Order 11246, as amended, or the implementing rules, regulations and orders.

8. All prime contractors and subcontractors shall include in all bid invitations or other pre-bid communications, written or otherwise, with respect to their prospective subcontractors, the goals, as applicable, which are required under this Appendix. Whenever a prime contractor or subcontractor subcontracts a portion of the work in any trade designated herein, he shall include in such subcontract his commitment made under this Appendix, as applicable, which shall be adopted by his subcontractor, who shall be bound thereby and by this Appendix to the full extent as if he were the prime contractor. The prime contractor shall not be accountable

for the failure of his subcontractor to fulfill his requirements. However the prime contractor or subcontractor shall give notice to the Area Coordinator of the Office of Federal Contract Compliance of the Department of Labor and the contracting agency of any refusal or failure of any subcontractor to filfill his obligations under this Appendix. Failure of compliance by any subcontractor will be treated in the same manner as such failure by the prime contractor.

9. Contractors and subcontractors must keep such records and file such reports relating to the provisions of this Appendix as shall be required by the contracting or administering agency.

10. Nothing in this Appendix shall be interpreted to diminish the responsibilities of the contracting and administering agencies nor the obligations of contractors or subcontractors pursuant to Executive Order 11246 for those trades and those contracts not covered by this Appendix.

11. The procedures set forth in this Appendix shall not apply to any contract when the lead of the contracting or administering agency determines that such contract is essential to the national security and that its award without following such procedure is necessary to the national security. Upon making such a determination, the agency head will notify, in writing, the Director of the Office of Federal Contract Compliance within thirty days.

12. Nothing in this Appendix shall be interpreted to diminish the present contract compliance review and complaint programs.

13. Requests for exemptions from this Appendix must be made in writing, with justification, to the Director, Office of Federal Contract Compliance, U. S. Department of Labor, Washington, D. C., 20210, and shall be forwarded through and with the endorsement of the agency head.

14. This Appendix shall be signed in the space provided below.

FEDERAL CONTRACT COMPLIANCE
JUN 23 1971
U.S. DEPARTMENT OF LABOR

Week of June 28, 1971

'ATLANTA PLAN' FOR WIDENING MINORITY
JOB OPPORTUNITIES IN CONSTRUCTION
ANNOUNCED BY LABOR DEPARTMENT

WASHINGTON -- Assistant Secretary of Labor Arthur A. Fletcher has announced implementation of an "Atlanta Plan" that sets equal employment standards in the construction industry.

The order establishing the minority-hiring plan was signed by Secretary of Labor J.D. Hodgson, Mr. Fletcher and Director John L. Wilks of the Office of Federal Contract Compliance.

The plan, which went into effect upon publication in the Federal Register, brings to four the number of Federally-imposed minority hiring plans in construction. Similar plans have been set in Philadelphia, Washington, D.C., and San Francisco.

In announcing the new plan, Mr. Fletcher said, "Atlanta area unions, contractors and minority groups had attempted for some time to develop a voluntary, home-town agreement for expanding minority job opportunities in construction. But since a voluntary solution was not forthcoming, the Labor Department felt a plan should be imposed at this time to provide a meaningful framework within which the parties in Atlanta may deal with the underutilization of minority group workers."

The new plan, which covers the five Atlanta area counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett, envisions an increase of about 1,500 minority workers in 10 trades over the next four years.

(MORE)

7P- Atl. Blg Trades

Trades covered by the plan are asbestos work, carpentry, electrical work, glazing, iron work, millwrighting, painting, plumbing, sheet metal work, and elevator constructor work.

No contracts will be awarded for Federally-involved construction projects exceeding $500,000 unless the bidder agrees to specific minority hiring goals.

The contractor or subcontractor involved in these projects is required to make a "good-faith" effort to achieve these goals both in his Federally-involved and non-Federally involved construction work.

The plan was initiated after findings of public hearings held in March and April by the Labor Department showed minority workers have been prevented from fully participating in certain construction trades.

The findings revealed, for example, that although the overall minority population in the Atlanta area is approximately 22.6 percent and minority representation among journeymen in construction in that area is approximately 27.1 percent, very few of these minorities are located in the skilled trades.

The following percentages, constituting "acceptable" ranges within which a prospective contractor or subcontractor must establish his minority-utilization goals, are established over the next four years under the Atlanta Plan for the 10 covered trades:

-- June 1971 to June 30, 1972: asbestos workers, 13.5% to 18.5%; carpenters, 7.1% to 10.9%; electricians, 4.1% to 7.7%; elevator constructor, 4.3% to 7.6%; glaziers, 7.9% to 15.8%; ironworkers, 3.5% to 5.7%; millwrights, 4.2% to 7.5%; painters, 8.3% to 13.0%; plumbers, 4.9% to 8.2% and sheet metal workers, 4.8% to 9.6%.

What are current levels

(MORE)

-- July 1, 1972 to June 30, 1973: asbestos workers, 18.5% to 23.5%; carpenters, 10.9% to 14.6%; electricians, 7.7% to 11.3%; elevator constructors, 7.6% to 10.8%; glaziers, 15.8% to 23.7%; ironworkers, 5.7% to 7.9%; millwrights, 7.5% to 10.7%; painters, 13.0% to 17.7%; plumbers, 8.2% to 11.5%; sheet metal workers, 9.6% to 14.4%.

-- July 1, 1973 to June 30, 1974: astestos workers, 23.5% to 28.5%; carpenters, 14.6% to 18.3%; electricians, 11.3% to 14.9%; elevator constructors, 10.8% to 14.1%; glaziers, 23.7% to 31.6%; ironworkers, 7.9% to 10.1%; millwrights, 10.7% to 14.0%; painters, 17.7% to 22.4%, plumbers, 11.5% to 14.8%; sheet metal workers, 14.1% to 19.2%.

-- July 1, 1974 to June 30, 1975: asbestos workers, 28.5% to 33.5%; carpenters, 18.3% to 22.0%; electricians, 14.9% to 18.5%; elevator constructors, 14.1% to 17.3%; glaziers, 31.6% to 39.5%; ironworkers, 10.1% to 12.3%; millwrights, 14.0% to 17.2%; painters, 22.4% to 27.7%; plumbers, 14.8% to 18.1%; sheet metal workers, 19.2% to 24.0%.

It is expected that new job openings for the 10 crafts covered by the plan will total about 3,000 over the next four years. If new and vacated positions are filled on the basis of one minority worker for each non-minority worker, the increase in minority employment in those trades will be approximately 1,500 by June 1975.

"By establishing ranges which anticipate good-faith efforts by construction contractors to fill new and vacated jobs on at least a one-to-one minority-to-non-minority basis through May 1975," the order establishing the plan states, "contractors can recruit from available minority manpower without displacing any existing craftsmen and without discriminating against any non-minority applicant for employment."

Every other kind would be a minority worker?

(MORE)

The Labor Department's Manpower Administration is committed to make available "such funds as may be necessary to carry out reasonable and effective training programs" which further the objectives of the plan and which are consistent with President Nixon's March 1970 directive calling for a 50-percent increase in construction skills training over the next five years.

Proposed Rule Making

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[24 CFR Part 8]

[Docket No. R-71-111]

EQUAL EMPLOYMENT OPPORTUNITY UNDER HUD CONTRACTS AND HUD ASSISTED CONSTRUCTION CONTRACTS

Notice of Proposed Rule Making

The Department of Housing and Urban Development is considering amending Title 24 of the Code of Federal Regulations to include a new Part 8 entitled "Equal Employment Opportunity under HUD Contracts and HUD Assisted Construction Contracts." The proposed amendment, issued pursuant to 41 CFR 60-1.6(c) and Executive Order No. 11246, Equal Employment Opportunity, 31 F.R. 12319, establishes procedures for HUD administration of the equal employment opportunity policy in cases where HUD funds are involved.

Generally, under the proposed regulations, HUD would adopt the applicable provisions of 41 CFR Part 60-1 promulgated by the Department of Labor. However, in addition, § 8.25 *Award of contracts* sets forth specific steps to be followed by HUD with respect to the award of construction contracts in excess of $100,000, and nonconstruction contracts in excess of $50,000. Also, § 8.35 requires the filing of written affirmative action compliance programs in connection with construction contracts of $1 million or more. Section 8.100 sets the effective date as 60 days after publication in the FEDERAL REGISTER, applicable to all contracts which have not been executed as of that date.

Accordingly, interested persons are invited to participate in the making of the proposed rule by submitting written data, views, or statements with regard to the proposed regulations. Communications should identify the proposed rule by the above docket number and should be filed in triplicate with the Assistant Secretary for Equal Opportunity, Department of Housing and Urban Development, Washington, D.C. 20410, not later than July 16, 1971. All relevant material will be considered before adoption of a final rule. Copies of comments submitted will be available for examination during business hours, both before and after the specified closing date, at the above address.

The proposed rule is issued pursuant to section 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

The proposed Part 8 reads as follows:

PART 8—EQUAL EMPLOYMENT OPPORTUNITY UNDER HUD CONTRACTS AND HUD ASSISTED CONSTRUCTION CONTRACTS

Sec.
8.1 Purpose.
8.5 Definitions.
8.10 Responsibilities.
8.15 Equal opportunity clause.
8.20 Exemptions.
8.25 Award of contracts.
8.30 Affirmative action compliance programs—nonconstruction contracts.
8.35 Affirmative action compliance programs—construction contracts.
8.40 Pre-bid requirements and conferences.
8.45 Participation in areawide equal employment opportunity program.
8.50 Reports and other required information.
8.55 Compliance reviews.
8.60 Complaint procedure.
8.65 Hearings and sanctions.
8.70 Intimidation and interference.
8.75 Segregated facilities certificate.
8.80 Solicitations or advertisements for employees.
8.85 Access to records of employment.
8.90 Notices to be posted.
8.95 Program directives and instructions.
8.100 Effective date.

AUTHORITY: The provisions of this Part 8 issued under sec. 201, Executive Order 11246 30 F.R. 12319; and 41 CFR 60-1.6(c).

§ 8.1 Purpose.

This part prescribes standards and procedures for the Department of Housing and Urban Development in the implementation of its responsibilities as a compliance agency under Executive Order 11246; the rules and regulations of the Secretary of Labor, codified in 41 CFR Part 60, prescribed thereunder; and other rules, orders, instructions, designations, and directives issued by the Office of Federal Contract Compliance, Department of Labor.

§ 8.5 Definitions.

(a) "Administering agency" means any department, agency, and establishment in the Executive Branch of the Government, including any wholly owned Government corporation, which administers a program involving federally assisted construction contracts.

(b) "Agency" means any contracting or any administering agency of the Government.

(c) "Applicant" means an applicant for Federal assistance from the Department involving a construction contract, or other participant in a program involving a construction contract as determined by the Department. The term also includes such persons after they became recipients of such Federal assistance.

(d) "Compliance Agency" means the agency designated by the Director on a geographical, industry, or other basis to conduct compliance reviews and to undertake such other responsibilities in connection with the administration of the order as the Director may determine to be appropriate. In the absence of such a designation, the Compliance Agency will be determined as follows:

(1) In the case of a prime contractor not involved in construction work, the Compliance Agency will be the agency whose contracts with the prime contractor have the largest aggregate dollar value;

(2) In the case of a subcontractor not involved in construction work, the Compliance Agency will be the Compliance Agency of the prime contractor with which the subcontractor has the largest aggregate value of subcontracts or purchase orders for the performance of work under contracts;

(3) In the case of a prime contractor or subcontractor involved in construction work, the Compliance Agency for each construction project will be the agency providing the largest dollar value for the construction projects; and

(4) In the case of a contractor who is both a prime contractor and subcontractor, the Compliance Agency will be

determined as if such contractor is a prime contractor only.

(e) "Construction work" means the construction, rehabilitation, alteration, conversion, extension, demolition or repair of buildings, highways, or other changes or improvements to real property, including facilities providing utility services. The term also includes the supervision, inspection, and other onsite functions incidental to the actual construction.

(f) "Contract" means any Government contract or any federally assisted construction contract.

(g) "Contractor" means, unless otherwise indicated, a prime contractor or subcontractor.

(h) "Department" means the Department of Housing and Urban Development.

(i) "Director" means the Director, Office of Federal Contract Compliance, U.S. Department of Labor, or any person to whom he delegates authority under the regulations of the Secretary of Labor.

(j) "Equal opportunity clause" means the contract provisions set forth in § 8.15 (a) or (b), as appropriate.

(k) "Facilities" as used in § 8.75, includes, but is not limited to waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, wash rooms, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees.

(l) "Federally assisted construction contract" means any agreement or modification thereof between any applicant and any person for construction work which is paid for in whole or in part with funds obtained from the Government or borrowed on the credit of the Government pursuant to any Federal program involving a grant, contract loan, insurance, or guarantee, or undertaken pursuant to any Federal program involving such grant, contract, loan, insurance, or guarantee, or any application or modification thereof approved by the Department for a grant, contract, loan, insurance, or guarantee under which the applicant itself participates in the construction work.

(m) "Government" means the Government of the United States of America.

(n) "Government contract" means any agreement or modification thereof between any contracting agency and any person for the furnishing of supplies or services or for the use of real or personal property, including lease arrangements. Services, as used in this section includes, but is not limited to, the following services: Utility, construction, transportation, research, insurance, and fund depository. Government contract does not include (1) agreements in which the parties stand in the relationship or employer and employee, and (2) federally assisted construction contracts.

(o) "Hearing officer" means the individual or board of individuals designated to conduct hearings.

(p) "Modification" means any alteration in the terms and conditions of a contract, including supplemental agreements, amendments, and extensions.

(q) "Order" means Parts II, III, and IV of Executive Order 11246, dated September 24, 1965 (30 F.R. 12319), as amended by Executive Order 11375 dated October 13, 1967 (32 F.R. 14303), and any Executive Order amending or superseding such orders.

(r) "Person" means any natural person, corporation, partnership, unincorporated association, State or local government, and any agency, instrumentality, or subdivision of such a government.

(s) "Prime contractor" means any person holding a contract, and for the purposes of Subpart B (General Enforcement, Compliance Review, and Complaint Procedure) of the "rules and regulations", any person who has held a contract subject to the order.

(t) "Recruiting and training agency" means any person who refers workers to any contractor or subcontractor, or who provides or supervises apprenticeship or training for employment by any contractor or subcontractor.

(u) "Rules, regulations, and relevant orders" of the Secretary of Labor used in paragraph (4) of the equal opportunity clause means rules, regulations, and relevant orders of the Secretary of Labor or his designee issued pursuant to the order.

(v) "Secretary" means the Secretary of Housing and Urban Development.

(w) "Site of construction" means the general physical location of any building, highway, or other change or improvement to real property which is undergoing construction, rehabilitation, alteration, conversion, extension, demolition, or repair and any temporary location or facility at which a contractor, subcontractor, or other participating party meets a demand or performs a function relating to the contract or subcontract.

(x) "Subcontract" means any agreement or arrangement between a contractor and any person (in which the parties do not stand in the relationship of an employer and an employee):

(1) For the furnishing of supplies or services or for the use of real or personal property, including lease arrangements, which, in whole or in part, is necessary to the performance of any one or more contracts; or

(2) Under which any portion of the contractor's obligation under any one or more contracts is performed, undertaken or assumed.

(y) "Subcontractor" means any person holding a subcontract and, for the purposes of Subpart B (General Enforcement; Compliance Review, and Complaint Procedure) of the "rules and regulations," any person who has held a subcontract subject to the order. The term "First-tier subcontractor" refers to a subcontractor holding a subcontract with a prime contractor.

(z) "United States" as used herein shall include the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Panama Canal Zone, and the possessions of the United States.

§ 8.10 Responsibilities.

(a) *General.* The Department of Housing and Urban Development is responsible for: (1) Implementing the requirements of the order, the "rules and regulations," OFCC directives and all other rules, regulations, and orders issued pursuant thereto, and (2) obtaining the compliance of all contractors for which the Department is the Compliance Agency.

(b) *Contract Compliance Officer (CCO).* The Assistant Secretary for Equal Opportunity has been designated the Contract Compliance Officer (CCO) for the Department by the Secretary (35 F.R. 7138, May 6, 1970), and is responsible for developing and administering the Department's program under the order.

(c) *General Deputy Contract Compliance Officer (GDCCO).* The Deputy Assistant Secretary for Equal Opportunity has been designated the General Deputy Contract Compliance Officer (GDCCO) for the Department by the Secretary (35 F.R. 7138, May 6, 1970), to assist the Contract Compliance Officer in the performance of his duties. He is authorized to exercise the authority delegated to the Contract Compliance Officer.

(d) *Deputy Contract Compliance Officer (DCCO).* Each Assistant Regional Administrator for Equal Opportunity has been designated by the Contract Compliance Officer as Deputy Contract Compliance Officer (DCCO) for the Region in which he serves. Deputy Contract Compliance Officers are responsible for field administration of programs of contract compliance in conformity with directives and guidelines promulgated by the Contract Compliance Officer.

(e) *Heads of Program Areas.* Assistant Secretaries of the Department who are authorized to extend Federal financial assistance which involves construction work shall be responsible for effectuating the Order, "rules and regulations," OFCC directives, this Part 8, directives of the Department and all other rules, regulations, and orders issued pursuant thereto as they relate to construction contracts financially assisted by the Department.

§ 8.15 Equal opportunity clause.

(a) *Government contracts.* Except as otherwise provided, the following equal opportunity clause contained in section 202 of the Order shall be included in each Government contract entered into by the Department (and modification thereof if not included in the original contract):

During the performance of this contract, the contractor agrees as follows:

(1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated

during employment, without regard to their race, color, religion, sex, or national origin. Such action shall include, but not be limited to, the following: Employment, upgrading, demotion, or transfer, recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

(2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(3) The contractor will send to each labor union or repesentative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided by the Department's contracting officer, advising the labor union or workers' representative of the contractor's commitments under section 202 of Executive Order 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(4) The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(5) The contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the Department and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(6) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be canceled, terminated or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 25, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(7) The contractor will include the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the Department may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* That in the event the contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the Department, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

(b) *Federally assisted construction contracts.* Except as otherwise provided, the following language shall be included as a condition of any grant, contract, loan, insurance, or guarantee involving federally assisted construction which is not exempt from the requirements of the equal opportunity clause:

The applicant hereby agrees that it will incorporate or cause to be incorporated into any contract for construction work or modification thereof, as defined in the regulations of the Secretary of Labor at 41 CFR Chapter 60, which is paid for in whole or in part with funds obtained from the Federal Government or borrowed on the credit of the Federal Government pursuant to a grant, contract, loan, insurance, or guarantee, or undertaken pursuant to any Federal program involving such grant, contract, loan, insurance, or guarantee, the following equal opportunity clause:

During the performance of this contract, the contractor agrees as follows:

(1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this nondiscrimination clause.

(2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(3) The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers' representatives of the contractor's commitment under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(4) The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(5) The contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by rules, regulations and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the Department and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(6) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be cancelled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(7) The contractor will include the portion of the sentence immediately preceding paragraph (1) and the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the Department may direct as a means of enforcing such provisions, including sanctions for noncompliance: *Provided, however,* That in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the Department, the contractor may request the United States to enter into such litigation to protect the interest of the United States.

The applicant further agrees that it will be bound by the above equal opportunity clause with respect to its own employment practices when it participates in federally assisted construction work: *Provided,* That if the applicant so participating is a State or local government, the above equal opportunity clause is not applicable to any agency, instrumentality or subdivision of such government which does not participate in work on or under the contract.

The applicant agrees that it will assist and cooperate actively with the Department and the Secretary of Labor in obtaining the compliance of contractors and subcontractors with the equal opportunity clause and the rules, regulations, and relevant orders of the Secretary of Labor; that it will furnish the Department and the Secretary of Labor such information as they may require for the supervision of such compliance; and that it will otherwise assist the Department in the discharge of its primary responsibility for securing compliance.

The applicant further agrees that it will refrain from entering into any contract or contract modification subject to Executive Order 11246 of September 24, 1965, with a contractor debarred from, or who has not demonstrated eligibility for, Government contracts and federally assisted construction contracts pursuant to the Executive order and will carry out such sanctions and penalties for violation of the equal opportunity clause as may be imposed upon contractors and subcontractors by the Department or the Secretary of Labor pursuant to Part II, Subpart D of the Executive order. In addition, the applicant agrees that if it fails or refuses to comply with these undertakings, the Department may take any or all of the following actions: Cancel, terminate, or suspend in whole or in part this grant (contract, loan, insurance, guarantee); refrain from extending any further assistance to the applicant under the program with respect to which the failure or refusal occurred until satisfactory assurance of future compliance has been received from such applicant; and refer the case to the Department of Justice for appropriate legal proceedings.

(c) *Subcontracts.* Each nonexempt prime contractor or subcontractor shall include the equal opportunity clause in each of its nonexempt subcontracts.

(d) *Incorporation by reference.* The equal opportunity clause may be incorporated by reference in Government bills of lading, transportation requests, contracts for deposit of Government funds, contracts for issuing and paying U.S. savings bonds and notes, contracts and subcontracts less than $50,000 and such other contracts as the Director may designate.

(e) *Incorporation by operation of the order and departmental regulations.* By operation of the order, the equal opportunity clause shall be considered to be a part of every contract and subcontract required by the order, the "rules and regulations" and these regulations to include such a clause whether or not it is physically incorporated in such contracts. The clause is applicable to every nonexempt contract where there is no written contract between the Department and the contractor.

(f) *Adaptation of language.* Such necessary changes in language may be made in the equal opportunity clauses as shall be appropriate to identify properly the parties and their undertakings.

§ 8.20 Exemptions.

(a) *General.*—(1) *Transactions of $10,000 or under.* Contracts and subcontracts not exceeding $10,000, other than Government bills of lading, are exempt from the requirements of the equal opportunity clause. In determining the applicability of this exemption to any federally assisted construction contract, or subcontract thereunder, the amount of such contract or subcontract rather than the amount of the Federal financial assistance shall govern. The Department, applicants, contractors, and subcontractors shall not procure supplies or services in less than usual quantities to avoid applicability of the equal opportunity clause.

(2) *Contracts and subcontracts for indefinite quantities.* With respect to contracts and subcontracts for indefinite quantities (including, but not limited to, open-end contracts, requirement-type contracts, Federal Supply Schedule contracts, "call-type" contracts, and purchase notice agreements), the equal opportunity clause shall be included unless the purchaser has reason to believe that the amount to be ordered in any year under such contract will not exceed $10,000. The applicability of the equal opportunity clause shall be determined by the purchaser at the time of award for the first year, and annually thereafter for succeeding years, if any. Notwithstanding the above, the equal opportunity clause shall be applied to such contract whenever the amount of a single order exceeds $10,000. Once the equal opportunity clause is determined to be applicable, the contract shall continue to be subject to such clause for its duration, regardless of the amounts ordered, or reasonably expected to be ordered in any year.

(3) *Work outside the United States.* Contracts and subcontracts are exempt from the requirements of the equal opportunity clause with regard to work performed outside the United States by employees who were not recruited within the United States.

(4) *Contracts with State or local governments.* The requirements of the equal opportunity clause in any contract or subcontract with a State or local government (or any agency, instrumentality or subdivision thereof) shall not be applicable to any agency, instrumentality or subdivision of such government which does not participate in work on or under the contract or subcontract. In addition, State and local governments are exempt from the requirements of filing the annual compliance report provided for by § 8.50 and maintaining a written affirmative action compliance program prescribed in §§ 8.30 and 8.35.

(b) *Specific contracts and facilities not connected with contracts.* The equal opportunity clause will not be required to be included in any contract or subcontract exempted by the Director under the provisions of 41 CFR 60-1.5(b) (1) or (2) provided such exemption has not been withdrawn under the provisions of 41 CFR 60-1.5(d).

(c) *National security.* Any requirement set forth in the regulations in this part shall not apply to any contract or subcontract whenever the Secretary determines that such contract or subcontract is essential to the national security and that its award without complying with such requirement is necessary to the national security. Upon making such a determination, the Secretary will notify the Director in writing within 30 days.

§ 8.25 Award of contracts.

(a) All Contracting Officers and all officers who approve applications for Federal financial assistance involving a construction contract, shall prior to approval follow either of the procedures in subparagraphs (1) or (2) of this paragraph:

(1) Notify the Contract Compliance Officer or appropriate Deputy as soon as practicable of the impending award of each nonexempt construction contract in excess of $100,000, the name and address of the prime contractor, anticipated time of performance, name and address of each known subcontractor and whether the prime contractor and known subcontractors have:

(i) Participated in any previous contract subject to the equal opportunity clause, and

(ii) Filed with the Joint Reporting Committee, the Director, an agency, or the Equal Employment Opportunity Commission all reports due under the applicable filing requirements.

(2) Consult a list (supplied by the Contract Compliance Officer) of contractors who have previously been found to be in noncompliance with equal opportunity requirements. In the event of an impending award to any contractor on such list, the Contract Compliance Officer or appropriate Deputy shall be advised and the procedures of paragraph (b), (c), and (d) of this section shall be followed.

(b) The Contract Compliance Officer or appropriate Deputy shall review the available information relative to the prospective prime contractor's equal opportunity compliance status and notify the Contracting Officer or Approving Officer of any deficiencies found to exist. A copy of such report shall be forwarded to the Director.

(c) Contracting Officers or Approving Officers shall: (1) Notify the bidder, offeror, or applicant of any deficiencies found to exists by the Contract Compliance Officer or appropriate Deputy, and (2) direct any bidder, offeror, or applicant so notified to negotiate with the Contract Compliance Officer and to take such actions as the Contract Compliance Officer may require.

(d) The award of any such contract shall be conditioned upon the Contract Compliance Officer's notification to the Contracting Officer or Approving Officer that the bidder, offeror, or applicant has taken action or has agreed to take action satisfactory to the Contract Compliance Officer, appropriate Deputy, or the head of the agency as provided in § 8.55(a). Any such agreement to take action shall be stated in the contract, if the Contract Compliance Officer so requires.

(e) In the case of nonconstruction contracts, all Contracting Officers shall:

(1) Notify the Contract Compliance Officer as soon as practicable of the impending award of each nonexempt, nonconstruction Government contract in excess of $50,000, the name and address of the prime contractor, anticipated time of performance, name and address of each known subcontractor and whether the prime contractor and known subcontractors have:

(i) Participated in any previous contract or subcontract subject to the equal opportunity clause;

(ii) Filed with the Joint Reporting Committee, the Director, an agency, or the Equal Employment Opportunity Commission all reports due under the applicable filing requirements; and

(iii) Developed and have on file at each establishment affirmative action programs pursuant to Part 60-2 of the "rules and regulations."

(2) The Contract Compliance Officer shall notify the Compliance Agency (designated pursuant to the Director's Order No. 1 and 41 CFR 60-1.3(d)) of the impending award of each contract covered by subparagraph (1) of this paragraph. Based upon the information furnished by the Compliance Agency, the Contract Compliance Officer shall advise the Contracting Officer to take such action with respect to the impending award as may be appropriate pursuant to the rules, regulations, and relevant orders of the Secretary of Labor and this Part 8.

(f) The invitation for bids for each formally advertised nonconstruction contract, shall include a notice, and Department officials shall state at the outset of negotiations for each negotiated contract, that if the award, when let, should exceed the amount of $1 million, the prospective contractor and his known first-tier subcontractors with subcontracts of $1 million or more will be subject to a compliance review before the award of the contract. No such contract shall be awarded unless a preaward compliance review of the prospective contractor and his known first-tier $1 million subcontractors has been conducted by the Compliance Agency within 12 months prior to the award. If an agency other than the Department is the Compliance Agency, the Department will

notify the Compliance Agency and request appropriate action and findings in accordance with this paragraph. In order to qualify for the award of a contract, a contractor and such first-tier subcontractors must be found to be in compliance pursuant to Part 60-2 of the "rules and regulations."

(g) A preaward compliance review may be conducted prior to award of contracts in any case where the CCO has reasonable grounds, based on a complaint, the Department's own investigation, or otherwise, to believe that the contractor or subcontractor is unable or unwilling to comply with the requirements of the equal opportunity clause. (Such reviews are in addition to those required pursuant to paragraph (f) of this section.)

§ 8.30 Affirmative action compliance programs—nonconstruction contracts.

Order No. 4 (41 CFR Part 60-2), issued by the Secretary of Labor, sets forth requirements for the development of affirmative action compliance programs for nonconstruction contractors.

§ 8.35 Affirmative action compliance programs—construction contracts.

(a) *Requirements of programs.* The Department or the applicant shall require each Federal or federally assisted construction prime contractor on projects costing $1 million or more, regardless of the number of employees, and each Federal or federally assisted construction prime contractor and subcontractor shall require each subcontractor on projects costing $1 million or more with a subcontract of $100,000 or more, regardless of the number of employees, to develop a written affirmative action compliance program.

(b) *Purposes.* The purposes of the written affirmative action program are:

(1) To identify areas of employment, employment policies and practices which require action by the contractor or subcontractor to assure equal employment opportunity to all employees and applicants for employment without regard to race, color, religion, sex, or national origin;

(2) To analyze these areas, policies, and practices to determine what actions by the contractor or subcontractor will be most effective in assuring equal opportunity; and

(3) To establish a plan to achieve employment opportunity through those actions identified as potentially most effective.

§ 8.40 Prebid requirements and conferences.

(a) In any area or for any class of contracts designated by the Director, or by the CCO, no bid invitations will be issued for any Federal or federally assisted construction contract unless such bid invitation contains definite minimum standards for affirmative action and a statement that contractors and subcontractors must meet such minimum standards to be eligible for award.

(b) Whenever the submission of a written affirmative action program is required before the award of a contract, definite minimum standards for such program shall be incorporated in the bid invitations or requests for proposal issued in connection with such contracts.

(c) When the Director or CCO so requires, a prebid conference will be held in which the minimum standards for affirmative action will be explained to those in attendance. All known prospective bidders will be notified of the date, time, and place of the prebid conference.

(d) Bids which fail to meet the standards prescribed shall be deemed nonresponsive and will not be considered for award.

§ 8.45 Participation in areawide equal employment opportunity programs.

Any contractor who is a participant in, or is a member of an organization or association which participates in, an areawide equal employment opportunity program which is approved by the Department and the Office of Federal Contract Compliance for the purpose of effectuating the goals of Executive Order 11246, may be deemed to be in compliance with the order by virtue of such participation and shall be exempt from the requirement of developing and maintaining a written affirmative action program, unless required to do so under the areawide equal employment opportunity program.

§ 8.50 Reports and other required information.

(a) *Requirements for prime contractors and subcontractors.* (1) Each prime contractor shall file, and each prime contractor and subcontractor shall cause its subcontractors to file annually, on or before the 31st day of March, complete and accurate reports on Standard Form 100 (EEO-1) promulgated jointly by the Office of Federal Contract Compliance, the Equal Employment Opportunity Commission and Plans for Progress or such form as may hereafter be promulgated in its place if such prime contractor or subcontractor (i) is not exempt from the provisions of the "rules and regulations" in accordance with 41 CFR 60-1.5; (ii) has 100 or more employees; (iii) is a prime contractor or first-tier subcontractor; and (iv) has a nonexempt contract, subcontract or purchase order, serves as a depository of Government funds, or is a financial institution which is an issuing and paying agent for U.S. savings bonds and savings notes: *Provided,* That any subcontractor below the first tier which performs construction work shall be required to file such a report if it meets requirements of subdivisions (i), (ii), and (iv) of this subparagraph.

(2) Each person required by subparagraph (1) of this paragraph to submit reports shall file such a report with the Department within 30 days after the award to him of a contract or subcontract, unless such person has submitted such a report within 12 months preceding the date of the award. Subsequent reports shall be submitted annually in accordance with subparagraph (1) of this paragraph, or at such other intervals as the CCO or the Director may require. The Department, with the approval of the Director, may extend the time for filing any report.

(3) The Director, the CCO, or the applicant, on his own motion, may require a prime contractor or subcontractor to keep employment or other records and to furnish, in the form requested, within reasonable limits, such information as the Director, CCO or the applicant deems necessary for the administration of the order.

(4) Failure to file timely, complete and accurate reports as required constitutes noncompliance with the prime contractor's or subcontractor's obligations under the equal opportunity clause and is grounds for the imposition by the Department, the Director, an applicant, prime contractor or subcontractor, of any sanctions as authorized by the order and the "rules and regulations." Any such failure shall be reported in writing to the Director by the CCO as soon as practicable after it occurs.

(b) *Requirements for bidders or prospective contractors*—(1) *Previous reports.* Each bidder or prospective prime contractor and proposed subcontractor, where appropriate, shall state in the bid or in writing at the outset of negotiations for the contract: (i) Whether it has developed and has on file at each establishment affirmative action programs pursuant to 41 CFR Part 60-2; (ii) whether it has participated in any previous contract or subcontract subject to the equal opportunity clause and (iii) if so, whether it has filed with the Joint Reporting Committee, the Director, an agency, or the Equal Employment Opportunity Commission all reports due under the applicable filing requirements.

(2) *Additional information.* A bidder or prospective prime contractor or proposed subcontractor shall be required to submit such information as the CCO, the Deputy CCO, or the Director requests prior to the award of the contract or subcontract. When a determination has been made to award the contract or subcontract to a specific contractor, such contractor shall be required, prior to award, or after the award, or both, to furnish such other information as the Department, the applicant, or the Director requests.

(c) *Use of reports.* Reports filed pursuant to this section shall be used only in connection with the administration of the order and the Civil Rights Act of 1964, or in furtherance of the purposes of the order and said Act.

§ 8.55 Compliance reviews.

(a) *General.* The purpose of a compliance review is to determine if the prime contractor or subcontractor maintains nondiscriminatory hiring and employment practices and is taking affirmative action to ensure that applicants are employed and that employees are placed,

trained, upgraded, promoted, and otherwise treated during employment without regard to race, color, religion, sex, or national origin. It shall consist of a comprehensive analysis and evaluation of each aspect of the aforementioned practices, policies, and conditions resulting therefrom. Where necessary, recommendations for appropriate sanctions shall be made. Where deficiencies are found to exist, reasonable efforts shall be made to secure compliance through conciliation and persuasion. Before the contractor can be found to be in compliance with the order, it must make a specific commitment, in writing, to correct any such deficiencies. The commitment must include the precise action to be taken and dates for completion. The time period allotted shall be no longer than the minimum period necessary to effect such changes. Upon approval of the Contract Compliance Officer, the appropriate Deputy, or the Secretary of such commitment, the contractor may be considered in compliance, on condition that the commitments are faithfully kept. The contractor shall be notified that making such commitments does not preclude future determinations of noncompliance based on a finding that the commitments are not sufficient to achieve compliance.

(b) *Regular compliance reviews.* Each Deputy Contract Compliance Officer shall institute a program of regular compliance reviews of those contractors and subcontractors for which he is assigned responsibility.

(c) *Special compliance review.* The special compliance review of bidders, applicants, offerors, contractors, or subcontractors will be conducted at the request of the CCO or the Director, OFCC to determine compliance or ability to comply with the order, the "rules and regulations," these rules and regulations and directives issued pursuant thereto.

(d) *Reports*—(1) *Special compliance review reports.* A special compliance review report shall be provided to the CCO or the Director, OFCC, as directed.

(2) *Regular compliance review reports.* A report of each compliance review shall be forwarded to the CCO within 30 days after the regular review is conducted unless otherwise provided.

(3) *Preaward compliance review report.* A written report of every preaward compliance review required by the "rules and regulations," or otherwise required by the Director including findings, will be forwarded to the Director by the CCO within 10 days after the award for a postaward review.

(4) *Additional reports.* A written report of every other compliance review or any other matter processed by the Department involving an apparent violation of the equal opportunity clause shall be submitted to the Director. Such report shall contain a brief summary of the findings, including a statement of conclusions regarding the contractor's compliance or noncompliance with the requirements of the order, and a statement of the disposition of the case, including any corrective action taken or recommended and any sanctions or penalties imposed or recommended.

§ 8.60 Complaint procedure.

(a) *Who may file complaints.* Any employee of any contractor or applicant for employment with such contractor may, by himself or by an authorized representative, file in writing a complaint of alleged discrimination in violation of the equal opportunity clause. Such complaint is to be filed not later than 180 days from the date of the alleged discrimination, unless the time for filing is extended by the CCO or the Director upon good cause shown.

(b) *Where to file.* Complaints may be filed with the Director of OFCC or at any HUD Regional or Area Office, FHA Insuring Office or with the CCO. Any HUD employee receiving a complaint shall forward the complaint directly to the CCO or his designee. The CCO shall transmit a copy of the complaint to the Director within 10 days after the receipt thereof.

(c) *Contents of complaint.* (1) The complaint should include the name, address, and telephone number of the complainant, the name and address of the prime contractor or subcontractor committing the alleged discrimination, a description of the acts considered to be discriminatory, and any other pertinent information which will assist in the investigation and resolution of the complaint. The complaint shall be signed by the complainant or his authorized representative.

(2) Where a complaint contains incomplete information, the CCO shall seek promptly the needed information from the complainant. In the event such information is not furnished to the CCO within 60 days of the date of such request, the case may be closed.

(d) *Investigations.* For each complaint filed against a prime contractor or subcontractor for which HUD is the Compliance Agency, the CCO shall institute a prompt investigation and shall be responsible for developing a complete case record. A complete case record consists of the name and address of each person interviewed, and a summary of his statement, copies or summaries of pertinent documents, and a narrative summary of the evidence disclosed in the investigation as it relates to each violation revealed. When a complaint is filed against a prime contractor or subcontractor for which the Department is not the compliance agency, the CCO shall transmit the complaint to the Director for disposition.

(e) *Resolution of complaints.* (1) If the complaint investigation by the CCO shows no violation of the equal opportunity clause, he shall so inform the Director. The Director may request further investigation by the CCO.

(2) If any complaint investigation or compliance review indicates a violation of the equal opportunity clause, the matter should be resolved by informal means whenever possible. Such informal means may include the holding of a compliance conference. Each prime contractor and subcontractor shall be advised that the resolution is subject to review by the Director, and may be disapproved if he determines that such resolution is not sufficient to achieve compliance.

(3) Where any complaint investigation or compliance review indicates a violation of the equal opportunity clause and the matter has not been resolved by informal means, the CCO with the approval of the Director shall afford the contractor an opportunity for a hearing. If the final decision reached in accordance with the provisions of § 60–1.26 of the "rules and regulations" is that a violation of the equal opportunity clause has taken place, the CCO with the approval of the Director, may cause the cancellation, termination, or suspension of any contract or subcontract, cause a contractor to be debarred from further contracts or subcontracts, or may impose such other sanctions as are authorized by the order.

(4) When a prime contractor or subcontractor, without a hearing, shall have complied with the recommendations or orders of the CCO or the Director and believes such recommendations or orders to be erroneous, he shall, upon filing a request therefor within 10 days of such compliance, be afforded an opportunity for a hearing and review of the alleged erroneous action by the CCO or the Director.

(5) For reasonable cause shown, the CCO may reconsider or cause to be reconsidered any matter on his own motion or pursuant to a request.

(f) *Report to the Director.* Within 60 days from receipt of a complaint or within such additional time as may be allowed by the Director for good cause shown, the CCO shall process a complaint and submit to the Director the case record and summary report containing the following information:

(1) Name and address of the complainant.

(2) Brief summary of findings, including a statement as to the CCO's conclusions regarding the contractor's compliance or noncompliance with the requirements of the equal opportunity clause.

(3) A statement of the disposition of the case, including any corrective action taken and any sanctions or penalties imposed or, whenever appropriate, the recommended corrective action and sanctions or penalties.

§ 8.65 Hearings and sanctions.

(a) The Secretary with the approval of the Director may convene formal or informal hearings as he may deem appropriate for inquiring into the status of compliance by any prime contractor or subcontractor with the terms of the equal opportunity clause.

(b) The Secretary may propose or apply sanctions in the event of noncompliance by a contractor or subcontractor

with the requirements of the equal opportunity clause, subject to the limitations of the "rules and regulations," particularly § 60-1.27.

(c) The conduct of hearings and the proposal and application of sanctions shall be in accordance with the requirements of the order and of the "rules and regulations."

§ 8.70 Intimidation and interference.

The sanctions and penalties contained in Subpart D of the order may be exercised by the CCO or the Director against any prime contractor, subcontractor or applicant who fails to take all necessary steps to ensure that no person intimidates, threatens, coerces, or discriminates against any individual for the purpose of interfering with the filing of a complaint, furnishing information, or assisting or participating in any manner in an investigation, compliance review, hearing, or any other activity related to the administration of the order or any other Federal, State, or local laws requiring equal employment opportunity.

§ 8.75 Segregated facilities certificate.

Prior to the award of any nonexempt Government contract or subcontract or federally assisted construction contract or subcontract, the Department or the applicant shall require the prospective prime contractor, and each prime contractor and subcontractor shall require each subcontractor, to submit a certification, in the form approved by the Director, that the prospective prime contractor or subcontractor does not and will not maintain any facilities he provides for his employees in a segregated manner, or permit his employees to perform their services at any location under his control where segregated facilities are maintained; and that he will obtain a similar certification in the form approved by the Director, prior to the award of any nonexempt subcontract.

§ 8.80 Solicitations or advertisements for employees.

In solicitations or advertisements for employees placed by or on behalf of a prime contractor or subcontractor, the requirements of paragraph (2) of the equal opportunity clause shall be satisfied whenever the prime contractor or subcontractor complies with any of the following:

(a) States expressly in the solicitations or advertising that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin;

(b) Uses display or other advertising, and the advertising includes an appropriate insignia prescribed by the Director. The use of the insignia is considered subject to the provisions of 18 U.S.C. 701;

(c) Uses a single advertisement, and the advertisement is grouped with other advertisements under a caption which clearly states that all employers in the group assure all qualified applicants equal consideration for employment without regard to race, color, religion, sex, or national origin;

(d) Uses a single advertisement in which appears in clearly distinguishable type the phrase "an equal opportunity employer."

§ 8.85 Access to record of employment.

Each prime contractor and subcontractor shall permit access during normal business hours to his books, records, and accounts pertinent to compliance with the order, and all rules and regulations promulgated pursuant thereto, by the Department or the Director for purposes of investigation to ascertain compliance with the equal opportunity clause of the contract or subcontract. Information obtained in this manner shall be used only in connection with the administration of the order and the administration of the Civil Rights Act of 1964, and in furtherance of the purposes of the order and that Act.

§ 8.90 Notices to be posted.

Contractors and subcontractors required to do so by paragraphs (1) and (3) of the equal opportunity clause shall post notices to be provided by the CCO. Such notices shall be in compliance with the requirements of § 60-1.42 of the "rules and regulations."

§ 8.95 Program directives and instructions.

Appropriate program officials may issue such directives, procedures, and instructions as they consider necessary to achieve equal employment opportunity in programs administered by them, provided such issuances are not inconsistent with the provisions of the order, the rules, regulations, and directives of the Secretary of Labor or the Director, and these regulations. A copy of such directives, procedures, and instructions shall be submitted to the CCO for approval prior to issuance.

§ 8.100 Effective date.

The regulations contained in this part shall become effective _____ (60 days after publication in the FEDERAL REGISTER) for all contracts, solicitations, invitations for bids, or requests for proposals which shall be sent by the Department or an applicant on or after said effective date and for all negotiated contracts which have not been executed as of said effective date.

GEORGE ROMNEY,
Secretary of Housing and Urban Development.

U. S. DEPARTMENT OF LABOR
BUREAU OF APPRENTICESHIP AND TRAINING
Room 725 - 1371 Peachtree Street, N. E.
Atlanta, Georgia 30309

February 10, 1971

Mr. E. T. Kehrer, Southern Area Director
AFL-CIO Civil Rights Department
Suite 1422
40 Marietta St., N. W.
Atlanta, Georgia 30303

Dear Al:

I am enclosing the following information on numbers of new apprenticeship registrations for the calendar years 1969 and 1970 for the crafts in Atlanta, as you requested in your letter of February 1st:

CRAFT	1969	1970
Central Georgia Sheet Metal JAC	51	25
Atlanta Roofers JAC	17	17
Atlanta Plasterers JAC	5	1
Atlanta Plumbers-Pipefitters JAC	43	1
Painting Industry Appr. Program	104	43
Atlanta Operating Engineers JAC	22	20
Atlanta Lathers JAC	16	3
Atlanta Iron Workers JAC	26	20
Atlanta Area Glaziers JAC	9	13
Atlanta Electrical JATC	79	60
Atlanta Cement Masons JAC	2	1
Atlanta Carpenters JATC	116	100
Atlanta Bricklayers JAC	35	19
TOTAL:	525	323

I trust this information is adequate for your study. Any time I can be of service, don't hesitate to call on me.

Sincerely,

William I. Elrod
WILLIAM I. ELROD
State Supervisor

FEDERAL GUIDELINES FOR REVIEWING EQUAL EMPLOYMENT IN CONSTRUCTION ISSUED

WASHINGTON -- Specific guidelines to assist in Federal reviews of the equal employment posture of Government construction contractors across the country have been issued by the Department of Labor.

Director John L. Wilks of the Office of Federal Contract Compliance said the guidelines provide a new government-wide standard and will cover all construction projects of Federally-involved contractors.

"For the first time," Mr. Wilks said, "Federal agencies will have comprehensive, step-by-step procedures for reviewing equal opportunity in construction work among Government contractors."

Mr. Wilks listed the review guidelines -- covering all phases of construction projects of Government contractors and subcontractors -- in a memorandum to heads of all Federal agencies.

There will be two "distinct and equally important" phases in each review of construction projects, the top Federal contract compliance officer said. He listed them:

-- First, the compliance officer of the agency involved will analyze the personnel policies, practices and programs of the prime contractor and subcontractors to determine possible problems.

-- Second, the compliance officer will conduct on-site visits and prepare a detailed compliance review report of what he finds.

"The number of persons in a particular trade on the job varies with the phase of building," Mr. Wilks said. "Therefore, it is important to schedule site visits when trades in which minority groups are typically less well represented will be on the job."

(MORE)

The guidelines call for four on-site visits during various stages of construction.

During the visits, the compliance officer will seek to verify the contractor's minority employment record and employee referral system to ascertain whether he is in compliance.

An important element of these on-site visits will be interviews with minority workers and non-minority workers in each trade included on the project.

Whenever a deficiency appears, the compliance officer is required to attempt conciliation within established framework of Federal contract regulations covering contractors.

If he succeeds in conciliation, a formal agreement will be executed. However, if the contractor refuses to correct a deficiency within a "reasonable" period of time, the contractor will be considered not complying. In this event, the Federal compliance agency involved will issue to the contractor a notice to "show cause" as to why he should not be denied Federal contracts.

Where deficiences are found, a regular monthly progress report will be required. Continued uncorrected deficiences will result in hearing that could lead to contract cancellation and debarment.

If a contractor has a collective bargaining agreement providing for exclusive referral of workers, it will be no excuse for being out of compliance if the union fails to refer minority employees.

"Discrimination in referral for employment, even if pursuant to provisions of a collective bargaining agreement, is prohibited by the National Labor Relations Act and Title VII of the Civil Rights Act of 1964," Mr. Wilks said.

(MORE)

Prior to making the on-site inspection, the compliance officer will gather information on the contractor's current work force in the area; the contractor's relationship with referral sources; the minority representation of his referral sources; the availability in the area of minorities with requisite skills, and any pending Federal cases involving the contractors, subcontractors or their referral sources.

CENTER FOR MANPOWER STUDIES

SCHOOL OF BUSINESS ADMINISTRATION

JUNE, 1970

In November, 1969, a "JOBS 70" contract series was announced; this series modified and improved the program as follows:

1. Contracts would be accepted for the first time nation-wide. This would allow for greater participation by small employers.

2. Five hundred specially trained employment service personnel would assist employers in preparing their JOBS proposals.

3. Monthly pay-back amounts would be geared to the actual length of training. Formerly pay-back periods sometimes extended beyond training periods.

4. The conventional MDTA-OJT program would be merged to JOBS to eliminate duplication.[51]

Labor Education Advancement Program (LEAP)

The Labor Education Advancement Program (LEAP), a project under the sponsorship of the National Urban League, was established in 1966, with one objective in mind: to increase substantially the number of minority youths in apprenticeship programs of the building trades and construction crafts. To accomplish this end, the program emulated techniques employed by the Workers Defense League (WDL), a human rights organization which made impressive advances along these lines in New York City during the early sixties.

Even though WDL had been in existence prior to World War II, it was not until 1963 that the organization turned its attention to apprenticeships and, having become involved, attempts to effect change in this area soon became

the organization's primary objective.[52] One of the initial problems the New York organization ran into was the nonavailability of qualified recruits. It undertook, therefore, a thorough enlistment campaign which included going to schools (a long-term investment since most apprenticeship programs required high school diplomas); appeared before PTA meetings, because it was cognizant of the role parental influence played in filial career choices; asked YMCA directors to identify potential applicants, since the "Y" served as temporary home for many rural to urban transients; canvassed bars and poolrooms; solicited the help of every possible community organization concerned with minority youth; and, finally, derived the greatest number of recruits from the ranks of the underemployed: gas jockeys, car washers and soda jerks.

After recruitment, a preliminary aptitude screening test was administered. Since most youths were unaware of the wide range of apprenticeship programs available, the next step was counseling. It was during this process that WDL attempted to guide the aspirants into that field most nearly compatible with their abilities and desires. After an individual made his choice, intensive tutoring sessions started. These meetings, spanning a six to eight week period, were used "to develop test awareness and to impart knowledge." Preparation for the oral interview also was given, when necessary. After the examination was passed, WDL helped find

temporary jobs for its youth while they waited to enter their respective programs. In addition to the above help, the organization arranged for free medical examinations; it made loans and outright donations to its students; applications were processed; and appeal cases were prepared when applicable.

All of this was accomplished by a surprisingly small staff.

> The WDL staff is purposely kept small since "it is easier to be accountable for your actions" under such an arrangement. The format basically calls for three staff specialists: one to deal with the unions in order to learn the who's and where's of individual apprentiveship classes; one to deal with the applicants and to see that their credentials are in order; and one to take charge of tutoring the applicants to get them through the examinations.[53]

In 1966, when Whitney Young, Executive Director of the National Urban League, solicited the support of the AFL-CIO Executive Council, the Council donated $30,000 for a three-year period,[54] and a Joint Urban League-Labor Program was set up for the purpose of bringing more blacks into labor. Out of this venture came LEAP (Labor Education Advancement Program), which received its first outreach grant from the U. S. Department of Labor in July, 1967.[55] LEAP was patterned upon the format of the WDL program and made use of the same techniques.

In June, 1968, the Atlanta LEAP organization began its operations from an office within the EOA target area known as "Vine City." High school graduates 17 through 25 years of age were recruited through the high schools, churches, civic organizations and "other community sources."[56]

Each individual was then given a battery of six tests to ascertain his aptitude. After he selected a craft, he was tutored to strengthen his position when he took the actual tests which were administered by the Georgia State Employment Service. According to a LEAP staff member, the most important part of the tutoring centered around the preparation for an aspirant's oral interview.[57] He was taught successful communication and given clues on how to sell himself as a successful employee. In review then, LEAP assisted its prospective apprentices in the following ways: (1) by assisting in the completion and filing of an application; (2) by administering apprenticeship-type tests; and (3) by preparing the aspirant for the oral interview. Those who passed the entrance requirements were then listed, by rank, based upon the above three factors. When selected, the individual began a probationary period of three to six months at a minimum salary of $3.00 an hour. After this period, the individual was launched into a three to five year apprenticeship program. Once the applicant was accepted, LEAP theoretically served as coordinator between the individual and the employer. Follow-ups also included statistical accountability of those persons indentured through the efforts of the organization.

The Atlanta LEAP staff was comprised of three full-time members; a director, an associate director, and an administrative associate. Six part-time instructors also assisted

in the tutoring sessions.

To give a precise evaluation of the program is difficult both because official reports are conflicting and officials were uncooperative in providing information. For example, the administrative associate (who performed secretarial duties) was reluctant to divulge statistical information. Such information was supplied by either the director or the associate director, both of whom were either "out of the office at the present time" or "on vacation". After two weeks of endeavors, an interview was finally secured with the adminstrative associate (neither of the other two officers was available); during the interview, attempts to secure statistics were turned aside with, "We don't know what the retention percentage is. These boys just drop out of the programs and don't call us to let us know. Many of them don't seem interested in the first place; they don't like to get their hands dirty".[58] When pressed further for data, the reply was "Oh, I'd guess we have a 60 to 65 percent retention rate". A sheet of statistics was supplied during the interview; it showed a cumulative total of 128 blacks indentured from program inception through December, 1969, with 18 individuals "dropped".[59] If this were the case, the retention rate would have been 86 percent.

Because of federal governmental funding, the LEAP organization was under contractual agreement to furnish statistics giving the numbers of indentured apprentices and the number of dropped indentured individuals which had been placed in

programs through its efforts. This information was for publication in the U. S. Department of Labor's Manpower Administration Outreach Program activity summary charts. Although such information was not due for publication until early in 1970, it was secured in its final form late in 1969;[60] these figures showed a retention rate of 71 percent.

Thus, three sources of data concerning the same topic (black apprentices indentured through Atlanta LEAP efforts) and covering the same time period (from program inception through December, 1969), were conspicuously inconsistent (60-65 percent, 86 percent, 71 percent). What made the discrepancies even more inconceivable was the fact that ultimately the Atlanta LEAP organization had issued all three sets of statistics from its own office.

Needless to say, further research was considered necessary. In an attempt to discover the actual number of black indentured apprentices who had been placed in programs by LEAP efforts, and who were still indentured at the end of 1969, it was necessary to contact JAC (Joint Apprenticeship Committee) officers of all eleven Atlanta unions which had black apprentices at that time.[61] Table 65 is a comparison of the figures supplied by LEAP to the U. S. Labor Department's Manpower Administration Outreach Program with figures obtained from JAC officials. The JAC figures were also to be filed with the U. S. Department of Labor, but through its Bureau of Apprenticeship and Training.

TABLE 65

NEGRO INDENTURED APPRENTICES IN ATLANTA
DECEMBER, 1969

Program	LEAP Figures	JAC Figures*	Total of JAC Negro Apprentices
Atlanta Electrical JATC	3	1	2
Atlanta Masonry JAC	3	-	20
Atlanta Roofers' JAC	31	-	12
Atlanta Carpenters' JATC	29	3	7
Central Ga.Sheet Metal JAC	2	-	1
Atlanta Lathers' JAC	14	15	65
Atlanta Painters' JAC	18	10	16
Atlanta Area Glaziers' JAC	-	-	6
Atlanta Plasterers' JAC	-	-	40
Atlanta Cement Masons' JAC	1	1	45
Atlanta Operating Engineers JAC	4	-	2
Machinists Placed at Lockheed**	5	(5)	(5)
Total	110	35	221

The preceding table does not imply that there were only 35 black indentured apprentices in Atlanta in December, 1969. There were actually 221 such apprentices. For example, the Atlanta Plasterers had a total of 40 black apprentices, but LEAP did not claim credit for any of them, and rightfully so. On the other hand, LEAP claimed to have had 31 black apprentices in the Atlanta Roofers, when in actuality there was a grand total of only twelve, not one of whom was a LEAP recruit according to the union's business agent. Those 186 apprentices who were not indentured through LEAP efforts were brought into their respective programs mainly through the efforts of union members and other apprentices, some were

Table 65

* From interviews with W. A. Griffin, W. Johnson, Jr. Gray, J. Miles, M. Dixon, B. Elrod, -. Jackson, -. Fredwell, -. Miller, -. Count, and -. Deason

** Interview with Bill Elrod. Mr. Elrod verified this figure and added that while these men were not members of one of the Atlanta programs they were registered apprentices and LEAP should receive credit for them.

referred through the Georgia State Employment Service and YOC, while the remainder were recruited through schools and word of mouth, according to JAC officers. One coordinator who claimed to have been recruiting through area vocational and high school for a number of years said, "One of the LEAP officials came up to me last September (1969) and told me to quit recruiting in Negro schools, because that's where he worked and he didn't want any competition."[62]

Thus, one finds that, in actuality, LEAP efforts had led to the indenture of only 35 of the 221 total black apprentices who were still in programs at the end of 1969. If, in fact, LEAP had recruited and originally placed 128 apprentices, this displayed a retention rate of only 27 percent for their efforts. Even more damaging is the fact that of the total number of Atlanta black apprentices (221), only 15.8 percent were attributable to this organization whose sole justification for existence lay here.

In order to place Atlanta LEAP efforts in their proper perspective, it was felt necessary to compare its retention rate with the rates of three other Southeastern cities which had LEAP programs in December, 1969. The Jacksonville, Florida, program had a retention rate of 55 percent, the Miami, Florida, LEAP project had a 73 percent retention rate, while the New Orleans, Louisiana, figure was 81 percent.[63] The Atlanta figure (27 percent) was, therefore, half that of the lowest figure of the other three cities. Based upon these

data, it could hardly be contended that Southern racial prejudices were the contributing factor of Atlanta's depressing ratio.

The reasons had to lie deeper. According to the Director of the Civil Rights Division of AFL-CIO for the Southeast, the reason for the poor retention rate was attributable to the lack of on-the-job follow-up which LEAP was supposed to provide the apprentices. "The first six months to a year are the most difficult, the boys need encouragement and if they don't get it, they get discouraged and drop out. The people at LEAP admit to no responsibility for follow-up".[64]

When questioned about the lack of follow-up, the administrative associate conceded that it was not done on a regular basis, but defended LEAP's inability to provide it due to staff shortages. (It is interesting to recall that WDL purposely kept their staff small for easier accountability). When asked to outline the duties of each of the three LEAP officers, the respective job descriptions were read to the interviewer out of a booklet entitled "LEAP Standard Operating Procedures".

Dissatisfied with the answers received, further research was undertaken. It brought to light some disturbing facts. The LEAP director, in addition to his full-time duties, was involved with Manpower Development Programs for the Atlanta Urban League. He was also director of a black contractors group; furthermore, he was a business partner in a

corporation, which acted as general consultants with respect to federal procurement and federal guarantees, engaged in land development and improvement and general business promotions. He was also the registered agent for the corporation of Bankhead-West, Contractors and Developers, Inc. Lack of follow-up was no longer a mystery but a new question now appeared unanswered; with the myriad of jobs in operation from the LEAP office, how could the organization find time to place apprentices? The following replies and other similar ones were received from the JAC coordinators:

"They would call me and say they were sending me some people and they never did show up".

"If the director says he had a single apprentice in this organization due to his efforts, he's a damned liar. He's supposed to have come down here two or three times to bring boys and to talk to me. He's never even shown up, leave alone the boys".

"LEAP has contacted me and I've talked to them and been told there'd be people to call on me and I've never seen them, no one ever came".

"Indenture' to us means when a signed apprenticeship agreement is received in this office and certified. Their (LEAP's) interpretation is when someone says, 'I'll take three boys if they meet our qualifications'. So LEAP tells three boys, 'You go to this address and they'll give you a job in the apprenticeship program'. If the boys don't make it, so what? LEAP still says, "We indentured three boys'".

"They're not too damn regular".

Only two of the eleven coordinators felt they received individuals on a satisfactory basis from LEAP:

"I'd say that almost all of our boys come through the LEAP program".

"As far as we're concerned we've got a real good working relationship with LEAP. They call me and let me know about one and when I get one I call them. But I don't work with them that close".

Thus it seemed that in a majority of cases Atlanta LEAP was counting apprentices who had never existed. Maybe the actual ratio between those truly indentured and those retained in programs was not so dismal as inflated figures would indicate. If this be the case, why were the figures exaggerated? Part of the answer could be found in the need to "appear busy" but the most condemning reason seemed to lie with the LEAP director's attitude:

> . . . The director was meeting with us and he bowled me over when he said, "Our goal is to get thirty-three bodies in apprenticeship programs. We don't care how long they stay, just so we meet our quota". I swear to God that he said that, and Ive got witnesses who heard it, too.[65]

If the statements and accusations on this and preceding pages could be accepted with credence, their sole validity and purpose lie not in their truthfulness or even in their consequential imputation of the LEAP director. Their only utility must be to bring into rather sharp focus the urgent need for new leadership in the Atlanta LEAP program. Or, as one individual put it:

> "As far as I'm concerned one of the problems we have is the guy charged with our programs in wearing so many hats that he may not be as effective as we'd like to see him. Our concern is not how many business he gets into, our concern is that the program functions properly".[66]

For as disgruntled as many JAC coordinators were with LEAP's present leadership they repeatedly praised the purpose and the goals of the program:

> "When the program first started I tried to work closely with them, but they pulled such deals all the time I finally just gave up. But I still think the idea of the program is fine".

"Our idea is, given time, an organization like this can show more progress than any other, because it is something that takes time and what they're doing is instilling in helping them get a start by getting them into these apprenticeship programs".

"LEAP is a good program; it is what is needed". . . my overall viewpoint is that this is the right approach and as far as the program is concerned, I'd like to see it stay in existence and as years go by it'll become more and more useful until it serves its purpose".

In this program, as in so many others, the problems rested not with its theory or philosophy but rather with its implementation, or lack thereof.

Youth Employment Project (YEP)

Another program designed to help young people find meaningful jobs in Atlanta during the sixties was the Youth Employment Project (YEP). This program was established by the National Association for the Advancement of Colored People (NAACP) in February, 1969, as a job referral service. The project, which was funded for three years by the organization's Local Contribution Fund, was set up in five cities: Oklahoma City, Baltimore, Memphis, Philadelphia, and Atlanta. YEP functioned as a private employment agency dependent upon field contacts and job information placed with it by industry.

The objective was to recruit, counsel, refer, and follow up on young minority member applicants who applied for jobs through its office.[67] Recruitment was accomplished through the news media and by word of mouth. The counseling consisted primarily of easing the applicant's mind about the job interview and suggesting a manner of dress and punctuality. It did not include training but the agency referred

MITCHELL APPOINTED TO MANPOWER POST;
TO HAVE EEO RESPONSIBILITIES IN APPRENTICESHIP

WASHINGTON -- James P. Mitchell, a 21-year veteran of the Labor Department, has been appointed Deputy Administrator of the Bureau of Apprenticeship and Training (BAT), Manpower Administrator Paul J. Fasser, Jr., has announced.

Mitchell will have a primary role in implementing the revised apprenticeship regulations governing "Equal Opportunity in Apprenticeship and Training" which becomes operational in October.

Mitchell will be deputy to Administrator Hugh C. Murphy in managing the Bureau's promotional activities through its 160 field offices in major industrial cities in every State.

The Bureau of Apprenticeship and Training is part of the Labor Department's Manpower Administration.

Mitchell has held positions as management analyst, administrative officer, assistant to the administrator for planning, and director of the office of program and budget in BAT.

A native of Kingston, Oklahoma, he was educated in the Tulsa public schools and worked as an apprentice and journeyman coremaker and foreman.

He joined the Federal service in 1950 as field representative in the BAT Oklahoma City office, providing advisory and technical services related to the training of apprentices to industry.

Prior to his transfer to Washington in 1960, Mitchell was selected by the Labor Department for participation in the Civil Service Commission Inter-Agnecy Management Intern Program in the field of operations research, with service in the Department of Agriculture.

Mitchell is married to the former Eileen Rock of Beaver, Okla. They reside in Adelphi, Md., have four children and six grandchildren.

Plumbers On The Way Up

PIPEFITTER TACK WELDS pipe.

Plumbers and pipefitters are craftsmen who install pipe systems which carry water, steam, air and other liquids or gases needed for sanitation, industrial production or other uses.

Their number is expected to rise rapidly during the next decade. In addition to increased need for workers in the field, the amount of openings available will rise to replace pipefitters and plumbers who die, retire or transfer to other occupations.

Most plumbers and pipefitters are employed at construction sites by plumbing and pipefitting contractors. A substantial number of plumbers are employed by plumbing contractors doing repair, alteration and modernization.

Minimum Wage

The union hourly minimum wage averaged $5.73 and $5.70 on July 1, 1968, straight-time hourly benefits, excluding fringe benefits and payments to health, insurance and pension programs, for plumbers and pipefitters in 12 of the 68 cities selected to show wage information from various areas and regions of the country.

The work of plumbers and pipefitters is active and sometimes strenuous. They must stand for prolonged periods and occasionally work in cramped or uncomfortable positions because of the inaccessibility of many of the working places.

Apprenticeship

Most training authorities, including the joint labor-management apprenticeship committees for the plumbing and pipefitting industries, recommend a formal 5-year apprenticeship for plumbers or for pipefitters as the best way to learn all the aspects of the trades. A number of men in this field have acquired skills by working for several years with skilled craftsmen, by watching and receiving instruction from them.

Apprentices are usually required to be between the ages of 18 and 25 and in good physical condition. A high school education or its equivalent is generally recommended.

The apprenticeship program usually consists of 10,000 hours of on-the-job training, in addition to 144 hours of related classroom instruction annually. In the typical 5-year program the apprentice learns to use and care for their tools, equipment and the materials of the trade.

Further

For further information about plumber or pipefitter apprenticeships and work opportunities, inquiries should be directed to contractors, a local union of the United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry of the United States and Canada.

Other sources of information include: the nearest State apprenticeship agency or the Bureau of Apprenticeship and Training, U. S. Department of Labor. In addition, the office of the State Employment Service may be a source of information about the Manpower Development and Training Act.

General information about the work of plumbers, pipefitters and sprinkler fitters may be obtained from:

National Association of Plumbing-Heating-Cooling Contractors
1016 20th Street North West
Washington, D. C. 20036

or

United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry of the United States And Canada
901 Massachusetts Ave. North West
Washington, D. C. 20001

Don't Give Up!

We are living in a time of much unemployment and uncertainty about the future. Not only have many workers lost their jobs because of the national business recession, but opportunities for young people to enter the world of work are more limited than they were two years ago or even last year.

No one knows for certain how long it may take the national economy to recover to the point where we will have full employment--which means a job for every willing and able worker, young and old, male or female. Business forecasts in some quarters are optimistic. Other sources take a dimmer view of the near future.

What To Do

In the face of such an uncertain business outlook, what should you do as a young man or woman hoping for a career that will bring adequate rewards in pay and in job satisfactions?

Finish high school, by all means, and get as much general education as you can along with acquiring whatever skills will help you eventually to find employment in the field of your choice. Then, if the general business climate has brightened by graduation times--as we hope it will--you will be able to be choosey about the kind of job you will take. And, if the economic situation continues bad, your education and vocational skills will give you an advantage in the keen competition for employment over those who dropped out.

A detailed survey by the Regional Plan Association indicates that the number of office jobs in the New York-New Jersey metropolitan region will double before the year 2000 and that this will require construction of additional office space equivalent to 300 Empire State Buildings. And right now, according to the Economic Development Council, at least 10,000 clerical positions in this city are going begging because employers can't find competent young people to fill them.

21 Per Cent Less Recruiting

On a higher level of education the College Placement Council has found that employers are doing 21 per cent less recruiting of 1971 college graduates than they did a year ago. The picture is spotty, with engineering graduates facing fewer job openings than business graduates. But the salaries being offered are as good, and in some cases higher, than they were last year.

All in all, the scene for this year's graduates, from high school or college, is not as grim as some reports have made it appear. And the better general education and vocational skills you can offer a prospective employer the better your chances will be.

Complete Your Education

Complete your schooling if you can. If you have already dropped out, you can qualify for a high school equivalency certificate by home study, or in classes conducted along with many free skills training courses that are given by a number of government agencies, employers and trade unions and by non-profit public service institutions.

Need For Laborers To Increase

New highways, dams, pipelines, water and sewer projects have steadily increased the need for construction laborers. Little formal training is required and union minimum wage rates averaged between $4.29 and $3.96 per hour on July 1, 1968.

A person acquires some basic skills once on the job, but good physical condition and the age of 18 are the only other qualifications.

All Types Of Projects

Construction laborers work on all types of buildings and construction projects. The work includes the loading and unloading of construction materials at the worksite and the shoveling and grading of earth. Laborers stack and carry materials, including small units of machinery and equipment, and do other work to aid the building craftsman.

Additional Job Openings

Employment of construction laborers is expected to increase slowly through the 1970's. Thousands of additional job openings will arise from the replacement of construction laborers who change occupations, retire or die.

The anticipated large increase in construction activity is expected to result in a growing demand for laborers. However, employment will be somewhat limited by the use of mechanical equipment.

In New York the wages are especially high. The minimum hourly wage is a national high of $5.65.

Physically Strenuous

Construction work is physically strenuous. It requires bending, stooping, lifting, and other physical activity. Much of the work is obviously performed outdoors.

General information about the work of construction laborers may be obtained from:

Laborers International Union of North America
905 16th Street NW
Washington, D. C. 20006

PAINTERS PREPARE THE surfaces of structures and then apply paint, varnish, or other materials.

Apprenticeships Available

NEW YORK CITY -- A Plumbers Joint Apprenticeship Committee in Mt. Vernon is recruiting for 15 apprentices, State Industrial Commissioner Louis L. Levine said today

Applications -- which will be available until March 3 -- can be obtained at the office of Local Union No. 86, 27 Mt. Vernon Avenue, Mt. Vernon.

Further information can be obtained from the Apprentice Section, Division of Employment, New York State Department of Labor, 80 Centre Street, New York, New York 10013 or at the Apprenticeship Information Center, 255 West 54th Street, New York, New York 10019.

Construction Offers Top Wages

BRICKLAYERS (OR BRICKMASONS) are craftsmen who construct walls, partitions, fireplaces, chimneys, and other structures from brick.

The construction industry in New York, which includes a variety of trades and skilled crafts ranging from bricklayers and carpenters to plumbers, steamfitters, air conditioning mechanics and structural draftsmen, is at present training several thousand young men to qualify for careers of dignity with top union wages and the comfort and security of fringe benefits.

How Long Will Training Take

The training is acquired during apprenticeships, most of them varying in length from two to five years for the construction trades.

What Is The Pay Scale?

From the first day on, the learners are on a contractor's payroll, at $3 an hour or more in many instances, while working alongside experienced craftsman whom they serve as helper at the start. There are pay raises every six months under formulas agreed upon by employers and unions. Upon completion of the training period, which includes also classes in subjects related to their crafts, the apprentices are graduated to journeymen—proud workers who have not only mastered their craft — but gained maturity of judgment and a sense of responsibility that will stand them in good stead in all aspects of life.

Of all the apprentice programs in New York State and in this city, covering hundreds of different work classifications, more youths have chosen apprenticeships in the construction industry than in any other line of work. One reason is that wages are better than in many other so-called blue collar jobs and compare favorably with middle-level white collar types. An expert plumber-steamfitter, for instance, may with overtime bring home more money than a school principal. The man who handles one of the tall cranes on a highrise job earns more, at $16.10 an hour, than many an office executive. You must realize, however, that jobs at the top are not numerous.

What Are The Job Prospects In Construction?

In these changing times, building and construction continues to go ahead, regardless of the ups and downs of the national economy. When residential construction lags, contractors turn to their backlog of orders for office and industrial buildings. And when private projects go into low gear, there are government contracts for urban rehabilitation, new Federal buildings, bridges and highways.

Negative factors that will slow down the need for construction workers are new materials and new processes, such as pre-fabricated houses. All in all, there should be a moderate rise in the number of construction workers needed in the next decade.

What Kind Of Job Security Does The Construction Field Offer?

Apprentices are assured of continuity in training and employment. If the construction project to which an apprentice is assigned is completed, he is sent to another project. And when there isn't an immediate opening, he is paid a weekly stipend to attend training and classroom instruction.

How Many Apprentices Are There?

There are approximately 150,000 apprentices in the U. S. each year. There are, however, many more applicants than there are jobs.

Of 24,590 apprentices registered in all the State and Federally supervised programs in New York State as of last Dec. 30 (16,571 in State programs, 8,019 in Federal), more than 12,000 were in construction industry earn-and-learn courses. And about half of the construction industry apprentices, some 6,000, were in New York City. With an estimated 3,000 new apprentices expected to be accepted here, the number of construction apprentices in this city will probably rise to 7,000 this year, according to Frank J. Neher, regional director of the Bureau of Apprenticeship and Training of the U. S. Department of Labor.

What Does It Take To Be An Apprentice?

It takes determination, perseverance and work to go through an apprenticeship. None of the apprentice programs, says Mr. Neher, will welcome the youth who looks upon a trade apprenticeship "as a cop-out for a school drop-out."

"About half of all apprentices fail to complete the full program," Mr. Neher told The Light. "Some just haven't got the will to stay with anything for two or three or four years, whatever the requirement for the craft they chose. Some terminate their apprenticeship early to open a small business of their own. Some move out of New York."

What Are The Chances Of Getting Into An Apprenticeship Program?

When an apprentice drops out or when one completes the program and becomes a full-scale journeyman, an opening is created for a newcomer. **Some of the construction crafts have waiting lists of as long as a year.** In others, qualified applicants may get in much sooner. Announcement is made from time to time through the State Department of Labor of openings in specific programs, with deadlines for making applications and other pertinent information.

POWER SHOVEL OPERATOR delivers load to waiting truck.

CARPENTERS, THE LARGEST GROUP of building trades workers, are employed in almost every type of construction activity.

No announcements have been made so far for the new year.

The Joint Apprenticeship Committee of the Sheet Metal Industry of New York City took on 50 apprentices in January to begin four years of training in shops and on construction sites in this city and in formal classroom sessions. A new class of 50 will begin on July 1, but has already been filled.

What Kind Of Information Is Available?

The call for candidates, as issued last year, may serve as an example of the sort of information that is now available at the State Apprentice Information Center on West 54th Street concerning all the different apprentice programs.

The announcement described the duties of a sheet metal worker as follows:

"(He) fabricates, assembles, and installs sheet metal products and equipment used in ventilation and air conditioning, restaurant equipment, architectural sheet metal work, warm-air heating systems, sheet metal roofing and related industries. Selects gage and type of sheet metal to be fabricated. Locates and marks dimensions on the metal. Sets up and operates fabricating machines such as shears, brakes, bending rolls and punch and drill presses to form the metal. Sets up and operates soldering and welding equipment to join the sheet metal parts. Smooths seams, joints and other surfaces using files, buffers and grinders. Uses measuring instruments to inspect work and installation."

What Pay Rate Do Apprentices Receive?

The 1970 announcement listed the beginning pay of apprentices as $3.20 an hour, with increases of 40 cents every six months up to $6.40 an hour during the last six months of the apprenticeship, before attaining the journeyman scale of $8 an hour. It stated also: "After completing one year, apprentices receive welfare benefits (hospitalization, disability and medical), pension fund and vacation benefits."

What Are The Minimum Requirements?

It listed the following minimum requirements, with the age limit 18 through 23 years, except that an honorably discharged veteran's age limit

Continued on Page 7

OPENING OF THE Brooklyn office of the Department of Labor in July, 1963, in the Bedford-Stuyvesant area of Brooklyn.

Continued from Page 6

can be extended by the number of years he served in the armed forces.

High school diploma or equivalency certificate is required. An aptitude test will be administered, and candidates will be examined by a physician to determine whether they are in physical condition to perform the required work. Applicants must pay a $10 fee when filing their applications.

The prerequisites, length of apprenticeship, wage scales and description of duties vary with the different trades. Of 255 different apprentice programs in the construction trades in this state, 153 require high school diploma or equivalency certificate, 78 require between six and 10th grade, and 24 programs have no educational requirement. Duration of apprenticeship runs from two years for lathers and structural ironworkers to five years for pipefitter, plumber and steamfitter, refrigeration and air-conditioning mechanic and electrician for the huge display signs.

Some programs require applicants to be citizens, or to have from one to three years residence in New York, and some bar applicants having a criminal record. Others have no such limitations. Information about these and other specifics is available without any charge at the Apprentice Information Center, where youths who find they lack one or more of the requirements are advised where they may obtain pre-employment training and help to enable them to pass the entrance requirements.

Which Construction Industries Have Apprentices?

Among the construction industry and allied trades available for apprentices are bricklayer, mason, plasterer, cement finisher, granite cutter, marble carver and cutter, stone mason, carpenter, millman, asbestos worker, pipe fitter, plumber, steamfitter, lead burner, metal and wire lather, wood lather, painter and decorator, painter, paperhanger, iron worker, ornamental ironworker, roofer, glazier, stain glass glazier, linoleum and resilient tile layer, soft tile and carpet layer, mosaic worker, terrazo worker, electrical lineman, electrician, sign electrician, electrical draftsman, architectural draftsman, structural draftsman, universal equipment operating engineer, grade and paving equipment operating engineer, and plant equipment repairman.

How Have The Construction Trades Changed?

The construction trades have come a long way up the social ladder as well as up the pay scale since the days when men dug the ditches with hand shovels instead of manipulating mechanical earth-moving monsters and other sophisticated equipment. The once lowly plumber is concerned today with new techniques in ecological conservation and preventing pollution of the nation's rivers.

Where Can I Get Information About The Various Apprentices?

The Apprenticeship Information Center, conducted by the New York State Department of Labor at 255 West 54th Street, is one of two repositories in this state (the other is in Buffalo) of all information about apprenticeships, the requirements for acceptance into the many different programs, pay scales, fringe benefits, nature of the job, where to make application for admittance, etc.

Application may be made also through the various participating unions, certain employers, employer-union councils, and organizations such as the N.A.A.C.P., the Joint Apprenticeship Program of the Workers Defense League, Neighborhood Manpower Service Centers in the five boroughs, and through other advisory or recruiting services.

Your school guidance counselor would also have information about the various openings.

What Is The New York Plan?

The New York Plan is an equal opportunity proposition to allow 600 applicants to be accepted for apprenticeships. This plan would exclude the preferences given to sons and relatives of those already in the union. Those who are accepted for an apprenticeship would be accepted into the union after working a certain period of time.

Veterans Benefits Are Tax Exempt

Veterans benefits are generally exempt from taxation and need not be reported as income on income tax returns, the Veterans Administration announced today.

The VA said the only reportable item is interest earned on GI insurance dividends left on deposit or credit with the VA since this is considered earned income and a veterans' benefit.

GI insurance dividends themselves are not taxable, VA said, nor are proceeds from GI insurance policies.

Other major tax exempt benefits are compensation and pension, GI Bill and other educational assistance, subsistence payments to vocational rehabilitation trainees, and grants for homes or autos to severely disabled veterans.

Apprenticeship Programs Have Improved Greatly

There have been apprentices as far back in history as there have been skilled craftsmen, but the life of an apprentice has changed greatly— for the better within this century.

Throughout Europe and in colonial America, boys were indentured by their parents or by the masters of orphanages to craftsmen who agreed to teach them their trade. These boys, sometimes as young as ten years, were bound for long periods—often until they were 21—to the master craftsmen who paid them nothing or almost nothing and who fed them, often meagerly and poorly. Many youths were apprenticed to craftsmen or shop owners in cities distant from their parental homes.

Life for an apprentice, except for those fortunate enough to have a warm hearted master, was hard and dreary, with long hours of work, a hard cot to sleep on and little time between or the wherewithal for education or recreation.

A contract of indenture in Massachusetts, preserved from 1640, reads thus:

"Know all men that I, Thomas Millard, with the consent of Henry Wolcott of Windsor unto whose custody & care at whose charge I was brought over out of England into New England, doe bynd myself as an apprentise for eight yeares to serve William Pynchon of Springfield, his heires & assigns in all manner of lawful employment unto the full extent of eight yeares beginninge the 29 day of Sept. 1640 & the said William doth condition to find the said Thomas meat drinke & clothing fitting such an apprentise & at the end of his tyme one new sute of apparel & forty shillings in money."

As it turned out, young Thomas Millard never got the 40 shillings, the only cash payment provided for in the entire eight-year contract. The following statement was appended to the contract shortly before the eight years were up: "Thomas Millard by his own consent is released & discharged of Mr. Pynchons service this 22 of May 1648 being 4 months before his tyme comes out, in Consideration whereoff he loses the 40s in mony wch should have bin pd him, but Mr. Pynchon giveth him one New sute of Aparell he hath at present."

Apprentices Have Improved

In the three centuries since then the

Continued on Page 10

GUIDELINES

Men who build houses and roads have shaped our lives more than we realize. The ancient Romans built aqueducts which brought water into their homes; can you imagine what life would be like today if we had to walk down ten flights of stairs to get water? Tall buildings would be impossible without the invention of the elevator, of plumbing, of large panes of plate glass, of electric lighting, of the thousands of little conveniences which we take for granted.

From children's play with sand castles and toy dump-trucks, to skyscrapers and bridges, men have derived pleasure from the challenge of controlling nature's materials. This has developed into the nation's biggest industry, which provides 1 out of every 10 jobs. For every worker on a construction site, there are other workers who supply tools and materials, and still others in transportation and distribution industries.

Americans invented and developed a number of new techniques: the first elevator, the first steam shovel, the first skyscrapers. Other improvements such as power machinery, prefabricated finished units and new materials make the work easier, but the construction worker still needs to be husky and in good health. He usually has to stand or stoop for long periods of time outdoors, or indoors in unheated buildings.

AVAILABLE to YOU. . .

THE NATIONAL APPRENTICESHIP PROGRAM, a booklet explaining in non-technical language the national apprenticeship program, its aims and organization and how it operates, may be obtained free of charge by writing to the Bureau of Apprenticeship and Training, U. S. Department of Labor, Washington, D.C., 20210, or to the nearest regional office listed in this pamphlet.

APPRENTICESHIP PAST AND PRESENT—A STORY OF APPRENTICESHIP IN THE SKILLED TRADES SINCE COLONIAL DAYS, a 31-page, illustrated, popularly written booklet describing the development of apprenticeship procedures and systems since Colonial days, may be obtained for 20 cents by writing to the Superintendent of Documents, United States Government Printing Office, Washington, D.C., 20402.

Publications relating to apprenticeship in specific trades may be obtained on request, free of charge, by writing to the Bureau of Apprenticeship and Training, U.S. Department of Labor, Washington, D.C., 20210.

ADVANTAGES	DISADVANTAGES
Job outlook is good - housing of all kinds is needed	Work is seasonal, cuts into annual wages
Employment found in most localities	Jobs move from place to place
Hourly and weekly wages much better than for other manual workers	Accident rate is high, work is hard
Opportunities for over-time work and for self-employment	Bad weather causes delays
Good opportunities for those not planning to go to college.	Periods of unemployment between jobs

CRANE OPERATOR WATCHES load.

Jobs For Which Apprenticeship Training Is Available

Would you like to become an expert in a trade--to develop a skill that will command a good salary and a secure spot in the job world? One sure route is through apprenticeship training. Not the only way of course, but a good one with a big advantage: It is widely recognized by employers as an especially thorough training method. Besides this, the completion of an apprenticeship program makes entry level jobs easier to obtain; advancement faster.

Here is the list of occupations--selected from the Occupational Outlook Hand-book--for which you can train through apprenticeship programs.

Building trades

OCCUPATION (employment1966)	QUALIFICATIONS AND TRAINING	EMPLOYMENT OPPORTUNITIES AND TRENDS
Asbestos and insulating Workers (20,000)	Most learn through 4-year apprenticeship program.	Several hundred openings annually. Moderate employment increase.
Bricklayer (175,000)	Can be learned on the job, but 3-year apprenticeship is recommended.	Several thousand openings each year. Moderate rise in employment.
Carpenter (850,000)	Some learn skills informally on the job, but a 4-year apprenticeship recommended.	Slow increase in employment, but many openings each year in this very large occupation.
Cement Mason and Terrazzo Worker (55,000)	Can be learned on the job, but 3-year apprenticeship is recommended.	A few thousand openings yearly. Moderate increase in employment.
Electrician (Construction) (175,000)		Several thousand craftsmen will be required each year.
Floor Covering Installer (35,000)	Many learn skills on the job, but a 3-or 4-year apprenticeship recommended.	Several hundred openings yearly. Moderate increase in employment.
Lather (30,000)	At least a 2-year apprenticeship recommended, though many learn trade informally.	About 1,000 job openings annually. Moderate increase in employment.
Operating Engineer (Construction machinery operator) (275,000)	Many learn through informal training and experience, but a 3-year apprenticeship recommended.	Very favorable employment outlook. Rapid increase in employment.
Plasterer (50,000)	A 3- or 4-year apprenticeship recommended. Many learn through on-the-job experience.	A few thousand openings each year. Moderate increase in employment.
Plumber or Pipefitter (350,000)	A 5-year apprenticeship recommended, but many learn on the job. Trade or correspondence courses can be useful training aids.	Several thousand openings each year. Moderate increase in employment.
Roofer (60,000)	Many learn informally through on-the-job experience, but 3-year apprenticeship is recommended.	A few thousand openings annually. Moderate increase in employment.
Sheet-Metal Worker (55,000)	A 4-year apprenticeship recommended, though many learn through years of on-the-job experience. Trade or correspondence school	Moderate increase in employment. A few thousand openings annually.

Office, Construction Workers Will Be In Great Demand

High schools and colleges in the New York - New Jersey - Connecticut metropolitan area will be kept busy for the next several years preparing enough young men and women to meet the biggest demand ever for office workers at all levels if estimates newly announced by the Regional Plan Association are realized.

A detailed study of business and construction prospects in New York City and its ring of neighboring cities and suburbs has led the Association to predict that the number of office jobs in this region would double by the end of this century, requiring new office construction equivalent in space to 300 Empire State Buildings.

Office Construction Boom

The findings, made public on January 18, concluded that the predicted office construction boom "can be the instrument for saving our older cities with private investment." They indicated that Manhattan's central business district, which now has about half of all the office space within the metropolitan region, would get one-third of the new construction of the next 30 years.

The report said that the so-called "subcenters" around Manhattan — cities such as Newark, White Plains and Stamford — could attract companies to build office complexes there if they made their old downtowns more attractive to developers by building municipal parking garages and using urban renewal funds to clear slum sites for new office construction.

With New York still the national office headquarters for most major corporations and the showcase for their products, the limited area of Manhattan and its traffic and transportation problems make it necessary, according to the planners, for new companies and expanding older ones to seek office skyscrapers in Brooklyn and in the central business districts of neighboring cities.

40 Million Office Workers

The new offices will have to be staffed by thousands of workers having skills ranging from clerks, typists and stenographers to supervisors, managers, bank tellers and cashiers, salesmen, computer experts engineers and executives. The Regional Plan report said that fulfilling of those requirements would bring the number of office workers in the region, which had 16.8 million in 1964, to nearly 40 million by the year 2,000.

The anticipated immense increase in office jobs comes at a time when skilled office workers are already in short supply here. A survey by the Economic Development Council of New York City in November found that at least 10,000 clerical jobs in this city were going begging because businessmen and employment agencies could not find competent young people to fill them.

"Moving On Up"

About 60 youths, ranging in age from mid-teens to early 20's, sat in a basement room of the former Y.W.C.A. Annex on West 137th Street, waiting for the lights to dim so the movie would begin. Most of them were black, but there were also several Puerto Ricans, two Chinese and a youth with an Irish lilt.

"The film you're about to see is called 'Moving On Up in the Construction World,'" Gene Commander of the Harlem Teams for Self-Help, was saying. "There are good jobs at good pay in the construction trades, but you've probably heard how difficult it's been for minority groups to get into that industry.

Changes Have Been Made

"Well, there's been some changes made. This film, which is being shown in high schools through the city, will show you how you can now work up to those good-paying jobs and what you'll have to go through to get there."

Apprenticeship Program

The film opened on a scene of a young man being interviewed by a three-man panel of the Joint Apprenticeship Program. He wanted to get into the apprenticeship program of the steamfitters union. He gave his name as Jepsie Bright. Then, squaring his shoulders, he added, a bit louder:

"My national name is Akbar Ahmed Malakoon."

One of the union panelists, white, mentioned that at union meetings the members addressed one another as "brother."

"How do you feel about being called 'brother' by a white worker?" he asked the candidate.

"I don't mind it," was the rejoinder.

$3 An Hour To Start

The requirements of the steamfitter apprenticeship were explained. (The

Bayard Rustin Says:

Fletcher Undercuts Negroes With Union-Busting Campaign

AN ALLIANCE is now taking shape which, despite the professed intentions of some of its members, will set back the black struggle for economic advancement. It is an alliance between liberals who think they are helping blacks by hurting unions, and conservatives who want to appear to be helping blacks precisely in order to hurt unions.

The basis of agreement is to smash unions by using the open shop and other anti-union measures. The effect will be to irreparably harm blacks who depend upon unions for their economic security, all the "liberal" cant to the contrary notwithstanding.

The Nixon Administration, with its sophisticated brand of conservatism, provides the ideal setting for such an alliance to take shape. The Administration's policies, which have hurt both unions and blacks, have been vigorously denounced by the trade union and civil rights leadership.

In order not to lose votes as a result of its policy failures, the Administration has unleashed Agnew to win over "the worker," and it is trying to appeal to Negroes by attacking unions in the name of fighting union discrimination in the construction industry.

The most forthright expression of this "pro-black," anti-union posture was given by Assistant Labor Sec. Arthur A. Fletcher in a speech delivered last month before a meeting of open shop contractors. Mr. Fletcher had nothing but praise for "a President and an Attorney General who support a specific anti-discrimination program in this field."

There was no attempt to analyze why the President and the Attorney General—Attorney General Mitchell, that great friend of the Negro!—might be taking this course. Mr. Fletcher was interested only in proclaiming, with great exuberance, that the Administration had finally "whipped" the unions.

Mr. Fletcher, let us remember, was speaking to open shop contractors, people who don't care about the color of a worker's skin, as long as he's not in a union and does not have to be paid union wages.

The open shop contractors applauded his speech not because they like Negroes and are interested in their welfare, but because they don't like unions. They would hardly have applauded if Mr. Fletcher had called for full and equal participation of black workers in the building trades at union wage scales.

Mr. Fletcher warned the open shop contractors that they should not take advantage of the assault on unions by exploiting a new source of cheap black labor. "Too often in history," he said, "black people have been used as strikebreakers, only to be put aside by management, and discriminated against by employers, when they had served the purpose of breaking the union."

But the contractors applauded just the same because they've been around too long. They know full well that breaking unions and getting cheap labor go hand in hand, and that the appeals to higher motives are only icing on the cake. "It is your responsibility," Mr. Fletcher said, "to see that the civil rights movement is not perverted into an anti-labor, anti-worker movement."

IT IS SHOCKING that Mr. Fletcher could seriously make this appeal to open shop contractors who have never made any effort to hide their hostility to unions. They know what he doesn't know—that business is business, and that the objective of the businessman is not to fight for racial justice but to make money, and if that means cutting wages, then so be it. It is for this very reason that unions were formed in the first place.

What Mr. Fletcher did not tell the non-union contractors is that Negroes depend on unions even more than whites. According to a study just released by the U.S. Dept. of Commerce, "For Negro men working year-around full-time in blue-collar occupations, union members earned about 50 percent more than their nonunion counterparts." The ratio of union to nonunion wages for whites was a good deal lower.

It is one thing to call for full and equal opportunities for minority groups workers in the building trades. It is an entirely different matter to call for union busting, yet this is what Mr. Fletcher has done. I am sure he will not welcome the terrible consequences this will have for Negro workers, yet he (and the conservative Administration he represents) is following this course anyway.

One thing is clear: that when Mr. Fletcher spoke before the meeting of open shop contractors, his audience understood what he was saying better than he did himself. He said, "The fight is for racial justice," but they heard, "The fight is against unions." What they knew, and what Mr. Fletcher seems incapable of grasping, is that the fight against unions is ultimately a fight against blacks as well.

Labor Unit Expected To Back Fund Cutoff For Lag on Hiring Goals

HEW Secretary Terminates Pact Under Philadelphia Plan Held by Edgely, a Sheet-Metal Concern

9/20/71

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON — The Labor Department is expected to speedily approve the first move by a federal agency to cut off federal funds for noncompliance with minority-hiring goals of the "Philadelphia Plan."

Elliott Richardson, Health, Education and Welfare Secretary, ordered terminated a contract under the Philadelphia Plan held by Edgely Air Products Inc., a Levittown, Pa., subcontractor doing sheet-metal work on a project at the University of Pennsylvania. He also barred the contractor from future federally supported contracts.

In signing the order, Mr. Richardson adopted the findings and conclusions of a federal hearing examiner, who last March held that Edgely Air Products had failed to satisfy the requirements of the Philadelphia Plan. The plan is the Nixon administration's controversial prototype effort to increase minority employment in the skilled building trades. It applies to government contractors in the Philadelphia area.

Under federal regulations, the Secretary's order doesn't become final until it has been approved by John Wilks, director of the Office of Federal Contract Compliance in the Labor Department. A spokesman for Mr. Wilks said Mr. Richardson's order probably will be approved shortly.

Edgely had a subcontract of $43,000 for sheet-metal work on the medical laboratory building of the University of Pennsylvania, a project partially financed by a HEW grant. The contractor was suspended from further work on the project in August 1970, when the government initially accused it of noncompliance with the Philadelphia Plan. At that time Edgely had completed about 85% of the work required by the contract.

A HEW spokesman said debarment from future federally supported projects is in effect until Edgely complies with Philadelphia Plan requirements.

In his order, Secretary Richardson said Edgely had failed to hire any minority employes at all or even make a "good-faith" effort to do so.

Leonard A. Nucero, Edgely's president, said he planned to appeal for a rehearing on the matter. If that fails, he said his business would be crippled as federal contracts are a large part of it. He asserted that Edgely isn't discriminating against minorities in hiring, nor has it. Mr. Nucero said the 14-year-old concern employs 10 persons and he is unwilling to lay off any of them to hire someone from a minority group. If the company could expand its payroll, he stated, he would make every effort to hire people from minorities.

Mr. Nucero also was quoted by the Associated Press as saying the Nixon administration had deliberately set up a test case involving Edgely. According to the AP, Mr. Nucero said he had offered, to put a black journeyman to work on the addition several months ago, but that HEW had refused the offer.

Mr. Richardson's order said, "Of course, the Philadelphia Plan doesn't require that any employe be fired. The plan does seek to expand the pool of labor available in a trade or industry." Consequently, the order said, "It is proper to require good-faith efforts even by a contractor who is ultimately unable to hire any minority workers. In the present case, as it happens, Edgely could have hired minority vacation replacements. Edgely's failure to do so or to make any effort to do so dooms its claim of good faith."

The Philadelphia Plan sets goals for hiring minority workers in six major areas—plumbers, electricians, sheet-metal workers, steam fitters, iron workers and elevator constructors.

Enforcement of the Philadelphia Plan is delegated by the Labor Department and various federal agencies.

Head of New York Police Warns Against Bribery

By a WALL STREET JOURNAL *Staff Reporter*

NEW YORK — Police Commissioner Patrick Murphy said he is broadening his war on police corruption to take "dead aim" at businessmen and "otherwise law-abiding citizens who attempt to buy favors from police officers."

"Corrupt police officers are made, not born," he said in a speech to members of the New York Chamber of Commerce. "From now on we will vigorously pursue and arrest" anyone caught offering "gratuities or payoffs."

Policemen will no longer merely rebuff bribe attempts, he said, they have orders "to make arrests in every case." Mr. Murphy said the types of people "who as a matter of course" try to bribe policemen include not only crooks, gamblers, narcotics pushers and fences but also "hotel managers, restaurant owners, merchants, building superintendents . . . housing contractors who block traffic while unloading trucks . . . tow truck operators" and "the everyday motorist, who might even be the most flagrant of the violators."

Building Trades Local Sued by Pennsylvania Over Philadelphia Plan

Operating Engineers Accused of Bias in Hiring Blacks Under Federal Government Program

11/9/71

By a WALL STREET JOURNAL *Staff Reporter*

PHILADELPHIA—A 6,000-man construction trade union local that had been exempted from the so-called Philadelphia Plan for minority hiring was sued in federal district court here by Pennsylvania and a civil rights group on charges of discrimination.

The complaint charged that Local 542 of the International Union of Operating Engineers failed to hire and train adequate numbers of blacks under an "affirmative action" plan agreed to by the federal government in 1968. A year later, the local was exempted from the federal government's Philadelphia Plan setting minority hiring quotas for area contractors and construction trade unions.

State Attorney General J. Shane Creamer said that although Local 542 had told the federal government in 1968 it had 900 blacks enrolled in its membership, it later reported it had only 193. He also charged that $1 million of state money and $250,000 of federal money was used by the Operating Engineers Joint Apprenticeship and Training Committee to train blacks in obsolete skills and equipment.

Union officials couldn't be reached for comment. Mr. Creamer said the Equal Employment Opportunities Commission found earlier this year that there was probable cause to believe the union discriminated against blacks, but the U.S. Department of Justice hadn't pressed a suit or moved to intervene in the Pennsylvania action.

BUILDING TRADES

Blacks Due More Jobs

Atl. Const. 4/13/72

By NICK TAYLOR

The U.S. Department of Labor sees an increase of 1,500 minority workers in Atlanta construction trades over the next four years.

Henry A. Huettner, the Labor department's Southeastern regional director in Atlanta, made the prediction in a Wednesday address to the Hungry Club Forum.

Huettner said hiring goals under the "Atlanta Plan" can be met by contractors filling new and vacant job slots with one black for every white hired through May, 1975.

The Atlanta Plan was imposed by the Labor department last June to increase minority participation in 10 building trades in the Atlanta metropolitan area.

Huettner, covering a wide range of job-related topics in his Hungry Club talk, said, "The legal foundation for equal opportunity has been laid. Public attitudes have changed . . . to a surprising degree.

"It is now time for the nation to concentrate on economic progress for all."

Citing black educational progress during the 1960's, Heuttner said, "The task before this nation centers on jobs and income . . . a need for at least a reasonable amount of dollars and cents."

More money and more emphasis is being placed, Huettner said, on "giving blacks and other minorities a better shake in the job market."

The Labor department regional director said that minority apprentices in building trades training programs have increased from 8 per cent in 1969 to 17 per cent last year.

The federal government, Huettner said, has paced the job market in hiring blacks. Citing 17 per cent black employes in his department in the five-county metropolitan area, Huettner said, "Seventeen per cent is good, but not good enough."

He said that goals and timetables for minority hiring in industry should now be repalced by "across the board national goals for minority jobs and income.

"For a long time," Huettner said, "there has been a disparity between black and white employment" that has been running at more than two-to-one.

"We ought to get this ratio down to one-to-one, and I think we ought to set this as a target for the end of the decade," he continued. "It warrants our best national effort."

Huettner also called for eliminating the gap between black and white incomes by 1980 through job training, help to minority businesses, continued stress on employment and upgrading in public and private sector jobs.

Blacks Eye Militancy for Building Jobs

AH Bldg Via Trades

By PAUL DELANEY

Special to The New York Times

WASHINGTON, June 27—Decades of failure to open up construction jobs to minorities have left a residue of bitterness, frustration, confusion and divisiveness.

So deep are the scars that growing numbers of blacks and other minorities feel that only direct action, such as physically closing down job sites, will lead to any substantial changes.

The quest for a solution to the problem has caused disunity and confusion in the black community, which compounds the problem. And those who believe that militancy is the only course point to the success of militant actions in several cities.

Interviews with nonwhite leaders in 12 cities in every section of the country disclose a feeling that cracking the construction industry—which mainly means the unions—is impossible without some kind of massive action by the minority communities and the Federal Government.

Sees Union Failure

"The unions are not going to do a damn thing about putting more blacks to work," said Lloyd X. Smith, director of the Atlanta Labor Education Advancement Program (LEAP), an Urban League project that is training 100 Negroes to pass tests of skill required by building trades unions. He reflected the mood of most of the blacks interviewed.

Generally, such feelings are found among both young and older negroes. There is some optimism, more among young blacks who are in training programs and who believe, or hope, that they will be placed in jobs when they complete their training. But most negroes feel that few trainees will wind up in the building trades.

"I am not hopeful," one Atlanta worker said. "If hope is based on past history, then hope is dead."

A black leader said: "The Atlanta Urban League is training 100 blacks just to take apprentice examinations, which doesn't assure them of getting jobs. "That's ridiculous in 1971. They should be training at least 1,000."

Mr. Smith said:

"No training program in the world can assure minorities they will get work—not if the unions don't want them. And the unions are fighing all the way."

Denied Union Cards

Tom Allen, a Negro pipefitter in Denver, summed up the frustration of minority workers about union attitudes.

"They [the unions] will send us to work as journeymen, but they won't give us cards," he said.

Mr. Allen is 29 years old, a soft-spoken father of four with 10 years' experience as a pipefitter. He said he learned his trade while in the Air Force. His experience includes supervisory jobs at Air Force bases in this country and overseas. But he said he and four other Negroes in Denver had been denied union cards.

"They say our applications are on file," he said. He noted that at least they were luckier than other Negroes who could not command journeyman scales.

Discussing the confusion in the black community, Joseph Debro, executive director of the National Association of Minority Contractors, said of public and private efforts to increase minority employment:

"The various job plans were created by a group consisting of one-third white contractors, one-third union representatives and one-third minority people, who don't know what they are doing in this industry and who are interested in civil rights, but who lack the knowledge of both the industry and bargaining methods."

Disunity in minority communities is widespread and has prevented concerted action. Some blacks said white unions and contractors took advantage of this situation, using it as an excuse for inaction.

One conflict in the black community involves Negro contractors who fear they may lose their already trained and skilled black workers. Herbert Williams, director of an organization of Negro contractors in Atlanta, said:

"I fear there would be a raping of black contractors. If all of a sudden white contractors and unions start looking for blacks, they would want the best trained men available. And these men are now working for black contractors."

Optimism that minority access to jobs would improve was expressed by Charles Bowser, director of the Philadelphia Urban Coalition.

Mr. Bowser said he believed that the Philadelphia Plan and other imposed programs would eventually compel the unions to accept minorities. The plan requires companies with Federal contracts to hire a percentage, varying from craft to craft, of nonwhites.

He said the coalition had put together a program to help 180 minority journeymen polish their skills so as to be acceptable to the unions.

Finds Big Leverage

"The Philadelphia Plan has great potential to put people to work," he said. "Without the plan, our program would mean nothing. But with the plan, the workers are needed to fill the quotas. The plan therefore has great leverage."

The problem of disunity within the black community is reflected in two recent events.

At a meeting in Chicago to unite Negro construction workers to push for more and better jobs, participants spent much time hurling invectives at each other. The dispute was chiefly over tactics—confrontation vs. negotiation.

And in Pittsburg, Calif., two white pickets shut down a housing construction site. Except for the pickets, all those involved in the situation were black—it was a black community. The contractor was Negro and so were the laborers who closed the site by honoring the picket line. The trouble started when the black contractor refused to hire workers from an all-white union hiring hall.

"This is what the system and the plans have done to us," Mr. Smith complained. "It has us fighting each other over crumbs."

See Need For Militancy

Hence the belief that militant action is necessary before meaningful change will take place. Believers in the more militant stance range from youthful workers to leaders of established groups.

They include Andrew G. Freeman, director of the Philadelphia Urban League; Noah Robinson, director of the Breadbasket Commercial Association of Chicago, the community economic development arm of Operation Breadbasket; Lonnie King, president of the Atlanta branch of the National Association for the Advancement of Colored People, and Mr. Smith of the Atlanta Urban League.

Indeed, more militancy has been evident of late. Twenty-eight men were arrested last Monday at a construction site in Manhattan. The men were demonstrating for more employment of Negroes and Puerto Ricans. In the last two years, violent demonstrations and confrontations have occurred across the country, sometimes resulting in plans to hire more mnorities.

Plans were agreed upon in Chicago after street gangs shut down sites on the South Side; in Seattle, after demonstrators sat in on the runway of the Seattle-Tacoma Airport, and in Pittsburgh, after mass marches every Monday for several weeks.

Urges Confrontation

"The only way to get blacks in those jobs is through direct confrontation," said Mr. Freman, a nattily dressed, small-framed man whose soft, calm voice belies his belief in confrontation.

Mr. Robinson was more blunt.

"You have to use muscle; there's no other way to do it," he said during an interview in Chicago. "There's got to be a threat of mobilization by the community to force the industry to act. For unions and management to give in voluntarily would go against their grain.

"But we have a unique situation in Chicago, where threat and threats of force are common. We've got a strike force organized, a lot of people ready for action.

"We [breadbasket] negotiate for the community. We are the 'Moral Mafia,' We are the 'Economic Mau Mau.' We have interjected ourselves in the bargaining process, making it tripartite."

Mr. Robinson's organization was instrumental earlier this month in obtaining agreement with companies bidding on a proposed 44-story Federal office building that would assure the use of Negro workers as well as providing at least $20-million worth of work for black subcontractors.

Promised a Fight

In pushing for the agreement, Mr. Robinson sent letters to the companies that read in part: "We will in no uncertain terms fight you. You can be damn sure of that. We will fight you either through the courts or in the streets with demonstrations."

He has been accused of "racial blackmail," and one Chicago newspaper said in an editorial: "There is an unpleasant suggestion of arm-twisting in a threat by B.C.A. leader Noah Robinson that construction sites will be picketed this summer if minority hiring is not satisfactory."

In Atlanta, Mr. Smith expressed little faith in governmental programs and plans to place minorities in jobs, mainly because such programs usually need union concurrence.

"The Federal Government wants you to make love to your enemy," he said. "Plans and programs therefore are designed not to succeed. If the Atlanta black community decided to launch an all-out battle there would be some changes.

"For example, imagine how many sites would be tied up if black bricklayers, lathers and carpenters refused to work until the other trades took in blacks. You wouldn't need to beat heads, just don't go to work."

Limited Response

Mr. Robinson said in Chicago: "You can look at the construction from O'Hare Airport all the way downtown to the Loop and you can vividly see the problem. Few if any blacks are on those jobs.

"We want some of those jobs, especially the ones in the black community. We've got to get those guys off the street corners and into jobs.

"How are they surviving? They'll steal before they'll starve. They'll hit those same whites, who come into the ghetto to work, in the head and take their paychecks on Friday. That's how serious the problem is."

Mr. Robert J. Butler
Area Manpower Representative
881 Peachtree Street, NE, Rm. 118
Atlanta, Georgia 30309

Dear Representative Butler:

I am in receipt of your letter dated January 28, 1970, in which you express some nervous concern about the appearance of the North Georgia Building and Construction Trades Council-AFL-CIO. I am always pleased to have people like yourself express themselves as you have done, for it reveals very much, and I am glad to have the revelation. I think you know that I know as well as you do that the Commission is not a police agency and, therefore, does not have any authority to force anyone to do anything. It does have the duty, however, to expose bigotry and hypocrisy in the area of human relations. And I would hope that you, too, would be dedicated to such exposure.

I think you are not too young to know that the labor unions have, through the years, discriminated against Black workmen and particularly is this true in the crafts. When you talk about alienation, I cannot, to save my life, figure out what that means. For what else can alienation mean if it is not deliberate and continued discrimination against Black workmen. This is the alienation Black people have been having to fight in this country since 1619. And for somebody to talk now about and I quote, "if we continue to alienate those groups who are willing to cooperate voluntarily by appearing and informing the Commission of their activities, the Commission will have very few return visits and very little cooperation and support, and in turn move our goals further away," is in my judgment insulting and almost vulgar.

You refer in your first paragraph to a letter which you say came from the Commission, I suppose you intended to say the letter came from the Executive Director of the Commission for the Commission, itself, did not send a letter giving an hour to anybody. Mr. Butler, I am a little surprised at your reaction because you know as well as I know that what the union came to present was a "snow job."

Perhaps, some white people are unable to recognize a "run around" in discrimination for they have been giving Black people the "run around" for so long. But Black people have suffered the indignity and indecency perpetrated upon them by so called "well-meaning" white people, they can smell the "run around" one mile away.

I am sure you sense my impatience with the kind of approach which you suggest in your letter. I want to make it crystal clear that I am impatient with it, and I think we had better get the record straight. As long as I am on the Commission either as chairman or as a member, I shall not sit idly by and hold my peace when the labor unions or any other group present themselves in a manner as evasive as was done last Tuesday night by your group. I will not hold my peace, Mr. Butler, because as a Black man, I have absolutely nothing to lose except my integrity if I keep quite.

I think some of us are determined that bigotry must be confronted head on whether it is self-righteous labor unions, bigoted politicians, or hypocritical church groups. I would hope, Mr. Butler, that we could engage you in our commitment to the eradication of racial bigotry in our society, and I hope that your commitment is a true commitment and not one which is the traditional "begging for time" one.

I have spoken with a great deal of passion and perhaps some persons would re-think this and say it differently, but I want you and the members of the Commission and everybody to know how deeply I feel about this and, therefore, my best efforts will always be devoted to disclosure and eradication of every vestige of discrimination wherever I confront it. I think the members of the Commission are also commited to this, and I would like to think you still are, but your letter does not convince me that you are, and I cannot accept your position nor that of the labor union which you represent. Your position and theirs are morally indefensible and do not ever expect me to lend my support to it.

With best wishes and kindest personal regards, I am

Sincerely yours,

Samuel W. Williams

Agenda For Racial Harmony

10-Point Individual Plan Illustrates Ways to Help

By NAT WELCH

The foremost problem America faces at home is the urban crisis. Regardless of where I make that statement in Atlanta, few disagree with it. The urban crisis is real. It is more than deteriorating buildings and open spaces. It is a human condition.

Atlanta is known as a progressive city. It has attained a favorable national reputation because its people have been willing to change, especially in regard to race relations. The city is now faced with the challenge of improving on that reputation or falling away from it.

Human relations must be improved between white people and black people—not only on a group basis but as an individual. An individual usually has a feeling of good will toward his fellow-man but has little knowledge of what helpful role he can perform to make it a visible reality.

Here are 10 specific suggestions:

BE INFORMED on what is happening in regard to local urban problems.

READ THE Report of the National Advisory Commission on Civil Disorders. We need to understand more about the problems. This is one of the most important presidential Commission reports ever made. If you can't wade through the several-hundred page paper back edition, an excellent 30-page digest is available.

* * *

TAKE A tour of some of our economically depressed areas and let the local residents tell what *they* are doing to improve their lot. These tours are sponsored by Economic Opportunity Atlanta for individuals and groups. Arrangements can be made by calling Mrs. Mary Lou Mitchell at 525-4262.

VISIT THE Hungry Club at the Butler Street YMCA. This is probably the most stimulating luncheon club in the city. Speakers since the first of the year have included Mayor Ivan Allen, former Gov. Carl Sanders, Julian Bond, local NAACP President Lonnie King, Dr. John Letson, SCLC's Andrew Young and Donald Hollowell.

* * *

DRIVE THROUGH some of the upper income Negro residential areas as Collier Heights and Peyton Forest in the Cascade area. You will see that Atlanta has a substantial number of middle and upper income Negroes who take pride in home ownership just as any other comparable group.

* * *

ENCOURAGE YOUR business or professional organization to expand its Negro membership. The Atlanta Chamber of Commerce took the initial step some ten years ago. This way lawyers get to know lawyers and teachers get to know teachers as persons and prejudice fades.

* * *

LEARN TO pronounce the word "Negro" correctly. The word is pronounced "kneegrow." This is difficult for a white Southerner who has grown up saying "Nigra." If you can't pronounce it correctly, just say black since both are acceptable. The term "colored person" is old hat. Proper titles are also very important.

VISIT ANOTHER church. Four members of the Commu-

nity Relations Commission are outstanding ministers. They are the Rev. Sam Williams, pastor of the Friendship Baptist Church; Rabbi Jacob Rothschild of the Temple; Dr. R. E. Lee, pastor of the Lutheran Church of the Redeemer; and Dr. John Randolph Taylor, minister of the Central Presbyterian Church. Visitors are welcomed as in other Atlanta churches.

ATTEND A lecture or concert at the Atlanta University Center, Emory University, Georgia State or one of Atlanta's several other institutions of higher learning. Become exposed to some new ideas and new people.

The two most interesting lectures my wife and I heard last year were those of John K. Galbraith and Walter Heller at the Atlanta University Center. And when the Atlanta Symphony was doing a special series at Spellman College, a friend remarked, "They might as well be playing at Dahlonega as far as most Atlantans are concerned."

JOIN AN inter-racial discussion group. This small movement was started last year by Dr. and Mrs. Joseph A. Wilber. Four white couples and four Negro couples meet once a month for an evening of discussion. The host selects the subject which might be a community problem or a personal prejudice.

One participant remarked, "These are pretty frank discussions. After three or four sessions, you don't look on each other as white or black but as individuals." There are now over 100 persons in Atlanta involved. After a year the group splits up into two or three groups.

THE PLACE to start improving human relations is where you are—your neighborhood, your school, your church, your business and the organizations with which you are affiliated. If a person is treated with genuine dignity and respect, he will respond in kind. If treatment is second class, this is what can be expected in return.

A homemaker can start by paying domestic help the minimum wage of $1.60 and seeing that the employe's quarterly social security form is filed.

* * *

WHAT ELSE can be done?

One institution that needs to be revived in Atlanta is the neighborhood organization or group. We have lost the "neighborhood cohesiveness" that is so important.

White middle and upper income neighborhood groups tend to become defensive mechanisms to insulate the neighborhood from the rest of the city. In so doing we tend to develop sterile neighborhoods. The neighborhood needs to relate to the city.

The disadvantaged neighborhoods are making substantial progress by strengthening their neighborhood groups through local leadership with the help of EOA, Model Cities, and the Community Relations Commission.

* * *

THE GRANT Park area is an encouraging example. It was selected by CRC as the area in which to initiate their 1969 Town Hall meeting program. The usual procedure is, first, a meeting with the citizens to get their ideas on what their problems are and, then, a follow-up meeting in which City Hall officials report on actions taken in response to the citizens.

The first meeting was on a cold March night with a rather slim crowd at the Jerome Jones School in Grant Park. The public officials almost outnumbered the citizens. The crowd tripled at the follow-up meeting held recently. A total of five aldermen, two state representatives, eight city department officials and five members of CRC participated in these two meetings.

* * *

THE CALIBER of leadership shown by the Grant Park citizens impressed me tremendously. Both white and black citizens and white and black elected officials showed dignity and respect for one another and an earnest desire to move on with solving the community problems at hand.

Cecil Alexander, head of the Mayor's Housing Resources Committee, has stated, "Atlanta no longer has the choice of beng a white or a black city. The choice is either to be a black city or an integrated city."

These two Town Hall meetings produced strong evidence that the citizens . . . white and black . . . have made their choice. Grant Park is their home and they are going to stay there and build a great community again. Model Cities, assisted by CRC, is making a valuable contribution in helping develop this indigenous leadership.

* * *

LET US hope that as other neighborhoods move into transition, they will follow the example of the resurging leadership in Grant Park.

This article was written at the request of the editorial staff of the Atlanta Journal and was published on its editorial page. The Community Relations Commission believes that this 10-point Plan is worthy of wide distribution in the Atlanta community and has made available this reprint for use by civic, church and service organizations.

"The following appeared in the Florence (South Carolina) Morning News, March 14, 1969, Page 1:"

City Democrats Elect First Negro Chairman

The City Democrats Party elected its first Negro chairman in Modern-day history Thursday night during an "organizational" meeting which also set primary dates and candidate filing fees to set the stage for the May 6 Municipal Election.

Named as chairman to succeed attorney Jack Nettles was Negro attorney William W. Bennett. Bennett was named to the post after he and Nettles had been paired in a runoff, receiving 19 votes each in the first election while C. Carter Byrd, former vice chairman, received two votes.

In the runoff, Bennett claimed 24 votes with Nettles receiving 19. However, Nettles, on a request to the attending persons at the meeting by Bennett, was elected co-chairman for the city party.

Bennett also asked for a vice chairman and Negro Jerry M. Keith was elected without opposition.

N. W. (Nat) Rosenfield was reelected secretary-treasurer.

The meeting was off to a fast start, but bogged down in technicalities several times during the meeting. And at one point, new Chairman Bennett called a recess to organize procedures before moving forward with the intended business.

During a meeting of officers and elected executive committeemen after the "organizational" session, the primary dates and filing fees for the two City Council seats which will be up for grabs in the May 6 General Municipal Election (Posts now held by Democrat Weston Patterson and Republican Dennis D. O'Brian will be open.)

It was decided to open filing books Saturday at the office of Rosenfield at 243 North Dargan Street and close them March 21, which is next Friday. The filing fee was set at $350.

The committee decided to hold the first primary on April 1 and hold any runnoff needed on April 8.

The committee also decided to raise the fee for poll workers from $10 to $15 for primary days.

Named during the regular session as executive committeemen were Rev. Jasper Smith of Ward 1, J. O. Smith of Ward 2, Mordecai Johnson of Ward 3, Robert Bryant of Ward 4, Mrs. J.F. Middleton, Jr. of Ward 5,

Mrs. F. Looper of Ward 6, Mrs. Robert Herring of Ward 7, Ralph Moore of Ward 8 and Paul Hayes of Ward 9.

The session, attended by 44 persons with slightly more that half of them Negroes, started somewhat smoothly, but ran into organizational difficulty when it could not be decided without much discussion as to whether those attending would vote on matters as meeting delegates or to divide into nine wards and have delegates from each ward cast votes. It was finally decided to allow those in attendance to vote.'

After election of officers, the meeting ran into difficulty again on election of executive committeemen. A motion to elect them during the meeting with all voting rather than elect them by seperate precinct meetings was passed after considerable discussion.

Glen Park is mainly white, middle-income steelworkers living in homes like this.

Against mayor, Joseph Zimmerman, a local Democrat, says Hatcher administration gives poor service to Glen Park.

For mayor, Pauline Schwegel organizes informal meetings between Hatcher and residents of Glen Park section.

Hatcher of Gary faces a revolt

Residents in Glen Park, predominantly white section of city accuse Negro mayor of neglecting them, plan to secede. Pro-Hatcher forces, charging racism, try to halt rebellion

Since his election in November, 1967, Negro Mayor Richard G. Hatcher of Gary, Indiana has lured more federal money to his city than all past administrations combined. He has cracked down hard on organized crime, and even his harshest critics grudgingly acknowledge the drive's success. And Hatcher, a 35-year-old lawyer, has been instrumental in getting U. S. Steel Corp., by far the city's largest employer, to play a bigger role in helping Gary solve its problems.

But for a growing number of people in Glen Park, an overwhelmingly white, residential section of the city, such accomplishments haven't been enough. From Glen Park comes a challenge to the Hatcher administration—"A challenge," says city councilman Eugene Kirtland, "to the Administration's ineptness to run a bi-racial city like this."

Supported by Kirtland and many other Glen Park residents, a movement is currently afoot to "disannex" Glen Park from Gary. In effect, Glen Park would secede. ("Disannexation" is the term employed because the city of Gary, founded in 1906, annexed the Glen Park area in 1910.)

If the movement is successful, Hatcher stands to lose 20% of his population and probably a larger percentage of his tax base, since Glen Park certainly seems to be Gary's most affluent area.

Race? Proponents of disannexation claim their motives are purely eco-

nomic. Kirtland, for instance, says that Hatcher steered federal funds into Gary's decaying inner city area while Glen Park residents complained that municipal services, such as garbage collection and road repairs, were poor. The complaints, he says, went unheeded. "Glen Park residents simply are not enjoying the upswing of the surrounding community in building, new development, and shopping centers," the councilman laments.

Those opposing disannexation, however, claim the real issue is racism—against Negroes in general and Hatcher in particular. In fact, support among Glen Park residents for disannexation didn't begin gathering steam until late last year, when Hatcher moved to rezone large, vacant sections of the predominantly white area for public housing.

With a population of 40,000 in its 5-sq.-mi. area, Glen Park gave Democrat Hatcher only 9% of its vote in the Gary mayoral election 17 months ago. Many of the area's residents, says Leigh Plummer, editor of the weekly Glen Park Herald, had fled racially changing inner-city areas. Now, they feel threatened again by Hatcher's low-income housing proposals.

By 1971. Disannexation, then incorporation as a new city, is a tough legal process—made tougher by quirks in Indiana law. To disannex from Gary, proponents must gather signatures of at least 51% of the lot owners in the area. The petition then would be presented to Gary's Board of Public Works for a vote. If the board failed to approve the petition, the next step probably would be to the courts.

However, Indiana law requires a minimum 3-mi. buffer zone between incorporated areas. A bill abolishing the regulation was passed in both houses of the state legislature in its session earlier this year. However, the bill literally vanished as it was being taken to the governor's office for signature. A grand jury is looking into the disappearance. Since the Indiana legislature holds only one 61-day session every two years, Glen Park now must wait until 1971 to incorporate, even if disannexation takes effect earlier.

Hatcher klatsch. Meanwhile, Hatcher and a small group of Glen Park residents are trying to undercut the movement before it goes much further. Taking the lead is Mrs. Pauline Schwegel, 61-year-old chairman of the Glen Park Information Committee. "There is no economic argument for disannexation," she emphasizes. "Of course, we don't get OEO[Office of Economic Opportunity] and federal funds in Glen Park. We don't need them; the inner city does."

Mrs. Schwegel has organized informal kaffee klatsches between Glen Park residents and Hatcher to explain the impact of disannexation. "What most people don't understand yet," she says, "is how much this version of the Berlin Wall would cost. We'd have to set up our own fire department, scavenger service, planning and zoning commission, and local government." And while Glen Park waited to incorporate, it would be governed by Lake County, which currently is able to assign only a single patrol car to the area.

Countercharge. Hatcher sees disannexation as a move "toward disunity at a time when we should be doing all we can to unify our city." But the differences between Glen Park and the rest of Gary are dramatic. Glen Park is primarily white, middle-income steelworkers; the remainder of Gary—about 140,000 people—is mostly black with decayed ghettos and a high inner city unemployment rate. Glen Park also is physically separated from Gary by an interstate highway and by the polluted Little Calumet River.

The nature of Hatcher's election—won without the regular party organization's support—did little to bring the two sections of the city together. Negroes, about 55% of Gary's population, were united behind him; whites overwhelmingly opposed him.

Such factors indicate, at least to Hatcher backers, that the motivation for disannexation is racially tinted. The issue is non-negotiable, says Hatcher aide Ray Wilde. "Those favoring disannexation have never presented a list of grievances to us, they have never talked to us. But they seem very upset that Mayor Hatcher spends OEO and poverty funds where the poverty is. It all points to a thinly veiled case of racism."

Mayor moves. Joseph Zimmerman, a Democratic party precinct worker and a staunch advocate of disannexation, denies such allegations. "We know we can't keep the colored out of here, and we're not trying to. But we want our streets fixed and our garbage picked up without it being necessary to get a petition for it every time. We think we can do the job better by setting up as an independent community."

This week, Hatcher announced his plans to ask the Gary city council for approval to sell $1.4-million in bonds. The money will go toward major equipment purchases for police, fire, and general services—all functions that many Glen Parkers contend they can more effectively provide for themselves, if disannexed.

"People began testing Mayor Hatcher the day he walked into office," says Mrs. Schwegel. "The disannexation drive is just another incident of racial nit-picking."

Lawsuits gush from oil disaster

Government's right to issue offshore drilling regulations faces first court test following costly California blowout

A torrent of lawsuits has resulted from the blowout of a Union Oil Co. of California drillhole in the Santa Barbara Channel last Jan. 28. They were expected; estimated cost of the disaster could top $2-bilion. But until last week the right of the federal government to issue offshore drilling regulations had never been challenged in the courts.

Now Pauley Petroleum, Inc., and five other independent oil companies are doing just that. In the U. S. Court of Claims in Washington, they are directly attacking the tightened offshore drilling regulations issued by Interior Secretary Walter Hickel in February.

They challenge the order making drilling companies liable for pollution resulting from their operations. They charge that the new rules make it "economically and practically impossible" for them to work their federal leases profitably in the Santa Barbara Channel. They also assert that Hickel's order changing the regulations is unconstitutional, in that their right to drill (they say) has been taken from them for public purposes without just compensation.

As a result, they claim $230.8-million in damages from the federal government—their valuation of more than $73-million in lease bonus payments, plus exploration costs and anticipated profits.

Joining Pauley as plaintiffs in the suit are J. M. Huber Corp., Husky Oil Co. of Delaware (subsidiary of Husky Oil, Ltd.), Colorado Oil & Gas Corp. (subsidiary of Colorado Interstate Corp.), Mesa Petroleum Co., and McCulloch Oil Corp. of California.

State suit. In California, the state is suing the federal government for $500-million damages in pollution leakage from Union Oil's federal lease. The case will go to the courts if the U. S. does not reply before August, the time allowed by statute.

SOUTHWIDE CONFERENCE

OF

BLACK ELECTED OFFICIALS

DECEMBER 11-14, 1968

DINKLER PLAZA HOTEL

ATLANTA, GEORGIA

VOTER EDUCATION PROJECT
OF THE SOUTHERN REGIONAL COUNCIL

AGENDA

WEDNESDAY, DECEMBER 11

2:00 p.m.—REGISTRATION—Lobby

7:00 p.m.—RECEPTION—Dinkler A
COURTESY OF THE COCA-COLA COMPANY ATLANTA

8:00 p.m.—OPENING DINNER—DINKLER B

Presiding:
Vernon E. Jordan, Jr.
Director
Voter Education Project

Welcome:
Q. V. Williamson
Board of Alderman, Atlanta

Leroy Johnson
State Senate, Georgia

Introduction of Speaker:
Benjamin Brown
House of Representatives, Georgia

Keynote Address:
Julian Bond
House of Representatives, Georgia

THURSDAY, DECEMBER 12

7:30-8:30 a.m.
—Breakfast—Dinkler B

9:00 a.m.—GENERAL SESSION—
DINKLER ROOF

Presiding:
William H. Alexander
House of Representatives, Georgia

Welcome:
Ivan Allen, Jr.
Mayor of Atlanta

Address:
"From Subject and Victim to Citizen and Public Official: An Historical Overview of the Negro and the Southern Political Process."
Dr. Samuel DuBois Cook
Professor of Political Science
Duke University

Panelists:
- Lawrence T. Guyot, Jr.
  Mississippi Freedom Democratic Party
- Miss Barbara Jordan
  State Senate, Texas
- Dr. C. G. Gomillion
  Board of Education
  Tuskegee, Alabama
- Joseph A. Jordan, Jr.
  City Council
  Norfolk, Virginia

12:30 p.m.—LUNCHEON—DINKLER B

Presiding:
Jesse Hill, Jr.
Actuary, Atlanta Life Insurance Company.

Address:
Dr. Kenneth B. Clark
President
Metropolitan Applied Research Center
New York City

2:00-5:00 p.m.
—CONCURRENT WORKSHOPS

I—School Board Members—Plaza B, Lobby Floor
Convener: Miss Jean Fairfax
NAACP Legal Defense Fund

II—City Officials—Roof, 14th Floor
Convener: John Feild
U. S. Conference of Mayors

III—County Officials—Panel Room, Mezzanine Floor
Convener: James Gibson
Potomac Institute

IV—Law Enforcement Officials—Sky Room, 14th Floor
Convener: Julius Chambers
Attorney-at-Law

V—State Legislators—Room 370
Convener: Horace T. Ward
State Senate, Georgia

6:00 p.m.—DINNER—PLAZA B

7:15 p.m.—Buses Depart

8:00 p.m.—PUBLIC FORUM
Davage Auditorium, Clark College

Presiding:
Dr. Vivian Henderson
President
Clark College

Welcome:
James Mays
President
Clark College Student Government Association

Introduction:
M. Carl Holman
Vice-President
The Urban Coalition

Address:
Richard Gordon Hatcher
Mayor
Gary, Indiana

Panelists:
- Robert G. Clark
  Mississippi House of Representatives
- Henry L. Marsh, III
  City Council, Richmond, Virginia
- John McCown
  County Commissioner
  Hancock County, Georgia
- J. C. Daugherty
  Georgia House of Representatives

FRIDAY, DECEMBER 13

7:30-8:30 a.m.
—Breakfast—Dinkler B

9:00 a.m.—GENERAL SESSION—
DINKLER ROOF

"Revenue and Taxation and the Elected Official"

Presiding:

John S. Stewart
City Council, Durham, North Carolina

Panelists:

- Alfred M. Pelham
  Chairman of the Board
  Great Lakes Mutual Life Insurance Company
  Former Controller of the City of Detroit
- Gerald A. Lamb
  Treasurer
  State of Connecticut
- Theodore A. Jones
  Director
  Department of Revenue
  State of Illinois

11:30 a.m.—"Everyman's Guide to Federal Programs"

Richard Boone
Executive Director
Citizens' Crusade Against Poverty

12:30 p.m.—LUNCHEON—DINKLER B

Presiding:

Donald L. Hollowell
Regional Director
Equal Employment Opportunities Commission

12:30 p.m.—SPECIAL GUESTS:

CONFERENCE PROCEEDINGS

SOUTHWIDE CONFERENCE OF BLACK ELECTED OFFICIALS

DEC. 11-14, 1968

DINKLER HOTEL
ATLANTA, GEORGIA

Sponsored by
The Voter Education Project
Southern Regional Council, Inc.
Atlanta, Georgia

PREFACE

Late in 1967 and early in 1968, as it became apparent that the number of black elected officials in the South was growing rapidly and would continue to do so in the months ahead, the Voter Education Project of the Southern Regional Council conceived the idea of a southwide conference for these officials. Most—indeed, almost all—had been elected in the middle '60s as black voter registration advanced markedly.

Being closely associated with the dramatic registration increases of the '60s, VEP felt an obligation to the officials who had been elected largely as a result of these voter gains. Most of the officials had little political experience—or, indeed, previous contact with the political process—and giving assistance to these officials is an important part of VEP's broad goal of extending political participation. Moveover, it was felt that a regional meeting would be a means of bolstering the spirits of black officials, many of whom serve in extremely trying circumstances, and motivating prospective black officials throughout the South.

A number of foundations were approached with requests to supply special funds for such a conference. Almost all responded not only with approval, but also with enthusiasm. Arrangements then went forward to bring all the black elected officials to Atlanta for a four-day conference, with all expenses to be paid by VEP. The Rev. John Morris, former executive director of the Episcopal Society for Cultural and Racial Unity, was employed to coordinate the conference.

It was decided that a variety of workshops would be held for the elected officials, in addition to general sessions (see conference agenda, Page 2). A date subsequent to the November 5 general election was picked so that officials then elected could be invited to the conference. (It was determined that only *elected* officials would be invited, since the list of appointed black officials is even larger and more varied than the list of elected officials.)

Of approximately 385 Negroes holding elected positions in the South in late 1968, nearly 200 attended the conference, which was the first of its kind ever held in the South. The Voter Education Project is grateful to the foundations and to the individuals who contributed in countless ways to the success of the conference. The results of the program planning described above are presented in these conference proceedings.

AGENDA

SOUTHWIDE CONFERENCE OF BLACK ELECTED OFFICIALS

DECEMBER 11-14, 1968, DINKLER PLAZA HOTEL, ATLANTA, GEORGIA

WEDNESDAY, DECEMBER 11

2:00 p.m.—REGISTRATION—Lobby
7:00 p.m.—RECEPTION—Dinkler A
COURTESY OF THE COCA-COLA COMPANY ATLANTA
8:00 p.m.—OPENING DINNER—DINKLER B
Presiding:
Vernon E. Jordan, Jr.
Director
Voter Education Project
Welcome:
Q. V. Williamson
Board of Aldermen, Atlanta
Leroy Johnson
State Senate, Georgia
Introduction of Speaker:
Benjamin Brown
House of Representatives, Georgia
Keynote Address:
Julian Bond
House of Representatives, Georgia

THURSDAY, DECEMBER 12

7:30-8:30 a.m.—Breakfast—Dinkler B
9:00 a.m.—GENERAL SESSION—DINKLER ROOF
Presiding:
William H. Alexander
House of Representatives, Georgia
Address:
"From Subject and Victim to Citizen and Public Official: An Historical Overview of the Negro and the Southern Political Process."
Dr. Samuel DuBois Cook
Professor of Political Science
Duke University
Panelists:
- Lawrence T. Guyot, Jr.
  Mississippi Freedom Democratic Party
- Dr. C. G. Gomillion
  Board of Education
  Tuskegee, Alabama
- Joseph A. Jordan, Jr.
  City Council
  Norfolk, Virginia

12:30 p.m.—LUNCHEON—DINKLER B
Presiding:
Jesse Hill, Jr.
Actuary, Atlanta Life Insurance Company
Address:
Dr. Vivian Henderson
President
Clark College
Atlanta

2:00-5:00 p.m.—CONCURRENT WORKSHOPS

I—School Board Members—Plaza B, Lobby Floor
Convener: Miss Jean Fairfax
NAACP Legal Defense Fund
Recorder: Mrs. Susan Morgan
Southern Regional Council

II—City Officials—Roof, 14th Floor
Convener: John Feild
U. S. Conference of Mayors
Recorder: Lee J. Price
American Jewish Committee

III—County Officials—Panel Room, Mezzanine Floor
Convener: James Gibson
United Presbyterian Church
Potomac Institute
Recorder: Warren Pritchard
Southern Regional Council

IV—Law Enforcement Officials—Sky Room, 14th Floor
Convener: Julius Chambers
Attorney-at-Law
Recorder: Mrs. Taunya Banks

V—State Legislators—Room 370
Convener: Horace T. Ward
State Senate, Georgia
Recorder: Rev. J. Oscar McCloud

6:00 p.m.—DINNER—PLAZA B
7:15 p.m.—Buses Depart
8:00 p.m.—PUBLIC FORUM
Davage Auditorium, Clark College
Presiding:
Dr. Vivian Henderson
President
Clark College
Welcome:
James Mays
President
Clark College Student Government Association
Address:
Richard Gordon Hatcher
Mayor
Gary, Indiana
Panelists:
- Robert G. Clark
  Mississippi House of Representatives
- Henry L. Marsh, III
  City Council, Richmond, Virginia
- John McCown
  County Commissioner
  Hancock County, Georgia

FRIDAY, DECEMBER 13

7:30-8:00 a.m.—Breakfast—Dinkler B

8:00 a.m.—GENERAL SESSION—
DINKLER ROOF

"Revenue and Taxation and the Elected Official"

Presiding:

John S. Stewart
City Council, Durham, North Carolina

Panelists:

- Alfred M. Pelham
  Chairman of the Board
  Great Lakes Mutual Life Insurance Company
  Former Controller of the City of Detroit
- Gerald A. Lamb
  Treasurer
  State of Connecticut
- Theodore A. Jones
  Director
  Department of Revenue
  State of Illinois

11:30 a.m.—"Everyman's Guide to Federal Programs"

Richard Boone
Executive Director
Citizens' Crusade Against Poverty

12:30 p.m.—LUNCHEON—DINKLER B

Presiding:

Donald L. Hollowell
Regional Director
Equal Employment Opportunities Commission

Special Guests:

- Maynard Jackson, Georgia
- A. W. Willis, Tennessee
- Reginald A. Hawkins, North Carolina
- Mrs. Eva Clayton, North Carolina

2:00-5:00 p.m.—CONCURRENT WORKSHOPS

7:00 p.m.—RECEPTION—AMERICAN MOTOR HOTEL

COURTESY OF THE ATLANTA INQUIRER AND H. J. RUSSELL & CO., ATLANTA

8:00 p.m.—BANQUET—AMERICAN MOTOR HOTEL

Welcome:

Sam Massell, Jr.
Vice-Mayor of Atlanta

Paul Anthony
Executive Director
Southern Regional Council, Inc.

Address:

Ramsey Clark
Attorney General of
The United States

SATURDAY, DECEMBER 14

7:30-8:30 a.m.—Breakfast—Dinkler B

9:00 a.m.—CONCURRENT WORKSHOPS

12:00 Noon—LUNCHEON—DINKLER B

Presiding:

Vernon E. Jordan, Jr.
Director
Voter Education Project

Adoption of Conference Statement

Introduction of Speaker:

Mrs. Grace T. Hamilton
House of Representatives, Georgia

Address:

Mrs. Shirley Chisholm
Congresswoman
12th Congressional District
New York

ADJOURNMENT

WORKSHOP CONSULTANTS

I. School Board Members
- Mrs. Sara Mitchell, member, Atlanta Board of Education
- T. E. Patterson, member, Little Rock Board of Education; Executive Secretary, Arkansas Teachers Association
- Paul Rilling, Regional Civil Rights Director, Department of Health, Education and Welfare
- Horace E. Tate, member, Atlanta Board of Education; Executive Secretary, Georgia Teachers Education Association
- William Turner, NAACP Legal Defense Fund
- Dr. Samuel Trusty, University of Tennessee, Knoxville

II. City Officials
- William Allison, Deputy Administrator, Economic Opportunity Atlanta
- William Page, Regional Director, Department of Health, Education and Welfare
- Moreland Smith, Director, Urban Planning, Southern Regional Council
- Michael Janis, Model Cities, Department of Housing and Urban Development
- Donald Webster, Intergroup Relations Advisor, Department of Housing and Urban Development
- Robert Smith, Executive Director, Low Income Housing Corporation, Durham, North Carolina

III. County Officials
- Richard Boone, Executive Director, Citizens Crusade Against Poverty
- Clarence Coleman, Southern Regional Director, National Urban League
- George Esser, Executive Director, North Carolina Fund
- Dr. Mack Jones, Department of Political Science, Atlanta University
- John Lewis, Director, Community Organization, Southern Regional Council
- Hugh Saussy
  Southeastern Regional Office, Office of Economic Opportunity

IV. Law Enforcement Officials
- Fred Banks, NAACP Legal Defense Fund
- Mrs. Taunya Banks, Director, Tougaloo College Service Center for Elected Officials
- John Boone, Director, Project on the Administration of Justice, Southern Regional Council

V. State Legislators
- Dr. J. David Paletz, Professor of Political Science, Duke University
- Mervyn M. Dymally, State Senator, California Legal Defense Fund
- Bill Greene, Assemblyman, California
- Jack Greenberg, Director-Counsel, NAACP
- Dr. Jewel Prestage, Chairman, Department of Political Science, Southern University
- Emory Via, Director, Labor Education, Southern Regional Council

SOUTH
CAROLINA

'...A More Just Society...'

The Rev. John Morris, *coordinator of the Southwide Conference of Black Elected Officials and an Episcopal priest, delivered the invocation at the opening dinner Dec. 11. The Rev. Mr. Morris was in charge of planning the program and making arrangements for the conference. He is a founder and former executive director of the Episcopal Society for Cultural and Racial Unity.*

ALMIGHTY GOD, Who hast given us this good land for our heritage and helped us to begin to turn back the forces of oppression and injustice;

BEHOLD NOW Thy people who have gathered here in the pursuit of greater service of their fellow man. Grant that these days may be both profitable in helping us build a more just society and a witness to the spirit of free men.

THOU WHO are Lord of Lords and King of Kings, hidden and yet on every side, preserve from self-serving ambition those to whom the authority of government is entrusted; but, rather, give them an untiring zeal to see that Thy will is done and all men are free before they rest.

AS WE MEET we also honor the memory of thy servant, Martin, whose vision of a beloved community still beckons, and whose death reminds us of the sacrifice of many who have gone before.

FOR his love and for Thine we are grateful; and for our fellowship here and the food of which we are about to partake.

BLESSED ART THOU, Lord of the harvest, who bringest forth bread from the wheat fields and wine from the vineyard. Keep us in Thy love for ever and ever.

AMEN.

'...A Rapidly Growing List...'

Text of opening remarks by **Vernon E. Jordan Jr.,** *director of the Voter Education Project, Dec. 11.*

Three years ago, just after passage of the Voting Rights Act of 1965, the Southern Regional Council compiled a list of elected Negro officeholders in the South. The list totaled just over 70 names.

Today, counting some 80 black candidates elected for the first time in the Nov. 5 general election, the list totals over 380 names. The roster thus is more than five times as large today as it was just three years ago.

This dramatic increase is one of the more significant developments in Southern politics today. Not even the fact that five Southern states gave George Wallace his only electoral votes can overshadow the deepening involvement of black Southerners in the region's political process.

It is true, of course, that most of these officials were elected by predominantly black voting lists and are a result of heavy increases in Negro registration. Indeed, many represent all-black districts—as do, for example, the mayors and councilmen in all-black towns. Nevertheless there are some black officeholders—notably several of the legislators—who represent districts in which large numbers of white voters live. In any event, the list of black officeholders is growing very rapidly and will continue to do so in the months ahead.

This rapid growth in the number of Negro officeholders poses a new issue for Negroes in the South—a welcome issue, but an issue nevertheless. That issue is how to make these new officeholders as effective as possible in filling their offices. Like politicians of all races, black officeholders must be able to produce in behalf of their constituents. But Negro officeholders face several additional problems.

Black voters often feel that officeholders should produce instantly, almost magically, all those benefits and services that had been denied down through the years by callous white officials. Usually—almost always—this is impossible.

In many cases the Negro officeholder finds himself serving Negroes who live outside his district but have no spokesman. Thus a Negro legislator—to use that office as an example—might find himself speaking on some issues for all the Negroes in the state.

The Negro officeholder is being observed closely by both races. Some of the watching eyes are friendly, but many are hostile. Often the new Negro officeholder will be measured by yardsticks far more exacting than those applied to his white predecessors. The difficulty that Julian Bond had in claiming his seat in the Georgia Legislature stands as an example of the sort of roadblocks that can be thrown in the way of black elected officials.

Finally, most of the newly elected black officials carry a heavy burden of political inexperience. Historically, the white political structure of the South has deliberately and systematically denied blacks the opportunity to gain experience in the political process.

This is the sort of practical problems we will be dealing with these four days at the first Southwide Conference of Black Elected Officials. We will not solve all the problems at one conference. But we hope to establish, at this conference, some machinery for dealing with the problems on a continuing basis in the future, as the number of black elected officials continues to grow.

'...An Attack on All of Us...'

Rep. Julian Bond *of Atlanta opened the four-day Southwide Conference of Black Elected Officials with a keynote speech Dec. 11 at a dinner. Rep. Bond, refused his seat by the Georgia House of Representatives because of his opposition to the war in Vietnam, was elected three times before he was seated by order of the U. S. Supreme Court in 1967. The 28-year-old legislator's name was placed before the 1968 Democratic National Convention as a nominee for vice president.*

It is difficult to know what to say to an audience like this one. We come from so many different backgrounds, we hold so many different jobs, we have so many different ambitions. All that we have in common is the fact that we are politicians, we are black, and we are very largely elected by black constituencies.

Those last two facts are the most important—our race and the race of people whom we represent, the people who have chosen us to make important decisions for them.

Without knowing what kinds of people have selected you, let me tell you something about the people I am proud and privileged to represent in the Georgia General Assembly—the citizens of the 111th House district of Fulton County.

They are almost all black—nearly 85 per cent of them. They are nearly all poor—their average yearly income per family is $2,500. They have trouble finding work—unemployment in my district runs between 30 and 40 per cent. They are poorly educated—on the average they completed only the sixth grade. Most of the men have trouble finding work, and so the labor force in my district is predominantly female. You all know the kind of work poorly educated black women do—day work, domestic service, cleaning someone else's kitchen, caring for someone else's children.

Incidentally, the white citizens of my district share the same condition; but unfortunately for them, most of them think that somehow the color of their skin makes their small amount of money go further, or that their whiteness makes their poor sixth grade education better than the one my black constituents have.

But the point of all these statistics is simply to demonstrate that my constituents are probably very much like yours—they are poor and black, and they depend on government, very largely—their city and county and state governments and their federal governments—to help them do the things they are unable to do themselves. That is why they have chosen you to represent them, because they still retain some faith in the power of the democratic process to solve people's problems.

I am very much afraid that for the next several years they are in for some disappointments.

If your constituents are like mine—and like most other black Americans—they voted very heavily for Vice President Humphrey. They wanted him to be President. They may have had some other first choice, but that was denied them by an assassin in Los Angeles. They may even, like I did, have had a second choice; but that was denied them by democracy in Chicago. So therefore they voted for Mr. Humphrey. He represented warmth, while one can only find coldness in the iciness we now hear described as the "new" Nixon.

So while we were voting one way, the rest of the country voted another. They chose a man who said he didn't expect to get black votes and therefore never sought them out; they chose a man who said he was publicly for open housing but privately against it, and they chose a man who says the federal government is enforcing the 1954 Supreme Court decision too swiftly.

They chose a man who has tremendous power to set a positive or a negative future for black Americans.

—He perhaps may choose five new Supreme Court justices and therefore may determine the nature of the decisions that Court makes in civil rights cases over the rest of this century.

—He will certainly choose a new attorney general and a new head of the civil rights division of the Department of Justice and will decide how vigorously—or whether at all—they enforce the legislation that affects us most vitally.

—He is going to name the staff and set the budget for the Department of Health, Education and Welfare, the Department of Housing and Urban Development, and the Office of Economic Opportunity. He will determine how these agencies respond when they are asked to deal with our problems.

He will have a great deal to say about the nature of the 92nd Congress.

Now those are not the kinds of decisions one wants to leave to a man whose closest advisers include Strom Thurmond.

But we are faced, now that the election has passed, with being ruled by a man who was not the choice of 90 per cent of us, with being ruled by a man who has

yet to demonstrate that he has any concern for the poor or the black. We will be ruled by a man who says he wants to rebuild our slums with black capitalism, which can only mean exchanging the race of the people who have been exploiting us. Faced with that kind of government over the next four years, the way that all of us act from now until 1972 is going to be very important.

We face these next four years a Congress that is more conservative than the last one, and we face a nation that has grown tired of the demands of the black and the poor. We are in a position worse off, relatively speaking, than our position has been over the past several years.

You all know the statistics that show more black people working, more living in decent homes, more getting an education, more earning more money. There is another set of figures that shows we make less money now—more in comparison with what we used to make, but less in comparison with white people. We are moving out of poverty, but while white poverty in America has decreased 27 per cent, black poverty has decreased only 3 per cent.

The most frightening figure is this one. The infant mortality rate for blacks—compared with whites—in 1940, 28 years ago, was 70 per cent higher. In other words, our babies died 70 per cent faster 28 years ago than white babies did. There has been some change, however—in 1962, just six short years ago, the figure was 90 per cent.

Now in addition to these kinds of problems, we face involvement in a problem of national proportions, a problem that affects every American, black and white. That problem is America's imperial war in Vietnam. The difference, black and white, is that it affects us more.

It feeds on our community. It takes our sons and fathers and brothers and uncles to fight and die in it in greater proportion than it takes any other group of Americans. Is that because we are braver, or because we love fighting more than anyone else, or because we are greater patriots? I think not. I think it is because young black men find the Army uniform and three square meals a day more attractive than they find life in Harlem, or Watts, or the Delta of Mississippi or the bayous of Louisiana. And so the war takes them. It sends them 8,000 miles away from their homes, telling them they are defending freedom, the kind of freedom they often find lacking in the communities they leave behind.

The war places many of them in an integrated situation for the first time—a front-line foxhole, next to some white boy. America has not yet discovered how to get that kind of integration at home.

Most of us are spectators to the war. We watch the young black man and the white boy on television, often in living color, as they burn down the huts of some poor Vietnamese village, and realize the two of them could not live on the same block in most American villages. We may realize further that if the young black boy is lucky enough to survive the war without being killed, he may come home and may become so frustrated at the discrimination and racism he meets in the land of his birth that he may burn down some American village—using, of course, the skills and the techniques he learned while defending America's freedom overseas.

Now I have heard some black politicians say that the war didn't affect them, that it was a foreign policy matter, and that we ought not say anything about it, that it wasn't our business. Well, let me say that any time you live in a country that is willing to pay $500,000 for every enemy soldier it kills, and only $50.75 for every poor person in the war on poverty, then that is your business.

Every time you find yourself living in a country that tells you violence is all right when it results in death and destruction for some little brown people 8,000 miles away but not when it is done by black people here at home, then it is your business.

Every time your government tells you that the trouble in Vietnam is caused by outside agitators from the North, think back to George Wallace and Marvin Griffin telling you that you would be happy and satisfied if it wasn't for the outside agitators from the American North.

Ladies and gentlemen, it is everyone's business.

So we have to make it our business to tackle some of the evils of 20th Century Americanism—racism and militarism. We could begin to do that by making our own communities strong and by controlling the goods and services and the institutions of our communities. For a long time we've only had the church. That was the only thing that was ours and ours alone. But I hope in the future that we'll begin to widen our sights and say to ourselves that if it operates in a community of black people, black people have got to control it. That means the businesses and it means the schools and it may mean the police as well.

I was in New York City on Monday, and I went to Intermediate School No. 201, one of the Harlem schools that is controlled and run by the people of Harlem. I spoke to a class of eighth graders, and in my speech, I mentioned some great people who have come from Georgia; and with Roy Hamilton and Ray Charles and James Brown and Otis Redding and Gladys Knight and the Pips, I mentioned the Honorable Elijah Muhammad. Now you may not think that eighth graders ought to be taught about Ray Charles or James Brown, and I'd agree with you; and you might think that Elijah Muhammad might not be a proper subject for an eighth grade class either, but they knew who he was. One eighth-grader told me, "Elijah Muhammed taught racist doctrines, and that's why Malcolm X left the Muslims." Another told me, "The Honorable Elijah Muhammad is the leader of the Nation of Islam and the Messenger of Allah."

Now I submit to you, that's a wonderful thing. Not that one child agrees with Mr. Muhammad and another does not, but that both know about him, and both know he is a part of our peculiar history in the United States. That, I think, is what it means when black people control their community.

Additionally, I think we've got to be aware of and suspicious of attempts to turn us against our own interests. Take Mr. Nixon's Black Capitalism, for instance. (Now before any one of you begins to think I'm against capitalism, let me correct you. But I think we'd all admit that if it had not been for white capitalism, none of us would ever have been sold into slavery.) As Mr. Nixon explains it, Black Capitalism means that General

Motors will be given tax credits to come into my community to set up a factory that will hire and train black people. Now that is wonderful, but it's not Black Capitalism by any stretch of the imagination. That is white capitalism once again coming into the black community and taking the only thing we have to offer, which is our labor.

Instead, we ought to become interested in—now here's a terrible, dirty word—community socialism. We ought to be interested in the kind of economic development in our communities that will not only give us jobs but will give the community the profit as well. A minister in Philadelphia, the Rev. Leon Sullivan, the man who began the idea that became Operation Breadbasket, has a project like that working now. Mr. Nixon has seen it, and we ought to hope that he gets the message.

We are additionally going to have to look around us for the kinds of people we can join forces with. It would be nice if we could go it alone. I am sure there is not a single person here who hasn't said to himself, at one time or another, I wish I could just get away from all this. But we can't, and our numbers are so small nationally that we have got to find the kinds of people who can help us. Those we used to depend on have deserted us.

Organized labor used to call itself our friend, but you saw where labor was in the 1968 presidential election.

White liberals and moderates used to help us, but this terrible war has attracted nearly all their attention.

So we have got to try to find new friends, while we hope the old ones will come home. We naturally ought to look to the other colored minorities—the Mexican-Americans and the Puerto Ricans and the American Indians. If we could get some kind, any kind of response from the heavy shield of racism that blinds poor white people, they would be our natural allies too.

In the future, we will have to beware of the kinds of coalitions like the one that has existed in this city for so long. That coalition put all of us together with some of the white people—the moderates and the liberals. It worked out fine while it was intended to maintain order; but since the blacks began to demand justice, the coalition is beginning to show some signs of wear. And now they want to expand the city limits to cut our numbers down.

So we have to always be on the lookout for any other forces in American political society that can help us. We ought not to turn anyone down. If your house is on fire, and a man runs up with a bucket of water, don't ask him where he got it or who he is. Just make sure it's not gasoline and then pour it on.

Finally, although we need fast action, we have to move with care. We are living in strange times. For the first time in the last eight years, the forces of conservatism have won a national election. For the first time since 1948, we have had a presidential candidate who appealed to racism. This year the hillbilly Hitler from Alabama won nine million votes. In 1972 he will be back again, and we must be ready for him.

We live in an era in which the next Vice-President of the United States makes jokes about Polacks and Japs—you know that any man who does that will also joke about Wops and Spics and Niggers. We live in an era in which a committee of the U.S. House of Representatives has said we ought to reopen the concentration camps that the Japanese were put in during the Second World War; but this time they don't want to put the Japanese in them, they intend them for us.

In an era like that, we ought to consider that an attack on one of us is really an attack on all of us.

We ought to remember what a German minister had to say when someone asked him what he did to stop Hitler from coming to power. He said: "When they came for the Jews, I did not cry out because I was not a Jew. When they came for the Catholics, I did not cry out because I was not a Catholic. When they came for the union leaders, I did not cry out because I was not a union leader. But when they knocked on my door, then and only then did I think of screaming; but there was no one around to hear my screams."

In closing, let me say one final thing. I have believed that we are and will be a great people because we come from a great people. We have great heroes. But a people with a limited view of their own past will have a limited future. So let me close by reading to you two short pieces that come from our past. One comes from a man who was, I believe, our greatest hero, Frederick Douglass. His words of 100 years ago ought still apply to us today. One comes from a man like us, a black politician, who was thrown out of the Georgia House of Representatives 100 years ago.

Frederick Douglass:

> "He who would be free must strike the first blow. You know that liberty given is never so precious as liberty sought for and fought for. The man who is outraged is the man who must make the first outcry. Depend on it: men will not care much for a people who do not care for themselves. Men will organize to prevent cruelty to animals, for they are dumb creatures and cannot speak for themselves; but we are men, and men must speak for themselves or we shall not be spoken for at all. We hold it self-evident that no class or color should be the exclusive ruler of this country. If

there is such a ruling class, there must, of course, be a subject class; and when that condition is established, the government of the people, by the people and for the people shall perish from the earth."

Henry McNeill Turner.

"Even though we are not white, we have accomplished much. We have pioneered a civilization. We have built up your country. We have worked in your field and have garnered your harvest for 250 years. Do we ask for compensation for the sweat our fathers bore for you—for the tears you have caused, the hearts you have broken and the blood you have spilled? Do we ask retaliation? We ask it not. We are willing to let the dead past bury the dead. But we ask you now for our rights. You have all the elements of superiority on your side—you have our money and your own, you have our education and your own. You have our land and your own. We are strangers in the land of our birth; without money, without education, without aid, without a rook to cover us while we live, nor clay to cover us when we die. It is extraordinary that a race such as yours, professing gallantry and chivalry and education and superiority, living in a land where Bibles are read and where Gospel truths are spoken and where courts of justice are presumed to exist—it is extraordinary that with all these advantages on your side, you can still make war on the defenseless black man.

"The great question is this: Am I a man? If I am such, I claim the rights of man. You may expel us, but I believe firmly that one day you will repent it. The black man cannot protect a country if the country cannot protect him, and if tomorrow, a war would arise, I would not raise a musket to defend a country where my manhood is denied. The fashionable way in Georgia is for the white man to sit at ease while the black man does the work, but I will say this much to the colored men of Georgia: never lift a finger or raise a hand in defense of Georgia unless Georgia acknowledges that you are men and invests you with the rights pertaining to manhood. You may expel us by your votes today; but while you do it, remember that there is a just God in Heaven, whose all-seeing eye beholds alike the acts of the oppressor and the oppressed, and who despite the machinations of the wicked, never fails to vindicate the cause of justice and the sanctity of his own handiwork."

Let me suggest that those two men were men, real men. Their words are 100 years old, but their thoughts and ideas are as fresh as tomorrow. If each of us can approach his job with one half the fire and fervor that those two men did, then we will have vindicated the trust our constituents put in us.

'...The Key to Southern Liberation...'

Dr. Samuel D. Cook, *professor of political science at Duke University, gave "an historical sketch of the Negro in the Southern political process" at the opening session Dec. 12. His talk was followed by a panel-audience discussion. Dr. Cook is chairman of the Voter Education Project's Advisory Committee.*

Just as politics "makes strange bedfellows," it begets baffling meanings, events, and experiences. It sometimes makes realities of illusions and illusions of realities. Politics can enslave "the high and the mighty" even as they celebrate the delights of power and privilege. There is a politics of deception, but there are also deceptions of politics, including brutal self-deceptions. The history of Southern politics is a grim reminder and prophetic warning of the perils of politics of fear, negativism, memory, separation, and brutally irrational collective egoism and pride.

The historic position of the Negro in the Southern political system is an awfully strange phenomenon, full of paradox and irony, simplicity and complexity, mystery and meaning, public injustice and poetic justice. Strange as it may seem, the black man's influence on Southern political systems, structures, events, and public policies has been profound, central, and universal. Somehow, the harsh and startling truth is that the Negro is the key to Southern politics. Take him out of the equation and the politics of Southern history does not, in substance, make sense; it is, clearly, beyond the realm of rational intelligibility. Put him in the key role and the tawdry pieces, like a symphony, fall into their proper places and perspectives.

Though, in essence, powerless, helpless, and victimized, the black man, because of the tyranny of racism over the mind of the white South, has been able, without intention or knowledge, to dominate Southern political and governmental life. Essentially outside the political arena, his presence in Dixie largely determined the content, style, rhetoric, direction, and issues inside the Southern political process. How paradoxical and ironic!

Driven by a paranoic fear of black control or "domination," the political thought and practices of the South produced by way of the back door (how symbolic!) that very "black domination" it most feared and sought so desperately to avoid. Slaves tyrannized masters; subjects tyrannized citizens; those who monopolized the structure and process of power fell victim to the very men against whom, above all, their terrible power was directed. Whites fell into the trap they had so cleverly and determinedly made for blacks: absolute dominion.

The very presence of the Negro exercised a dominating influence on the public philosophy and life of the South. The heart of Southern history has been informed and inspired by memories and anticipations, hopes and fears, beliefs and doubts, cocksure complacency and blinding restlessness issuing from the troubling and universal presence of Negroes. Unwittingly, the Negro has exercised tyrannical power over the Southern political process. Just as he was victimized by the albatross of racism, so was the white man. With all his awesome and unlimited power, the white man of the South was powerless—psychologically, emotionally, intellectually, spiritually, culturally, economically, and politically—to shake off the tyrannical influence of the black man. The black man has been the Southern white man's "hang-up." The Negro, like a fearsome ghost, has haunted and driven the white man. The white South's actions and reactions, plans and counter-plans, contemplative flights and manipulative processes were, in large measure, simply echoes and reflections of the agonized, agonizing, and fearsome presence of politically alienated and powerless black men. Deep and irrational fears can enslave even the most powerful. The Southern white man's genius—political and otherwise—has been exhausted in "the race problem." Southern politics is, at bottom, the politics of fear, and the object of fear is the black man.

The changes that have occurred on the Southern political scene—symbolized by your election to positions of power and responsibility—are indeed radical, but the most radical ones are yet to come. The key to Southern liberation is black liberation—liberation from the cancer of racism. When black men are fully free,

the South will be fully free. It will overcome its legacy of national alienation, poverty, illiteracy, economic colonialism, cultural and ideological isolation, and tragic and self-defeating enslavement to the tyranny of the past and the seething despair of a collective existence born of entrapment to the paralysis of memory. Freed from the heavy yoke of racism, the South—and, on a deeper level, the nation as well—will take wings.

I. The Nature of Politics

Politics, shorn of its non-essentials, is a struggle for power and for the values associated with, and derived from, the possession of power. Politics, said Max Weber, "means striving to share power or striving to influence the distribution of power, either among states or among groups within a state."[1] Political institutions and activities are, essentially, power relations. Power is the ability to get things done, to influence others, to create the desired consequences or conditions.[2] It is the capacity to manipulate and control the world of men as well as the realm of nature in accordance with one's interests and desires.

"Political power is social power focused on the state. It involves control of other men for the purpose of influencing the behavior of the state, its legislative, administrative and judicial activities."[3] Political power determines the authoritative allocation or distribution of public benefits. It involves public decision-making in terms of form and substance, personnel and policy, input and output, privileges and privations, punishment and reward, protection and exploitation, enrichment and impoverishment. Accordingly, the stakes of politics are indeed high and precious. The political system determines who gets what, when, and how. The fruits of political power are many and varied. Public services—from physical protection to street lighting, sewage and garbage disposal—taxation, opportunities for education, enjoyment, employment and other life chances, and related bread-and-butter decisions are largely political matters. Ultimately, politics has profound bearing on the quality and destiny of human life and culture.

Politics is, therefore, a high and honorable calling. It is no better and no worse than other honorable professions. Because of the nature of their office and responsibilities, what political leaders do, in terms of virtues and defects, successes and failures, devotion to public good and pursuit of self-serving ends, is more glaring, visible, and dramatic than that of most men and women. The public properly expects high standards from politicians. After all, they are supposed to be the servants and guardians of the public interest.

The political system and the people who manage its operations have great responsibilities and opportunities for public service. Conflict and disagreement, owing both to human nature and to the scarcity of goods or objects of satisfaction, are an inherent part of the human scene. Politics is peculiarly the arena of conflict, tension, clash, and competitive pursuit for the satisfaction of desires and the achievement of advantage and privilege. It is an eternal battleground of pressure and counter-pressure, demand and counter-demand, pushing and shoving.

As Miller asserts,

> Politics . . . is about disagreement or conflict; and political activity is that which is intended to bring about or resist change, in the face of possible resistance . . . . Political activity . . . arises out of disagreement, and it is concerned with the use of government to resolve conflict in the direction of change or in the prevention of change. It is about policy and position.[4]

Conflict is at the heart of politics. Herein lies perhaps the most creative power and responsibility of political life. Politics is concerned with the adjustment, regulation, accommodation, management, and resolution of conflict growing out of competitive desires, needs, interests, and preferences. It has been well said that "politics is the most inclusive process by which social conflict is regulated in a community."[5] The quality of the political system and the character of political leaders are best determined by how they deal with conflict. The response of the political system to the stubborn reality, power, and persistence of conflict discloses its viability, character, and worth. A political system is creative or destructive in accordance with the pattern and quality of its response to the basic problems and dimensions of human conflict.

Race, in its many manifestations, has been the chief source and expression of conflict and tension in Southern political life. The response of the political system has been destructive and sterile rather than creative and imaginative. Radically absent were creative encounters and responsible responses. The fundamental dimensions and human realities of the situation were never faced; indeed, a premium was placed on not facing them. Methods of political sidestepping were endlessly elaborated and faithfully implemented. Exclusion, oppression, suppression, and victimization of blacks were the chief methods and techniques of the South in dealing with racial conflict and tension. They prevailed.

Regulation, adjustment, accommodation, and resolution of conflicting interest were accomplished by the ruthless mobilization and brutal application of "White Power." The idea of shared power and mutuality of political respect was totally lacking. Conflict communication, participation, and representation were not only irrelevant; they were viewed as dangerous subversion of law, order, justice, and the common good. Issues, therefore, were never confronted, and hence their resolution was made an obvious impossibility. The system not only fostered but celebrated and glorified collective hypocrisy, conceit, egoism, and dishonesty. Majestic principles were invoked to justify the reduction of black men to the status of subject and victim of the political process. Lip-service was dutifully paid to democracy even as Negroes were systematically excluded from the experience of every element of citizenship.

II. Southern Politics and the Tyranny of Racism

A. Black Men As Subject, Issue, and Victim

To understand the depth and power of racism over the Southern political process, it first is necessary to grasp what politics has meant to the South. In a way unique to America, politics has been dear to the heart of Southerners; they have loved it with a passion. It has been a source of profound meaning, attachment, value and fulfillment. If racism was the South's first love, politics was its second. The Southern love of

politics, Cash insisted, is inseparable from its love of rhetoric and oratory.[6]

He went on to say that,

> Thus the politics of the Old South was a theater for the play of the purely personal, the purely romantic, and the purely hedonistic. It was an arena wherein one great champion confronted another or a dozen, and sought to outdo them in rhetoric and splendid gesturing. It swept back the loneliness of the land, it brought men together under torches, it filled them with the contagious power of the crowd, it unleashed emotion and set it leaping and dancing, it caught the very meanest man up out of his own tiny legend into the gorgeous fabric of the legend of this or that great hero.[7]

Besides, politics in the South has been a form of entertainment, relaxation, and escape from the painful burdens of life. All this must be understood in terms of the region's legacy of poverty, misery, illiteracy, disease, national alienation, and tragedy. Politics has been precious to the Southern collective experience.

Politics provided a psychological and emotional outlet from the soil, which was both a prison and a shrine, a curse and a blessing.

Atlanta Constitution columnist Celestine Sibley perceived the heart of matter:

> If there had been anywhere else to go, any other form of public entertainment, it's possible the rural Southerner wouldn't have developed such a marked taste for oratory and barbecue. Having little enough to divert them, however, at 'lay-by time,' when there was nothing to do in the fields except let the crops grow, and the summer protracted meeting had run its course, a political rally at the county seat was a welcome event. Men of all ages from bearded grandpas to shirt-tail boys saddled up horses, hitched the mule to the wagon or set out afoot to hear such spellbinders as fiery Bob Toombs, Little Alec Stephens, Tom Watson and, in later years, Ol' Gene Talmadge . . . . You have but to read some of the old speeches to realize that politics . . . was better than any road show.[8]

No wonder the South produced so many colorful political figures. One thinks of "Kingfish" Huey Long—"Every Man a King"; "Ma" Ferguson—elected governor to serve as proxy for her husband, barred from office by an earlier impeachment and indictment; Ol' Gene Talmadge—displaying his red galluses, appealing to the "wool-hat" boys, and insisting that he didn't want any votes from any county big enough to have street car tracks; "Kissing Big Jim" Folsom; Georgia's two or three governors at the same time; Cotton Ed Smith discoursing with great eloquence on the virtues of Southern womanhood; Lester Maddox, in the early days of his campaign for the governorship, proclaiming his opposition to school consolidation on the ground that it would prevent some nice little girl from being chosen school queen; George Wallace standing in the "schoolhouse door" in symbolic defiance of the whole majesty and power of the United States government. Behind all the comedy was a serious commitment to political life. It satisfied deep needs.

"The South has always been a great land for politicians. This isn't mere happen-so. It results from the character of the people and the nature of their life."[9] Politics in the Old South was something sacred, some-

thing of a religion, perhaps a substitute for, or an extension of, religious experience, rituals, and symbols. The South, according to Dabbs, "tended to replace religion with politics, and to make politics, religion, and the moral life one."[10] He goes on to speak of the "Southern tendency to keep questions in the political realm and to prevent them from becoming moral and religious."[11]

Accordingly, the oppressed status of the Negro in Southern political life represented his victimization and exploitation by something precious and sacred to white Southerners. Deep beliefs and commitments were involved. The region's first and second loves were united in political and governmental institutions and processes to the detriment of black humanity. Politics was, "so to speak," said Cash, "the temple wherein men entered to participate in the mysteries of the common brotherhood of white men, to partake of the holy sacrament of Southern loyalty and hate."[12] Thus racist demagogues, with all their oratory and manipulative skill and power, provided to whites not only enjoyment and entertainment but enrichment, satisfaction, meaning, and fulfillment at the heavy expense of black men. Negroes were excluded from, and victimized by, the Southern political process with a passion that partook of the "sacred."

The raping of Negroes by the Southern political process was, therefore, born of and nurtured by the search for meaning as well as the will-to-power. There was, in fact, a marriage of the will-to-meaning and the will-to-power. Psychological and spiritual components combined. The domination and control of black men satisfied not only the egoistic ambitions, imperialistic aims, and aggressive inclinations of whites; they also satisfied certain spiritual and moral impulses as well. It may sound strange, but the white South gave the political process a moral, spiritual, and religious interpretation. It was also viewed as a commanding agency of organic social cohesion and unity. The Negro was caught up in the throes of a variety of convergent forces and values. A racist public order issued from, and pointed to, more fundamental concerns of the moral, social and religious sphere. The intensity, persistence, and evangelical character of the political persecution of black Southerners is beyond rational comprehension unless linked to perception of certain ultimate concerns.

A broad perspective is essential in order to understand the constant preoccupation with the presence of the Negro and the expenditure of endless energy as well as moral, rational, and political resources to keep him in a state of oppression. The South felt it necessary to make the alienation and domination of Negroes ab-

solute and total—and even that did not produce satisfaction. The desire for security against a weak and black minority was insatiable; the hunger and thirst were beyond satisfaction. It was not enough to make black men powerless; they had to be humiliated and consistently and brutally reminded, in the public forum and in the boondocks, of the contempt and scorn in which they were held. They were easy targets and victims of political evangelism, and the peril of their presence had to be denounced with fervor and earnest dedication.

What's more, the white South could never shake off the feeling of the mysterious and perilous presence of the Negro. Serious threat of "black domination" was always lurking in the background. Negro strength would, according to the perceptions and fears of whites, somehow break through the stone walls and steel barriers of oppressive laws, caste, and custom. Danger was omnipresent; black invasion of sacred white temples was always an immediate possibility. Watching had to be constant; new walls of protection had to be built; new devices for the detection of rebellion had to be invented.

There was, on the ultimate level, a feeling of the powerlessness of power to prevent attempts at social and political change. Prevalent was the paranoic syndrome of a secret but powerful conspiracy against the Southern "way of life." The white man never felt secure. He was haunted by an inner doubt and fear that he had not done enough to maintain the political enslavement of the black man. Complete disfranchisement of blacks did not bring serenity and confidence to whites. Doubt still lurked. Black men were still viewed as a threat, a problem, a nightmare.

Perhaps subconsciously, the feeling that the Negro would rise was substituted for the sorry myth that the Confederate South would rise again. It is strange, but power does not necessarily produce security, and absolute power, if it were possible, would not inevitably bring about absolute security. Ironically, black men, in their powerlessness, exercised tremendous power over whites, who monopolized the process and substance of power; relegated to subjects, black men informed and inspired the basic political philosophy and practices of white citizens. There is an element of mystery in all this, but there is also a core of meaning.

Southern politics has been primarily the politics of race. Racism has presided over perhaps every major aspect of the political life of the region, if the situation is viewed in large terms—in the pre-Civil War era, the Civil War itself, the Confederacy, the Democratic split in 1860, Reconstruction, the Redemption, the establishment of various restrictive voting laws, the Black Codes, the rise and perpetuation of the one-party system,[13] the birth and death of Populism,[14] the Dixiecrat movement, the numerous independent electors exercises, the Wallace movement, and so forth. Alexander Heard asserts, "Southern concern over the Negro is the most deeply rooted source of political contention in American politics."[15]

In his classic study, *Southern Politics,* V. O. Key observed:

> In its grand outlines the politics of the South revolves around the position of the Negro. It is at times interpreted as a politics of cotton, a politics of free trade, as a politics of agrarian poverty, or as a politics of planter, and plutocrat. Although such interpretations have a superficial validity, in the last analysis the major peculiarities of Southern politics go back to the Negro. Whatever phase of the Southern political process one seeks to understand, sooner or later the trail of inquiry leads to the Negro.[16]

The "Southern bloc" in the Congress exists only in reference to the race issue. After analyzing Southern voting behavior in the Senate, Key concluded that "on the race question, and on that question alone, does a genuine Southern solidarity exist. On other questions Southern Democrats split and Southern solidarity becomes a matter of degree." [17] After examining Southern voting behavior in the House, Key concluded: "Thus the inference to be drawn from House behavior is similar to that deductible from Senate voting: Southern attitude toward the Negro provides the bedrock of Southern sectionalism."[18] The celebrated Southern doctrine of states' rights—from its initial formulation to the present—is, at bottom, an ideological weapon, political imperative, and respectable camouflage for a free hand in the management of race relations. It has no consistent and meaningful application elsewhere. The South "has not stood consistently for states-rights, except on issues associated with slavery and the Negro question."[19]

Somehow, then, the Negro has, unwittingly, exercised a curious tyranny over the mind of the white South. Of the centrality and universality of Negro influence, it has been well said that the

> fundamental determinant of Southernism has been the presence of the Negro in large numbers relative to the whites, and resulting white supremacy doctrines and patterns of behavior. A South divorced from the problem of race would not have been a Solid South; a South preoccupied with race problems became a Solid South.[20]

It is of timely relevance to note that racism, fearing that, in a system of competitive party politics Negroes would hold the balance of power, is chiefly responsible for the historic one-party system in the South. "The South is a one-party area," commented Rossiter nearly a decade ago, "primarily because of the Negro."[21] Perhaps the crowning irony of Southern political history and process is that the party of Lincoln—which, owing to its image of association with the rights and aspirations of Negroes, was for nearly a century reduced to impotence in the South—must attribute a large part, though, of course, not all, of its modern rebirth and success to racism.[22]

Significantly, the pervasive influence of the Negro on the political process of the South has not been as a political agent and participant but as a political issue and object.[23] It has been, in other words, his function as a subject, not citizen. Essentially outside the political process and system, the Negro has been the chief source of animation, dynamism, inspiration, strategy, style, issues, and direction.[24] Southern politicization and political socialization issued from, in large measure, the very presence of the black man. The heart of Southern political socialization is the proposition that the governing process is the business of whites only. The Negro, in this view, is only subject—not citizen; a tool to be manipulated, not a political agent to be reckoned with and whose demands are to be responded to. "A democratic citizen," it has been well said, "speaks the language of demands."[25]

B. Consequences of the Tyranny of Racism on Southern Politics

Owing to the tyranny of racism, the Southern political system and process have been built on exclusivist rather than inclusivist principles and ideals. Interpretations of democracy, equality, justice, progress, and other moral ideals that inspire and inform the Southern political process were provincial and made in a manner to deny that very exclusiveness. The principles of democracy, in this framework, were not violated but, on the contrary, affirmed and institutionalized with religious fidelity. As Louis Hartz observed, "One of the crucial factors in the solidarity of the South was a democratic spirit enhanced by the slavery on which it rested."[26]

Some spokesmen of the Old South saw in Greek democracy their model and inspiration. Democracy for whites only was idealized. "The dominance of all white men over the Negro created a sense of brotherhood not unlike the Greek concept of democracy."[27] But even as Athens was invoked, fidelity to the American Creed was proclaimed. "The proslavery argument was so cleverly combined with American ideals that servitude appeared the very condition of democracy."[28] The very slavery of blacks was viewed as a basis of the freedom, equality , citizenship, culture, civilization, and humanity of whites.[29]

Ante-bellum political philosophy, attitudes, public policy, and vision have been continuous and productive of some awesome fruits. The Old South mothered the legacy that whites are born to rule and Negroes to obey, that the governing process is the business alone of whites. Because of slavery, said Tocqueville, "the citizen of the Southern states becomes a sort of domestic dictator from infancy; the first notion he acquires in life is that he is born to command, and the first habit which he contracts is that of ruling without resistance."[30] The operation of the particularistic version of democracy spawned an institutionalized negation of the ideal of the universality of participation inherent in the democratic process. It has meant not only the total alienation of Negroes from, but, even worse, their victimization and exploitation by, the Southern political process.

Down through the years, Southern public life has adhered to the principle of racist exclusivity. Even progressive and reform movements, weak at best, have espoused the ideology of racism. In his monumental *Origins of the New South,* C. Vann Woodward has a chapter whose title is: "Progressivism—For Whites Only." He maintains, "Southern progressivism generally was progressivism for white men only," and notes the "paradoxical combination of white supremacy and pregressivism."[31]

Self-defeating for whites have been the consequences of the centrality of racism in the total political culture. If it emasculated blacks, it produced the sterility of whites. Low electoral and other forms of citizen participation, a one-party system, (or, rather, a no-party system), a primitive political culture, diversion of energies and imagination from the real and vital issues of regional growth and development, alienation from the mainstream of the public life of the nation, vast restrictions on freedom of choice, archaic political, governmental, and constitutional structures, fertile soil for demagogues, tragic illusions, romance with negativism, and wild-eyed and futile adventures, and an inability to perceive the ultimate dignity, vitality and creative and higher possibilities of political life are all, in great measure, the product of racist-dominated politics. Great visions have been vitiated and buried because of racism. There is deep pathos here. The "tragedy of the South," says Dean Acheson, "has been that racism has corrupted an otherwise respectable strain of protest and experimentation in the search for economic equality, dating back to Jefferson, Mason, Randolph, and Jackson."[32]

Worthy of emphasis is the low level of electoral participation. Voting is only one aspect of political consciousness and involvement, but it is crucial. The record of the whole country is a terrible commentary on our public life,[33] but the South's record is the most depressing.[34] "By any standard," said Key, "precious few Southerners exercise the rights of citizens in a democracy."[35] Many reasons may be adduced, but they are all related, in the end, perhaps, to the "Negro problem."[36] Restrictions on Negro suffrage were vast and constituted "the most impressive systems of obstacles between the voter and the ballot box known to the democratic world."[37]

But restrictions on Negro suffrage took their toll on whites as well, both directly and indirectly, resulting in a small segment of the white population monopolizing the governing process. Indirect limitations on white voters flowed from the quality of the whole political system—the lack of competitive politics, the absence of issues and choices beyond personalities and self-serving factions, the hegemony of routine, and the sheer weight of the cumbersome mechanics of registration and voting. Direct restrictions on whites proceeded from laws aimed at Negroes but also militated against whites of low socio-economic and educational background and status. Laws directed against Negroes almost invariably affected some white voters.[38] The poll tax, for example, Key held, "insofar as it has deterred voting, has operated primarily to keep whites away from the polls,"[39] because Negroes could be kept from the polls by other means. Besides, the landed aristocrats and Bourbons held no special love for "poor whites." Thus, ironically, in the Southern political system certain whites have been victimized by the mythology and practice of the politics of white supremacy. In fact, "in sheer quantity nonvoting whites outnumber the voteless Negroes of the South as a whole."[40] In terms of substantive pub-

lic policy, the region's legacy of poverty, low per capita income, disease, illiteracy, and undevelopment of resources—human and natural—is a pathetic reminder of the depth and persistence of human folly. In every major crisis of the South, its leadership has defaulted. It has misled.

III. The Day and Night of Reconstruction

With legal emancipation and ratification of the Civil War amendments, the hope and expectation prevailed that former slaves would become, in reality as well as in theory, citizens and therefore full and equal participants in the Southern political process. Hopes, among the four million freedmen and their friends and allies, soared. Expectations and aspirations took wing. Reconstruction got under way.

Obviously, the new freedmen had no political experience or civic education. What is less well-known—and this tells us much about the character of the whole American political tradition as regards black men—is that even free Negroes, before the Civil War, had been, on the whole systematically excluded from the processes of politics. "Prior to the Civil War, Negroes had the right to vote in only four Northern states—Massachusetts, New Hampshire, New York, and Vermont. One Southern state, North Carolina, for a period allowed freed slaves to vote."[40] The voting laws of New York had discriminated against free Negroes.[41] When the Fifteenth Amendment was ratified in 1870, Negroes could vote in only seven Northern states.[42] "During the period between the Philadelphia conventions of 1787 and 1865, only Maine, New Hampshire, Vermont, Rhode Island, and Massachusetts permitted Negroes to vote on equal terms with whites. All others, at some time, have barred Negro Americans from the suffrage."[43]

Despite the tragically scarred legacy of slavery, Southern resentment and hostility, political chaos, and partisan wrangling for the advantages of power and privilege, Negroes plunged deeply into the muddy waters of Southern politics. They registered and voted in large numbers. They filled significant elective and appointive offices. They were familiar figures at state constitutional conventions, in state legislatures, and in local positions of responsibility. Between 1869 and 1880, 16 black men served in Congress from the South—two of whom, Hiram R. Revels and Blanche K. Bruce, represented Mississippi in the Senate. By 1895, 21 Negroes, representing eight states, had served in the House of Representatives.

Many myths have been created and perpetuated about "Negro domination" during Reconstruction—powerful myths that have been used to justify the political oppression and degradation of black men. The facts, however, are quite different. As John Hope Franklin observed,

> No group has attracted more attention or has had its role more misrepresented by contemporaries and by posterity than Southern Negroes during Radical Reconstruction. The period has been described as one of Negro rule, as one of gross perfidy with the Negro as the central figure, since the reins of misgovernment were supposedly held by black militiamen. Negroes were not in control of the state governments at any time anywhere in the South. They held public office and, at times, played important parts in the public life of their respective states. But it would be stretching a point to say that their roles were dominant, and it would be hopelessly distorting the picture to suggest that they ruled the South. It was in South Carolina that they had the greatest numerical strength. In the first legislature there were eighty-seven Negroes and forty whites. From the outset, however, whites controlled the state senate and in 1874 the lower house as well. At all times the governor was white. There were two Negro lieutenant governors. . . .[44]

Negro public officials, during Reconstruction, were neither better nor worse than their white counterparts. Both virtues and defects, both successes and failures were shared. Black men made real contributions.[45] A major contribution was to the establishment of public education for both races. "It is fair to say," asserted DuBois, "that the Negro carpetbag governments established the public schools of the South."[46]

The hopes of Reconstruction were dashed for a variety of reasons. The failure of the national government to enforce the Fourteenth and Fifteenth Amendments, partisan calculations, Southern determination to make the political process the exclusive prerogative of whites, the low economic, social, and educational status of blacks and other forces conspired to end the experiment in shared power and responsibility. With the withdrawal of federal troops, the Negro was abandoned to his enemies. White power was restored with vengeance. Force, violence, economic pressure, psychological coercion, and various "legal" devices were employed to reduce black men, once more, to the status of subject and victim. Virtual slavery returned.

IV. Conclusion: Citizen at Last?

"The citizen, unlike the subject, is an active partici-

pant in the political input process—the process by which political decisions are made."[47] Is the Negro, at long last, a free, equal participant in the Southern political process? The answer is clearly in the negative. The input must be increased; the output even more so. Changes in public philosophy and policy must come.

While it is true that the Negro still is part subject, it is also true that, because of numerous changes in the political landscape, he is much nearer the shore of political equality than at any previous time. He now has a toehold in the Southern political process. He can, on the whole, vote. Negroes are, in increasing numbers, elected to public office. A handful hold appointive positions in state and local governments. Black men are beginning to participate in the conduct of party affairs. A new day has dawned in the political and governmental life of the region. Because of pressure, barriers continue to fall. Because of increased participation, black men are developing a fund of public experience and increasing their political confidence and skill.

Negroes can help redeem the past of the Southern political process. They can be liberating and redemptive agents. Just as the Negro was the key to Southern political enslavement, he is the key to Southern political emancipation. The Southern genius has been exhausted in the "race problem." Black men, working with whites of reason, good will, and a sense of justice, can largely free the South from the chains and illusions of the past. The chief problem is racism.

Freed from the prison of racism, the South will be freed from the heavy yoke of deceit, hypocrisy, negativism, obstructionism, and provincialism. It will be freed from the vain illusion of the possibility of the restoration of a public order "gone with the wind." It will be freed of the exhausting and painful efforts to maintain a closed corporation. It will be freed from enslavement to the past and to memory. Freed of the Atlas burden of racism, the Southern political process will be able to say, ironically, with Martin Luther King: "Free at last."

'...Real Kind of Revolution...'

Dr. Vivian Henderson, *president of Clark College in Atlanta, was luncheon speaker Dec. 12th. Dr. Henderson is author of a Southern Regional Council study on "The Economic Status of Negroes" and is co-author of several books, including "The Advancing South: Manpower Prospects and Problems" and "Jobs and Color: Negro Employment in Tennessee State Government." He is a member of the VEP Advisory Committee and the SRC executive committee.*

I am interested in discussing with you what I believe to be a very important set of background phenomena in terms of the South. This audience, by virtue of its structure and the structure of its agenda and its program, obviously is interested in the South. Subsequently I'd like to try to pinpoint some kind of strategy for black elected officials.

Now I won't be too successful here, because I'm not a political scientist and I'm not a political figure. But I've had some experience in the practical field of trying to arouse a community and particularly to help organize Negro political groups for the purpose of effecting a sophisticated kind of strategy (I use the word sophistication without apology here.)—a sophisticated kind of strategy that would enable us to know something about what we ought to do under a variety of conditions involving political participation.

We hear a lot of talk about the revolutions of today. And, of course, to me, when we talk in terms of revolution, we think in terms of violence, physical upheaval—and of course there is some of that. But I think the politics of the South and certainly the representation here today manifests the real kind of revolution that is going on in this country and particularly in the South.

Any person with minimum intelligence would sense the fact that what is here today would not have been here three years ago. Any person with minimum intelligence would recognize the fact that what we have here is a conglomeration of personalities from varying black groups representing different kinds of interests but all currently having one thing in common—and that is, being black and, at the same time, trying to pursue, like a people, the best life and the good life within the framework of a democratic society. It is this kind of a revolution that doesn't get enough attention in the public press and in the media. It is usually the soapbox orator who gets the attention.

The issues facing the South today emerged from traditional and persistent problems. This is so with regard to race relations, and it is also the case with regard to the broader of politics—of economics, education and leadership. On the other hand, I do think that the forces which condition and shape these issues are of recent vintage. The forces of urbanization, the forces of technological change, mobility of labor and capital and the swiftness with which such forces play havoc with the lives of many people—this is certainly of a new origin.

As Southerners and as people interested in working in Southern politics, it is important for us to recognize the two faces of the South. The concept of the old order—the only face the South exhibited—was that of a rural and backward South. Now I see that there are at least two faces today. One is the face of Southern cities and metropolitan areas, smaller towns with an urban mentality—plagued, to be sure, with the systems and traditional problems and images, but trying to carry the South into the mainstream of American and rural life, and yet encumbered with problems ushered in by the forces of urbanization and technological change. This is the face that we recognize. This is the face that is represented here in this conference—a face of black men and women struggling to emancipate the region from its traditional backwardness and its traditional images. One gentleman from Portsmouth, Va., last night said to me that the South will rise again, but it will be rising with the leadership of black people and rising with a new kind of image and not in terms of the old kind of image.

But we can not suggest that with all the progress that apparently is being made that there is a continuance of that second face. And that is of the old order—the face of racism, segregation, discrimination, anti-unionism, down with the federal government, preservation of the status quo, agrarianism, and a Communist under every rock and stone. It is the face of rural-dominated legislatures, ultra-conservative representatives in the U. S. Congress, low-wage industry, the faces of George Wallace and Lester Maddox, and the faces of hungry children and poverty as established by recent reports. These are the forces or the issues that black elected officials must recognize.

At the same time I recognize the fact that many of America's problems today are not regional in character.

Certainly they do not carry the regional thrust of a few years ago.

We know, for example, that the South's problems, like the nation's problems, are basically urban problems. Only a few years ago the South's problems were mostly rural, and those of the rest of the nation were basically urban. Race relations problems were a few years ago confined to the South because overwhelming proportions of black Americans lived in the South. But today the problems of Southern job-seekers, income recipients, housing tenants, school children, the problems of those who pursue welfare rights and quality education, the problems of those who seek health improvement and relief from hunger and malnutrition—they have only limited differences in the South than those Americans in other regions.

The solutions certainly have lost some of their regional character. Since World War II Southern progress economically, politically and socially and in race relations has been directly tied to national programs, national policy and national trends. It is for this reason that I question the whole concept of grants to states and the whole concept of the reversal to states' rights. Recent economic gains in the South and improvements in employment and so forth, these have been directly tied to the national force of economic and political power.

It may appear irrelevant for a conference of this sort to deal with problems of people in the South in a regional context at this point in our history. But the South does have problems peculiar to the region. Its politics, its economics, its race relations and its history—these are all peculiar to the region.

One of the great differences between the South and other regions today is what I believe to be a realistic kind of opportunity—an opportunity for the South, even at this late hour, to avoid the mistakes of the North in favor of building up in its society a generating force of participation by all its citizens. To me this is the great significance of the conference here today. One of the great challenges to black elected officials is recognition of a role that the Negro elected official must play in building up a society capitalizing upon the fact that there may be an opportunity here for the South not to make the mistake of the North and build into rigidity a housing segregation, etc. that the North is plagued with today.

While the South's history is laden with scars of demogogic politics—agrarianism, demeaning race relations and a history of the severest kinds of racial dualism and hate—it is also a history of black and white poverty existing side-by-side and a peculiarity of less-than-rigid distribution of population by race, within cities and within rural areas. Strange as it may seem, the data will suggest that urbanization, for example, has not developed in the South as it has in other regions. In spite of the farm mechanization and the displacement of many people from farms by farm mechanization, the technology is still relatively novel in its impact on Southern non-agricultural industry.

We began by talking about the region, the place that's being represented here. It has made several strides in the areas of unemployment, per capita income and the like. It has made great strides in the area of politics. (As I understand, there are 385 black elected officials in the states that represented the Old Confederacy, the highest degree of concentration of legally elected public officials than anywhere else in the nation. I would say we need more. The most important thing is for the black elected officials who are in office today to recognize this goal and help to get others to be a part of this participation.) There are several things that have influenced this kind of progress. One has been the development of national policy to promote full employment to combat poverty, and so forth. Two, the part of national policy to combat racial discrimination and segregation through schools and hospitals and employment and voter registration and voting.

It's on this second point that I am concerned. I have yet to see in the South, in spite of the positions of our black elected officials, the kind of initiation of public policy legislation which really brings the problem and the solution from the national level to some of our local and state levels. It seems to me that we have just about gotten what we are going to get from national policy; and if the Cabinet that was appointed last night is any criteria, then I'm quite sure that we have gotten just about all we are going to get for the next few years. It means, in other words, that rather than being passive as elected officials and responding and reacting to legislation introduced by others, the great challenge we have for the black elected officials today is to take the initiative and introduce this legislation formulating the public policy, pushing it, riding it, and making these policies known to their constituents.

Number three is the forces of the redistribution of the Negro population. Now these and other kinds of things and work will continue to influence public change and they will continue to influence public employment.

Now let me just mention one thing here which I think is extraordinarily important and which I think we live with every day and which I think is the kind of a thing which we can get our hands on pretty quickly in terms of effecting public policy for ourselves. I mentioned population redistribution. I also mentioned that the South has had what I call less-than-rigid distribution of the population by race, particularly when it comes to housing. Now I didn't say there was no segregation in housing—I didn't say that. I simply said it was less than rigid. This is a very serious problem. Local, regional political leadership must deal with it. Now cities like Houston with its third ward and fifth ward, Atlanta with its Southwest section—these have long had rather rigid housing segregation. But most Southern rural towns and rural areas and urban areas have not been rigid in this respect.

Through urban renewal and construction of new expressways, more and more citizens now in the South have built—have in fact planned and engineered development of—racial ghettos and race lines in terms of housing and citizenry. The negative aspects of this passage, in my judgment, will far outweigh any positive impact that has been proved. Consequently, whereas school desegregation could have been dealt with as easy to come by in many areas of the South, insofar as residential patterns were concerned, it is more and more repeated by concentration of public housing, housing developments and single-family dwellings in racial enclaves and racial ghettos. Any elected official who sits

up and watches this go by without trying to do something relative to it has missed the boat, and I believe this is only one example of the kind of problem we face in urban circles and in smaller rural farms. And to it black elected officials must address themselves.

Negroes are going to continue to move to the urban areas. It is projected that by 1975, 72 per cent of the Southern brothers and sisters will be in urban cities and towns.

The rise of racial ghettos in the Southern region should be a matter of concern to all of us. And yet I recognize that two parts of this most of us have been able to capitalize on on one hand—and how it hurts us on the other hand. For example, many of you here would not have been elected to public office had it not been for the racial ghetto. And I recognize the power of politics within the racial ghetto. This is an educated kind of opportunity. It presents a greater kind of opportunity for greater political participation. And indeed it represents perhaps a new kind of opportunity for political leadership in our cities, including mayors of cities and towns. But it also means on the positive side the things that black elected officials recognize as the cities become more concentrated with the brothers and sisters: that the problems of poverty and progress are mounting. We must understand that issues will become more important to the brothers and sisters than personality. This will become more important then to the black constituency as they feel the pressures that must accompany the higher degree of concentration of people in a small area.

In sum, at this point what I'm trying to say is that we in this region know the South has made a lot of gains, and they've made them on all sides. Then we know that civil rights gains have benefitted all black Americans one way or another. But despite these gains in the South and despite the gains and improvements among Negro Americans, there are several things I want to cite just to keep you reminded of the fact that we've got a long way to go before we reach the kind of parity with the larger part of the population that we ought to have.

The South continues to be the most depressed area in the economy. Per capita income, for example, in the region is less than three-fourths that of the rest of the nation. Eighty-five per cent of the 200 most poverty-stricken counties in the United States are located in the South. And I don't have to add that these are heavily populated by black people.

A recent report by the Citizens Board of Inquiry indicated that 242 of the 256 counties in the country which were in the hunger count were located in 13 Southern states. And these are the very states and counties, I might add, where congressmen and senators work most effectively to block policies designed to feed the hungry and to alleviate the poverty—while they also promote agriculture and other policies to lower the amount of production and drive people off the farms and out of rural areas to the cities so they can fill their pockets with $13,000 worth of payments from the taxpayers' pockets in Soil Bank and other kinds of payments designed to promote agricultural development. You know who I am talking about from the state of Mississippi, Sunflower County, who gets $13,000 a month not to produce while people are going starving right there in his county.

I'm saying here that these issues cannot be dealt with just on the basis of personality. We must come to grips with the hard issues that affect the people's stomachs, their lives, their schooling, their health and their liberties of life. The kind of thing I've just described, incidentally, is what some people call free enterprise for the poor and socialism for the rich. It was what was said about Mr. Nixon's Black Capitalism.

Negroes in the South—in Atlanta, Birmingham, places like Sunflower County, Issaquena County—on the average only earn 43 per cent of what Negroes in the North earn. Whites in the South, on the other hand, earn about 75 per cent of what whites in the North earn. The region continues to lag in education, and Negroes bear the brunt of that lag. Negroes in the South still constitute the largest and most depressed group of the nation's population.

Finally, many elements of traditional race relations persist in the South. And there are many industries and plants with all-white work forces, and these are the rule rather than the exception. We find it in our banks and our insurance companies and in communications and in radio, television and newspapers.

We've heard a great deal about the urban crisis—the crisis of our cities. One of the most obvious consequences of the concentration of black Americans in central cities is the increased difficulty in taking them out of poverty.

I would argue at this point that the thing that black elected officials must take seriously is the development of a carefully conceived body of political strategy for the Negro electorate in the South. Colleges and universities have failed miserably in providing that body of strategy, the framework of the strategy for black elected officials. But somebody is going to have to do that.

Political fortunes that have come to Negroes up to this point have come in spite of themselves more than because of political astuteness. Now, I don't mean to be indicting people—I am indicting myself as well. But I suspect that it is because of the terror of the racial ghetto, more than political astuteness, that we have been able to come by some of the political fortunes that are manifested by the group assembled here today. And while most of this strategy is applicable to all races, strategy in different situations can evolve from general principles.

For example, politics among Negroes in Atlanta is almost wholly—and I would say about 99.9 per cent—oriented toward personality. Now, a certain amount of politics is always going to play a role. In my view, Atlanta desperately needs issue-oriented politics. Anybody who knows the city of Atlanta knows what personalities do here.

The issues are clear. They are found in the poverty of our black people. They are found in our manpower inadequacies. They are found in the quality of our ghetto schools. They are found in the related services to the poor. The issues are found in the inadequacy of the grievance procedures, in the inability of people to reach certain aspects of the city government. The issues are found in the lack of consumer protection and programs. They are found in the nth degree. The issues are found in the destitution of families and children.

That brings us to the future.

We must re-examine the strategy of racial blocs. I'm not too sure but that in the near future we can rely upon racial solidarity. Now we may have a slight difference of view here, but we can rely on racial solidarity as a vehicle to accomplish our goals. This is particularly true as the two-party system in the South gains strength. That doesn't mean for a moment that I'm saying tomorrow we're going to come together when it comes to a political issue involving race. I don't think we can. But how about someone to enlighten us to the possibilities of the two-party structure and legitimate two-party structures to provide settings for the ways to proceed on racial issues? I think this strategy will have to work. I feel that the question of issues, personality politics and coalition politics also must deal with the question of the role of racial blocs. I'm simply citing this as a matter that has to be dealt with.

I was very interested in the Cabinet and the appointments made by President-elect Richard Nixon as I was visiting last night in Washington. It was said earlier that if these appointments are any criteria of what is to come, then Negroes really must come to grips with the question of strategy, because we may be in for a period of standstill in politics, insofar as national leadership is concerned. Mr. Nixon appointed a Cabinet with no Negroes, no members of the Jewish faith, no ethnic representation, and obviously pretty close to the white Anglo-Saxon principle.

The only appeal that I heard regarding the brothers and sisters by the incoming administration has been the call for black capitalism. I have studied Black Capitalism. I'm not really too sure what Mr. Nixon is asking with his Black Capitalism, but I can assure him and I can assure you and I can assure everybody else that even Black Capitalism would be of little use to the masses of New York who need help. For we want and I want all the black businesses, everybody I can get. I want all the black entrepreneurs. I want them in Harlem and I want them on Fifth Avenue in New York City, not just on Hunter and Auburn Streets in Atlanta, but at Five Points. It is an illusion to think that this approach (Black Capitalism) will transform the lives of the millions of black brothers and sisters whose lives need transforming and restitution to a reasonably normal standard of living.

I was very interested in the new representative from Mississippi, Mr. Robert Clark. He said what has happened is that Mr. Nixon did not go into the Negro community, he did not campaign, he did not seek the Negro vote, he made no effort to get it; he made it by his attitude. He said what this meant to him, if I read it correctly, is that Negroes are left out and they will be left out of what's going to happen.

Now I hope we're all wrong on this—and obviously we are not trying to prejudge completely. But the fact is that we're going to talk about political strategy on the national scene. The brothers and sisters have had to depend upon the national scene to effect the policies and the things by which we could get things done at the local scene. If we lose a hold on the national scene, if they sort of look at us as being on the periphery and not an integral part of the pursuit of the mainstream, then we've got to really re-think the strategy. And I don't think this can be done on an ad hoc basis. I don't think this can be done with people going in so many different ways. Perhaps it becomes incumbent on those who are assembled here to try to come up with the kind of things that might have meaning in this respect.

It seems to me that most political strategy—and the strategy that has caused the dynamics in urban and rural life contrary to where we thought we were just about five years ago—must continue to recognize the dynamics of race relations as a continuing and central factor in the life and order and growth and development of our people. Racial attitudes and practices continue to be factors conditioning one-third to one-half the population. Now, I say that because of the second point I want to make about this strategy: It seems to me that we must keep in mind that we are not at the point where we can abandon racial and color consciousness under the facade of color blindness. Even some of the black brothers and sisters who got elected to office right here say, I'm going to represent all of the people. That's fine. You just keep in mind that those who elected you 99 per cent of the time were black.

Secondly, you must keep in mind the fact that you must be responsive to and responsible to a color-conscious society. And it seems to me that for any black elected official to go around and say "I'm elected by all the people" without also adding "I'm going to give some special attention to the black brothers and sisters," he's going on the wrong track. I say this hoping at the same time we continue to pursue with all dignity a color-blind society.

Even the white elected officials now are always talking about, "I want to pursue this without regard to race, creed or color." Now you know that too many injustices have been heaped upon the black brothers and sisters under a color-conscious institution of racial segregation for us to expect the consequences of those injustices to be erased under a scheme of color blindness. And I've been so careful of telling you of color consciousness as a political strategy, and it must necessarily underride the strategy of Negro elected officials.

Now, I'm not a black nationalist. I'm not a Black Power advocate according to the rhetoric and slogans that you hear now. I want to be sure to be clear on that. But I am arguing here that for the forseeable future color consciousness must be part of our political strategy and our urban strategy.

What we have found in the last few years in the lives of black people appears to be a conflict in goals in race relations. And that conflict revolves around survival of racial separatism as a goal, as a philosophy and as a strategy vis-à-vis racial integration. Objectives concentrating on the development of economic and political power among black people are objectives that aren't new.

We started a group in Madison some years ago called Eagleton County Independent Political Party, and one of the first things we did back there was say it would be all Negro. That was in 1961. And we said to our white friends, we've got a role for you but not right now. The point is, there was nothing new about the building of economic and political power for the Negro. We developed a high sense of black self-respect. These were all verbal objectives.

But this does not mean building black racism. This does not mean that we have got to build hate. This does

not mean that we have got to go off trying to build, as a matter of strategy, separate societies. What it does say to me is that Negro life and institutions need to be strengthened, not for separatism but for the purpose of achieving intelligent integration and maximizing contributions to the total of our pluralistic and multi-racial and democratic society. Indeed, as W. E. B. DuBois said many years ago, only when black people and white people, and black institutions and white institutions, can accept one another and interact with one another and be interwoven as part of each other's operation, respecting each other for his worth as an individual and not on the basis of color, will democracy in this country be subjected to a true test and have its opportunity to be achieved.

It is desirable that black institutions be strengthened, but not for the purpose of establishing some mystique called Black Power or for the purpose of creating black racism. They should be strengthened for the purpose of achieving a rightful place in a pluralistic society, a rightful place in a multi-racial society. You see, I'm going to have my cake and eat it too. Not only am I unwilling to abandon the goals associated with racial integration—at the same time, I reject the idea of apartheid. I also am not in favor of abandoning Negro institutions; because I believe pursuit of a democratic and interracial society is the only one that counts, and it will not be achieved without strong Negro institutions as part of that society.

I would caution those who call for even a limited separatism that this is a dangerous course. Yet somehow this still has a relevance in pursuit.

I am deeply disturbed as a president of a college over our failure to work effectively in servicing black elected officials. I have received in my office on several occasions requests from elected officials throughout the South asking for help in developing policy positions, examining the literature, examining bills, trying to help them get through to commissioners; and I have been at a loss as to how I could effectively do this within the amount of time that I have had. And yet for some reason or other I have been able to stay up at night and do some of these things to help the brothers and sisters.

We've started at Clark College what we call the Southern Center for Studies in Public Policy. We received a grant the other day for almost $200,000 to develop this center, and it has several projects. The idea is to provide some services to the brothers and sisters. Hopefully that service center and the others that are going to be established in various places in the South will be able to provide a resource whereby the black elected officials and others might call to get the kind of help they need in order to be effective in the kinds of things I've been trying to describe.

I'm going to close by simply repeating a prayer Dr. Martin Luther King used to offer on many occasions, because I think it says much about what I've tried to say here. He said: "Lord, we ain't what we've got to be, we ain't what we want to be, we ain't what we are going to be; but thank God, we ain't what we used to be."

CONFERENCE

'...America's Last Hope...'

James Mays, *president of the student body at Clark College, welcomed Mayor Richard Hatcher to the college campus when he spoke at a public forum there Dec. 12. Hatcher is mayor of Mays' hometown, Gary, Ind.*

Perhaps one of the tragedies of the masses of black people in the United States today is the lack of information concerning the history of their black leaders. Going through a Negro history book recently, I was amazed at the things about black politicians during the Reconstruction following the Civil War that I had never heard of. For instance, how many of us knew that at one time a black man was governor of the state of Louisiana or that from 1870 to 1901, 22 Negroes served in the Congress of the United States or of the many, many black people who served in their respective state legislatures?

All of this occurred during what we call the "old" Reconstruction, but now we speak of the "new" Reconstruction in which we are currently involved. But the sad fact is that even though we are involved in a type of political reconstruction, some of us as black students (perhaps because we so seldom see the face of a black politician in the news) still do not seem to want to become involved in the world of politics. In fact, it now seems fashionable to be as anti-government as possible. If there is a new political reconstruction going on among black people, most black students don't seem to be aware of it, or if they are aware of it, they appear to want no part of it.

Being interested in law and politics myself, I have often tried to analyze this disinterest manifested by students I associate with. After a little discussion, the answer is quite apparent. The first question a student wants to ask when you ask him if he is aware of the "new" political reconstruction is: "What happened to the old one?" And when you answer this question for him, you begin to realize from where the roots of this political disenchantment have stemmed.

Checking the Negro history book again, we read:

> The downfall of the Negro-white governments of the South was inevitable since Negroes had few guns, little land, and less government protection. Organized violence was the main weapon of those who sought to restore the old order. Masked night riders such as the Ku Klux Klan sprang up everywhere to terrorize Negro voters and their white supporters. The main Klan targets were Negro officials, teachers, and successful farmers. In 1875, a tall, muscular Negro farmer had stood before Senator George Boutwell of Massachusetts and demanded that something be done about the continued murder of his people. He was considering killing the Klan leaders responsible, saying, "We could do it in a night." "No," answered the Senator, "We intend to protect you." The promise was never kept. For the black man and for the South the result was tragedy. The torch of democracy that had burned brightly for a short while was extinguished. And Southerners would live from that day until this in the darkness of tyranny, poverty, and ignorance.

This information was taken from a book called *Eyewitness: The Negro in American History.*

This little passage only tells part of the story of why, as I have learned, black students are disenchanted with the political system, per se.

Some of you are probably thinking: "Why don't you remind them that the Ku Klux Klan no longer carries on its reign of terror?" If I did, they would answer: "Maybe not, but there are so many more subtle ways of keeping the black man in his place that we still see politics executed from the black frame of reference as being futile." Then they would go on: "Witness what Georgia tried to do to Julian Bond, and look at what Congress did to Adam Clayton Powell—and to take it even closer to home, notice what they tried to do to your own Mayor Hatcher during his campaign."

The question, gentlemen, is this: Is this really a "new" reconstruction or is this the same *old* reconstruction with the same *old* ending, but with different variations? My fellow students have their doubts; and I don't blame them as I, too, to some degree, have my own doubts.

But if what is happening in the realm of politics for

black people today is not a fraud, then it is up to you as our spokesmen and leaders to make this crystal clear. There is no one, I repeat, no one, who can do this for you.

When Stokely Carmichael stood here where I'm standing yesterday and told an auditorium-packed audience that the only answer to our problem in this country is for us to get our guns, I wondered if it was already too late. For many students, it is. For others of us, we're saying: "O.K., America, we're willing to give you one last chance. We're foolish enough to believe that this time you may possibly allow us to grow into and of your political system." For almost all of us, this is America's last and final chance.

As we go into our new presidential administration, I can already feel the wheels of the "new" reconstruction grinding to a halt. No black man was appointed to the new Cabinet. Maybe this is nothing to become alarmed about, but many of us seem to hear Stokely's words more and more clearly each time we face this type of setback.

What this means, gentlemen, is that you have your hands full. From a student's point of view, you are America's last hope. I do not believe that I can overemphasize that point. What you accomplish while you are in office will inevitably determine the destiny of this country.

'...Power of the People...'

Richard Gordon Hatcher, *completing his first year as mayor of Gary, Ind., spoke Dec. 12 at a public forum at Clark College. The 34-year-old attorney and former city councilman is one of two black mayors of major U.S. cities. A native of Indiana and one of 13 children of a Michigan City factory worker, Hatcher was graduated from Indiana University and Valparaiso University School of Law.*

When Stokely Carmichael shouted "Black Power, Black Power" in that Mississippi schoolyard, he performed the mythic function that some poet must always perform at the proper moment in history. He gave voice, he gave a name to a development in the life of Black America which was happening anyway and which needed naming so we could talk about it and think about it. I say he named it, rather than created it, because the movement towards Black Power, under other names, has had a long and honorable past. If it has become the dominant tone of our emotions and thoughts in the last two or three years, that is only because, like the proverbial snowball, the accretion of time and frustration has turned incipience into actuality, has made of the snowball an avalanche. I want, today, to look at these two words, "black" and "power," from the vantage point of a man who has had some connection with both words.

It is beyond dispute that I am black—I am too abashed to add "and beautiful," though it is tempting—and it is also a fact that I have held, for a year now, a position of at least a modicum of power. It is a good time, then, as the first year of my administration as mayor of Gary draws to a close, to examine what black power has meant to me.

My blackness has been the dominant fact of life's experience, as it is the dominant fact of the life of every black man in America, and perhaps in the world. James Baldwin, with his usual brilliance and cogency, describes the condition in his famous essay, "Stranger in the Village," in which he discusses his experience as a black man in a little Swiss village:

> For this village, even were it incomparably more remote and incredibly more primitive, is the West, the West onto which I have been so strangely grafted. These people cannot be, from the point of view of power, strangers anywhere in the world; they have made the modern world, in effect, even if they do not know it. The most illiterate among them is related, in a way that I am not, to Dante, Shakespeare, Michelangelo, Aeschylus, Da Vinci, Rembrandt, and Racine; the Cathedral at Chartres says something to them which it cannot say to me, as indeed would the Empire State Building, should anyone here ever see it. Out of their hymns and dances come Beethoven and Bach. Go back a few centuries and they are in their full glory—but I am in Africa, watching the conquerors arrive.

Because of the white man's rape of Africa, because of the ignominy of slavery, because of the long and barbarous history of segregation and discrimination, I am a stranger in this, the American village. Because white Americans have developed the ideology of racism to justify the sociological and historical experiences I have mentioned, I am a stranger in this country, in this village. But from another point of view, because I am a man, because I have been reared on the words, though not the facts, of Christianity and democracy, I am also an inhabitant, and in a strange sort of way a citizen, of the village.

Much of the history of Black America is dominated precisely by this contradiction. We have been *told* one thing—democracy, freedom, "We hold these truths to be self evident, that all men are created equal." We have *lived* quite another—slavery, the Ku Klux Klan, white liberals so concerned with black people that they will tell them exactly what they ought to want, schools that don't teach us, promises from the Supreme Court which turn to ashes in strikes against Ocean Hill-Brownsville in New York. That is why we have been forced to fall back on our own resources. For you cannot be a stranger always. To be continuously strange is to pay a psychological price so great that no people can endure it forever. When Black America, then, turns to blackness, to what in Africa has for a long time been called "negritude," we have no apologies to make.

From the time I was a little child, before I ever heard of Othello, or, for that matter, Shakespeare—I knew I was black. No wonder, then, that as a grown man I must turn to the words of Leopold Senghor, the black African poet from Senegal, or to those of Langston Hughes or Arna Bontemps or Leroi Jones or Gwendolyn Brooks. From the time I was a little child—before I ever heard of Beethoven or Bach—I knew I was

black. No wonder, then, that I turn to Jimi Hendrix and Aretha Franklin, and that I recall with anger the black American symphony conductor Dean Dixon, who had to go abroad to practice his art. From the time I was a child—before I ever heard of Paul Bunyan or George Washington or Jaques Danton—I knew I was black. No wonder then, that as a grown man I turn to John Henry, Jomo Kenyatta and W. E. B. DuBois.

I will stop being a stranger, because I will recall that, though a stranger in this village, I have lived there nonetheless, and I have a history there, and elsewhere, as in Africa, and that history will make me less the stranger. We assert what we are, and we may wear a dashiky and look with favor on a "natural." Being ourselves will make us less the stranger. We tried being like the so-called natives, and were not allowed to be like them, and so we must turn to our own resources. Baldwin says,

> The black man insists, by whatever means he finds at his disposal, that the white man cease to regard him as an exotic rarity and recognize him as a human being.

So my experience with the word black is that of all black people. Being black has made me a stranger; being black has dominated my life. I cannot, nor would I wish to reject my blackness, and so I turn what the white world has attempted make a handicap precisely into its opposite. Black America is fortunate in that our history and culture are more than rich enough so we can find in blackness an advantage, a source of pride, a way to end our estrangement.

But there is another side to this. Even though I may find in negritude and in black culture a way not to be so strange any longer, especially strange to myself, that is not enough. For my estrangement has also included my powerlessness. I have not only been a stranger in the village, but I have also been a stranger without power. There are times in history when strangers have had sufficient power to keep themselves at least supplied with the necessaries for decent living. This has been true of many who came as strangers to American shores, as, after a generation or so, the Irish, the Italians, what have you. It has not been the case with black Americans. We have been kept strangers, in part at least, because our strangeness has provided the others, white Americans, I mean, with a cheap source for the sawing of wood and the drawing of water. Because black people have had no power, because the ideology of racism has permitted white Americans to think it natural, we have been exploited and used, deprived of the minimum wherewithal for a decent life, have provided the nation with back-breaking and menial labor, and sometimes with its best brains, all for the aggrandizement and enrichment of others.

That is why pride in being black is not enough for our survival. That is why we have increasingly had to turn our attention to a means of wresting from the majority not only a new perception of our humanity, but also a new place in the nation, so that we can enforce our demands for the satisfacion of our needs.

This is nothing new. The African chief Cinque sought power when he led a mutiny on the slave ship *Amisted* in 1839. Nat Turner is quite explicit when he says that the reason for his revolt is so that he can strike terror into the hearts of the planters and thus have the power to establish a black community in the Dismal Swamp. Toussaint L'Ouverture knew about the need for power, and so did, in more recent history, such often unheeded thinkers as W. E. B. DuBois and Paul Robeson, or, for that matter, Marcus Garvey. There is nothing new in the search for power by black Americans. What is new, perhaps, is that our search has been intensified because we have combined pride in being black with that search for power, and that we have found, in various stages of our experience, that power shared with the white majority doesn't seem to work.

Power means, quite simply, a force strong enough so you can get whatever it is you need. Let me recall that in the last two decades or so we have tried all sorts of ways of achieving power.

The Brown decision by the U.S. Supreme Court concerning equal education represented an effort to use the power of the courts to win needed improvements in the lives of black children. We won that skirmish, but we have discovered, almost 15 years later, that there was not enough strength in the power of the courts to guarantee any fundamental change in the education of black children. Legal power, which helped a little, did not help enough.

Dr. Martin Luther King Jr. tried another form of power. Beginning with the Montgomery Bus Boycott of 1955, Dr. King tried with all of his skill and dedication—indeed, he gave his life for it—to use the nonviolent power of black masses to achieve their needs. An eloquent man, he said it much better than I can hope to do. Writing in *Liberation* in 1959, Dr. King said:

> There is more power in socially organized masses on the march than there is in guns in the hands of a few desperate men. . . . All American history teaches us that like a turbulent ocean beating great cliffs into fragments of rock, the determined movement of people incessantly demanding their rights always disintegrates the old order. . . . This is the social lever which will force open the door to freedom. Our powerful weapons are the voices, the feet, and the bodies of dedicated, united people, moving without rest toward a just goal.

This, too, was a form of black power, though we did not then call it such. But this form of power, in and of itself, we also found not adequate to our needs. Nine years after he had written those words, Dr. King had fallen to the white assassin's bullet. Nine years after he had written those words, though segregation was a little less blatant in the South, though more black people had found their way to the voting booth in the South, the bulk of Black America, living in the horror of the crowded, fire trap-haunted ghettos of the North, had not advanced two inches. This society, it would appear, was not prepared to yield easily to the needs of Black America, and so the search for a lever, for an effective means of achieving power, had to go on.

We learned something else at this point, taught by Malcolm X and Leroi Jones and H. Rap Brown and Eldridge Cleaver. We learned that when the stranger allies himself with the so-called natives, to return to Baldwin's metaphor, it is very hard for the stranger to play anything but a secondary role. In the many struggles black Americans carried on together with white

people, we found all too often that well-meaning whites nevertheless conceived of us as strangers, assigned to us the role of strangers in our own struggle. Thus, well-meaning white people knew what was good for us—better than we did. They knew what our feelings about things ought to be—better than we did. I say that many of these men and women were well-meaning white people, because history records that they worked very hard and often sacrificed a good deal for our causes. I cannot forget that it was a white Goodman and Schwerner who died along with black James Chaney in the red dirt of Mississippi. But it takes nothing away from their heroism or dedication to say that they were always, willingly or not, the natives, and we were always the strangers.

To stop being strangers, we had to find the road to power ourselves. Whether or not one fully accepts other aspects of the thought of Franz Fanon, it is clear that rising black consciousness requires that we be led by our own, determine our own destiny, recognize our own needs, and that white Americans have quite another task to perform—perhaps an impossible one—which is to work to cure the sickness of racism among their own people, to work on changes needed in the total society, which affect everyone who lives within it.

Efforts at achieving power in various forms, combined with the rising tide of black self-confidence, then, bring us to the heart of the problem faced by Black America today, and to the heart of the problem about which this conference is deliberating, and to the heart of my own problems as a man who has achieved some modicum, as I have said, of power. It is clear that pride in blackness, and all that this implies, from a revival of black history and other Afro-American studies, to a new appreciation of the beauty of our women, to being led on the road to a better life by black leaders, is an absolute necessity if we are to end our status as strangers. This we are beginning to do. We have not yet, however, solved the riddle as to what lever or levers can provide the power we need to wrest a better way of life from the power structure within the total society. We have a number of options, and I would like to discuss a few of these now, including the one about which I am most knowedgeable.

One option is, of course, to leave, to return not only spiritually but physically to the lands of our African heritage.

No doubt some will choose that solution, but it cannot be a solution for most of us. There are physical problems as to where such a massive migration would go, and cultural ones stemming from our distance from African cultures. But there are also other aspects. We own a good part of these United States—not physically, but morally. Our sweat has gone to make the railroads run and to make cotton king. Our brains helped building Washington, D.C., and made heart transplants possible. Our talents have helped enrich the music, the stage, the poetry of the nation. Our blood has been shed in too many wars—including the fiasco in which we are now engaged. So we have a great investment in this nation, one we ought not to be forced to give up. Our power ought to give us our rightful share in what we have wrought. Therefore, I for one choose not to leave.

There is another approach. We can demand a piece of the nation for ourselves. We can demand five or six states as the territory for a black nation, or we can carve out the old ghetto in each city as our own turf. This has possibilities, and it has been explored by many thinkers both black and white, including so thoughtful a man as W. H. Ferry, the vice-president of the Center for the Study of Democratic Institutions. Ferry writes, in the Saurday Review of June 15, 1968:

> But what Blacktown *most* wants, Whitetown cannot confer. Blacktown wants independence and the authority to run its own affairs. It wants to recover its manhood, its self-love, and to develop its ability to conduct a self-reliant community. . . . A successful plan for coexistence (that is, between Blacktown and Whitetown, to use Ferry's terms —I continue to quote) will not bring Utopia into being in Blacktown. Autonomous, interdependent Blacktown will be no better and no worse than other parts of the urban scene. Blacks can be expected to exploit blacks, even as whites exploit whites. There will be quarrels and walkouts and demonstrations and the inevitable ambiguities about leaders and leadership. . . . Whitetown will be accused of parsimony and trying to control things even if it enters into the scheme of coexistence with the best possible intent. . . . So the vision of coexistence is not that of the New Jerusalem, nor is it that of a national community struggling with the untenable doctrines of integration. It is a vision of a new federalism that will give 10 per cent of our citizens the chance they are seeking to make whatever they want to make of themselves, their culture, and their community.

I do not reject this form of power either on moral grounds, or on grounds of feasibility. But I have not seen any evidence within this society that Black America can get such communities without first achieving the tremendous power necessary to force them into existence. The white power structure which pinches pennies from Model Cities plans and Headstart programs will not readily give up control of major sections of New York, Chicago and Los Angeles. The slumlords who live in pretty suburbs on the profits they make from hellholes in the ghetto will not turn their hovels over to other owners for the asking. Blacktowns are intriguing, but they beg the question; for we must, should we decide we want them, first find the power to get them.

There is also the power of violence, in direct opposition to the kind of power Dr. King sought to use. I do not wish here to discuss this form of power—and that it certainly is—from an ethical point of view, though that is surely a matter for consideration. Rather I want to ask about the efficacy of the use of street violence, about its ability to achieve results.

Like it or not, violence cannot readily be dismissed as a source of power. It is true beyond dispute that the white section of the nation sat up and listened hard when it heard the fire engines race to Hough and Watts and Harlem and Chicago's West Side. But I am afraid that, to date, this form of power has also not paid off very much. White America *talks* better about what it ought to do, in the wake of one of these insurrections—but such talk has been around for a long time, and is hardly new. In fact, all that street violence has pro-

vided so far is more white talk and burned-over ghettos. The Kerner Report is a nice piece of rhetoric, which has not fed one black mouth. I do not reject violence out of hand then, but I have yet to see how it becomes a useful lever for power.

Let me turn finally to the kind of power I know the most about, that is, political power in cities of large black populations. I think it clear, in the first place, that my election as mayor of Gary has done something for Gary's black community in so far as its pride and sense of self is concerned. While we may still be strangers in our village, it surely makes us feel less strange that one of us has been chosen to head the village government. Furthermore, this fact guarantees that local efforts will be made so that we will not be exploited quite so mercilessly, that our people will get their share of whatever they have coming, to the extent that anything is available.

But right there is the rub. I may be mayor of Gary, but I cannot, by that token, guarantee that black people will share in the unbelievable profits of the U.S. Steel Corporation which dominates our city's economic life. I am mayor of Gary, but I cannot stop a war in Vietnam which drains the national treasury to such an extent that only very limited programs are available to the city for the reconstruction of its black community. I am mayor of Gary, and I was elected as a Democrat, but I am not able to sway the white Democratic Party so that it will reverse the present trend of national priorities and make the needs of black communities first on the list. I am mayor of Gary, but I cannot change the fact that our schools are too poorly funded, from state or nation or even local sources of revenue, to provide the catch-up educational process that the city needs in order to bring our black youngsters up to educational standards.

I want to confide a further problem to you. I am mayor of Gary, and thus I am mayor of all the people of the city, and I would like to do my best for all of them, black or white. But you know, what I cannot do for my black brothers, I cannot do for white people either, try as I might. Though the black community's needs are infinitely greater, the white community in our city is not without problems. But for the same reasons which prevent me from solving many black problems, I cannot solve many white ones, either—and neither could my white predecessors. Though I have some local political power, it becomes clearer to me that this is not enough, and that the power structure of this society is not prepared to give up enough of its profits to solve the problems of city living—for whites or blacks. Though black kids in Gary are badly educated, white ones are not getting nearly what they should, either. Though black communities are devoid of parks and play spaces, white communities do not have adequate park facilities either.

There are, rumor has it, a few white people in Gary who wish to disaffiliate from the municipality a predominantly white section of the city because they "don't like what's going on in City Hall." It seems that, while they were able to stomach the jailing of several earlier mayors for one form or another of municipal corruption, they just can't abide whatever it is that a black mayor is doing, though not one has accused him of appropriating for himself one dishonest penny. But I would warn these white citizens that disaffiliation will not solve one single problem for them—except perhaps their hurt racial pride. For the fact of the matter is that the local political lever for power, black or white, can only do very limited things, that it cannot really solve the problems faced by the American city until the entire power structure is in some way forced to yield up to the people—first to black people, but eventually to all the people—what the people need and deserve.

The question of power, it becomes more and more apparent, cannot be left at the level of parochial power. Black Power, whatever its form—political, non-violent confrontation, street riots or terror—may help us to feel less the stranger; but it will not eliminate poverty, or inadequate educational facilities, or slum housing, or provide us even a portion of the economic control of the life of the nation. Even if it were possible to establish the blacktowns that Ferry talks about, black people would not have control over the basic economic, foreign policy or social welfare priority decisions which will determine the welfare of black people as well as whites. Blacktowns might make us feel better—and that is terribly important and so I do not reject such ideas —but they will not make us live better.

And what is true of Black Power is also true of other forms of group power. Our campuses, for example, have seen a demand for student power which has a great deal of legitimacy.

Surely students ought to play a much larger role in the life of the university, which is their community for four or more years. But student power will not, by itself, change the national system of priorities in which education runs far behind spending for super-weapons of destruction, in which drafting young men for war is more important than letting them continue their studies beyond a bachelor's degree so that they can apply their knowledge to the alleviation of human suffering. Student power, like Black Power, like youth power, like other parochial forms of power, can only achieve very limited gains.

Where does this leave us? Am I rejecting the drive for Black Power? Am I hopelessly saying that nothing we may do can be of use? The answer is a clear and decisive No! The drive for Black Power is an essential, it seems to me a no longer debatable need; for it will

help to end our strangeness in the village, and that is absolutely necessary. So I support all forms of Black Power which will help Black America to define itself, to recapture its heritage, to assert its abilities, to realize its most immediate demands.

It is not immodest on my part to say that Gary's black children will be richer and stronger human beings for the knowledge that one of their own can govern the city, for the knowledge that their mothers and fathers were able to get themselves together enough to elect one of their own and thus assert their dignity. Nor is it immodest to say that Gary's black community is being given, for the first time in its history, some of the attention and concern which it so richly deserves, and that the lives of black men and women will be somewhat the better for it. These are among the things which Black Power can and ought to and must do.

But beyond that, if I look to the alleviation of our poverty and the improvement of our standard of life, logic compels me to place hope in the eventual coming-together of the demands for power by people of many sorts. I see hope in the rising tide of student militancy, if that militancy is carried, in time, from the campuses into the communities of the entire nation. I see hope in the demands of Spanish-speaking Americans for their share of power. I see hope in the growing radicalism of the young, who demand youth power and are no longer content to accept a dehumanized *status quo*. I see our only hope for a decent society in the coming together sometime in the future, of all these demands for partial and parochial power into a total demand for people power.

I do not pretend to be very hopeful. The experiences of Black America with other segments of our society have most often been disappointing. Perhaps they will be again. But I am certain that the only way to rescue our lives from the poverty for some, the alienation for all which are its hallmarks, is by the combination of the kinds of people power I have been talking about. Should that fail, what lies before us is chaos and dark nights of despair and destruction. The leaven in such a rising power cake must be, and already is to some extent, Black Power, for Black America has the least to lose, and the most to gain, by its assertion of power.

In the essay I have already quoted, Baldwin concludes with the following:

> No road whatever will lead Americans back to the simplicity of this European village where white men still have the luxury of looking on me as a stranger. I am not, really, a stranger any longer for any American alive. One of the things that distinguishes Americans from other people is that no other people has ever been so deeply involved in the lives of black men, and vice versa. . . . It is precisely this black-white experience which may prove of indispensable value to us in the world we face today. This world is white no longer, and it will never be white again.

That is what we hope America will realize as we achieve more and more the power which our blackness demands. If we try to save ourselves, if we achieve the full potential of what Black Power can do, then it will be up to the rest of America, white, Spanish-speaking, student, youth, and so on and on, to join us in the establishment of the power of the people in a world in which none are strangers. If they fail, or if we fail, we may have no way left to live in this country. If they can succeed, and if we can succeed, if the people can wrest control from the hands of the economic overlords and the political self-servers, the rich and the powerful, then and only then do we have some hope that the good society can be ours.

One of the finest of our black poets, Margaret Walker, ends her poem "For My People," with a kind of incantation to the future. Let me cite it here, for her vision, the vision of a black woman who wrote these words more than a quarter of a century ago, still holds true:

> Let a new earth rise. Let another world be born. Let a bloody peace be written in the sky. Let a second generation full of courage issue forth; let a people loving freedom come to growth. Let a beauty full of healing, a strength of final clenching be the pulsing and the spirit in our blood. Let the martial song be written, let dirges disappear. Let a race of men now rise and take control.

A race of *men,* Margaret Walker says! For God's sake, for America's sake, let's get ourselves together!

Dashiki Plaza

'...Difficult Decisions Must Be Made...'

Alfred M. Pelham, *chairman of Great Lakes Mutual Life Insurance Company in Detroit, appeared on a panel on "Revenue and Taxation and the Elected Official" Dec. 13. He is a former controller of the city of Detroit.*

Before proceeding to any discussion of revenue and taxation, I believe it to be of utmost importance to emphasize the fact that the levy and collection of taxes and the collection of other forms of revenue and other income from whatever source constitute only one aspect of the responsibility and the problems which confront elected officials at every level of government. Of even greater importance are the judicious determination of the purposes for which available resources are to be expended, the selection of programs best calculated to accomplish these purposes, the best possible allocation of available resources to carry out these programs, and appropriate systems to assure that such resources are expended as effectively as possible for authorized and intended purposes.

In order to attain these ends, difficult decisions must be made and orderly operational programs must be carried out on the basis of carefully developed plans. It is obvious, therefore, that financial resources, while absolutely indispensable, constitute only one of the ingredients required for the effective and efficient conduct of government.

Another vital ingredient is a sound budgetary process. The word budget means different things to different people. In the simplest terms, a budget is a projected and reasonably flexible plan for the effective use of available resources for the accomplishment of one or more carefully defined future objectives. As a matter of fact, all of us, whether consciously or unconsciously, are almost constantly involved in the process of budgeting: budgeting of time, budgeting of space, budgeting of energy, and budgeting of money and other material resources.

In any case where available resources exceed the cost of all needed and desired services, formal budgeting might seem to be of less importance; but even in such a case effectual results would almost certainly depend upon carefully planned usage of such resources. Whenever, on the other hand, there are many demands on limited resources, the processes of priority establishment and resource allocation must be utilized if anything approaching optimum resources is to be attained. Where the unit of government is small and the demands for service are few, the process of budgeting is not likely to prove too difficult even in the face of limited resources. For those charged with the responsibility of conducting the affairs of larger and more complex governmental units, an adequate budgetary system is absolutely essential. In every case, it is important to maintain complete accounting records in order to assure proper accountability for the expenditure of public funds.

The brief reference that I have made in the foregoing to program planning, evaluation, and selection and to the budgetary process has been included only in order to put the fiscal responsibility of elected officials in proper perspective. In-depth coverage of these other important aspects of financial management should be given consideration as the subject matter for future meetings of this group, since our attention today is to be focused primarily on revenue and taxation.

Before proceeding to the discussion of any specific taxes or other sources of revenue, certain general observations seem to be in order. In considering the levy of any new tax, or even in reviewing an existing tax structure, attention should be given to certain basic criteria, chief among which are: equitableness, productivity, flexibility, collectibility, and administrative feasibility.

Since the primary purpose of taxation is to provide essential revenue, it is obvious that the productivity of any tax is of great importance. When the extent of need for revenue has been established, the potential productivity of any tax or combination of taxes should be estimated as accurately as possible in order to predetermine whether the projected goal can be attained by the levy of such tax or taxes. It is further desirable that such tax or taxes be subject to upward or downward revision within reasonable limits in order to provide a degree of flexibility which may avoid the subsequent necessity for the levy of some new or additional tax.

Careful consideration should also be given to the factors of collectibility and administrative feasibility. Some apparently proper subjects for taxation pose problems of collectibility because of indicated difficulties in enforcement. In other cases, estimated costs of levy and collection constitute such a high percentage of

potential yield as to make such taxes impracticable. In this area of concern, every effort should be made to avoid a multiplicity of different taxes, not only because of administrative problems and higher costs of collection, but also because too many different taxes are a nuisance to the tax-paying public.

The most important criterion in determining the use of any tax or combination of taxes should, in my judgment, be that of equitableness. An equitable tax structure might well be defined as one in which each person bore his or her fair share of the tax burden, or as one in which taxes were levied in accordance with ability to pay. It is obviously easier to define such a tax system than it is to attain it. There are wide differences of opinion as to what constitutes a fair share, and neither economists nor political scientists have been successful in satisfactorily measuring the limits of ability to pay.

However, despite the fact that there is no pat formula for attaining tax equity in designing a tax structure, in modifying an existing one, or in levying a new and additional tax, the best possible judgment should be used in attempting to make equitableness a primary consideration. This consideration, of course, should be extended to all, but with particular attention to those least able to pay and also to business and industry lest a too heavy tax burden result in a loss of potential job opportunities and a weakening of the economic base upon which the community depends for its existence. It should, perhaps, be mentioned at this point that certain types of taxes can be made more equitable by the appropriate use of exemptions.

Unfortunately, our present-day tax systems at every level of government have tended to grow by a series of patchwork additions from time to time as additional revenue was needed, with the result that by and large they are not equitable. In an article entitled "Who Really Gets Hurt by Taxes," which appeared in the December 9, 1968 issue of U. S. News and World Report, it is stated that the widely held idea that taxes in the U.S. "soak the rich and spare the poor" is erroneous, but rather that families with the lowest incomes tend to bear the heaviest tax burden in terms of ability to pay. While it is true that the graduated federal income tax takes a greater percentage of the income of those in the upper brackets, many other taxes make a bigger dent in the pocketbooks of lower income families.

The latter is particularly true of the payroll tax (Social Security), the property tax, and the sales tax. As an example, on Jan. 1, 1969 the payroll deduction for Social Security will be 4.8 per cent on earnings up to $7,800. Obviously everybody earning $7,800 or less will be paying 4.8 per cent of their earnings for this purpose; but because of the limit, those earning $12,000 will pay only 3.12 per cent of their total earnings, those earning $18,000 only 2.08 per cent, those earning $24,000 only 1.56 per cent, and so on down the line.

In the case of property taxes, according to the article referred to above, those making less than $7,000 a year pay six to eight cents out of each dollar of income, on average, whereas those in brackets above $25,000 average only 2 per cent of income for property taxes. It was further indicated that sales taxes take nearly a nickel out of every dollar earned by families in the lowest income brackets, as against a penny or two at the upper end of the income scale. It should be remembered that the above figures are based on nationwide averages and, therefore, that they may vary significantly between states and communities. In any event, the property tax and the sales tax tend to fall with heavier impact on those in the lower income brackets with relation to ability to pay, and yet state and local governments lean most heavily on those two taxes as major sources of tax revenue.

At the federal level, at least, increasing concern is currently being expressed relative to the heavy burden of taxation on low-income taxpayers; and many forms of possible relief are being tentatively proposed, such as increasing the income below which no federal income tax would have to be paid, reducing rates in the lowest income tax brackets, increasing the minimum standard deduction for expenses, increasing personal exemptions, giving tax credits for each personal exemption claimed by a low-income family, refunding Social Security taxes paid by low-income families, payment of "negative income taxes," etc. From time to time, studies have been conducted at both the state and local levels of government aimed at tax reform; but few, if any, of these have thus far resulted in any significant improvement of tax structures. Hopefully some of this good intent will soon be translated into action.

Although taxation provides the largest source of governmental revenue, there are many other potential sources of income including license fees; other fines, fees, and permits; income from sales of services; reimbursements for services performed; grants-in-aid; shared taxes, and other miscellaneous sources. These non-tax sources are utilized for a number of different reasons and, in some cases, a combination of reasons, such as:

1. To provide added revenue
2. To exercise control in the protection of health, public safety, property, etc.
3. To protect other public interests
4. To serve as a punitive measure
5. To secure total or partial reimbursement for certain services
6. To provide for intergovernmental cost sharing
7. To stimulate activity and improvement in respect to specified public services

In order that some of you who have had only limited experience in the field of public finance may get a better idea of the large number and great variety of potential tax and other revenue sources that are currently being utilized by state and local governments, you have or will be furnished with an outline of such sources. While fairly complete, it is not professed that it is inclusive of all such tax and revenue sources in use throughout the country. In some cases, comparable taxes may be levied in different governmental jurisdictions bearing entirely different names. I wish to make it very clear that, in presenting this outline, there is absolutely no intent on my part to suggest the use of any particular tax or combination of taxes. Local conditions, economic factors, and legal restrictions vary significantly between geographic areas and must, or should, be taken into consideration in the structuring or restructuring of any tax and revenue system.

At this point in time, practically all governmental

units at every level are being confronted by the same dilemma-increasing demands for public services, sharply increasing costs, and an inadequate tax and revenue potential. In many cases, therefore, unless there is to be a sharp curtailment in these public services or a lessening in their quality and effectiveness, it seems (even after every reasonable effort has been made to improve efficiency) that increases in existing taxes, or the levy of some new and additional tax or taxes, or the seeking out of some alternate source of revenue is inevitable. Wherever and whenever this proves to be the case, it is of the utmost importance that the five basic criteria mentioned earlier in this discussion be given most careful consideration before any decision is made to change the tax structure.

Quite obviously time does not permit any attempt on my part to discuss each of the different tax sources that are listed on the outline to which I have made previous reference. In the question and answer period which I understand is to follow the presentation of your panelists, there will be an opportunity for you to ask about any of these in which you may have a particular interest. Two of them, however, the property tax and the sales tax—which are heavily depended upon by both state and local governments—deserve at least brief mention. Both of these taxes are productive and reasonably flexible, but both tend to place a disproportionate burden on taxpayers in the lowest income brackets, as has been previously pointed out.

The property tax is one of the oldest and most used among all taxes currently being levied. It does not pose any serious problem of collectibility, for, if there is a failure to pay, the tax becomes a lien upon the property in question. It is not a particularly easy tax to administer, for there is involved the necessity of separately assessing each individual parcel of property, of maintaining extensive tax and assessment rolls, of keeping property assessments accurate and up-to-date, of developing uniform assessment procedures, and of equalizing assessed valuations on a state or county-wide basis. The use of the property tax is further complicated in many jurisdictions by statutory and constitutional restrictions and by a large number of different provisions for complete or partial exemption. In some jurisdictions the property tax is also extended to personal property; and, in these cases, administration becomes even more difficult and problems of enforcement are introduced. Nonetheless, the property tax is apparently here to stay for at least the foreseeable future, and it is therefore important that it be administered as effectively and as equitably as possible.

There is considerable variation in the manner in which the sales tax is used by governmental agencies across the country. It can be made applicable to the sales of services, as well as the sales of commodities. It can be made applicable to all sales, or provision can be made for exemption on the sales of such commodities as fool, drugs and/or certain basic clothing items. In the latter case the administration of the tax, which normally poses few problems, becomes more difficult and complicated, particularly for those who collect the tax at the original source.

In conclusion, I wish to make brief reference to the financing of major capital projects such as the construction of public buildings, highways, water and sewer facilities, etc. In some cases and to a certain extent, capital improvements may be financed out of current revenue, which method is generally referred to as financing on a "pay-as-you-go" basis. This method has considerable merit and may prove desirable in the case of long-term capital programs which provide for large annual expenditures over a considerable number of years, as might be the case in an extended highway construction program.

More frequently, however, major capital projects which are expected to have a relatively long life are financed by the issuance of bonds. This method of financing is justified by the fact that, at least to some degree, it tends to spread the costs over the period of years during which the capital project will continue in use. In no case is it desirable that the payment of a bond issue extend for a period in excess of the estimated useful life of the capital improvement. It is, of course, possible to finance capital improvement programs by an appropriate combination of "pay-as-you go" and bond financing.

Bonds issued by states and local units of government fall into two general categories—full faith and credit bonds and revenue bonds. The former category, which involves a pledge of the full faith and credit of the particular governmental unit, is normally used in cases where the capital project will not generate any revenue or insufficient revenue to cover the debt service of the bond issue. In the case of capital projects in respect to which it can be demonstrated that sufficient revenue will be generated to cover the debt service by an adequate margin, revenue bonds are generally used.

At the local level of government, a third category of bonds may be used which are known as special assessment bonds or special district bonds. The legal establishment of a special assessment district is a prerequisite to the issuance of such bonds. These bonds are issued to cover the costs of such projects as drains, sewers, water facilities, roads, etc., and require that the debt service be adequately covered by the levy of special property tax assessments against the benefitted property within the district over a long enough period to pay off the bond issue.

The ability of any unit of government to issue bonds and to issue them at a favorable interest rate is directly related to the financial stability of that unit of government. If such financial stability is questionable, it frequently becomes either impossible or prohibitively expensive to issue bonds. For this and many other reasons, I urge upon all of you most serious concern for the sound and effective management of the financial affairs of your respective units of government.

REVENUE AND TAXATION

An Outline of Potential Sources
Prepared for Use at Southwide Conference of Black Elected Officials
By **Alfred M. Pelham**
December 13, 1968

TAX SOURCES

Taxes used primarily by state government:
- Corporate Franchise Taxes (organizational and annual)
- Business Activities Tax
- Motor Vehicles Taxes:
  - a. Weight
  - b. Horsepower
  - c. Motor Carriers' Privilege
  - d. Gasoline
  - e. Diesel Fuel
- Inheritance Tax
- Intangibles Tax
- Utility Property Tax
- Liquor, Beer and Wine Taxes
- Horse and Dog Wagering Taxes
- Chain Store Tax
- Unemployment Compensation Tax
- Domestic Building and Loan and Savings and Loan Association Franchise and Privilege Taxes
- Foreign Building and Loan and Savings and Loan Association Privilege Tax
- Federal Savings and Loan Privilege Tax
- Insurance Company Privilege Tax (domestic and foreign)
- Oil, Gas and Minerals Severance Tax
- Stumpage Tax
- Other (aircraft, vessel tonnage, watercraft, etc.)

Taxes used by both state and local government:
- Property Tax (real and/or personal)
- Income Tax (flat or graduated)
- Sales Tax (on commodities)
- Sales Tax (on services)
- Cigaret Tax
- Amusement Tax

Taxes used primarily by local governments:
- Property Tax-Special Assessments
- Payroll Tax
- Utilities Tax (on customer billings)
- Hotel-Motel Occupancy Tax
- Motor Vehicle Operation Tax
- Property Transfer Tax

SOURCES OF REVENUE OTHER THAN TAXES

Licenses:
- Motor Vehicles (automobiles, trucks, trailers, motorcycles, etc.)
- Motor Vehicle Operators
- Liquor Dealers
- Liquor Establishments (bars, clubs, cabarets, etc.)
- Restaurants
- Other Business Establishments
- Street Vendors
- Marriage
- Dog
- Other

Fines, Fees and Permits:
- Traffic and other Court Fines and Fees
- Registration Fees:
  - a. Deeds, Mortgages, Chattel Mortgages, etc.
  - b. Births and Deaths
  - c. Assumed Name
  - d. Annual Reports
  - e. Professional
  - f. Other
- Inspection Fees:
  - a. Safety (building, elevator, etc.)
  - b. Fire
  - c. Food
  - d. Other
- Parking Meter and other Automobile Parking Fees.
- Other Fees and Charges (zoo, golf course, marina, etc.)
  - a. Building
  - b. Food Handlers
  - c. Sidewalk
  - d. Other

Sales of Service and Reimbursement for Services Performed:
- Hospital and Health Services
- Other Institutional Services
- Water and Sewer Services
- Welfare Services
- Rubbish and Garbage Collection (commercial)
- Other

Grants in Aid (from state and federal government)
- Welfare
- Health
- Education
- Urban and Community Renewal
- Highway Construction
- Office of Economic Opportunity
- Water and Air Pollution Control
- Civil Defense
- Other

Shared Taxes (from state government)
- Varies between states

Miscellaneous Sources:
- Income from Investments
- Rentals and Concessions
- Gifts and Bequests
- Proceeds from Sale of Bonds
- Other

'...Know Your Authority...'

Gerald A. Lamb, *a native of Elizabeth City, N.C., is treasurer of the state of Connecticut. He has also served as president pro tem of the board of aldermen and as acting mayor of his present home, Waterbury, Conn. He was one of three Negro financial experts on a panel on revenue and taxation.*

I am indeed most honored to serve on this distinguished panel of financial experts, but of equal honor is this opportunity to share with you some of my experiences that may offer to you an expressway of financial genius and expertise in your transactions rather than a dirt road of bumpy pitfalls, frustrations and despair.

It is always gratifying for me to return to the South, for after all I am a product of a proud but poor family of the South. In fact, last evening when I flew over the eastern shores of North Carolina where I was born, I found myself in a rather nostalgic mood. Reflecting back over the years, I could remember vividly the day more than 26 years ago I marched off to defend this nation, and how paradoxical it was that I should want to defend this nation, for I had just spent more than two months searching for a job behind doors that remained closed to us. I reconciled my concern for this nation or this system at that time by saying that "things will be better some day." How prophetic, for I returned to the South last night, not as a frustrated, disillusioned and angry young man, but as an individual somewhat older, yes, somewhat balder, but also the treasurer of one of the 50 states. Let no one deceive you, this is progress, and the number of elected officials present today suggests to me that you in the South are also enjoying progress.

Our topic or theme, as has been stated, is "Revenue and Taxation." If we, as panelists, are to complement but not duplicate each other, perhaps each of us can touch generally on the broad implications of the topic but zero in on the areas that touch our present responsibilities. As treasurer of a state, I would like to at least discuss one area that perhaps the other panelists may overlook.

My remarks to you as elected or potential public financial officials will stress two general themes: the necessity of having a clear definition of one's authority and responsibility, and the necessity of utilizing *competent* advice.

Let us review carefully the first question for a moment—What is your authority and responsibility? May I first caution you against asking your predecessor or any other elected or appointed official in your locale. All too often their advice is both inconsistent and incomplete. My advice is simple—review, analyze and thoroughly familiarize yourself with your city or town charter, state or county statutes, ordinances, rules, and regulations pertaining to the office you hold.

The obvious reason to know your authority and responsibility is to perform and execute your duties properly, but of equal importance is to always be on guard that someone else does not perform your job for you by usurpation of authority. Your authority and jurisdiction may be much broader in scope and dimension than you anticipated or realized. It is no secret in Connecticut that my election as treasurer of Connecticut has made everyone aware of that constitutional office and its vast jurisdiction. And, I might add, for those few who were not aware of it, I have a way of reminding them—and this includes other state officials frequently.

It is not unusual for me to quote my powers enumerated in chapter 32 of the general statutes. It says: "The treasurer is responsible for receiving, depositing, and disbursing all state funds; collecting and distributing certain taxes and fees; servicing all state bond issues, investing surplus money; borrowing of funds when required, administering the financing of all state-owned public housing."

The treasurer is custodian of all securities pledged by insurance companies, all pension funds, and deeds to properties owned or controlled by our state. He is the escheat or abandoned property administrator and serves on the Banking Commission, Bond Commission, and Finance Advisory Commission.

I have listed these responsibilities to illustrate to you the necessity for knowing your authority. The position of treasurer had gone unnoticed because my predecessors either did not know the scope of their authority or did not elect to use it.

It has been suggested by some that the true impact of my job was not known until it was too late. With your indulgence, I would like to add a bit of humor. Those of you whose wives are the keepers of the family purse realize the influence of the mate with the money. I am certain you can almost agree that if you have the money, you have almost everything, because at least you have some influence.

Moving quickly to my second theme (utilizing competent advice), I cannot overstress the importance of seeking advice in this complex society because it is impossible to be an expert on all facets of finance. Public officials are and must be especially dependent on both legal and financial advice. Any man who thinks he knows all is destined to ruin himself and his state, county, or town.

I have used these two central themes with emphasis, because as we proceed through five important areas of special interest to local finance officers, you will realize their importance.

Using some personal experience and observations in these five areas, I will not attempt to give a technical discourse on each because the technicalities differ by state and area; but instead I want to offer some helpful hints.

The five areas of concern to public financial officials that I will comment on are:

I Administrative practices

II Public relations responsibilities

III Handling deposits

IV Investment of money

V Borrowing money

If I were giving a lecture on administration, I would discuss the practices of setting goals, selecting personnel, and coordinating and guiding their efforts with sophistication toward these goals. But today, rather than misguide or deceive you about our genius, I would rather talk about a very simple but helpful everyday tool I use for accomplishing these rather lofty goals, i.e., a "calendar of events." A simple, accurately maintained calendar goes a long way toward making a good administrator. In addition to maintaining a prompt and efficient personal calendar, this also enables you to coordinate your many diverse office functions and carefully program and project duties. As a public financial official this is especially important, because your responsibilities are very often defined in terms of legal dates and it would be disastrous to miss timely execution. Maturing dates of notes or bonds or restrictions specifying dates, often written into the authorizing legislation, are prime examples of important dates to be listed on calendars of events.

I cannot stress too strongly the continuing aspects of your public relations responsibilities. If you are an elected official, you must always remember the first requirement is to get re-elected. This means consideration of public relations factors every day and not just during election year.

It goes without saying that the basis of good public relations is a sound and efficient operation. After all, one cannot cover over inefficiencies for long. Granting this, you still have to communicate the soundness of your operation day in and day out to the public. Overlooking public relations has increased the casualties of some extremely expert and efficient finance officials.

One of the most basic rules for good public relations is to do everything within reason to "avoid inconveniencing the people."

Let me give some concrete examples of the public relations considerations that affect a finance officer's responsibilities in just one area, the issuance of bonds.

First, to the voters, here I can point out:

(A) A need for stressing the positive benefits of a proposed bond issue and the merits and benefits to be derived from this capital expenditure. This is particularly important if the authorization is by public referendum.

(B) The necessity for *not* confusing the voter with side questions or complicating his understanding by combining projects into large, incomprehensible, omnibus packages.

(C) Above all, when possible, time the referendum away from vacations and holidays. The support of the more affluent citizen, who could possibly be away, may mean the difference between success or defeat.

Second, to the bond rating agencies:

It is extremely important that the rating agencies of Moody's, Standard and Poor's and Dun and Bradstreet be continually informed about the financial and economic condition of your community. In essence, you should make full disclosure on a continuous basis. All positive attributes of community should be stressed. A credit rating of AAA or A or BA can mean hundreds of dollars in interest cost savings to the tax payer.

Third, to the underwriters and investors:

Again I repeat the importance of keeping this group completely informed about the community's financial and economic condition. If you desire a good sale, schedule the sale for a convenient day (not a holiday) and at a convenient time (11 a.m. rather than 9 a.m. or 7 in the evening).

These examples of public relations considerations at all levels of contact when issuing bonds is cited to stress the continuing aspects of your public relations responsibilities. Careful attention here not only helps the community (a lower borrowing cost) but also helps you (a requirement for re-election).

Leaving these more general administrative and public relations responsibilities, we can now discuss the more specific functional areas of concern to a finance official —handling deposits, investments, and borrowings.

As a finance officer, your core duties usually center around this important public trust. There are several recommendations that I deem important. You must not delegate the responsibility for determining the bank depositories or the cash level of each account. It is your neck if a bank fails or defaults, and it is also your responsibility to determine your cash requirements based on projected expenditures and experiences of prior years. A good system of checks and balances along with accounting controls are mandatory. We in Connecticut believe in the honor and integrity of our state employees, and this is the reason for bonding all individuals who handle money (smile). We bond them as a precaution in the event that we have misjudged their character. I would suggest that you do likewise. I repeat, accounting controls are absolutely necessary.

As a financial official you will have monies on hand above needed working balances, monies upon which you want to earn a return!

Again, the legal question—What authority do you have to invest? For example, in Connecticut, most local communities can utilize only treasury obligations or bank certificates of deposit. Some states have broader authority which often includes commercial paper or other government agencies. Once you have ascertained

the legal authority or requirements, you still have the need for determining the amounts, maturities or the type of investments.

Here, competent financial advice must be sought. The rationale for investing is simple—define your needs, select investments to meet your needs—but the execution demands specialized knowledge of the characteristics of many different but legal investments as well as up-to-date knowledge of markets.

One source of investment help can be your local banker. Select those bankers with competence in the investment area. It may be beneficial to seek out a larger institution with trained specialists in another community if your local banker has only a limited knowledge of this area of work, especially the mechanics of buying and selling securities, an important consideration when selecting your investment advisor.

Pension funds and other custodial and trust accounts in most instances, because of their long term investment features, require other types of consultants such as investment brokers, actuarial scientists, or those with insurance expertise.

I must repeat once again, competent legal and financial advice is mandatory.

Under legal advice—the field of law surrounding borrowing money by government units is highly specialized. You should:

—Select a bond attorney experienced in your state whose legal opinion is marketable, or in other words, whose legal opinion has proved acceptable to bidders of previous issues. Your close friend who happens to practice law or your town attorney *cannot* be used if you want to sell your bonds;

—Consult bond counsel early since he must approve all proceedings relative to the bond issue including all notices, resolutions, adoptions and/or approvals by boards and offering circulars. In fact, I virtually hire bond counsel many times in advance of drafting of bond proposals. Their assistance is invaluable. May I repeat, a legal opinion concerning public financing is a very specialized field of law and should not be undertaken by a firm inexperienced in this area.

Financial advice—Here again, the same theme prevails. Select competent advisors to help guide you through the maze of considerations surrounding the issuance of bonds or notes.

Let us look at some of the considerations:

1. The timing of the sale—Is it a favorable market?
2. The date of sale—Is it a holiday or does it conflict with a major national sale or sales (100 million of California and 50 or 60 million of Connecticut)?
3. Presentation to the rating agencies—What kind of information do they require?
4. Preparing the prospectus—Is it clear and concise?
5. Setting the maturity schedule—Are the dates convenient for investors? Is the schedule reconcilable with the flow of cash or resources?
6. Details of handling the sale—Is it a place convenient for bidders and is there a local proxy agent that can submit bids telephoned from the money centers (New York, Chicago, San Francisco, etc?)

I could go on at length, but instead I would highly recommend the reference booklet covering this area, "Pitfalls in Issuing Public Bonds" published by Moody's Investors Service, Inc.

In conclusion, I hope my message is clear enough—As you operate in the five principle areas of concern to public finance officials, you should carefully (A) consider the scope and limit of your responsibility and authority, and (B) seek competent advice, both legal and financial.

I am cognizant that I have not created many financial wizards in 15 minutes, but if any one of you is elected or appointed in a financial responsibility, I would be most happy to offer you several weeks of training in my office.

I purposely have avoided the topic of taxation, for we are indeed fortunate to have two experts in that field on the panel. I trust that I have aroused some curiosity and stimulated some interest, for questions will be most welcomed.

'...Services and Benefits...'

Theodore A. Jones, *director of revenue of Illinois, spoke on "Problems of Revenue Administration" on the revenue and taxation panel Dec. 13. He is former regional director of the Office of Economic Opportunity for the Great Lakes Region and is a director of several financial institutions in Chicago.*

I am deeply honored by your invitation. I am here, of course, as the representative of my state government's *most popular agency*—the tax-collecting Department of Revenue.

I am particulary grateful for this opportunity of speaking to you because of your particular professional interest in public administration. You are in a position to provide heavy influence upon some of the enormously complex decisions which lie immediately ahead of us.

I believe that it is time to make a decision as to whether state government will continue as a responsive and responsible instrument of the public will—whether it will continue to meet its responsibilities, or whether it will, by default, shift those responsibilities onto the federal government and itself assume a somewhat passive and ceremonial role in solving the people's problems and in some instances, the role of a spoiler, denying service to disadvantaged citizens. Every state faces decisions on this order.

Mere words will not answer that question. We must answer it with actions, and unless we do answer it satisfactorily, history will supply answers we do not relish. Are state governments going to respond realistically to local needs while the federal government waxes ever stronger and all-pervading?

Our ability to carry out the responsibilities of government is measured in what Abraham Lincoln called "the legitimate object of government" and defined as "to do for the people what needs to be done, but which they cannot, by individual effort, do at all, or do so well, for themselves."

If we are to do these things, it seems to me that we will have to do some rearranging of our opinions—to rid ourselves of some of the folklore that has grown up around the acts of government and the collection of taxes.

Too often we hear government discussed as if it were a business, as if it should be expected to make a profit and pay a dividend. This is utterly false. Government has no purpose as an institution other than the services and benefits it can provide for the people, better than they can do it for themselves.

Too often we forget that our democratic representative government was set up by inspired non-conformists expressly to provide services and benefits which they believed were justly due to the people, and which they had despaired of securing under colonial government.

If government is not created to "serve," what then is its purpose?

You cannot divorce state taxes from the federal and local taxes in preparing a program. They all come out of the same pocket, including your pocket and mine. In dealing with revenues, we must consider the total impact of all taxes, federal, state, and local, including those new ones which may be proposed.

In and of themselves, taxes are sterile. They have no real meaning except in terms of the payments of past debts or the purchase of services—paying workmen for their labor, and contractors for their work, materials for industry and goods bought and used by the state.

When Chief Justice John Marshall, in McCulloch vs. Maryland, said that "the power of tax involves the power to destroy," he laid the groundwork of a mischievous folklore that all taxes are, *per se,* bad because they will be abused. Had he said "the power to tax, carried to the extreme," he would have been much more precise.

The power of tax involves much more than John Marshall said: It involves the power to maintain responsible government, to provide police protection, health and education, highways and transportation facilities, schools and airports and sewage systems, hospitals and medical services—the things that Abraham Lincoln had in mind, and the things that the people, who own the government, want and are determined that they shall have.

Levying, collecting and expending taxes is not an exercise of futility and self-destruction. It is a function of maintaining those very services which ensure the permanence of democratic government and which are closest to the people and their needs.

It is in this area of services that the states are shifting the responsibility over to the federal government.

I should like to say parenthetically here that there is a very good reason why the federal government has been able to assume responsibilities that belong to the states, and that the states haven't been able to meet. The federal Constitution, liberally construed over the

years, confers vast, indeed almost unlimited powers in its clauses on the general welfare, commerce, and taxing power. State governments, Illinois being a prime example, operate under constitutions that for the most part are narrowly drafted, unduly restrictive, and narrowly construed. Hence you have the paradox of the remote government being given virtually unlimited powers while those governments closest to the people are handcuffed and rendered incapable of meeting their historic responsibilities; or providing cover for state inefficiencies and for state administrators to deny equal treatment for disadvantaged citizens.

The "tax climate," which we hear so much about, cannot be divorced from the total business climate. I assume that everyone wants to maintain a business climate that is healthy and vigorous and full of opportunity.

Andrew Mellon, when he was Secretary of the Treasury, gave us a guideline that is still relevant. He said:

> "A sound tax policy must lessen, so far as possible, the burden of those least able to bear it; and it must remove those influences which might retard the continued steady development of business and industry on which, in the last analysis, so much of our prosperity depends."

It seems clear to me that at certain strategic points, many state tax systems fail utterly to measure up to those standards. We can agree that good taxes should, then, have certain characteristics: They should hold reasonable promise of being stable sources of revenue; they should be uniformly levied so that everyone shares in supporting the government; they should be easy to collect and hard to evade; they should be levied according to ability to pay.

And, above all, they should be levied on the other fellow!!

I think we can agree, too, that if every man could build his own hospital, his own school, his own highway and transport system, clean his own river, dispose of his garbage and sewage, act as his own policeman, install his own street lights and pave his own street—we then wouldn't need taxes at all!

Let us consider briefly what is occurring in some areas of historic state and federal responsibility.

Increasingly, in some states, the federal government has been called upon to restore law and order and here and there to provide some justice. Here, we must move as rapidly as possible with every resource available, to erase the social and economic conditions which produce mass disorders. Maintenance of respect for law is a primary and historic state responsibility which all too often has not been exercised well, if at all. All government has responsibility here.

No responsibility rests more squarely upon the state than that of providing for education, and our plight is desperate. It is desperate statewide and most critical in cities. School administrators everywhere are faced with the urgent need to find money to carry out programs that must be undertaken.

I would like to note an example of the wide variation in the quality of education contained in the report of the Illinois Scholarship Commission last year. Of the high school students enrolled in City of Chicago senior classes, 22.4 per cent of those eligible to compete for scholarships did so. But only 5.5 per cent of the total eligible were actually qualified for scholarships. For the state as a whole 23.4 per cent of senior classmen entered the competition, and 7.1 per cent qualified for scholarships. For Cook County suburban schools, 29.3 per cent of senior classmen competed, and 10.1 per cent qualified for scholarships.

What does this mean? It means that City of Chicago seniors fall significantly behind the state level and very far behind the suburban level of education, as indicated in the grading for scholarships. Educators will tell you that other factors (environment, economic pressures, family and community disturbances) may affect the student's performance. But the conclusion that a gigantic educational effort must be made in the city and the state is inescapable.

We may congratulate ourselves in Illinois that we have unexcelled prosperity and an unemployment rate of only 3 per cent, which is far below the level of other industrial states. But do not be misled by generalizations on this theme. Averages are tricky.

In the Lawndale area of Chicago, 17 per cent of adult males are without jobs, and 12 per cent in the Woodlawn area are unemployed. In some sections unemployment among Negro youth is 30 per cent or higher. It is dangerously high in many of the poorer white sections. These are the drop-outs, the aged, the uneducated and untrained who are unemployable in a highly technological economy. They are the elements of what Dr. James Conant called a "time bomb" in our midst.

Dr. Phillip Hauser, sociologist at the University of Chicago Center for Urban Studies, has said, "All of the welfare and educational provisions today are only a band-aid on a gaping, massive wound." (Time Magazine, July 28, 1967).

Gunnar Myrdal, the eminent Swedish economist, in his recent study of our economy, says: "In society at large there is more equality of opportunity today than there ever was. But for the bottom layer there is less or none."

These people, and many others, are telling us that despite our booming economy, our good intentions and our efforts thus far, we must find ways to give great numbers of sorely disadvantaged persons—some one-sixth of our population—a chance to learn, an opportunity to gain skills, a way to find some gainful work. We must find ways to help them break the chains in which they but barely exist—the cycle of unemployment, the relief roll, the broken family, the loss of faith, the loss of motivation, adult and juvenile crime.

Training and education and new approaches and methods of training are the major factors in accomplishing this goal. It is—I would like to point out—the only means by which we shall insure that in the future, business and industry and government will be able to find men and women with the technological (or scientific) skills that are needed to maintain our competitive advantages. Before the world, I doubt that there is a person present here today who could not add at least a score of other major problems of our states and cities that call for emergency measures.

There are social and economic costs attached to any policy of "too little, too late" carried on in the name of "economy in government." What are some of the costs?

Tax values are destroyed on a massive scale as whole vast areas of property decay into slums.

Clients for the relief rolls are manufactured at an expanding rate, and the tax burdens thereby increase.

Families are destroyed, by the hundreds and thousands, as social units.

Crime and juvenile delinquency and police and court costs fall into a vicious spiral of inflation.

Relationships between the individual and the surrounding society, and between the individual and his government, are eroded.

Human dignity is emasculated.

When I see these things, I ask myself if we can afford not to undertake that which is needed. Will not the eventual cost of inaction be far the greater?

58.6 per cent of Illinois' general revenue fund in the last biennium came from the so-called sales tax. 27 per cent of our total revenue came from the federal government. The 1967 increase in the sales tax—to 5 per cent—undoubtedly makes it one of the most regressive levies in the nation.

Our tax excludes a very wide range of proper objects of taxation: Our combined state-local rate is among the highest in the nation, and it rests most heavily on the food and clothing necessities purchased by those with the larger families—namely the poor.

It is clear that if federal grants and other payments were withdrawn, Illinois, as would all states, overnight would be in a colossal financial crisis. You cannot pull 27 per cent out of any revenue system without producing chaos.

A word about Federal Domestic Assistance. Shift is one major characteristic, most notable from federal to local city direct relationships rather than through state control and reallocation. OEO was the leader here followed by HUD, the Department of Labor and now some HEW programs.

U.S. Aid as Percentage of State Budgets 28 per cent in 1966.

Ala.	36%	Miss.	32%
Alaska	52%	N.C.	23%
Arkansas	36%	S.C.	23%
Fla.	22%	Tenn.	31%
Ga.	29%	Texas	28%
Ky.	31%	Va.	28%
La.	28%		

Ninety-three per cent of the Governors believe that federal aid has stimulated state activity; 70 per cent believe it has improved state standards, and 35 per cent believe it has produced interference with state affairs. (This was in 1948).

With the partial shift from state control mentioned earlier, I believe many more will now claim interference—witness the new drive for block, unrestricted grants to states, sharing of income tax, etc.

With this shift has come a massive increase in federal grant programs:

1. War on Poverty—heavy local participation
2. Twenty-one basic education measures by Congress—1964-68
3. Fifteen vocational education and manpower bills
4. Four mass transit programs
5. Twenty major health statutes
6. Thirteen housing and urban development bills

In all about 219 new grant-in-aid programs with cost are going from $3 billion in 1960 to $20 billion in 1968-69.

With some imagination and firm resolutions we could do a much better and much fairer job of raising the revenues needed for schools, roads, welfare, training, housing and other purposes.

The more you involve yourselves in these matters, the more likely we are to devise a tax system that is fair and just and sufficient to our needs. Give leadership and participate.

President Roosevelt, who had to wrestle with unprecedented domestic problems and a depression of calamitous severity, proved to us that new thinking and new methods are required in meeting new challenges. I recall that he once said that, "Taxes are the price of breathing the free air of a free country, the price of a living and not a dead world."

'...Our Real Dream...'

Paul Anthony, *executive director of the Southern Regional Council, greeted U. S. Attorney General Ramsey Clark and the black elected officials at the banquet Dec. 13.*

It is with misgivings that I appear on the program this evening. Long dinners and the involvement of many people serve no function other than that of boring our guests.

However, in the next several moments, it is both a privilege, and certainly a pleasure, to do two things.

First, on behalf of the Southern Regional Council I should like to express our appreciation to Attorney General Ramsey Clark for being with us this evening. There is good in the South and there is good in the nation. This audience, Mr. Attorney General, represents a significant part of the good and the promise in this region. And the Attorney General, ladies and gentlemen of the audience, represents the good and the honorable of this nation. It is important, most important, that we meet here tonight recognizing this.

Secondly, and again on behalf of the Southern Regional Council, I should like, belatedly, to welcome the black elected officials of the South to this meeting and to thank you for coming. This is, as I am sure you agree, an historic occasion, and Atlanta is the appropriate site for it. Earlier, we have gone from "Gone with the Wind" to the Cotton States Exposition. At that latter event, of course, Dr. Washington attempted to make peace with the white South for "his people." I do not demean Dr. Washington, I hurt for him and the choices he faced.

The black elected officials here tonight give proof that now we are privileged to have new choices, and I rejoice that we do. The Southern Regional Council has for 20 years had a strong interest in access to the ballot, we have developed a sound reputation for our knowledge on this subject, and we have consistently expressed our faith in the power of the ballot. (And we are pleased that our current Voter Education Project is our most ambitious and successful effort to date in this area.)

Yet, for all the encouragement, pleasure and, indeed, honest rejoicing that this gives us of the Southern Regional Council, we, too, are sad. I am sad that in 1968 we should need a conference of black elected officials. For the Southern Regional Council to have such a conference is a confirmation that we are right, particularly in believing in the democratic society. We are gratified that this represents such a significant movement up the rungs of the ladder. But, we shall not be really gratified until we have climbed the ladder. We shall achieve our real dream in cooperation with men like the Honorable Ramsey Clark and that which he represents, and with the cooperation of the honorable black elected officials here present. This dream is to have a conference of *elected* officials.

Then we will all be blessed, whole, and a nation of honor.

'...Equal Justice To All of Its People...'

Ramsey Clark, *retiring Attorney General of the United States, was speaker Dec. 13 at a banquet at the American Motor Hotel. He is a native of Texas and the son of former U.S. Supreme Court Justice Tom C. Clark. He came to the Justice Department in March, 1961 after his appointment by President John F. Kennedy as assistant attorney general.*

I wish there were some way that I could tell you how deeply pleased I am to be with you tonight. My reasons fall into three groups: One is personal. I am Southern and white, and I know how very desperately we need black elected officials here.

Second is official. I have been awfully fortunate through all my life, but during no time have I been so fortunate as these last years that I have had the opportunity to serve justice. There are many, many men and women who have been in the Department of Justice these years who should be here tonight; and they would be, as am I, deeply pleased to be here and to know what you represent for this nation.

We are here tonight because we are a democracy and a democracy that will ultimately extend equal justice to all of its people. We are here tonight because we are making progress toward that end. We are making progress because we care. I well remember the long nights in the Department of Justice in the winter of 1964 when we were trying to find the legal techniques for a voting rights act. I well remember President Johnson's deep personal commitment to liberating the Negro, the minority in America; to bring the vote to all Americans.

As the principal federal officer in charge of the enforcement of the federal court order under which the march from Selma to Montgomery took place in the spring of '65, I had the privilege to see great men—brave men, men who believed in America—march that we might be here tonight. Dr. Martin Luther King was in the front rank. Bob Kennedy, who had been Attorney General, contributed there in the early days toward the Voting Rights Act. Men like Nick Katzenbach, Burke Marshall and John Doar were there and did what they could with their might.

Then there was that moment, Aug. 6, 1965, when the rotunda of the nation's Capitol was filled with the nation's great, and the President of the United States signed the Voting Rights Act of 1965, and it became the law of the land. It was less than a week later that the first deep rumbles from South-Central Los Angeles in an area called Watts—originally a bus depot, the first stop in Los Angeles County from the Southern states—were felt throughout the world; and we were reminded how imperative it is that we persevere.

I am deeply honored to be here for a third reason: to be with black elected officials of the South because I am a concerned American; because I know there are thousands and thousands of people in these United States who have come to doubt and some who do not believe, that this nation has either the purpose or the capability to bring equal justice to all of its citizens (and you demonstrate, better than anything perhaps, that this is not so); that the system, however awkward, however slow, can work; that our purpose as a people and the purpose of our laws is equality and justice for all.

The Voting Rights Act is a bold experiment in democracy. It has made a difference. Four years ago we could have held this meeting in the telephone booth in the lobby and not interfered with anybody who wanted to make a phone call. Two years ago in Washington, the leadership—as I recall, Louis Martin, primarily—met with what was comparatively a handful of black elected officials from all over the nation. What a difference you can make! What a difference that law has made and must make further, because we are only beginning. We have miles to go before we sleep.

The Voting Rights Act of 1965, like every contested piece of legislation, has compromises. One compromise was the expiration of many of the most important sanctions and controls—in what then seemed a long time and now seems no time. After five years, on Aug. 8, 1970, there will be the opportunity for jurisdictions to reinstate qualifications to vote through subjective tests, such as literacy. Then, unless something is done, the power of the Department of Justice to place examiners and observers in places where they are needed to protect the fundamental right of a democratic people will also expire. Then state legislatures will be empowered to prescribe new standards, new procedures for voting throughout this land.

It seems imperative to me that we redouble our efforts today to enlist in the support of democracy, under the auspices of the Voting Rights Act and this great Voter Education Project, all of our people and that we provide for the future by extending these sanctions of the Voting Rights Act of '65 for yet years to come. Their necessity, to me, seems clear.

I would not be fair if I said that voting, the right to vote, the exercise of that right, is the entire solution. Far, far from it. It is terribly important, it vests power. You now have new power; you must cherish it and nourish it, and build it, and increase it, and exercise it for justice. But if it were the entire solution, then how would we explain the conditions of Central City America, of our great metropolitan areas—of a New York and a Chicago and a Los Angeles?

We must go forward, seriously, on many fronts and with rare courage—the rare courage that you black elected officials have shown us and of which I am grateful. We know the areas. We sometimes think because the struggle is so difficult that, perhaps, the road isn't clear; but it is.

Separate, but equal, was never so; could not be; will never be. There can be no equality with separation in any society, least of all in a highly urban and complex nation of two hundred million such as ours. Separation must be ended, and all of its manifestations, to bring equality. The task is terribly difficult.

An area is education. Start with the children. Education is America's greatest industry. One in three in this country is engaged, full time, in education as student, teacher or administrator. In 1954, May 17—a time had begun so much, so late—the Supreme Court said, as to public schooling, there can be no separation. For nine years, through litigation in the courts of the South, the constitutional rights of our citizens were litigated. In September, 1963, those who knew saw one per cent of the Negro children in the public schools of the 11 states of the Confederacy in schools that were desegregated. All deliberate speed meant nine centuries.

People with vision saw this. People of determination changed it, in large measure, because of the Civil Rights Act of 1964, because of Title VI, because of the much-maligned guidelines of the Office of Education promulgated in conformity with law thereunder. One per cent in '63 became 16 per cent in '67. When the returns are in, it will surely be over 20 per cent in '68. This, a law that has had barely three years to work its way, has made a major difference and has shown that the constitutional rights of our citizens in the South can be fulfilled.

Because of the immensity of this nation, and while we concentrated here where the need was so great, we barely noticed the new segregation building up steadily and swiftly in urban America.

In five short years, from 1950-1955, the percentage of Negro children in the public schools of Baltimore increased from 50 to 61. In St. Louis, it was from 49 to 60. In Chicago, from 42 to 50. A profound change reflecting patterns of living meant a new segregation in Central City America unless we awoke. The 25 largest school districts in the United States saw a shift in five short years in the percentage of Negro children in public schools of nearly 10 per cent—10 per cent more Negro children and 10 per cent fewer white. America cannot stand that.

Slowly the resources of the law are brought to bear; and now four suits, outside the South, are brought to desegregate our schools there. And soon, soon we must recognize, among other things, that the litigations that take so long and the guideline techniques that can work so well must be brought to bear elsewhere. And soon, we must recognize that segregation in schooling is incompatible with our principles and, alas, I believe, with the Constitution, whatever the cause.

On the forefront today, we are moving in the area of employment, and only beginning. There is vast discrimination in employment—the opportunity to get a job, to keep a job, to improve in your job, to get a better job. The '64 Act, Title VII promised to remedy this. It's essential that we enlist all of our energies, as a people, to do it. Today, we have brought finally 34 suits. When you think of the immense industry of the United States, you see how very slow the beginning is. Twenty-four this year, with so far to go.

One reason you must understand. For all the might of the federal government, the resources that we, as a people, have provided there are terribly inadequate. The Civil Rights Division—as devoted a group of people to the principles of this country as has ever been collected in one place, with one mission, in my judgment—is fewer than a hundred lawyers. Their average age is under 30. Their burden is to enforce the Voting Rights Act, to litigate school desegregation in perhaps 30,000 school districts over the U. S., to bring Title II of the Act, promising open accommodation, to a reality; to enforce all of our Civil Rights Laws. This small resource would be inadequate for one state. It would be inadequate for one single law throughout the United States. We must look to you, in your local community, to generate commitment and action to bring equality.

The reasons that black and white in America must show the world that they can live together with respect, with stability and with love are many. One is human dignity—my dignity, your dignity. Another is to remove this gross imperfection from our national character, to show that we can be what we say we are.

But there is another. It is survival. It really is, you know. We will add on this planet, in the next decade, one billion souls, and most will be blacks and browns and yellows. And we are impelled by change so vast that, in a few short years, the fundamental way we live is more greatly altered than in history to this moment. And change means that millions will starve, and millions will live in more than affluence, amidst surfeit, more than they can use. It means that science and technology, with 90 per cent of the scientists who ever lived working today, accelerating change and population explosions, compel now equality. And if we do not demonstrate that it is possible, that it can be, that it is, here in America, black and white together with love and strength, then this poor, tired world has more ahead than it can handle.

In the Gospel according to St. Mark, it is said, "And if a house be divided against itself, then that house cannot stand." America is a house divided. Not yet irreconcilably, but that remains possible. The divisions are many. Never forget that. It may be hard for black America to realize that our divisions are many—the young and the old, a real division.

Of course every generation has had a gap. But the gap today is greater than ever before and for clearly ascertainable reasons—because change is so vast; because in a few short years, there is such a difference that a generation today exceeds the millenium in times gone by. Half the buildings in the world have been built in the last 30 years; half the buildings in Harlem were built before 1900, and there's a moral there.

There is a division today between the educated and the uneducated. It's a very profound division. Education means more to the individual today than ever before. My father and his brothers could come to be lawyers without going to college, without going to law school. The demands of our terribly complex, technologically advanced society compel constant increase in education. Forty-five percent of the college-age people today are in college. When I started college after World War II, there were a million and a half students; today there are over seven. The difference between the policemen endeavoring to control college students—the policemen five to 10 years older, who dropped out before completing the eighth grade—is immense. We have to recognize that division. We have to seek to bridge it.

There is a division between the rich and the poor. It is not the same division that has existed in bygone days between rich and poor because, today, the poor know of the wealth that surrounds them. Today, in America, the poor are a minority. To be poor in urban America is to be desperate. And in that desperation, you see Marlboro country on T.V., and you know it doesn't look like 126th Street. You must bridge the gap between rich and poor.

There are these gaps within races too. You must know Negro youth in this country. You must work very closely with them. They need your strength and wisdom. You need theirs. And if you can't bridge that gap, the meaning is immense to all of our people. And you must, within races and between, bridge the gap between the educated and the uneducated and lift all to the greatest possible education we can bring to them, because their future and ours depends on it, and so, too, the rich and poor.

And finally, of course, there's the division between black and white, a division that cannot and must not continue.

And from one side of this house of ours, we hear the call for order. There must be order. And from the other side of the house comes the cry of justice. Give us justice. The long history of mankind tells us that you will have neither order nor justice until you have both.

'. . . Proud To Have Been a Part . . .'

(TELEGRAM FROM THE PRESIDENT OF THE UNITED STATES)

Four years ago, only a handful of black people held public office in the South. Negroes were, in effect, without a direct voice in the council of government in the Southland.

Soon after this administration began, I had the honor of signing into law the Voting Rights Act of 1965. Hundreds of thousands of Southern Negroes who had been denied the ballot were able, for the first time in their lives, to register and to vote. Indeed, Negro registration in the South has increased by one million in the last four years, to a total of more than three million today. Those black Southerners are today, for the first time, able to participate in the most basic step in our democracy—the casting of the ballot on election day.

Largely because of this historic development, there are now some 385 black elected officials—all holding public offices for which they had to go before the voters—in the South. These officials now are gathered in a conference sponsored by the Voter Education Project of the Southern Regional Council to discuss their mutual problems, to exchange ideas and to receive advice and counsel on the performance of their public duties.

As President of the United States, I salute these black men and women now meeting in Atlanta. I wish their conference much success. I am proud to have been a part of the developments that made it possible for them to serve.

LYNDON B. JOHNSON

A Resolution: '...Not Separate, But Unequal...'

The following resolution, drafted by a representative of each of the 11 Southern states, was adopted by the Southwide Conference of Black Elected Officials as the conference ended Dec. 14.

We have come to a point in the South and in the nation where the executive decisions of the next four years may well determine the course of race relations and civil rights progress for the future and will decide whether the succeeding generations of America will live in peace or will live at all.

We are appalled by inferences from the incoming administration that the South's racial problems will be effectively dealt with by the states.

The fate and future of the South and her people, black and white, cannot be left in the hands of these leaders whose past failures have demonstrated their inability and unwillingness to build a new South.

While business, acting unselfishly, can help, business alone will not bring enlightened, unselfish solutions to this region's problems.

Rather, we, as members of city, county and state governments, believe in and depend on democratic government, responsive to the needs of our constituents and the unrepresented millions of the South, as the proper problem-solving agency of the 20th Century.

We hope that the traditional Southern divisions between class and race can be healed. The kinds of oppressed whites who have had their own interests subverted by their racism must join with the oppressed blacks whom we represent to build a new South.

What is needed more than all else is full implementation of the Civil Rights Acts of 1964 and 1968, the Voting Rights Act of 1965, and the Economic Opportunity Act. This can be done only by full dedication of the Executive, Legislative and Judicial branches of federal and state government to the rights of man. The United States Supreme Court and our federal judiciary must be upheld and strengthened in devotion to equal justice.

We want to urge the President of the United States and our Congress to extend the much needed Voting Rights Act of 1965 from its present maturity date to another five years.

Since 1965, 805,233 Negroes have been added to voter registration rolls in the 11 Southern States. Most notable gains have come in those states where federal registrars have been assigned. To date, however, none have been assigned to either North Carolina or Virginia. Registrars are needed in these two states, and additional federal registrars are needed throughout the whole South.

In a nation dedicated to democratic principles, how can we explain that only about 60 per cent of the nation's potential voters went to the polls in the November election? Consideration should be given to making election day a national holiday so that the people can have adequate time to exercise the right to vote, so dearly earned by so many, over so long a period of time.

Violence and intimidation—as the tragic events at Orangeburg, S. C., earlier this year illustrated—have not abated in the South. White resistance to school desegregation continues—as we have seen in South Carolina and Mobile, Ala., and many other places, where white parents have organized to block effective progress toward eliminating the dual school system. In the 14 years since the *Brown* decision outlawing segregated public education, the rate of school integration in the South still hovers at a low level of tokenism. According to the Department of Health, Education and Welfare figures for the 1967-68 school year, only 14 per cent of the South's black children were enrolled in desegregated schools. For the Deep South the figures were: Alabama, 5.4 per cent; Mississippi, 3.9 per cent; South Carolina, 6.4 per cent; Louisiana, 6.7 per cent, and Georgia, 9.9 per cent.

The critical problem of poverty in the South must not be ignored by the new administration. In spite of much national publicity, children are still hungry in Mississippi and throughout the South. In spite of national concern over technological unemployment, men are still being driven from the land to huddle in the slums of our large cities. As critical as the problem of technological unemployment is the depressing reality of widespread under-employment. In many areas of the South the percentage of the labor force designated "unemployed" is about the national average, but the income in those areas is less than half the national average. Southerners, black and white, work long hours for

low pay. Minimum wage laws must be broadened and enforced.

As part of a short-term solution to some of the more critical problems of the poor, uniform federal regulations are needed to govern the administration of public assistance programs in the states. Under present state welfare structures it is possible for states to impose restrictive regulations which bar the most needy from welfare rolls. However, the concept of public assistance itself needs to be re-evaluated with the understanding that welfare is not a privilege bestowed upon the needy in the way of charity, but a clear legal right. Hand in hand with such a re-evaluation, additional jobs and job training programs must be created.

We want to thank the Voter Education Project of the Southern Regional Council for bringing us together and giving us the tools and techniques we need to improve our performance as elected officials.

As more of us take office and as we become more deeply involved in the problems of our constituencies, gatherings like this one, on regional, state and local levels, must be continued to help us keep abreast of the complexities of modern government.

Events of the past four years in the nation's alienated black ghettos should have taught us that the just and human needs of the country's black minority cannot be ignored, or appeased with high-sounding words. We are not yet a nation separate, but we are most assuredly a nation unequal.

'... The Polling Place Is the New Phase...'

Mrs. Shirley Chisholm *of New York, whose luncheon speech closed the Southwide Conference Dec. 14, was elected Nov. 5 as the first Negro Congresswoman in history. Elected from Brooklyn's Bedford-Stuyvesant district, she had previously served in the state Assembly.*

Those of you who know me know that I am very forthright and very frank. And so I am not going to be giving you a lot of little pieces of dessert this afternoon. I'm going to tell it to you like it is, because we've got to realize that we are going through a very important social revolution in this country.

Someone made a reference a little bit earlier to the fact that we had women on the stage. Perhaps this might be ladies afternoon or ladies evening. I want to be very sincere when I say to you that there is a tremendous need for women to be in the political arena. I would hope, in the near future, that we would not pay so much attention as to whether a person is male or female, but that we would rather look at the assets and the attributes of those people who can help to liberate our race eventually. I think that must be the criteria.

Yes, from February through Nov. 5 of this year, I have been at it in the streets. And there were so many whisperings going on that "you can't make it because you are a woman." Well, ladies and gentlemen, here I am!

While nothing is easy for the black man in America, neither is anything impossible. Like all men, rather, we are moving along, and we will continue to move resolutely until our goal of complete and unequivocal equality is obtained. We must not be docile. We must not be resigned or inwardly bitter. We must see ourselves in an entirely new perspective, and we cannot sit in our homes waiting for someone to reach out and do things for us. Every tomorrow has two hands—the hand of fate or the hand of anxiety. And the first battle is won, my brothers and sisters, when we fight for belief in ourselves and find that it has come to us.

While we are still battling, we must not allow petty things to come to us and stimulate them into vast proportions of evil. To dwell on every slight and clutch it close to our breasts and nourish it will corrode our thinking. We are on the move now, and as Frederick Douglass said, "Power concedes nothing without a struggle. It never has and it never will." And the United States can no longer afford the luxury of costly, morally, religiously and ethically wrong racial discrimination. For America needs all of its citizens, with the ability to develop, to make a fuller contribution.

Many problems scream loudly—the thousands of black citizens, with franchise, living under degrading conditions; the millions of poor throughout this affluent nation, white and black, who lack the bare rudiments for fruitful living; the rapidly growing numbers of children caught in a web of disillusionment which destroys their will to learn, the increasing number of aged who do not look forward to rest or to retirement. And despite the historic legislation of our cities and our states, nearly 11 million black citizens today still live in basic ghetto communities of our cities.

From decades of non-participation, or only modest participation, the black man has, within only the last four years, shifted his goal to full political participation for full American citizenship. While on the picket line, at the lunch counter, and in the bus and store boycotts, the black man came face to face with the full breadth and weight of the power and influence exercised by local and state government, intertwining with and often stifling the protest. Indeed, a principle by-product of the American civil rights movement has been the election of the black citizen to his awesome political potential. And just as the picket line and the lunch counter demonstrations and the boycotts were dramatic and effective weapons of protest for the civil rights movement, the polling place, my friends, is the new phase and new thrust of the Negroes' bid for equality of opportunity.

Power concedes nothing. How else can any man rise to power and hold sway over millions and tens of thousands except by smothering dissenting voices? Freedom is an endless horizon and there are many roads that lead to it. We must walk arm in arm with other men, and we must struggle towards goals which are commonly desired and sound. We must give and lend to the youth a stronger voice and encourage their individuality. We must look to the schools and work for their improvement. The leaders of today in the black community must be able to place the goal of freedom ahead of personal ambition. The truly dedicated leader follows his conscience, tells what is best for his people.

Whatever else the black man is, he is American. Whatever he is to become—integrated, unintegrated, or disintegrated—he will become it in America. Only a minority of blacks has ever succumbed to the temptation to seek greener pastures in another country or another ideology. The black man's total commitment to America indicates that the prospects ahead seem bright. It is true that we are angry about our present

plight, for we measure this country by her potential rather than by her achievements.

And Black Power is, indeed, a reality that is gaining in emotional intensity, if not always rational clarity. The harnessing and solidification of Afro-American power is constantly being dissipated with factionalism. Internal struggle for power by one group over another and forgetting the masses—this behavior is no different from that of the whites. But we as a people cannot afford the luxury of fighting among ourselves if we are to make real progress in this country.

Black people will gain only as much as they can win through their ability to organize independent bases of economic and political power through boycotts, electoral activities, rent strikes, etc. Black Power is concerned with organizing the rage of black people and is putting new, hard questions and demands to white America. We will build a new sense of community amongst our people. We will foster a bond between those who have made it and those on the bottom. And as Mr. Hamilton says, "Alienation will be overcome, and trust, the thing that our people are looking for, trust, will be restored."

Let us remember that a great people are not affected by each puff of wind that blows ill. We must fight for belief in ourselves. And, above all, we must hearken back to the days of darkness when Frederick Douglass, the great abolitionist, even in those times, echoed the famous phrase that has come, realistically, to haunt the black people in America as they fight to enter the mixed stream of political and economic life in these United States, the land of their birth. And that phrase is, "Power concedes nothing."

Let me say to you, my brothers and sisters, that until we can organize to create black unity with an economic base, until we can develop a plan for action to achieve the goals to make us totally independent and not have to look to The Man in order to live, we are not liberated. We must become doers and producers in this system in order to be able to control our destiny. We have the potential, but we must consolidate all of our strength for eventual liberation.

And let me say, off the cuff, a few things that are beating in my breast.

As I travel around the country now, speaking to groups, I must share these things. During my congressional campaign in Brooklyn I had the opportunity to talk with many of the black and white students on the various campuses; and to a large extent, many of these students came in and were a vital part of my campaign. And one of the things that these students, both black and white, indicated to me: Mrs. Chisholm, you have become a new symbol; a new kind of politician that is emerging. And I would ask them to elaborate on what the statement meant. Listen, this is what young people are saying in this country. They say you represent the type of politician that the people can trust implicitly; the type of politician that will not exploit their people for personal self-aggrandizement; the type of politician that is unbought and unbossed.

Those of you who have been following my career ever since I emerged five years ago know that the symbol under which I have operated is unbought and unbossed, and I think you can understand when I say to you that this does not endear me to the political structure. For I have the courage of my convictions. If you are truly going to give your people a sense of direction and a sense of leadership, you have to be able to relate to the people only and be prepared to take the consequences as a result of your actions, because this is what black people are looking for in America today.

They are disillusioned, they are apathetic, and there are many more reasons why many of our people don't go to the polls in spite of all of the barriers that have been held against them, particularly in the Southern part of this country. Many of them don't go to the polls because the public officials that they put in office forget them when they get in office. And we cannot afford that luxury. Yet, people have said to me ever since I emerged four years ago, you are committing political suicide, because I refused to do things for political expediency. When I should leave this scene, I want to be remembered, not as the first black woman to go to the United States Congress, although this is a historical fact. I want to be remembered as a politician that entered the arena where the people had real hope, not in terms of the words that I mouth day to day, but in terms of my actions and my attitudes in my community. That is what I want to be remembered for.

Yes, it was a very tough struggle, a very hard struggle this year. First in the primary of June I was up against the most popular state senator, another woman. The senator was The Man's "boy," because in the meeting they had indicated, "Yes, Mrs. Chisholm has ability; yes, Mrs. Chisholm is a fighter; but you can't cope with the woman." It isn't a question of coping with the woman, it's a question of trying to manipulate my conscience and dictate to my mind what I must do. And I said then—and I continue to say it—I know a person that's fiery and independent-minded in the political arena, I know that their days may be shortened. But I am not going to worry about that. Fortunately for me, I have a theory that many people don't accept. And maybe many of the people in this room will not accept it. But I believe this theory on the basis of my political activity for 20 years behind the scenes—only having emerged five years ago. The black people in America must have leadership that for the most part is educationally and/or financially secure. Because the temptations that are placed in the paths of many of us, many of us are not strong enough to resist.

I think that if we understand these basic things, then we can hope to restore some faith in our people. They will go to the polls, the registration drives will be increased because of the fact that their elected officials have indicated by their actions that they are fighting for them, that they are with them, that they are prepared to take the consequences of their actions. If we do this, I can assure you that the registration drives and the political activity during election time will become greater. But we have to prove this.

They told me that they could not back me for the United States Congress, even though the people in that community had last December come together and interviewed 11 others who were potential candidates. And the citizens had said we want Shirley Chisholm to go to Congress, because she has beaten the machine at the polls and the woman cannot be controlled, and we know that we can sleep at night when that woman's voice is in Washington. But the very assets that the people found in me I later learned were things that were

against me politically, and hence the party boys did not give me the designation.

And of course, like many people, I suppose I should have stepped back, I should not have bothered, because I had four strikes against me. Number one, I was not a darling of the party. Number two, I was a woman. Number three, I was a black woman. And number four, I sure didn't have congressional money to run.

But you know what really made me decide to run? Not only the fact that I've always risen to challenges, but the fact that a woman came to my home on Sunday morning—I remember the state Legislature was still in session—that was way back in March. She came to my home one Sunday morning and rang the doorbell. I went downstairs and opened the door. I think I see her now. A very fat, middle-aged black woman, timidly entering my living room and pulling out of her pocketbook a crumpled, dirty white envelope. And I saw her taking this envelope out—it was kind of heavy—and as she extended it to me, she said, "Mrs. Chisholm you know, we welfare people hate you politicians because you're always fattening yourselves. We don't believe in helping you because so many of you forget about it. But Mrs. Chisholm, for the 10 years before you entered the political arena and for the four years that you have served in the state Legislature, when we learned in this community that you were going to run for the United States Congress, a group of us welfare mothers decided to get together and have our own little thing going each Friday night in order to raise some money to help you to buy stamps." And she gave me an envelope—I will never spend that money—the first contribution I got to my congressional campaign—$9.69 in coins.

If I had any doubts about running, that erased every doubt. I made my mind up that I had to run although many persons had cautioned me. They said, "Shirley, no one can run in your district against you for the state Assembly and win. That's your seat. You could stay there as long as you want to. Why are you giving up a sure thing to run for a congressional seat when you have so many odds against you. I said yes, I may have odds against me, but I have a little talk with the Man above each night, and I have a talk with the grassroots in the community, and they say, "Chisholm, run." And I ran. It was the toughest campaign that I've ever run in my life.

During the course of the campaign, right after I won the primary in June, I became ill. I had to go to the hospital to get an operation, and I was out of circulation for about seven weeks. My people became very concerned because my opponent was going up and down the district, and every day it would seem that he would be nearer and nearer to my door; and there was of course a certain amount of anxiety. But always deep down within me I knew that in spite of what was happening, I was going to win. Because I had indicated by my life, from the day I was born in that community, that I had served and worked with those people even before they ever thought of sending me to political office. And I knew that they would not forget. In spite of whomsoever the powers wanted to throw out there against me, I knew that the people would not forget me. Many workers came to my home as I lay on my bed trying to recuperate, and they were crying and upset. They said, "Chisholm you're so near to it, but yet so far, because the people in the district are saying they don't hear your voice on the soundtruck."

Ever since I have emerged I don't campaign indoors, I bring them out to the streets. Let the people dig you, let the people see you. And I believe in campaigning in the streets and in the housing projects and at the rallies. Because then this is where the truth and sincerity of everything comes out and you have to face that populace. You don't have to get away with gimmicks.

Finally, I said to my doctor—and he'd known me for a long time—I said, "Doc, I've got to go." He said "Shirley, I'm going to tell you, you have got to keep quiet for a while. I know that you're itching to go, but you've had an operation and you cannot use up your energy." And I remember so well that I said to him, "But Doc, the stitches aren't in my mouth, they're on my body." And he said, "Well, if you feel that you're strong enough to go out on your soundtrucks and tell the people your story, well, then you can go."

And believe it or not, the moment I got up to go into those streets until Nov. 5, I didn't even remember I had an operation. God is with me, and I went out in those streets and I did the kind of job that had to be done.

And now I know every eye is going to be focused on me. I went down to Washington last week for three days to look for a place to live, to hire a staff, to do a lot of odds and ends. And as I walked into the House of Representatives' restaurant, as I came down the steps, some of the members of the House of Representatives were eating; and I saw the elbows just hitting each other, as I came down the steps. Well, I guess you can imagine what was being said. And they came over, and one of them had the nerve to say to me, "You know, we heard *all* about you in New York, and we know you're a tough cookie, but we have been waiting for you. We're going to have some fun with you, Shirley Chisholm." And I said, "Sir, you must remember that fun doesn't necessarily work in one way. I'm going to have some fun with you, too."

And so, my dear brothers and sisters, I rise to the challenge of the awesome responsibility that has now been placed upon my shoulders, to be the first black woman to sit in the United States House of Representatives. And although I specifically represent the 12th Congressional District of New York State, I know that I am a voice for all of the blacks in America.

I don't know if many of you also realize that I was elected at the Democratic National Convention as the first black person to be a national committeewoman of New York State. I say this for one specific reason, because somebody said it to me a couple of weeks ago: "Shirley Chisholm, how can you rise within the ranks of the party so quickly, within a four-year period, from a poll leader all the way up to Congresswoman, and then go to the convention and emerge as a national committeewoman for the party—and yet you are not really a part of the machine?" And I said to the person, "Don't you recognize that the revolution is here, that the people are making their decisions now on the basis of what you can do to help liberate them?" And that's why I am rising. Because even though the bosses kept trying to stop me at the convention, when I ran in the district, the people kept telling them by their support, "Why don't you leave her alone?"

I think now that they recognize one thing about me,

if nothing else. I love a good fight. And you don't tell me that you're going to try to destroy me without my attempting to show you what I can do with my 100-pound self.

God bless all of you. Pray for me, because I am going to need prayers. But one thing I do know, that the black people in this country will be very proud of their first black woman to go to Congress, because I'm going to live the life and fight the good fight. Because the time has come when we can no longer be the passive recipients of whatever the politics or the morals of a nation may decree, but that we shall rise up and fight for that which we believe.

Forget what the world will say, whether you're in your place or out of your place. Forget conventionalism. Speak your best words. Do your best deeds. Fight your best fight, looking only to God and to your conscience for approval.

A PROPOSAL FOR

COMPREHENSIVE SUPPORT OF BLACK OFFICIALS IN STATE AND LOCAL GOVERNMENT IN THE SOUTH

Prepared by:

Voter Education Project

Southern Regional Council, Inc.

Southern Center for Studies in Public Policy
(Clark College)

Atlanta, Georgia

November, 1972

I N T R O D U C T I O N

The November 1972 elections represent another milestone in the increasing number of black Southerners elected to public office in the South. Parallel to the emergence of the black elected official is the increasing presence of black Southerners in appointed positions in Southern units of government. This increasing presence, however, is still proportionately small, and the goal of substantial representation at all levels of governmental decision-making will depend in significant measure on the performance of the current pioneers.

The black public official is operating today under severe handicaps. He lacks the experience and know-how of decades of participation in the governmental process. He lacks access to research and training resources which today are recognized to be of critical importance to effective government in a complex society. And where he has technical access, he lacks confidence in the good will of predominantly-white oriented resources.

Effective government in the South, at all levels, requires a government in which all citizens, black and white, have representation and involvement. If the black Southerner is to speed up the effectiveness of his involvement, he needs substantial assistance, and he needs it as quickly as possible.

This proposal sets forth a program for insuring competent research, training and technical assistance for black Southerners in government in the region. Although the impact of this program would reach into every level of black participation, emphasis is placed throughout on the elected official, whose responsibilities and needs are greater.

BLACK PUBLIC OFFICIALS IN THE SOUTH*

Emergence of Black Officials

One of the most remarkable developments in this troubled nation during the last few years is the emergence of an increasing number of black public officials in the South. In 1965 seventy-two black officials were identified, and many of these were in all-black towns. By the end of 1968 the number had leaped to 388. In 1970 the number grew to over 650. In 1972, prior to the fall elections, there are more than 950 black officials.

Each year more blacks are running for office, and more are being elected. It is likely that there will be more than 2,000 black officials in the South by 1975, with the list growing all the time. Some idea of the potential increase in black officials can be gained by observing that blacks constitute 20 per cent of the population in the South, but they presently hold only about 1.2 per cent of the elective offices, ranging from .03 per cent in Texas to 2.7 per cent in Mississippi. While it is true that blacks still hold only a tiny fraction of the public

*The emphasis in this proposal is on black officials, but public officials from other minority groups - Chicano and Indian for example - have similar needs and should be included in the program proposed herein.

offices in the South, the change that is taking place can be further illustrated by noting that over forty per cent of all the black elected officials in the United States are located in the eleven Southern states of the Old Confederacy, where few black citizens could even vote a short time ago.

Variety Among Black Officials

There is great variation among these black officials - in their education, their experience, their ideology, the size and nature of their constituencies, and the circumstances under which they must operate. Many of these officials did not attend high school, while some have college and even graduate degrees. Some of them have been small farmers or blue collar workers all their lives, while others have become successful lawyers or managers of businesses. Some of the officials could be labelled radical, some liberal, some conservative, and some even reactionary in their politics. Some of them are justices of the peace in sparsely-populated rural counties or city councilmen in hamlets of a few hundred persons. Others are vice-mayors of some of the largest cities in the South or members of state senates. Some represent the only black presence on an otherwise white city council or school board. Others serve on governmental bodies where blacks constitute a majority, including four county commissions. There are also a number of all-black towns, and plans are being made to incorporate more such areas. Some of the black officials work with generally cooperative white colleagues and have access

to considerable resources, while others must deal with hostile whites, who deliberately try to sabotage or isolate black officials.

Problems Faced by Black Officials

All of these officials, from the grade school-educated justice of the peace in backwoods Alabama to the successful and sophisticated attorney who serves as vice-mayor of Atlanta, are having problems in conducting their offices as effectively as they would like. The size and nature of the problems vary between officials, but all are serious.

Many problems are related to the official's lack of experience and his unfamiliarity with the powers and procedures of his new position.

* A newly elected coroner may not know how to fill out a death certificate or what steps to take when a death occurs under unusual or suspicious circumstances.
* A new school board member may not know that he has the right to demand certain information from the white school superintendent about conditions which adversely affect black children, or he may not be familiar with the budgetary process and may unintentionally approve policies and programs which properly informed, he would oppose.
* A city councilman may believe that a city department is discriminating against black citizens but not know what

action he can take to produce necessary changes. The city councilmen in an all-black town may not know how to petition the county commission for tax exemption for the industry they are trying to attract. A mayor may not be familiar with the management and financial procedures needed to administer his office effectively.

* A county commissioner, living in an area of low employment, few medical services, inadequate sanitation system, and no recreational facilities, may not know how to seek federal grants designed to alleviate such conditions. He may not know how to petition the state highway department to modify its width requirements so that more roads in the black community can be paved. Or he may not know how to use the commission's financial power to influence the county school board to stop their discriminatory practices.

Many other problems stem from the harassment inflicted upon black officials in some areas.

* A newly elected chancery clerk may be given absolutely no help from the white incumbent and even be denied access to the office until inauguration day, when the entire staff walks out without a word.
* A school board member may be tricked by his white colleagues into voting for the virtual giveaway of school property to a segregation academy or voting against the acceptance of federal programs which would aid black children.

* A city councilman may find that his white colleagues meet in secret caucus to decide all questions prior to their official meetings, which are thus turned into empty formalitites.
* A justice of the peace may discover that other law enforcement officials illegally narrow his jurisdiction and cheat him out of cases to the point at which he has virtually no job at all.
* A county commissioner may be unable to obtain trustworthy advice from the white county attorney.
* A court clerk may not be appointed by the circuit judge to handle chancery cases, which had heretofore been assigned to the former white clerk.
* The urban city councilman or vice-mayor may be unable to secure cooperation from a city department when he begins to question whether their practices are equitable to all citizens or when he otherwise pursues issues which are unfamiliar or disagreeable to the tradition-bound bureaucrats.
* Black officials of many kinds may find themselves accused of mismanagement of funds, which in fact occurred during the tenure of their white predecessors.

Still other problems grow out of the black official's lack of access to needed information or resources.

* The sophisticated attorney serving on the school board

in a large city may be quite knowledgeable about the duties of his office, but not be fully effective in his job, because he is unaware of innovative programs being used elsewhere to deal with the same kinds of problems which he sees going unattended in his own system.

* The city councilman or county commissioner may not be informed that new resources for health care or job training are available from the federal government, and he loses the opportunity to try to persuade his colleagues to apply for such funds.
* The black state legislator may be overwhelmed by demands and responsibilities, unless he has staff assistance beyond that normally available to white colleagues, because there are so few blacks in these bodies and those who are elected have to serve constituencies much larger than the district in which they are elected.

The foregoing examples represent but a small sampling of the types of problems which black officials are experiencing today in the South. As these illustrations suggest, many black officials are not presently accomplishing the results which they would like or their constituents expected.

Results of the Election of Black Officials

The election of black officials has, of course, produced some significant results for black southerners. It has been of

great symbolic importance to have blacks occupying public offices which previously were the exclusive preserve of the white society. There have also been some concrete improvements achieved by black officeholders. This is perhaps most dramatically illustrated by the improved treatment of black citizens when blacks become sheriffs, town marshals, and magistrates. And, though it is not so easy to measure, there must be instances where the actions of city councils, county commissions, and school board are in fact more equitable because of the participation of black members. But these accomplishments are not enough.

Consequences of Ineffective Officials

Ironically, the present joy over black electoral victories could be the prelude to a great embitterment. It is not alarmist rhetoric, but simply common sense, to raise the question of what will result if the long and costly struggle for full citizenship and political representation should prove to be an empty achievement. During the 1960's southern blacks invested a great deal of faith, work and suffering in overcoming the barriers to their participation in the political process. But what will be the reaction, both among those three and a half million blacks already registered and among the approximately two million blacks still unregistered, if the election of blacks to public office makes no substantial difference in improving the welfare of their

constituents? What hope is there for blacks, or for anybody, in this society if a patient and faithful adherence to the rules of a democratic political system leads only to frustration and a recognition that all their efforts were based on a cruel hoax?

The long and arduous struggle by blacks for political participation, as well as the requirements of a just and democratic society, demand that black citizens receive more benefits from the governmental system than they are presently receiving. Of course, black political participation can have positive influences on the output of the political system in ways other than the election of black officials. For example, the increasing black electorate may have substantial effects on the way white officials respond to the interests of black constituents, and this is a highly desirable and acknowledged goal. But it is unquestionable that now and probably for many years the chief means of changing the southern political process into a more responsive and beneficial one to blacks is through effective black public officials.

Thus, in addition to the need to elect additional blacks to office, there is a critical need that black officials be truly effective in their offices. Black officials must demonstrate that their election means a better life for their constituents. If this is accomplished, then the continued movement of blacks into

the political process through registration and voting and the election of more officials, black and white, who are responsive to the needs of black citizens, will follow.

Whether or not southern black officials can be effective in making the machinery of government respond positively and meaningfully to the needs of black citizens depends upon many things, some of which may be independent of anything which these officials do. But certainly the manner in which these officials perform the duties of their offices is a crucial element in determining the answer to this question. Poor performance by these officials will be sufficient to provide a negative answer. The more fundamental question of whether the groups and individuals who exert the major influence in this country will share the country's resources equitably with blacks will be conclusively answered only after all preliminary conditions, such as effective performance by black officeholders, have been met.

Need for Assistance

To be effective, black officials must receive assistance. Assistance is needed, first of all, because of the past failings of the American political system, which barred blacks from participation in that system. Assistance is needed, secondly, because the resources normally available to white officeholders

are still not nearly so accessible to black officials.

Most of the black officials now being elected in the South lack any previous governmental experiences. This does not mean that these men and women are lacking in ability. Many of them are unusually talented, and few, if any, are less able than the whites they replace. It does mean, however, that these new officials need information and training programs on the duties and procedures of their offices. This is especially true since many of these officials operate in hostile environments where their mistakes would be given unusual attention. They also need aid in locating the outside resources which can make their offices more productive and aid in manipulating the procedures involved in tapping these resources.

PREVIOUS EFFORTS TO ASSIST BLACK OFFICIALS

During the past few years several efforts to assist black officials have been made, most of which provided some valuable contributions but fell far short of meeting the total needs.

Voter Education Project

The largest program of assistance in the South was conducted by the Voter Education Project. After sponsoring several conferences for candidates and elected officials, VEP established service centers for elected officials on the campuses of five predominantly black colleges: Clark College in Georgia;

Tougaloo College in Mississippi; Southern University in Louisiana; and Miles College and Talladega College in Alabama. Except for the Tougaloo Center, which opened in 1968, the centers began operation during the first half of 1969. The Talladega Center was closed after one year, but the other four operated until the summer of 1972, when the grant supporting them ran out and other funds were not obtained.

The staffs of these centers consisted of a director, a secretary and occasionally some student interns. Although there were considerable variations in the way the individual centers operated, in general they conducted the following activities: organized workshops on the duties of office and on federal programs, did research on certain problems confronting officials, distributed information to officials, supervised student interns, and referred officials to other resources.

The Voter Education Project also had three state offices -- in Arkansas, North Carolina, and South Carolina -- which provided to officials in those states some of the same assistance as the service centers did in their states. In addition, the Atlanta VEP office organized several conferences for officials, provided some interns, and arranged for some professional consultant services.

SEDFRE, the Joint Center for Political Studies and Other Organizations

Another organization which has provided assistance to black officials in the South is the Scholarship, Education and Defense Fund for Racial Equality, Incorporated. They have sponsored some conferences for officials, but perhaps their most outstanding programs have been the placement of full-time aides with the officials of Greene County, Alabama, and Fayette, Mississippi. These aides have worked in a variety of ways with the county commissioners and school board members in Greene County and with the city administration in Fayette.

The Joint Center for Political Studies, although its focus has largely been outside the South, has sponsored a few meetings and provided some consultant services on federal programs to officials in this region. Several other organizations--such as the Lawyers' Committee for Civil Rights Under Law, the Lawyers' Constitutional Defense Committee, American Civil Liberties Union, and American Friends Service Committee -- along with a number of individuals, have also provided services to some of the black officials in the southern states.

White Institutions

There are, of course, a number of predominantly white institutions and programs in the South whose purposes include providing assistance to public officials. It should be stressed that, for a variety of reasons, these resources have not been of

substantial help to black officials and are not likely to be in the near future. This is not to suggest that the whites who operate these programs deliberately discriminate against blacks, although there is still some of this in places. However well intentioned they may be, most of these programs do not have the experience, the necessary resources, the kind of attitudes, or the sensitivity to deal very effectively with the needs of most black officials.

Some whites simply are not interested in making their resources available to blacks. Some, who may be interested, do not know the techniques needed to accomplish their purposes. For example, a university-sponsored bureau of public administration may send letters to newly-elected black officials, offering in a rather general fashion the assistance of the bureau. The black officials, not being familiar with the bureau or the kinds of specific aid available and generally mistrustful of all white institutions, do not reply. The bureau feels rebuffed and makes no further effort to offer its assistance. Another problem is that some whites treat the blacks in such degrading or paternalistic manner that the relationship cannot develop into a fruitful one. Another problem is that few, if any white institutions, are designed to provide the range of services needed by some black officials. White officials are assisted by an extensive informal network of

associations, interests, and resources which are not available to black officials, who therefore require certain kinds of assistance which whites do not need from the formal institutions designed to serve public officials.

The barriers to white institutions effectively serving the needs of black officials will become even clearer in subsequent sections which describe the problems involved in assisting black officials and the kinds of assistance they need.

NEEDS WHICH FUTURE ASSISTANCE PROGRAMS MUST MEET

No one would claim that the services mentioned above, though quite useful in places, have been adequate to meet all the needs of the ever growing number of black officials in the region. As indicated, most of the VEP programs have been terminated, and most of the others are either occasional or very limited in scope. If the obvious and pressing needs of the southern black officials are to be met, new and more comprehensive programs must be created -- and quickly. In designing these new programs, a number of lessons derived from the previous experiences should be taken into account.

Developing Rapport with Officials

Contrary to what some people had assumed earlier, most black officials do not readily initiate requests for assistance.

It is necessary for the organization offering assistance to develop considerable rapport with most officials before they will discuss some of their real problems and seek or accept assistance in dealing with these problems. The experience of the Voter Education Project and other groups clearly indicates that such rapport cannot be achieved through correspondence or a hasty visit, but instead requires sufficient time and contact to allow the officials to become familiar with the organization and feel trust in it. There have been many instances when persons with important skills to offer and presumably the best intentions in offering them were virtually ignored by officials who could have genuinely benefitted from the services which were offered. On the other hand, there are instances when after a period of weeks or months, and several visits, a person offering assistance began to receive numerous requests for help. Many black officials, assuming public office for the first time and frequently after a long struggle, are understandably and justifiably cautious in disclosing to others their problems and needs. Furthermore, the experience of blacks in this country argues strongly that they should exercise suspicion towards generous but unexpected offers of help from strangers, white or black.

Thus, any realistic efforts to provide serious assistance to black officials in the South must take into account the absolute

necessity for a strong outreach component. No matter how eager an organization may be to assist or how much help they have to offer, their program is not going to be widely successful unless it has the capacity to develop genuine rapport with the officials.

With black officials in large urban areas, the problem is somewhat different. Generally more educated and sophisticated than officials in small towns and rural areas, many of these men and women have to be convinced that an organization has the skill and resources to render a truly desirable service to them. Usually these men and women are quite busy and will give little attention to an organization until this persuasion is accomplished, and the burden of proof is on the organization.

Increasing Officials' Awareness of Need

Another difficulty in assisting officials is that many of them do not know exactly what kind of assistance to ask for. There are, of course, instances where an official's pride discourages him from admitting that he needs any help, but this is not the major problem. It is rather that the official is unfamiliar with his office, or the full potential of it, and thus is not aware of all that he needs or could use. To help these officials, an organization must be able to perceive unexpressed needs and suggest to them, albeit in a subtle and respectful manner, how they can benefit from certain kinds of assistance.

In varying ways, this applies to almost all officials.

There are several types of assistance which are needed.

A. Providing Orientation to Office

The first need is to provide newly-elected officials with an orientation to their offices. While most officials have a general understanding of the office they have won, this understanding is frequently quite superficial. Most of them need a great deal more knowledge about the powers and procedures of their new offices. This orientation should begin between election day and inauguration day. These initial sessions can give a general introduction to the offices, including the presentation of materials which the officials can take home with them for further study.

But the orientation process must continue after the officials take office. The process cannot be completed before inauguration day for several reasons. For one thing it would be difficult to find sufficient time; these officials are tied up with other jobs, and the holiday seasons between November and January further limit the time which can be given to such training. Another reason is that some of the instruction will not be fully effective until the official experiences the actual demands of the job. Inevitably, then, the officials need to receive "on-the-job" training, and it may take a number of weeks to complete this,

since only a limited amount of time each week will be available for instruction.

B. Assisting With Special Problems

While the first step in assisting officials is a general introduction to the formal powers and procedures of their offices, there is also a need to assist them when they begin to confront some concrete difficulties. Especially when they encounter unusual problems which fall outside the normal functioning of the office, they may need help. For example, a new justice of the peace may know the definition of his powers, but may need aid when faced with a particular jurisdictional dispute with other law enforcement officers in his county. A court clerk may have learned the way her office is supposed to operate, but then may discover that part of the system used by the previous clerk does not fit this model. A county commissioner may suspect that the technical rationale he is given for a water and sewer system which largely omits black areas is wrong, but he may need help in assembling the data needed to effectively attack this plan. In these and countless other situations there is a need for an organization which can provide expert assistance to these black officials.

Obviously, the problems of new officials are magnified when they also must deal with overt harassment by resentful

whites. While there have been instances in which white officials have been geniunely cooperative with newly-elected blacks and have assisted them in learning their new jobs, such occurrences have not been frequent. The most common practice has been for whites to ignore their black successors, and for whites to provide no real assistance to black colleagues. And, worst of all, there have been instances when whites have deliberately tried to make the job as difficult as possible for black officials.

C. Providing Information to Officials

Although many black officials in large cities can also benefit from orientation programs, they generally are better acquainted with the duties of their offices. But they, too, need considerable assistance as they try to pursue their jobs in an effective manner. The urban city councilman may be thoroughly familiar with his formal authority over a city department, but he may have great difficulty in securing adequate information from a city department when he begins to question some of its practices, and he may require independent sources of information. Likewise, the urban black school board member may know all about the way Title I programs are supposed to work, but he may be largely at the mercy of the superintendent in trying to find out exactly how those programs are in fact operating in his city. These officials may be just as knowledgeable

about their roles as public officials as any of their white counterparts, but the normal sources of information and other assistance within the system's bureaucracy may not be of the same value to them as to white officials. In such situations, the black official cannot really be fully effective without some outside forms of assistance.

There is also a need to distribute general information to officials. Not only do they need to be informed about resources which are available, but they need to be told, or reminded, of changes in laws and regulations pertinent to their positions, of important dates and deadlines, and any other kind of information which will help them do a better job or avoid mistakes and complications. This need applies particularly to those officials with lesser educational backgrounds or in isolated locations.

D. Assisting in Acquisition of Outside Resources

Another need of many black officials is to move beyond a mastery of their routine duties and learn ways in which an active and imaginative use of their office can bring greater benefits to their communities. For example, city councilmen, county commissioners and school board members need information on federal, state and private programs available to communities such as theirs. In fact one of the primary concerns of most black officeholders is how they can secure the outside resources

to improve the standard of living among their constituents. This is true even of officials who occupy offices which are not formally involved in serving these functions in that community. Because they are concerned community leaders, officials such as constables, court clerks or sheriffs may be interested in such programs as economic development, education or recreation.

To provide assistance in securing the needed outside programs, it is necessary to acquaint officials with available programs, help them determine whether their community is eligible for the program, help prepare the appropriate applications, and then sometimes guide the application through the required bureaucratic channels.

In acquainting officials with such programs, it is usually inadequate just to send them the formal descriptive literature of the programs. A simple written description may help spark their interest, but it is usually necessary for someone well acquainted with the programs to talk directly with the officials and discuss the possibilities and regulations of the program in relation to the official's own community. Workshops can serve this purpose for a number of officials at the same time. There have been instances in the past when officials have been sent printed information about federal programs, but they made no real effort to investigate the programs until after they had

attended a conference at which the programs were discussed and someone could answer their questions.

After an official has determined that he is interested in a program and that his community is eligible for it, it is crucial that he receive assistance in preparing an application. In addition to the fact that many officials are already overworked to the point at which they simply do not have the time to prepare an application, and there may be no one else in the community to do it, sometimes the complexity or the appearance of complexity in preparing the application may prevent the community from completing the process. In other instances an application may eventually be completed by someone in the community, but only after an inordinately long time.

It is to be expected that officials with little formal education may have difficulty in preparing applications, but the circumstances described above also prevail among college educated officials. These men and women usually hold one or more jobs in addition to being an elected official, and as a leader in the community, they are unavoidably involved in many other activities besides their official duties as an officeholder.

Still another need in this process is for someone to shepherd the application through the bureaucratic channels that it must follow after it is prepared. Sometimes an application

is unacceptable for funding for one minor technical reason or another, but the community may wait for months without knowing this and taking steps to rectify it. Someone more familiar with the bureaucratic channels could prevent these long delays and unnecessary disqualifications. Moreover, although blacks have precious few points of influence in governmental bureaucracies, the few opportunities for aiding the chances of one of their proposals should be exploited to the fullest.

However one may try to explain the reasons, experience has shown that it is unrealistic to expect governmental bureaucracies to provide the necessary assistance to poor black communities to allow them to take advantage even of those government resources specifically designed for such localities and situations. There have been exceptions to this in a very few special situations, but the general point is indisputable. If black officials are not provided with the needed technical assistance from other sources, then few of the drastically needed resources are going to come to their communities.

E. Assisting Black-Controlled Governments

When blacks constitute a majority of a city or county governing authority, their needs are both greater in scope

and of far more significance than when blacks occupy only a minority of the positions on such boards.

These counties and towns, where blacks hold real power over significant governmental institutions, are the prime testing grounds for what it can mean for blacks to participate in the political process. If these officials fail to perform effectively, then not only will their own constituents suffer, but the whole movement toward greater black political power will be seriously hurt. If they succeed in bringing a better life to their communities, then their constituents will benefit immediately and the entire society will benefit eventually.

The black officials in these circumstances need all the kinds of assistance which other black officials need, but they need more of it. The assistance must be more intense, more sustained, and more varied. From the start, assistance should be available on the whole array of functions performed by a county or city government, and it must continue for a considerable amount of time.

F. Summary of Services Needed by Officials

The comments on the preceding pages give only a slight indication of the kinds of needs which southern black officials have and the kind of services required to meet these needs. A program designed to respond effectively to these circumstances

would have to have the capability to do at least the following things:

1. Develop close rapport with the officials in the field
2. Provide expert advice on the operation of local government offices
3. Provide legal assistance
4. Assist officials in seeking government and private grants
5. Provide the kinds of research needed to solve some of the problems which confront officials or to propose new programs and policies.
6. Keep officials informed of pertinent information regarding their jobs
7. Refer officials to other appropriate sources of information and assistance
8. Respond immediately to crises
9. Provide sustained, long-range assistance
10. Anticipate and prepare for yet unarticulated needs.

Although some black officials in the South have received aid from existing programs - notably VEP, SEDFRE and the Joint Center - none of these agencies are prepared to meet in quality or quantity the expanding demands. And the very concentration of black officials in the region argues for assistance from regionally - based programs.

PROPOSED NEW PROGRAMS TO SUPPORT BLACK OFFICIALS IN THE SOUTH

A new system of providing assistance to black officials in the South is needed. This system should incorporate all the capabilities just discussed, ranging from direct field contact with officials to highly technical research and policy analysis of current issues in government.

It would be self-defeating to include all these capabilities in one organization. We propose a system that would include (1) special institutes in a number of states with large numbers of black officials, with each institute having the capability to establish close working relationships with communities where black officials serve, and (2) a regional institute which could provide resources in support of the state programs, provide graduate training, sponsor specialized training and technical assistance for those working with state programs, and conduct research and policy analysis of issues of general interest to black and poor Southerners.

We explicitly understand the complexity of the program we propose. We know that resources to develop a number of state programs simultaneously will be difficult to secure, but yet we believe that a significant start must be made on one or two state

programs immediately. We believe that there must be close relationships between the state programs and the regional program, but these relationships must be nurtured as both programs are developed, not made dependent on the initial creation and maturation of the regional program.

These programs will be designed not just to meet the current needs of black officials, but also to develop resources and strengthen institutions which can insure that black citizens and officials will be better equipped in the future to secure their rightful place in this society. The number of blacks trained to provide technical assistance to communities around the South will be greatly expanded. Black educational institutions will be encouraged to involve their resources much more extensively in the black communities around them, and the resources of these institutions will be increased. New institutions and programs will be created to complement and assist existing ones.

While the primary emphasis of this proposal is on assisting black officials and black citizens, it should be noted that the programs to be developed will also make substantial contributions to many white citizens. The research and policy studies conducted by the regional institute should have an influence on public programs which will benefit poor whites as well as blacks. The assistance to black officials will, of course, lead to better public service for both white and black constituents of that

official. Some of the assistance programs can provide direct services to white officials. And, the creation of services for black officials may stimulate predominantly white institutions to improve their services to white officials, as happened recently in Louisiana when a training program for black justices of the peace led the state to institute training programs for all justices of the peace, which they previously had not provided.

The regional institute will be created first, with the capacity to provide some Technical assistance to limited classes of elected officials. One of its initial functions will be to assist in the development of state programs, together with the Voter Education Project and the Southern Regional Council. As these state programs become established, they will become increasingly independent of the sponsoring institutions and will become affiliated with educational institutions in their respective states. Although the funding for the state programs may initially come through the Southern Regional Council, it is expected that they will develop the capability of obtaining their own funding in future years.

Three institutions with long and extensive experience in the South, especially among the black communities, will be the primary sponsors of the creation of this new system of assistance -- the Voter Education Project, the Southern Regional Council, and

Clark College. Numerous other institutions and organizations will also be involved in the operation and future development of the programs.

The Southern Center for Studies in Public Policy, situated at Clark College, is concerned with developing opportunities for faculty, students and the community leaders in the formulation, content and implementation of public policy affecting people in the South. The Center serves the entire Atlanta University complex. Among other things the Policy Center houses community action programs, sponsors forums and seminars, supports research, assists elected officials in Georgia and sponsors a curriculum in Public Policy Studies open to both graduate and undergraduate students at the Atlanta University complex.

The Southern Regional Council, Inc., (SRC), a private, non-profit, human relations organization, was established 28 years ago to help "attain the ideas and practices of equal opportunity for all peoples in the South."

With the changing circumstances of the '70's, SRC has reexamined its assumptions, structure, and functions in the light of new imperatives. The Council defines its task as one of alerting, sensitizing, educating, and mobilizing Southerners on the issues which will determine how well this region develops and produces opportunity and a better quality of life for its

people. The Council's special concern is justice, equality, and real opportunity for the black Southerner and the poor Southerner. Working through task forces of its members and other concerned Southerners, SRC is assessing the region's problems, and will be monitoring national policies and programs that affect the South, documenting ways in which delivery systems fail Southerners, assisting organizations in demonstrating better ways of administering essential services, and establishing a network of communication between SRC and others who share its goals.

The Voter Education Project, Inc., a private, and partisan corporation, assists minority political participation in 11 Southern states. It was created in 1962 as part of the Southern Regional Council, Inc., and was separated from it in 1970, largely as a result of the 1969 tax reform law, to become an independent corporation.

Initially, VEP was established to investigate the causes of low political participation by blacks and to involve more minority group members in the political arena. In the first phase of operation, VEP funded local voter registration drives, largely through major civil rights organizations. Program areas now include four major activities - Voter Registration, Citizenship Education, Assistance to Black Elected Officials, and Research. In its present phase of operation, VEP works directly with

indigenous groups at the local level.

The activities and perceptions of the Voter Education Project are central to the functions of the technical assistance program. VEP, with its various service centers, pioneered in creation of technical assistance to elected officials on a systematic basis. Much of VEP's experience is incorporated in recommendations for the expanded program which is outlined in the body of this proposal. Through its voter registration drives and state tours. VEP has built up a network of people in the various Southern states, many of whom may be relied upon to make important and lasting contributions in the development of the state delivery systems. As we note elsewhere, sponsorship of the program will be shared jointly among three organizations, but much of the thrust and development of technical assistance programs will be made possible through the continuing work of VEP in voter education and registration.

The details of what the state programs will do, how they will develop, and how they will be related to one another will be explained in the following sections.

STATE PROGRAMS

Establishment of State Programs

As the regional program is beginning to develop, concurrent efforts to develop the first of the state programs must begin. Need is so great across the South for basic assistance and training and, at the same time, for more general research and analysis of public policy that neither the regional institution nor the state programs can be delayed. Their interdependence is clearly apparent. A firm beginning of the regional institution will facilitate training for state staffs at the same time that realistic needs of states will help formulate the direction the training program should take. Assisting in supervising field experience or on-the-job training of state staffs will help define major areas of public policy concern for the regional institution, and the practical matters of what kinds of information and what types of research are needed will be clarified. Such an initial relationship will be encouraged by the three sponsoring institutions, and the independent but interdependent organizations that develop will provide a stronger network of institutions to serve public officials.

Setting up the state programs will be the responsibility of an ad hoc board put together by the three sponsoring institutions, SRC, VEP, and Clark College. Members of this board will be elected officials, representatives of higher education

institutions, staff and/or board members of the sponsoring institutions, community leaders, and representatives of other pertinent agencies. While the grant for the state programs will initially be handled through the Southern Regional Council, as fiscal agent, and salaries paid directly by SRC, the ad hoc board will assume responsibility for initial policy and program. As soon as an office in a college is established, funds will be channeled through the college.

The ad hoc board will have the following responsibilities, to be accomplished with the help of the three sponsoring institutions:

1. Because it will be impossible to initiate more than one state program at a time, the ad hoc board will select the first state in which a state program is to be established. As the first state office begins to take shape, the board will select an additional state, and so on. Although it is desirable that each southern state have an office, it is recognized that chances of obtaining enough money at the outset are slim. Therefore it is proposed that four states be chosen initially for programs, with other states being added after the first programs are underway and additional funds are available. The criteria for selecting states will include: (1) a large number of black officials;

(2) a lack of, or relatively few, resources, to assist these officials; and (3) the presence of circumstances which will facilitate the development of an effective program. Tentatively, states which may be included for consideration are Alabama, Mississippi, and Louisiana. It is probable that the regional institute, since it is to be located in Atlanta, could serve the state of Georgia through providing a field representative who could work directly with the staff of the regional institute.

2. The ad hoc board will negotiate with an educational institution in the state to become the initial sponsor for the program, but it will not seek immediate commitment for institutional support. The state office will be established, wherever possible, on the campus of a predominantly black college or university within the state. If no black colleges are located in the state or if none can perform this host function, the state office will then be situated on the campus of an institution with substantial minority enrollment. The experience, interest, and capacity of the college in operating public interest kinds of programs will be determining factors in the choice of a location.

3. The ad hoc board will recruit the initial staff for the first state program and provide for up to three months of training for that staff as a unit. Some of the training will be handled by classes organized in Atlanta or in the selected state, but utilizing the resources of the regional institute, universities, other institutes, and elected officials to give a thorough understanding of the processes of state and local government and the functions the staff will perform for elected officials. Training in Atlanta will be followed by on-the-job training in the states selected until the board concludes that the staff is ready to begin operation. It is likely that after staffs have worked in their states for awhile, they will be able to receive additional or more specialized training for which they see a need.
4. After the state program has been initiated, the ad hoc board will choose an advisory committee in each state, of similar composition to the ad hoc board, to assist in establishing the kind of program needed in the particular state, and to begin, with the ad hoc board, negotiations with the sponsoring institution for incorporating the program into its institutional program.

Such an advisory committee might then become the permanent advisory or governing committee under arrangements worked out with the affiliated college or university.

5. While the initial funding for individual state programs will be the responsibility of the three sponsoring institutions, with fiscal policy control in the hands of the ad hoc committee and administrative fiscal arrangements made through SRC, after a state office is well established in its own operation and with its affiliated college, it will begin to raise its own funds. As it develops this capacity, it will operate entirely independently of the ad hoc board.

Field Activities

The first function of the state program will be to develop rapport with the individual black officials. Through an active field presence, the state staff will become thoroughly acquainted with all officials, the kind of social and political situation in which they must operate, their particular needs, and the best ways of providing services to them. By winning their trust and respect, the staff can define more accurately and thoroughly the real problems of these officials and generate among them a receptive and cooperative attitude, so that effective assistance

can be given. In time the relationship between the officials and the staff should result in officials' initiating requests for help from the state program whenever they have problems.

The staff must be capable of providing a great deal of assistance themselves. They must be quite knowledgeable about the powers and procedures of the various local offices which blacks hold, and they must be familiar with the general structure and operation of the state government and how this relates to specific local offices. They should be able to assist officials on most of the routine problems which are encountered. When special problems of unusual difficulty or requiring special kinds of expertise arise, the staff must be able to recognize the nature of the problem and know where to turn to find the right kind of help. In some instances they will locate these resources in their own states and act as liaison between the officials and the resources. In other instances, the state staff can call upon the regional institute to provide an expert staff member or they can contract directly with an outside consultant to deal with the problem.

In their regular visits with officials, the staff will learn of many problems and will be ready to respond to them on the spot. The staff will also have to serve as a kind of crisis trouble shooter, going to the scene of a particular problem when

they hear about it, either from the official or someone else, and providing immediate assistance.

Orientation and Training Programs

The state office will provide orientation programs for all officials. These programs will present thorough instruction about the duties of office, respond to the particular problems which the officials are beginning to face in the actual performance of their duties, and suggest ways in which an official may creatively use his office to the greater benefit of his constituency. These training programs may take a variety of forms. They will have to be organized in such a manner as to permit the officials, whose jobs may prevent them from leaving their community at certain times, to participate. They may have to be scheduled for a series of weekends, or meet one night each week for several weeks. Also the same program may have to be held in several locations around the state. Otherwise many officials would be unable to attend.

Because of these circumstances, it would be particularly difficult or expensive to bring in outside experts to conduct all these sessions. On some topics it will be necessary to utilize outside experts, but the state staff must be able to conduct most aspects of these training programs. When special assistance

is needed, the state staff can arrange for the regional institute to send in resource persons, when available, or they can locate elsewhere the appropriate resource people.

It is tempting for someone to suggest that training programs such as the above are too cumbersome and expensive and that if the black officials really wanted instruction and assistance, they would make the necessary arrangements to attend centralized programs. It must be stressed that such a suggestion is unrealistic. The experiences of organizations involved in providing technical assistance to elected officials clearly demonstrate that such approach will reach only a limited number of officials. If a program is truly serious about assisting black officials, it must accept the difficulties involved and use approaches which will get around these difficulties, no matter how inefficient, expensive, or tedious these may appear.

These training programs will focus not only on the formal powers and procedures of particular offices, but also on other matters which will assist the official in doing a better job. For instance, some officials will need instruction and practice in parliamentary procedure. Some will need assistance in office management, in keeping public records, in the budgetary process, and so forth. Still another type of training will deal with effective tactics and strategy for officials who work on multi-member boards, particularly if these boards have white majorities.

SEDFRE, the Joint Center for Political Studies and Other Organizations

Another organization which has provided assistance to black officials in the South is the Scholarship, Education and Defense Fund for Racial Equality, Incorporated. They have sponsored some conferences for officials, but perhaps their most outstanding programs have been the placement of full-time aides with the officials of Greene County, Alabama, and Fayette, Mississippi. These aides have worked in a variety of ways with the county commissioners and school board members in Greene County and with the city administration in Fayette.

The Joint Center for Political Studies, although its focus has largely been outside the South, has sponsored a few meetings and provided some consultant services on federal programs to officials in this region. Several other organizations--such as the Lawyers' Committee for Civil Rights Under Law, the Lawyers' Constitutional Defense Committee, American Civil Liberties Union, and American Friends Service Committee -- along with a number of individuals, have also provided services to some of the black officials in the southern states.

White Institutions

There are, of course, a number of predominantly white institutions and programs in the South whose purposes include providing assistance to public officials. It should be stressed that, for a variety of reasons, these resources have not been of

The officials need to learn about the politics of office-holding and government adminstration; as well as the formal duties of office.

Preparation of Materials

It will be necessary in many instances for the state staff to prepare materials for the workshops and manuals for the officials to use in their offices. Up-to-date manuals on many offices in these states do not exist, and some of those which do exist are too complicated for the novice official, particularly if his educational background is not strong. With the experience of participating in training programs and using simplified manuals, an official will be able to use increasingly complex materials as he goes along. The staff of the regional institute can help in the research and preparation for some of the materials needed by the state program but it will be necessary for the state staff to tailor the information provided by the regional institute to the specific requirements and practices in their states, and they will have to assume full responsibility for preparing materials on the numerous local topics which the regional institute has not dealt with. For example, the regional staff may prepare materials on the operation of city councils, county commissions, or school boards which will be of value to such officials in all states, but it will be necessary for the

state staff to add the specific regulations and peculiarities which exist in their individual state. Furthermore, there will be offices or practices in each state which may not have the general interest to warrant the regional institute's attention.

Research and Staff Assistance

For some officials, such as state legislators and councilmen in large cities, who must stay informed on a large number of complex and rapidly emerging issues, the state program will provide research and staff assistance. Student interns working under the supervision of staff members of the state program, can be assigned to them. Together, the interns and the state staff can assist the official in keeping abreast of the many issues on which he has to act. They also can research the questions of particular interest to the official, provide him with the material he needs to sponsor legislation, investigate conditions in the state, or otherwise help him bring to public attention movements and conditions which are of crucial importance to black citizens. It must be emphasized that the assistance provided a state legislator, or any type of official who in effect legislates, will never attempt to influence his views or actions. Instead the assistance will be in response to specific requests from the legislator or will be in the form of objective, non-partisan information.

Assistance with Federal and State Aid Programs

In addition to sponsoring the programs designed to train the officials on the duties of their offices, the state staff will also organize courses on federal and state assistance programs. These courses will be concerned with programs relating to water and sewer systems, economic development, neighborhood facilities, health care, recreation, beautification, urban renewal, housing, day care centers, job training, adult education, school lunches, compensatory education, and so forth. After workshops are held, the state staff will go into particular communities and help prepare applications for some of these programs. They will help gather the necessary data for the applications, help the local officials and residents define just what kind of program they want, and help them find matching resources, when these are required.

The state staff members cannot, of course, be expert on all the programs in which the officials may be interested. But the staff can acquire a considerable familiarity with the programs and can work under the direction of experts affiliated with the regional institute or other professional consultants. The outside expert will have to visit the community on occasion, but the state staff can do much of the work under his guidance without his presence.

Distribution of Information

Another function of the state program will be to distribute useful information to the officials. Such distribution can sometimes be accomplished by a simple mailing, but on some particularly important or complex matters it will also be necessary to follow up the mailing with personal communication, either through individual visits or larger meetings. Among the types of information which the staff might communicate to the officials are the following: changes in election laws or the laws regarding the conduct of their offices; new programs which state, federal or private agencies are offering; changes in existing programs which are of interest to these officials; reminders of when important deadlines and filing dates are coming up; and so forth. To supplement the notices on some of these matters, it may be necessary for the state staff to prepare materials which make the meaning or significance of the notice clearer.

In order to keep black officials informed of certain developments which are of importance to them and the black community in general, it will be necessary for the state staff to monitor the activities of certain state and federal agencies. While it would be impossible for the staff to investigate all governmental activities, they will be able to rely on the research coming out of the regional institute to alert them

to some of the specific activities which they should keep an eye on. For example, the regional institute may do an in-depth analysis of the various kinds of programs available to the state under the federal revenue-sharing act. Then the state staff can look into exactly what the state is doing or what individual communities may be allowed to do.

Another example would be for the state staff to inform officials about national investigations regarding use of Title I (ESEA) money and, upon request, cooperate with the officials in an investigation in how state Title I funds are being used.

Liaison With Other Agencies

There will be occasions when the state staff must serve as liaison with various agencies and persons in the state. Sometimes an official may want to voice a complaint or make a request to an agency, but may want or need someone else to assist him as spokesman. Either because they do not know the particular agency official, or because they are uncertain of their knowledge of the agency and its procedures, or because they are concerned that they would otherwise be ineffective, some officials in the past have requested others to do such things as speak to state legislators about a problem, ask the highway department to alter a ruling, ask the county commission to install a better traffic control system in their neighborhood, ask the county health department and commission to remedy an unsafe water supply,

and so forth. Someone on the state staff must be able to act as spokesman or advocate for some officials on matters of this kind, or the complaint or request may not be made, and the community will lose. State staff members may also need to serve occasionally as negotiator or trouble shooter when an official gets entangled in a controversy with other local or state officials.

Faculty and Student Assistance Programs

The state staff will also organize and supervise student internship programs. While the regional institute will be sponsoring programs to provide interns to some officials throughout the region, the state staff will encourage local educational institutions to develop programs allowing students to pursue activities which will benefit officials in that state, as well as make the students more aware of the problems of their state's black officials and the possibilities of future public service careers. The state staff will also encourage faculty members to become more involved in projects which will assist the officials. In other words, the staff will try to stimulate local colleges to become more involved in the needs of the communities around them and make available to these communities some of the resources which the institutions possess, but are not now sharing as fully and effectively as they might. Some of the faculty and students might work directly with officials,

while others might assist the state staff in its research, preparation of materials or other functions.

Staff of State Office

In order to perform the functions outlined above, which is far from a complete listing of the needs they will have to serve, the state programs will require a staff of at least four persons: a director, a field representative, a researcher, and a secretary. The director will of course be responsible for the overall operation of the program, from program planning to day-to-day administration. He will serve in most cases as the liaison between officials and the representatives of government agencies and other organizations, both in matters of normal business and in crisis situations. He must have sufficient standing to win the acceptance and respect of faculty members and students, as well as the personnel in other organizations which have resources which may be useful to the officials. Although he will have numerous responsibilities which will send him other places, it is also necessary that he spend a large amount of time in the field, visiting and working directly with the officials.

While the director will spend some time in the field, the field representative will spend most of his time visiting officials in their home communities. He will have the major

responsibility of creating and maintaining a good relationship between the officials and the state program. In addition to providing on the spot assistance, he will communicate the needs of the officials to the state, and sometimes regional office, so that other assistance can be arranged. Along with the director and others, he will help organize and conduct training programs, and assist in preparing applications.

The primary responsibilities of the researcher will be to provide the information needed by other staff members and by officials. He will respond to specific problems of individual officials, as well as investigate matters of interest to various types of officials in general. He will prepare manuals and other materials needed by the staff in their work with officials, and he will keep close watch on such things as election dates, filing deadlines, electoral law changes, and so forth. He will also assist in the data collection needed by some communities in the preparation of applications for government programs.

The secretary will assist all the other staff members and run the office when others are out, so that an official will always be able to reach someone in the office during regular hours when he has a problem.

Consultant Services

In addition to this staff, it will also be necessary for the state program to have substantial resources to engage professional consultation when the need arises. Inevitably, there will be numerous occasions when special kinds of expertise is required to help an official. The regional institute will embody some of the needed expertise, such as legal services and grantsmanship experts, but this capability at the regional level will not always be available when needed, and sometimes it will not be adequate for the local needs. For example, even though there may be a lawyer on the regional staff, he may not be able to respond immediately to a crisis occuring in a particular community. In addition, the nature of the problem may require the sustained involvement of a lawyer, which may be an unwise use of the regional staff member's time. Furthermore, the regional lawyer will not be admitted to the bar of most states, and a local lawyer will have to be used when a matter goes into state court. Another example would be the occasions when a very special need arises, whether it be in seeking a grant or in performing some highly technical function of an office, and the expertise of the regional office is not broad enough to encompass the needed assistance. And there may be instances

Consultant Services

In addition to this staff, it will also be necessary for the state program to have substantial resources to engage professional consultation when the need arises. Inevitably, there will be numerous occasions when special kinds of expertise is required to help an official. The regional institute will embody some of the needed expertise, such as legal services and grantsmanship experts, but this capability at the regional level will not always be available when needed, and sometimes it will not be adequate for the local needs. For example, even though there may be a lawyer on the regional staff, he may not be able to respond immediately to a crisis occuring in a particular community. In addition, the nature of the problem may require the sustained involvement of a lawyer, which may be an unwise use of the regional staff member's time. Furthermore, the regional lawyer will not be admitted to the bar of most states, and a local lawyer will have to be used when a matter goes into state court. Another example would be the occasions when a very special need arises, whether it be in seeking a grant or in performing some highly technical function of an office, and the expertise of the regional office is not broad enough to encompass the needed assistance. And there may be instances

when a regional staff member is capable of dealing with a problem, but he is inextricably involved in problems elsewhere at the time when service is demanded. It is absolutely crucial that the state office be able to engage the required consultation at the time when it is most needed, and this means it will have to have the funds to do this.

REGIONAL INSTITUTE

The regional institute will be affiliated with Clark College in Atlanta and through it, the Atlanta University complex. Clark has been chosen by the constituent institutions of the Atlanta University complex to develop, through its Southern Center for Studies in Public Policy, extensive programs in public policy which include the provision of technical and research assistance to minority elected and appointed officials. While the Institute will, in the first instance, be affiliated with Clark, broad policy for its operations and development will be made by a board consisting of representatives from the College, The Southern Regional Council, the Voter Education Project, and other groups chosen and individuals for their experience and expertise in the area of providing technical assistance to officials. (If all parties agree, this may be the same board that sets up the state programs.)

The regional institute will develop programs to assist black officials and communities directly and to assist others who will be working with these officials and communities directly and to assist others who will be working with these officials and communities. Its training activities will range from the creation of a public administration degree program to short courses on specific programs for community workers and officials. Its research activities will range from long-range public policy

analysis to investigations of particular problems currently facing local officials. The institute will become a repository of resources and information to which the state programs, individual officials, and community organizers can turn for assistance when they need it. Although its primary concern will be to assist blacks, its activities will also make valuable contribution to white groups as well.

Public Administration Degree Program

Under the auspices of Clark College, through the Atlanta University Center, the institute will develop degree programs in public administration. This program, of course, will not be restricted to black students, but its primary purpose will be to train a large number of blacks to take important administrative positions throughout the region. It is expected that some of these graduates will go to work with state governments, large county governments, or large city governments. But also it is expected that some of the graduates will take positions with small towns and rural county governments, where blacks hold many offices.

Most of the larger city and county governments, as well as the state governments, presently employ some blacks, but there are very few blacks in important public administration positions anywhere in the region. A change in this situation

is necessary if these governments are to be truly representative and the interests of blacks are to be given their proper attention. More blacks in government jobs are also required so that black citizens will have greater trust and confidence in the actions of these governments.

While there are still barriers in many places to black employment and advancement in public service careers, there are also instances when an insufficient number of blacks with the requisite skills are available for certain positions. For example, the director of the recently-formed Atlanta Regional Commission recognizes that he must have black professionals in a number of key positions in his organization if that organization is to have the credibility among black citizens which it must have to serve its basic purposes. He has had difficulty in finding a sufficient number of qualified applicants. Very few blacks have had the opportunity to receive this kind of education in the past and there is keen competition for those who presently possess the desired credentials.

The Atlanta Regional Commission is not the only organization which finds itself recruiting a labor force which is almost non-existent. Metropolitan Atlanta Rapid Transit Authority (MARTA) has, after prolonged and sensitive negotiations,

agreed to hire a number of black men and women in policy-making positions within the organization. Once again insufficient opportunities for training have left blacks ill-equipped to fill these and similar visible and important positions.

In the small towns and rural counties, where black political power is making some dramatic gains, there is an urgent need for professionally-trained black administrators. In several instances already predominantly-black local governments have had to use talented, but professionally untrained people to fill these positions. A good example of this is Greene County, Alabama, where trained southern black administrators could have been of tremendous assistance to the newly-elected black officals. Trained people were needed to serve as administrative aides to the county commission, the school board, the probate judge, as well as newly-created agencies, such as the housing authority. Of course there is still a need for such administrators in that county.

Also places such as Mound Bayou, an all-black town in Mississippi, could very benefically use a young black administrator. There are dozens of other opportunities right now, and in the future many more of the 102 majority black counties and the numerous majority black towns in the South will be electing majority black governments.

Special Character of this Public Administration Program

A number of educational institutions and special fellowship

programs are now trying to encourage more blacks to enter public administration and related fields. While this is a positive step, the program of the regional institute will offer features which these institutions cannot match. First of all, it will be easier to encourage more southern black students to attend a predominantly black school in the South rather than a huge, predominantly white university far from their homes. Thus a larger number of students could be brought into this field of study. Furthermore, and perhaps more importantly, the degree program in Atlanta will offer the students a type of training which they could not receive elsewhere and which will be of considerable attraction to many of the potential students.

The students in the Atlanta program will receive all the kinds of training required for them to compete with the graduates of other schools, but their education will have a strong emphasis on field work with black officials. As a vital part of their training, they will be assisting black officials and will be able to perceive the importance of working with such officials in their subsequent careers. Thus the program not only will attract more blacks into public administration, but it will also encourage them to take positions where they can be of special help to black officials. This means that the program will have a greater emphasis on the needs of small towns and

rural areas than most other public administration schools.

As mentioned above, one of the prominent features of the public administration program will be its emphasis on field work. Both faculty and students will be involved in a number of activities directly related to current needs of black officials. Faculty members will possess expertise in areas which will be useful in solving many of the officials' problems. The faculty will act as a resource to which state staff members can turn for help, and, on occasion, they will work directly with officials. The curriculum for the students will include a considerable amount of work directly with officials. Students will serve an internship with officials or with a related agency. It is expected that in some courses the professor will take several students, or perhaps his entire class, into a community and work on a problem there. In other courses some of the assignments in Atlanta will involve work which can be of benefit to officials; for example, students may be assigned to research a particular program and prepare a manual which officials could use to become better acquainted with that program.

Other Training Programs

In addition to the degree program in public administration, the regional institute will conduct other closely related training programs, some for officials and some for those who will be assisting officials. As indicated earlier, the regional institute will assist

in training the staffs of the state program before they assume their positions, and will continue to provide short training courses on special aspects of their work after they have gone into the states.

The institute will also encourage other persons, such as community organizers and employees of other appropriate organizations to take these training courses, which will be concerned with various ways to improve conditions in black and poor white communities. This will have the effect of spreading useful knowledge and skills much more widely throughout the South than would otherwise be possible. These courses will cover a broad range of subjects, such as housing programs, economic development schemes, and innovative education programs.

Internship Programs and Faculty Fellowships

In addition to conducting the internship programs which will be part of the public administration degree program, the regional institute will also work with other institutions in placing students with black officials and supervising them in useful kinds of assistance to these officials. There are an increasing number of undergraduate schools with cooperative education programs, which allow a student to work a full term or longer away from the campus. In addition, there are increasing opportunities for student in professional schools -- such as

public administration, planning, and law -- to serve internships. In order for these interns to provide the maximum service to black officials and to derive the maximum educational benefit from the experience, the internship programs have to be carefully planned and supervised. The regional institute, in conjunction with the state programs can serve this function. In some instances, the institute will give the students specialized training before they go into the field. For example, if several communities have indicated a desire to apply for certain kinds of federal programs, a group of students could be trained in the procedures of preparing such applications and then go into these communities to perform this service. While the students would not be able to complete the entire process by themselves, they will make it possible for the skills of the state and regional staff members to be spread much further in a short time.

Legal Aid

The institute will need staff members with certain fields of expertise who may also teach in the public administration degree program. Among the type of people needed are lawyers and specialists in "grantsmanship". As indicated earlier, it will not be possible for a lawyer at the regional institute

to handle all the legal problems which arise for officials. Instead the institute lawyers will deal with problems which are of pertinence to a large number of officials, as well as provide assistance to the state staffs or local lawyers when special occasions demand this service. For example, an institute lawyer might investigate some of the problems of local government which would be helpful to city councilmen and county commissioners throughout the region, and occasionally he might go to a particular town or county to advise the officials there when they have a special problem which falls within his sphere of expertise, and no other person is available to assist. The institute lawyer can also give advice to state staff members when they need such counsel, and he can supervise law student interns in special projects.

Specialists in Grantsmanship

The specialists in grantsmanship will of course advise the state staff on the availability of federal programs and how communities should go about seeking these grants. When necessary, these specialists will go to local communities to assist in preparing applications, although it is expected that the state staffs will do most of the preparatory work on these applications. The regional specialists will also help process the applications after they have been submitted. This means they will have to be familiar with key personnel in the various bureaucracies, and they will shepherd the applications from point to point in the

process of review. It is also expected that they will be privy to the kinds of information which will indicate what kinds of programs and what kinds of proposals have the best chance for funding at any given time. They will keep abreast of new opportunities in federal programs and will alert the state staffs and the local officials on these new possibilities.

Policy Studies

One of the most important functions of the regional institute will be the examination of long-range public policy questions. The institute will examine current policies of federal and state governments, as well as certain non-governmental organizations, to see what their real goals and effects are. Of even greater importance will be the program's concern with creating alternative policy proposals which will better serve the interest of black citizens and poor citizens generally. The institute will try to map out strategies which can lead to better uses of present programs, and it will propose new programs to serve needs which are now being ignored or misconceived.

Presently, most of the ideas for public programs, and the research which is used to document the need for such programs, is coming out of predominantly white institutions which, however, well-intentioned, are biased in their values and in their perceptions of needs. The regional institute will be approaching

public policies from the perspective of black people and poor white people, and this perspective will be maintained and reinforced through the institute's close working relationships with local communities throughout the region, through the state programs and otherwise. It can thus bring a viewpoint and a sensitivity which is missing in those institutions which currently influence the course of public policy in this society. Through this contribution, the institute can perhaps help bring about more effective and more equitable policies, which ultimately will be to the benefit of everyone.

These policy studies can sometimes have immediate impact also. In examining current and forthcoming programs of the federal government, for instance, the regional institute will be able to alert state programs of new opportunities and help them plan ways to use these opportunities to their best interest. The significance of this can be illustrated by imagining how much better use could have been made of funds available during the past few years for day care programs, if at the beginning of this period, some institute had thoroughly examined the possibilities of such programs and helped black and poor white groups develop strategies and proposals for implementing these possibilities. And there are numerous instances when states and localities fail to ask for funds which the federal government

has appropriated. The regional institute could advise black communities and poor white groups of how they could attempt to obtain some of these funds.

Other Research Interests

The regional institute will also conduct a number of other research projects, in addition to the policy studies described above. One area of study will be concerned with the problems of local government in the South. The institute will examine some of the major weaknesses of the structure and functioning of these government units, and it will investigate possible innovations which will improve their services, particularly with regard to black and poor citizens. Some of these studies will be examinations of the basic nature of these problems, but the institute will also direct some of this research effort toward particular concrete problems being faced by black officials. Thus a study of municipal government will not just look at the actual and potential powers and restrictions of these units and their relationships with county, state and federal governments, but it will also be concerned with producing information which will be of direct assistance to black city councilmen, as they go about the day-to-day business of being an effective public official.

Both to support other programs and because of the inherent interests of the subject, the institute will also conduct research

on black officials. Simply maintaining up-to-date records of who is elected where to what office, as well as who no longer holds office, is a considerable task. Also the institute will need to know about the circumstances under which officials were elected and must operate, the expectations of their constituents, the relationship with white officials both in their communities and at higher levels, the size and nature of their jurisdictions, the results of various efforts by black officials, and many other questions.

Preparation and Distribution of Materials

Another important function which the regional institute can perform is the distribution throughout the South of information which will help black and poor white communities gain a better understanding of how the political system works, how specific government programs operate, and how citizen groups can exert some influence on these matters. This information will, of course, be of great help to black officials, but it can also be quite valuable to all kinds of groups across the region.

Some of this information will grow out of the institute's studies of public policies described above. For example, the institute can prepare simply-written booklets describing the

opportunities for communities and informing citizens how they might proceed in trying to obtain some of these programs. Other booklets will be produced out of the studies of local governments. For example, the institute will prepare a manual on the operation of county governments, describing present and potential functions of this type of government unit which will be of general pertinence to most southern states. Of course, there will be a need for the state programs to supplement such manuals with information which is particular to that individual state.

The institute can also play a useful role by distributing materials produced by other organizations simplifying or supplementing this information when needed. For example, when other groups produce studies of such things as Title I (ESEA) or school lunch programs, the institute can help insure that these materials reach the state programs and people who can use them. The institutue can also "assist" the federal government by giving wider and more effective circulation of information on such things as Agriculture Stabilization and Commodity Service elections.

It will also be useful for the regional institute to give assistance to state programs in the preparation of manuals. An institute staff member who already has experience in investigating

state laws and practices and writing this up into simplified manuals on the operation of specific public offices could greatly facilitate the rapid production of such manuals in the state programs by assisting the researcher on the state staff.

Providing Services in States Which Do Not Have State Programs

Ideally, every state would have a state office to provide assistance to black public officials, but for awhile this will probably be financially impossible. At the same time, it would be unacceptable to establish offices in four states and completely ignore the needs of officials in the rest of the region. Therefore, the institute needs the resources to provide at least some minimum service to these other states.

Since the institute will be located in Atlanta, the state of Georgia is in a somewhat special situation. The Southern Center for Studies in Public Policy presently has a staff person who provides field representation to elected officials in Georgia. Its relationship to the Regional Institute will allow it to continue this function. It will probably also be cheaper and more convenient in many instances for the public administration program to assign students to problems in Georgia, although of course the institute will have to guard against becoming too restricted to the state in which it is located.

If the institute could employ two other field representatives to work in the remaining six states, they could render some

valuable services to officials, even though this assistance could not be as comprehensive or thorough as needed. As in Georgia, these field representatives would call upon institute staff members to help them provide certain kinds of assistance. The field representatives would organize workshops and other services to meet some of the more general and pressing needs of officials, and they would be available to work with an official or a community which has special needs. For instance, the field representatives could organize orientation programs for the newly elected officials in each of their states. This at least would give the officials some knowledge of how to proceed and where he might turn for some additional help when the need arose. A field representative could also give special attention to towns and counties which have majority black governments, such as the counties of Surrey and Charles City in Virginia, and the towns of Gretna and Eatonville in Florida.

Another valuable function which the institute can perform is to respond to unusual crisis situations which may occur in states which do not have offices. The visits of the field representatives should create enough familiarity between officials and the institute that the officials will call upon it when real emergency situations arise.

Another service which the institute can provide to some officials in states without offices is to place student interns with them. Since the institute will be coordinating internship

programs from several other institutions, there should be enough interns available to send some of these states, especially as the state offices mobilize greater involvement of students in their home states.

The institute could also prepare some manuals for officials in states without offices, although a complete job of this could not be accomplished. These manuals would be particular to each state and would be in addition to the more general booklets which the institute would be preparing, as described above.

Budget for State Programs

Salaries	
Director	$ 15,000
Field Representative	10,000
Researcher	9,000
Secretary	6,000
FICA and Benefits @ 15%	6,000
Travel (Director and Field Representative + some for researcher)	5,000
Office Supplies	500
Telephone	2,000
Printing	1,000
Library and research materials	500
Expenses of holding meetings and courses	2,500
Postage	500
Expenses for officials to attend meetings and courses	5,000
Student internships	5,000
Stipends for faculty projects	5,000
Consultant fees	15,000
Contingency, including office rental or overhead to college, and office equipment and furniture	12,000
	$100,000 x 4 states = $400,000

C. Proposed 1 year Budget for Institute and Degree Program

1. <u>Salaries - Institute Staff</u>		$240,500
Director	$25,000	
Lawyer	20,000	
4 Associate Directors @ $18,000 (with expertise in local government, policy analysis, grantsmanship and management)	72,000	
Research Coordinator	14,000	
Librarian	12,000	
Georgia Representative	12,000	
Office Manager/Administrative Asst.	9,000	
Secretary	8,000	
2 Secretaries @ $7,500	15,000	
2 Secretaries @ $6,500	13,000	
Intern Coordinator	10,000	
Fringe Benefits @ 15% of $210,000	31,500	
2. <u>Program Support</u>		95,000
Consultants and Contracted Services	7,500	
Library and Research Materials	10,000	
Printing and Publications	15,000	
Telephone	8,000	
Mailing	7,500	

Proposed Institute Budget (continued)

	Program Support (cont'd)		
	Office Supplies and equipment	$ 7,000	
	Travel	20,000	
	Meetings, Workshops and Conferences	15,000	
	Board Meetings	5,000	
3.	Academic Component		$165,500
	3 Faculty Fellows @ $20,000 each	60,000	
	Curriculum in Public Administration and Policy Studies (instruction and selected faculty research)	72,000	
	Student Internships and Field Placement	23,000	
	Student Research	7,500	
4.	Overhead @ 35% of staff salaries and faculty fellowships		$105,175
	Total		$605.675

BUDGET FOR REGIONAL INSTITUTE
for Start-up Period

A. January 1, 1973 - September 30, 1973

Salaries		$85,800
Director	$13,600	
Associate Director	6,000	
Associate Director	6,000	
Associate Director	6,000	
Research Associate	4,000	
Office Manager/Admin. Asst.	5,250	
Secretary	6,250	
Secretary	2,500	
Librarian	9,000	
Georgia Representative	10,000	
Student Interns @ $1,000 each per semester	6,000	
Fringe benefits @ 15% of $74,600	11,200	
Program Support		$99,000
Consultants and Contracted Services	12,500	
Library and Research Materials	20,000	
Printing	8,000	
Telephone	6,000	

Budget for Regional Institute (continued)

Program Support (cont'd)

Mailing	$ 5,000	
Office Equipment and Furniture	7,000	
Meetings and Conferences	3,000	
Travel	5,000	
Board Meetings	2,500	
Overhead @ approximately 35% of $85,800	30,000 [b]	
Total (for 10 months)		$184,800

B. The estimates in A. carry salaries to August 31. It is necessary to take 1/12 of salaries and add to that an overhead line. Approximately $10,500 is required.

Total January - October $195,300

Footnotes for A and B

1. Based on salary of $25,000 per year for period March 1 - September 30.

2. Based on salaries of $18,000 per year for period June 1 - September 30. These lines include the specialized areas of local government, management, and government programs and grantsmanship.

3. Based on salary of $12,000 per year for June 1 - September 30.

4. Based on salary of $9,000 for March 1 - September 30. This position requires ability to keep books.

5. Based on salary of $7,500 for January 1 - September 30.

6. Based on salary of $7,500 for June 1 - September 30.

7. Based on salary of $12,000 per year for January 1 - September 30.

8. The program will not be a full strength for its first 10 months. Consultants will be hired, where possible from the faculties and staffs of the institutions and organizations involved with the Regional Institute and the projected state offices, to participate in a detailed and intensive planning curriculum for service to minority officials. They will assess among other things the status of minority office-holders throughout the region, the requirements of particular states and specific offices and, working closely with the Institute and its Advisory Board, draw a blueprint for activities for the first three years.

a. Based on $12,000 salary, a Georgia component is included here not as a "State office," but rather as it evolves from services now performed by the Policy Center and presently paid for directly by Clark.

b. The Clark overhead figure here includes a rental item Business Office Expenses, security, maintenance and other services. It is pegged at 35%, but may possibly be reduced.

April 29, 1966

Mr. Lewis Black
20 Washington St.
Greensboro, Alabama

Dear Mr. Black:

For whatever it is worth, I am sending along a copy of the latest quarterly report to SRC from the RAP program in South Carolina.

This is the kind of report that is most helpful to us, and I think that its good qualities are helpful in any report: it is specific and concrete--giving figures, examples, purposes and results. Maybe they follow the old news reporter's rule of "who, what, where, when, and why--and sometimes how."

Just trying to be helpful.

Best wishes,

Edwin Stanfield
Director of Field Activities

Alabama Council on Human Relations
Rural Advancement Project
20 Washington Street
Greensboro, Alabama 36744

Dear Lewis:

Enclosed is the expense account you submitted for your recent trip to Tallahassee, which I am returning for clarification.

I note that, under "Travel", you list "Car & Bus to Florida from Greensboro (294 miles)" and figure that at $.08 per mile, getting $23.52. Under "Other Expenses" you list "Bus fare" at $18.60. Now, according to my estimate, 294 miles is the <u>one way</u> trip from Greensboro to Tallahassee. So, in the first place, if you had driven your car there and back, you should have figured $.08 X 588 mile = $47.04. It appears, however, that you drove your car to Montgomery, then took the bus to Tallahassee -- a sensible thing to do. If that is the case, the roundtrip from Greensboro to Montgomery is about 188 miles, which means that you should have charged only $15.04 for auto transportation. That would make your total travel expense $49.26. Thus, if I am figuring correctly, you owe us $.74 instead of our owing you $7.74 more than the $50.00 advance sent previously.

I am enclosing two other expense forms. On one I have penciled in the figuring according to my speculation. <u>Please re-submit</u> your account. If my figures are correct, you need not remit the $.74, it being less than one dollar. It is customary, however, to submit proof of payment in the form of the statement from your motel and transportation ticket remainders with expense accounts.

Best wishes,

J. Edwin Stanfield
Director of Field Activities

Mr. Lewis Black, Director
Rural Advancement Project
Alabama Council on Human Relations
20 Washington Street
Greensboro, Alabama

Dear Lewis:

Thank you for sending me the revised expense account.

Lest it go on forever, perhaps we should let the whole matter drop now. But it ought to be said that the Southern Regional Council is more than willing to honor fully commitments such as the one to pay your expenses to Tallahassee and back, The fact remains that there was no clear indication on your account form of the problems you encountered as described in your second letter, or of the routing and means of trave. A simple explanation like "Auto, Greensboro to Tuscaloosa and return, Greensboro to Montgomery and return -- 216 mi. @ $.08 = _____" and the notation "Bus fare Tuscaloosa to Tallahassee to Montgomery" would have sufficed. We don't mean to be nit-picking, but we do require -- for auditing purposes if nothing else -- a clear explanation of expenses incurred.

I hope things are going well.

Best wishes,

J. Edwin Stanfield
Director
Field Activities

Director of Field Activities
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Standfield:

Enclosed is the new expense account you would like to have me submit. It was my understanding that this $50.00 was to take care of my expense to Florida. I am sure that it didn't, however, under normal circumstances it would have.

If you remember the planes were on strick at that time. I made a number of calls, which was not included in the expense account, after I couldn't get a plane, I asked my wife to take me to Tuscaloosa, Alabama to take the bus. This was 47 miles one way, and she went back home(2x47)=94x.08=7.52. I was able to get a bus out of Tuscaloosa, that carried me around by Birmingham and Montgomery. It appeared to me that I was wasting time. When I got to Florida, Mr. Roden called me, and told me that we were to go to Washington. I inturns called my wife, and asked her to meet me in Montgomery and bring me some cloth and money to make this trip, which I planed for her to do anyway, rather than go all the way back to Birmingham, and then to Tuscaloosa. This was roundtrip of 200 miles x .08 $16.00.

I spent $18.60 for bus fare, $8.12 meals, $5.50 motel, $2.00 Taxicab, and I am charging off half of my car expense, and go to lost of my wife coming from Tuscaloosa, and meeting me in Montgomery. My check will cover the balance.

Auto miles: $294 \times .08 = \frac{23.53}{2} = \$11.76$

Very truly yours,

Lewis Black

New Census Look at Cities and Race

By Jack Eisen
Staff Reporter

A SEVERE CASE of "hardening of the boundaries" during a period of massive population growth has moved large American cities, Washington among them, into a sort of statistical limbo.

This was emphasized last night by the release of new Census Bureau data showing that the Nation's metropolitan communities are not as racially unbalanced as earlier figures indicated.

In contrast with the earlier statistics, which covered only areas within cities' political boundaries, the new figures are based on entire metropolitan areas—or, as the Government calls them, "standard metropolitan statistical areas."

FOR METROPOLITAN WASHINGTON, the new census figures show that Negroes make up 487,183 of the 2,001,897 total population, or 24.3 per cent—a figure that has remained fairly stable for half a century. Before that, it was higher.

This new tabulation recognizes that virtually all cities have spilled large numbers of urban-oriented families—city-dwellers in every modern sense of the word—across their invisible boundaries into the adjacent suburbs. These families maintain strong social, economic and cultural ties with the central city.

In fact, Richard M. Scammon, director-designate of the Census Bureau, regards today's city as little more than an enlarged downtown for the metropolitan community.

"In fact, we must develop a new concept of a city to replace one that has ceased to have real statistical meaning," he says.

THE MAPS on this page provide a graphic demonstration. They depict, in identical scale, the Nation's 10 most populous metropolitan communities. Solid areas are the central cities — the enlarged downtowns Scammon referred to. The outer lines are the boundaries of the cities' standard metropolitan statistical areas. Shaded areas show the relative size of Washington and its suburbs.

Within the metropolitan boundaries, of course, land remains for development—just as there was space for Washington to grow

within its political boundaries in 1910, when the census described the District as "essentially urban or suburban in character," with rural pockets.

In the Nation's earliest days, when most Negroes were slaves working as field hands or body servants, the nonwhite population of this area approached half of the total. It reached a peak of 48.6 per cent in 1810.

During the Civil War, many freed men fled to the protection of Washington, tilting the proportion of Negroes upward for two decades. It dwindled slowly until the World War II and postwar population surge ballooned the size and shape of the metropolitan community.

IN THE PAST 10 years, Metropolitan Washington gained 545,293 population, of which 145,440 were Negroes. Of the latter, 127,706 moved into the central city. The District's population now is 763,956, with Negroes accounting for 411,737, or 53.9 per cent.

But Scammon holds that there is "no essential difference" between such developments in American cities today and what occurred a century ago in urban centers along the Eastern Seaboard. Low-income Negroes have tended to cluster in the center of the metropolitan area, he observes, just as the poor immigrant found a place to live in the much smaller downtown of yesteryear.

Then as now, new development in most cities lapped outward. When a municipal boundary was reached, annexation was easy—something not true today.

Washington of a century ago provides an example. The District had been shrunk one-third in 1846 by returning its original Virginia portion, yet the northern city limits reached only to Florida ave. nw. Beyond lay the farms, villages and estates of Washington County, D. C., extending to the Maryland line drawn in 1801.

Philadelphia attained its present size in 1854, San Francisco in 1856, St. Louis in 1876, New York in 1898. Scammon notes that all 10 cities depicted by the maps on this page are similarly straitjacketed.

In all these cities, as in all other large metropolitan communities on the Census Bureau list, the proportion of Negroes in the central city thus is much higher than that for the total metropolitan area. Frequently it is double.

SCAMMON ALSO NOTES that there is little apparent relationship between the Nation-wide "flight to the suburbs" and a community's racial patterns. He cites Minneapolis, which has 2.4 per cent Negroes—the smallest proportion among the top 25 cities—which lost 38,846 population between 1950 and 1960. Its metropolitan area gained 323,096.

During the same period, Washington lost an almost identical 38,222 persons while the area-wide gain was 537,808.

The Census Bureau's new figures show that two cities among the top 25 have metropolitan populations with higher proportions of Negroes than Washington. Metropolitan Memphis has 36.3 per cent and metropolitan New Orleans has 30.8.

Closely following Greater Washington's 24.3 per cent are metropolitan Atlanta with 22.8 and metropolitan Baltimore with 21.9.

Population Division In 25 Metropolises

THE FOLLOWING table, prepared from 1960 Census Bureau data, shows the total population and Negro population of the metropolitan areas centering on the Nation's 25 largest cities. Heavy type indicates data for the entire metropolitan area; italic type for the central city or cities and the outside communities (suburbs).

Business Profits

and the Population Explosion

by

Adolph W. Schmidt

T. Mellon & Sons

Pittsburgh, Pa.

Presented at
Conference on the Economic Consequences of the Population Explosion
Plaza Hotel, New York City, October 1962
Sponsored by the Hugh Moore Fund

More People -- More Business?

Many businessmen are convinced that our soaring population is the golden key to solving whatever kinks and creaks our economy may develop. This basic feeling of optimism even appears in a statement by Richard M. Scammon, Director of the Bureau of the Census, who said, "We must never forget that each new mouth to feed is also a new pair of hands to produce. As the United States rapidly approaches the 200 million mark for population, we are also setting new highs every year in the welfare of our people."

Let us examine a few of the facts and assumptions underlying this viewpoint. As a result of such an analysis, I find myself less optimistic on the beneficial impact on business of the current population explosion than some of my friends who feel that every increase in the population automatically means increased benefits for business.

If that were in fact true, Asia with a billion people, would today be by far the greatest market on earth. The United States -- with only 6% of the world's inhabitants -- would be one of the smaller outlets for merchandise. The fact is that industrial productivity and the standard of living rather than the number of people determines purchasing power. In large areas of the world each additional mouth which must be fed cuts the per capita availability of food and goods for the existing population. Even in the United States, with the highest living standard in the world, the current rapid population growth is not an unmixed blessing. We must begin to apply to our own situation some of the concerns we have been having for other lands.

U.S. Population Explosion

Here are the bare statistics on how fast U.S. population is growing. In 1940 there were 132 million people in the U.S. In 1960 we had 180 million. By the year 2000, our present rate of increase could give us a population of over 380 million people -- in other words, our population could more than double in another generation. This is as many years ahead as the "Roaring Twenties" are behind us, and there are many people who read these lines who can remember the Twenties as if it were yesterday.

In the 1930's our net rate of population increase was 0.7%. In the 1940's it rose to 1.4%. In the 1950's it rose again to 1.7%. This figure is more than three times the rate of population increase of Sweden or the United Kingdom. It is almost twice that of Japan, and is on a par with the population increase rates of some of the underdeveloped nations, notably India.

Now let's take a closer look at what this increase means to business. Here I will deal, not with future projections, but with conditions that we will be dealing with in the American business community today, tomorrow,

and for the rest of this decade. First, let's examine Mr. Scammon's observation that "each new mouth to feed is also a new pair of hands to produce."

Before each new pair of hands can produce, society must invest in those hands. Because of our urban revolution, our social revolution, and our educational revolution, the per capita investment in each new pair of hands in the U.S. is going up much faster than the net rise in population. You can see this if you realize that a city of two million often requires three or four times the budget for basic services that is required by a city of one million. Before the new pair of hands can produce, it will have to enjoy schools and colleges, health facilities, housing, water supplies, transportation, power and communications facilities -- to say nothing of the fact that this pair of hands will also require some public support in its adult years if it should fail to qualify as a producer in our rapidly automating society.

New Hands Must Be Educated

We are now adding 3 million new pairs of hands per year. The annual capital requirements for providing the basic structure of services for these new hands each year is estimated at $20 - $25 billion, which is about 5% of our Gross National Product. Most of this represents capital expenditure that is non-revenue producing. Also, most of it will come from public funds. Between 15% and 20% of all tax revenues will have to be spent simply to provide basic services for the 3 million new hands. This means two things -- dangerously higher taxes and bigger government. It is an inescapable trend if current conditions of population growth continue.

How about the education these new hands will receive? This is an important matter to business men, since we are living in a society in which "common work" and unskilled labor as we used to think of it is shrinking and even disappearing. The future problem will be with the growing number of the least able and those unable to learn the higher skills.

During the 1950's our grade schools were called on to absorb a 50% increase in enrollment. As a result, many municipalities in the United States have come close to taxing their citizens to death, and in addition are in precarious condition as a result of over-extension on bond issues. Even with these heroic efforts, the quality of education undoubtedly declined in many overburdened schools.

In the 1960's the high schools and colleges will feel the impact. High school enrollment will increase by 48%. College enrollment, reflecting both population increase and the increasing necessity for higher education in the job market, will go up no less than 92%. Since shortage of good teachers will be more serious than lack of buildings, businessmen may well wonder if the quality of education provided under such circumstances will always be adequate for the demands of our economy.

The most serious problem lies in the realm of liberal education. This is being steadily neglected in favor of the demands for vocational training. Thomas Jefferson warned that "a democracy can only be maintained by an educated citizenry," and he meant a liberally educated and not a vocationally trained citizenry.

Now, let's look at the work force itself. Here is where the immensely costly investment in all these additional hands is supposed to pay off. But will it?

The simple fact is that the business firms of the United States are about to be swarmed over by hordes of young people looking for jobs. I see no indication that the business community really wants or needs these hordes. And, if they have no work, or have only small incomes in a highly competitive labor market, their contribution to the expected increase in national demand for the products of our economy will be nil.

During the 1950's young labor in the 20-34 age bracket was in relatively short supply, while the big relative increases in our population came at both ends of the spectrum -- among people too young to work, and among those too old to work. Young workers of all kinds therefore enjoyed a great bull market for their services.

As a result of this scarcity of young labor, wages went up faster than ever before -- real wages went up 3% a year during the entire decade, compared to 1% or 2% a year during the two preceding decades. The shortage and high cost of labor also caused automation to be accelerated -- creating, in effect, a capital plant and an economy geared to do without large numbers of the young labor which had been scarce.

"The Labor Force Explodes"

Now we are about to reap the consequences. Automation, launched during years of labor scarcity, is taking full hold during a decade when the labor market will be swamped with young hands clamoring for jobs. At the same time the conditions which created the postwar boom are no longer operative, and cannot even be sustained artificially by a labor shortage. There is, in short, every indication that the labor force is going to grow faster than the need for labor, and therefore, faster than the expansion of consumer buying power.

In the 1950's about 2 million people annually reached the age of 18. In 1961, the number rose to 2 3/4 million. It will stay there until 1965, when the 1947 babies start to flood in on us. In that one year the supply of new 18-year-olds will rise to 3 3/4 million, and from then on we are in for it for a number of years. Bear in mind that these are not guesses of future population growth, because these youngsters are already born and are already with us.

An estimated 13.5 million new young workers will be pounding at the doors of the U.S. business in the 1960's, compared to less than 9 million in the 1950's. This is a 50% increase for the 1960's. This will happen at a time when demand for new hands is remaining constant in some fields and is actually diminishing in other fields as automation becomes more and more complete, and as computers take over many of the decision-making functions of management. Our present rate of unemployment, which represents one of the most serious drags on our growth, can hardly be reduced while competition for jobs becomes more intense.

Other indicators are also in the wind. Increase in per capita physical output has been declining for some time under the impact of population increase. Our gains, in other words, are increasingly nullified by the number of new hands that we must support. During the 1930's, annual increase in per capita physical output amounted to $85 for every man, woman and child in the U.S. In the war period it dropped to $59 per person; from 1945 to 1960, it dropped to $30. It is continuing to go down. In the not-too-distant future, we are faced with the likelihood that we will have to devote all the physical growth of our economy just to the task of standing still. From then on, the possibility exists that a net decline in our standard of living may set in under the pressure of population.

This is not an idle spectre. Take, for example, the period 1960-1961, when economic activity was fairly brisk as we recovered from the recession of 1960. From 1960 to 1961, personal income rose from $401 billion to $416 billion, an increase of 3.9%. Population increase during that same period was 3 million, a rate of increase of about 1.7% on an annual basis. This cancelled out a large part of the personal income increase on a per capita basis.

Who Will Pay the Bill?

If the population of the United States should double in the next generation, it means that everything about us must also double if our present standard of living is to be maintained. Do you believe that everything you see about you in your home community -- houses, apartments, roads, office buildings, schools, the endowments of your colleges, universities and hospitals -- will be doubled in the next 37 years? If not, this means that many people are going to have to do with less than they now have. I do not believe these individuals will give up their standard of living without a struggle. As long as they have the vote, they will attempt to supplement any deficiency from the public purse. And where will the taxes come from to pay for these subsidies? It is agreed that taxes on individuals have already reached diminishing returns. The most likely source, therefore, will continue to be business and industry. Hence, every increase in corporate sales stemming from the population explosion had the prospect of being more than nullified by a higher rate of federal tax on corporate profits.

When Americans in the past have been faced with a difficult challenge, they have done something about it. Explosive population growth is not inevitable. It has occurred because we have applied Western scientific and medical advances to death control, to one side of the equation only, and have dangerously upset the balance of nature for many peoples. As a result, death rates have fallen rapidly while birth rates have remained traditionally high. In Western Europe birth rates have been brought into balance with modern death rates, thus controlling growth. Japan, faced with terrible population pressures in the 1930's, found that it could not achieve lebensraum through war. From 1945 to 1960, it reduced its birth rate and has achieved a declining growth rate, now at 1.0%.

Business Men Can Do Something About It

We in the United States have not time to lose, and businessmen in particular should begin to do something about this threat and challenge. Here are some things the businessman can do now.

1. He should study the demographic facts now available and then decide for himself whether our national goal should be quantity of life or quality of life, and which is best for business in the long run. He should understand that this is a problem that can no longer be swept under the rug but must be debated openly and widely in our national interest.

2. He should support all efforts which will bring the seriousness of the population problem to the attention of our people so that young and older married couples can decide for themselves what the optimum size of their future families should be.

3. He should advocate and support intensive research by the National Institutes of Health and private agencies into inexpensive and effective contraceptive methods -- particularly those which will be acceptable to all religious groups. He should understand that the religious areas of agreement are much greater than the areas of disagreement.

4. He should advocate planning in regard to national population goals, as he approves planning for national economic goals, and as he believes in annual budgets and reasonable sales, production, and financial projections in his own business. If we decide as a nation that ten years from now it is much more in our national interest to have an annual growth rate in population of 0.8% instead of the current 1.7%, it is obviously necessary to start educating people and planning for it as soon as possible.

Business and industry have conferred great benefits on the peoples of the United States. Business and industry will continue to do so, "but only if its largess is not atomized by being spread over increasing multitudes of recipients."

Birth control:

Businessmen back it

Call by blue-chip group at Milwaukee meeting for more corporate support to help curb population growth signals shift in business attitude

Strong evidence of increasing involvement of businessmen in the birth control movement was presented at a national gathering of affiliates of Planned Parenthood-World Population last week.

Part of the evidence came in a 52-page report outlining the seriousness of the world population explosion. This was released at the Milwaukee meeting by Planned Parenthood's Commerce & Industry Committee, a blue-chip group of 41 top businessmen headed by Sidney A. Swensrud, former chairman of Gulf Oil Corp.

Significantly, the report—made public by Lammot du Pont Copeland, president of Du Pont—calls for U. S. business support of birth control programs, for reasons that come home to businessmen.

Abroad, the report said, birth control can "help multiply the value of foreign aid and private investment" through raising per capita income growth and creating safer investments and more profitable markets.

Why they join. The committee chairman, Swensrud, enlarged on the domestic reasons given in the report for businessmen's support of birth control.

"For one thing," he said, "businessmen are all too aware of the mounting costs of relief and welfare programs; they are major sources of the taxes needed to sustain these programs. Birth control is the key to reducing these costs through reducing the number of unwanted children born to the poor and poorly educated; this group, as our report points out, represents our most critical population problem."

New view. If Swensrud is typical, at least some U. S. businessmen are coming around to a new view of the profit potential in a mass market economy such as America's.

Swensrud believes there is a growing feeling among businessmen that more people do not necessarily mean more customers but, instead, mean more relief costs and higher taxes.

"The 200-million Americans we now have represent a vast market for unfulfilled wants, enough to keep American business going indefinitely," he contends. "And even if we succeed in saturating the U. S. market, we can turn to the much vaster market of the world population. So the argument that we need an increasing population for economic reasons isn't valid."

More dollars. Though the formation of the committee and its report indicate business interest, the ultimate test comes in financial support; and this, too, is rapidly growing. "Three years ago we had barely a half-dozen donors; now we have 1,000," says Donald B. Straus, board chairman of Planned Parenthood-World Population and president of the American Arbitration Assn.

This is only the beginning, Straus adds. In the past, business donations have been largely from sympathetic executives, who gave individually and persuaded their companies to lend support. The formation of Swensrud's committee puts corporate solicitation on an organized basis this year for the first time. The committee's goal is $500,000 this year, $1-million in 1966.

World shift. Unquestionably, the changing attitude of U. S. businessmen on birth control results in part from great shifts in world opinion. There is now open debate on a subject that not many years ago was taboo.

President Johnson, in his 1965 State of the Union message, specifically mentioned birth control. He said: "I will seek new ways to use our knowledge to help deal with the explosion of world population and the growing scarcity of resources."

Possible. In the vital area of devices and techniques, too, promising recent developments make it apparent that population control is possible. Besides the well-known contraceptive "pill," a plastic contrivance called IUD—for inter-uterine device—and costing only a few cents each is under study. Pilot programs using IUD in India, Taiwan, and South Korea have shown good interim results.

Population growth:

Will markets develop as hoped?

The much-anticipated 'explosion' seems to be taking new twists. Marketers are concerned that increases in the big buying public aren't keeping pace with over-all rates

As the population surges massively upward, businessmen who watch it devotedly hardly expect surprises. So much of what is happening now was predicted; so much of what will happen can be projected.

Yet the surprises and uncertainties never die. No matter how sophisticated the prognosticators and their computers, people have a way of confounding them.

Take the year-to-year growth, for example. At a time when the phrase "population explosion" is the marketer's password, it is hard to believe what the second chart tells us: that right now we are at a low point in year-to-year growth. The 1.38% increase of 1964 and of 1965 is the lowest in 20 years.

The significant point about this down trend is not that it grew out of statistics; it grew partly out of attitudes as well.

Pickup near. The charts above mainly underscore the known. (Where there is a choice, the charts used show the second highest series of four possible projections.)

They underline the explosion itself. For, despite the slow rate of current growth, the pickup is clearly at hand. The postwar babies, now reaching their 20s, are taking care of that. Sooner or later they will make themselves felt in reversing the downtrend in births, in boosting formation of households.

The first chart also abundantly clarifies what's meant by our "youth-oriented economy." By 1970, those under 25 of age will stand at 99-million, close to half of the projected 208-million total. Between 1960 and 1985, the under-25 group shows the biggest gain, 57.7%.

The chart also gives the elderly their due. People 65 and over show the second highest gain, a neat 50%, between 1960 and 1985. There may well be 25-million of them by 1985.

I. Behind the statistics

The general pattern seems set. The new questions come out of the quirks, the refinements. How far up will the birth line go? How soon will the rising marriages take off? How fast will the households form, and what kind will they be?

What has happened to births and the year-to-year growth in the past few years is a good illustration of changes that seem to have no purely statistical origin.

Shifts within numbers. Up to a point, it was reasonable that the birth rate and the number of births should lag. Until recently, the group of women in the child-bearing period of 15 to 44 was weighted toward the older end of the scale, when children are born less frequently. This helped cut the birth rate and the fertility rate (number of births per 1,000 women of child-bearing years). Eventually, the numbers born sagged, too.

But around 1961 demographers felt the decline in births was too sharp to be explained this way only. Studies suggested that women were deliberately planning smaller families [BW Nov.17'62,p64]. New contraceptives gave them the means to put their plans into effect.

Demographers have a hunch that it is the younger couples who are holding down the fertility rate and that this could conceivably curtail the rise in births. Younger women who have watched their sisters' struggles to raise and educate a large brood may revise their ideal family size downward. These people ask themselves: "How do I improve the quality of my family?" A possible answer is fewer and better products, or children.

There's no guarantee that this kind of thinking—if it prevails at all—will continue to prevail as the postwar youngsters marry. But among influential organizations—the government, the Catholic church, the medical profession—a new point of view toward planned parenthood suggests "quality" of living will more and more be the criterion.

Many marketers are having second thoughts about the contribution to them as businessmen that the huge segment of population aged under 25 will make. And some advisers are urging businesses not to pin their entire hopes on it.

II. The business effect

Henry Bach Associates, Inc., issued a study early this month. It noted that children under 15 constitute two-thirds of the under-25 group. "Obviously," the study comments, "these youngsters are wholly dependent and have little or no economic weight of their own." They inspire spending, of course, but hardly add to the family kitty.

Besides, the report points out, there are 4-million more men in the over-25 group than under-25.

Disappointment. One businessman has a somewhat jaundiced view of these much-vaunted young. Second marriages are increasing slightly faster than first marriages, if data that go back to 1962 are still good. It's the first marriage that evokes the lavish wedding, the barrage of presents, and of household equipment.

Another businessman—the homebuilder—has been complaining that the promised housing boom hasn't quite come off yet. The Bureau of the Census had a partial answer to that. Until 1970, the big increase in households will be among those with heads under 25. These are not the best market for houses.

Finally, the Bureau of Labor Statistics made some pointed comment, in the way of data, on the impact of young families. Its monumental study of consumer expenditures and income in the urban U. S., 1960-61, made it abundantly plain that, whereas young families spend a larger than normal share of their outlays for housing and transportation, in actual dollar expenditures, the older households outspend them by far.

III. How prosperous?

More fundamental than such questions is the one that has bothered economists for some time. How prosperous is the big new market going to be, or feel?

Last fall, the Census Bureau pointed out the change in what it called the dependency ratio of the population [BW Nov.14'64,p70]. This is the ratio of persons under 18 and over 65 per 100 people aged 18 to 64. In 1950, the dependency ratio was 64; last year it was 85. The bigger than average growth of both the young and the old is, of course, the reason.

Labor force. Furthermore, the flood of newcomers to the labor force has concerned many. Early this year, A. J. Jaffe of the Bureau of Applied Social Research at Columbia University told the American Statistical Assn. that the working force will double within the next 50 years; in the long term, it will grow faster than total population. Already, Jaffe pointed out, the highest rate of unemployment is among the young.

Unemployment could slow down the marriages—as it did during the depression. And another factor could have the same effect: today's emphasis on higher education. The Population Reference Bureau, Inc., which analyzes population trends, has found that a college career delays a girl's marriage about four years [BW Jun.13'64,p98].

A recent Census report on marital status may have the beginnings of evidence that the young are not in quite such a rush to marry as they have been. For young men, the median age at first marriage was 22.6 in 1955; last year it was 23.1. For young women, the median age last year moved up to 20.5 from 1959's 20.2.

Uncertainties. The future consists of far more questions than answers. The data just don't tell. How can you project a labor force accurately, Jaffe asked, when you don't know whether more women will want to get jobs; whether older employees will opt for early retirement; whether, in fact, people will vote for more leisure rather than for more income?

And, of course, a flare-up in Vietnam or in the Caribbean could upset every current trend by sending youngsters rushing to the altars again at even younger ages.

Yet history does have its place. In fact, Richard M. Scammon, formerly of the Bureau of the Census, and Ben J. Wattenberg in a recent issue of Reporter magazine used history to take issue with the pessimists—those to whom the population explosion equates with pure catastrophe.

The gist of their article is that there's an underlying reasonableness about people's attitudes toward population growth, just as there is toward undertaking new expenditures. "Unrestrained proliferation" of population is less likely now than ever, the authors argue. People know more, are in a position to make judgments on what they want. If the situation got unbearable in the U. S., people would undoubtedly cut down their family plans—as they did back in the 1930s—or at least delay them.

It is not so much a question of how large a population the U. S. can support, they say. Rather the question should be what the "optimum" is. More than ever, people are in a position to make their own decisions as to what the optimum is.

As marriages start to climb, households will increase fast, and births will come faster yet

CLOSE QUARTERS: MANHATTAN—Three hundred million's a crowd, and that's the projected U.S. population within a generation. The increase, says Lilienthal, "will undermine our traditions, erode our public services and impose a rate of taxation that will make our current taxes seem tame."

300,000,000 Americans Would Be Wrong

By DAVID E. LILIENTHAL

BY the year 2000, just one generation away, the population of the United States will probably be about 300 million—100 million higher than it is now and 200 million higher than it was in 1920. Yet, in comparison with many underdeveloped nations, population growth would not seem to be a serious problem in America.

Certainly this vastly increased population will not lack for food. While population growth in Latin America, for example, has brought per capita food production below pre-World War II levels, we in the U.S. worry about overweight, spend huge sums to restrict farm production and give away enough food to prevent famine in poor nations throughout the world. In contrast to less developed nations, we have enough space, too. Just fly over this country and see the huge, sparsely populated areas that could easily accommodate additional tens of millions.

Great differences in resources, technology and education help explain why Americans regard overpopulation as a menace only to other peoples. It can't happen here, they think. I used to think so, too; I don't any more.

During the past 10 years, much of it spent overseas, I came to the easy conclusion that if we succeeded in tripling or quadrupling food production in hungry nations—and in some areas in which I worked we did just that—the problem of overpopulation could be solved. But gradually I learned I was mistaken to believe that increased food production was the complete answer to the crisis of population abroad. Gradually, I also learned that America's overflowing cornucopia has obscured a deeper crisis developing here: a population of at least 300 million by 2000 will, I now believe, threaten the very quality of life of individual Americans.

AN additional 100 million people will undermine our most cherished traditions, erode our public services and impose a rate of taxation that will make current taxes seem tame. The new masses, concentrated (as they will be) in the already strangling urban centers, cannot avoid creating conditions that will make city life almost unbearable. San Francisco, to take a still tolerable example, once was one of my favorite cities — cosmopolitan, comfortable, lovely. Now the high-rise buildings have sprouted like weeds and suburban blight is advancing on the Golden Gate. The value of real estate has increased while people's enjoyment of life declines.

Historically the United States owes much of its vigor and power to population growth. (Only 50 million people rattled around in America in 1880.) Large markets, skilled manpower, huge factories, a country able to spend billions on war, space and social welfare—all this, plus 75 million passenger cars—is surely a consequence of rising population. But no economy and no physical environment can sustain infinite population growth. There comes a point at which a change in quantity becomes a change in quality—when we can no longer speak of "more of the same." And another 100 million people will, I fear, make just that change in the joy of life in America.

IT is probably true that as the population will grow, so will the dollar value of our output. U.S. wealth, measured by Gross National Product, is now $670 billion; barring a major economic setback, total output will be doubled in about two decades. With G.N.P. climbing at the rate of $40 billion a year, the U.S. probably can afford to build the schools, housing projects, roads and other necessities of life for 300 million Americans.

But if our resources are mainly spent merely to survive, to cope with life in a congested America, then where is the enjoyment of living?

DAVID E. LILIENTHAL is chairman of the Development and Resources Corporation, a private firm with much of its business abroad, and a former chairman of the T.V.A. and the A.E.C.

Our teeming cities are not pleasant places today; imagine them by the middle of the next century when the areas of some might be 100 times larger than they are now. This is the real possibility envisioned by Roger Revelle, director of the newly established Center for Population Studies at the Harvard School of Public Health. And it will be to the cities that tomorrow's millions will flock.

Or consider the picture, drawn with characteristic wit, by economist John Kenneth Galbraith: "It is hard to suppose that penultimate Western man, stalled in the ultimate traffic jam and slowly succumbing to carbon monoxide will be especially enchanted to hear from the last survivor that in the preceding year Gross National Product went up by a record amount."

Nor does the nightmare consist only of traffic jams and a bumper-to-bumper way of life. As we have seen in the history of the last 25 years, public services only the Federal Government can provide will continue to expand. Moreover, state governments, until now unable (or unwilling) to pay their share of the bills, show signs of awakening to their responsibilities. But bigger government efforts do not produce better results for human beings; they are simply a way of getting a job done when no more feasible methods exist.

Even today, most of the nation's most serious problems are caused largely by the pressures of a too rapidly rising population. In the next generation, the problems may become unmanageable. Take four basic needs: education, water, air and power.

The quality of education is closely related to the problem of numbers. Within the next five years, we are told, the number of high school students will rise to 15 million (a 50 per cent increase over 1960), forcing hundreds of communities to consider imposing stiff new taxes. Many taxpayers will refuse to accept the added burden and their children will attend even more crowded classes. Far-sighted citizens will approve new school bond issues, but the increased financial drain probably will not result in an improved education.

Our standard of democracy entitles everyone to free schooling through high school. But our educational standards are rising. Two-year junior colleges, many of them supported by cities and states, loom as the next step in our system of free, universal education. Along with the surge in enrollment at traditional four-year colleges and universities, higher education is expected to attract about 12 million students in 1980 (triple the 1960 figure).

Merely building the physical facilities for such huge increases is a formidable prospect. Creating a sympathetic atmosphere for education, and filling the need for qualified teachers is a much more staggering problem. Of course, we may argue for the radical reform of U.S. education. We may plead for overhauling the existing system of teacher training, as James B. Conant has eloquently done. But I see few signs we are about to undertake such vast changes in the machinery of U.S. education; nor does it seem possible, even if the mood for drastic reform was overwhelming, simply to order new procedures, new goals and new solutions and then put them into practice. Good teachers cannot be turned out by fiat. We do not live in a planner's paradise. Ask Robert Moses.

Henri Cartier-Bresson (Magnum)

IN INDIA—"Many Americans regard overpopulation as a menace only to other peoples. It can't happen here, they think. But it can."

WITH increased urbanization and industrialization, demands on the water supply will be much greater than most Americans have remotely imagined. The drought in the northeast United States last summer was an indication of shortages even greater to come. And though engineers and scientists can, and will, tap new sources of water and devise ways to purify polluted rivers like the Hudson, the cost will be fantastic—hundreds of billions of dollars. Add to the current strain the pressure of a 50 per cent increase in population and the result may well be a chronic water shortage that can hardly be solved at any tolerable price.

Imaginative but impractical water schemes have been proposed, such as one to bring to the United States the almost limitless supply of far northern water, carrying it a thousand miles and more to our own boundaries. Assuming that Canada would agree to the politically prickly diversion of her waters, the cost is estimated in the neighborhood of $100-billion. But it has taken more than a generation of hot dispute and interminable litigation to decide priorities of water among our own sister states of the West. How much greater the difficulties of diverting Canada's water to care for U.S. needs?

As for nuclear-powered desalination plants, quite apart from the cost of constructing the huge installations we would need and the pipelines to carry the water inland, there is the additional problem of safety in disposing of radioactive waste. Technicians may solve the problem, but at what social cost? The conversion of precious open spaces into atomic garbage dumps?

JUST as easily accessible water supplies dwindle, air pollution will increase. Air pollution is the result of congestion, industrialization and the multiplication of automobiles—factors in direct relation to population density in urban areas. Los Angeles is not an industrial city, yet at times its air is hardly fit to breathe. And with the spread of industry in the sprawling cities of the nation, more and more places will be Los Angelized.

We have long assumed that at least the air we breathe is free. It won't be for much longer as we expand our efforts to purify the atmosphere. In California, for example, an aroused public finally insisted that automobile manufacturers install exhaust filters to trap toxic chemicals. Keeping automobile fumes and industrial poisons out of the air we breathe is going to be an increasingly costly business. By the year 2000 the high cost of breathing will be a real issue, not just a phrase.

PACKING too many people into an urban area increases the cost of providing still another essential of everyday living: electric power. Even more serious, such concentrations of people may make absolutely reliable electric service more and more difficult to maintain. I doubt if it was a mere coincidence, for example, that New York City needed 10 hours to restore electricity after the recent Northeast power failure while smaller communities were able to turn on their lights in a much shorter time. Growth is desirable up to a point; then the advantage of size diminishes and the multiplication of complexity multiplies the headaches. And by

1980 we can expect at least a 300 per cent increase in the nation's electrical energy needs. Most of this will flow into urban areas. The present difficulties of maintaining absolutely reliable service to such concentrations of people and industry, and holding down costs, will thus be magnified.

As chairman of T.V.A. and the Atomic Energy Commission, and in my present work in Asia and Latin America, I have become familiar with the problems of producing and distributing electricity on a large scale. Indeed, it was T.V.A. a generation ago that pioneered the concept that the greater the use of electricity the lower the cost per kilowatt hour. This is still generally true. But for great cities the exact contrary is coming to pass. To *distribute* electricity in a large, densely populated area such as New York is more costly than in smaller urban markets. Huge generating power plants produce ever lower generating costs; but to bring this power to the consumer in massive concentrations of population grows more and more expensive. Consequently, the price of this essential of modern life probably will go up in the great cities as population growth continues.

WITHOUT realizing it, we are fast approaching what may be called the population barrier beyond which lie unpredictability and, I fear, problems of unmanageable size. Consider, for example, the relationship between population growth and the poor.

The Federal Aid to Dependent Children program has doubled to more than four million cases during the last decade, while the costs have soared from about $600 million to more than $1.8 billion. Even more depressing than the numbers of families who cannot survive without welfare assistance is the phenomenon known as the "cycle of dependency."

More than 40 per cent of parents whose children receive A.D.C. funds themselves had parents who received relief checks. This cycle is sad but not surprising. Poor people tend to have more children than they want or can afford, and the children have less chance to receive the education and training they need to break the pattern. Thus, even the third generation appears on relief rolls in the U.S., the most socially mobile nation in the world. In America, reports the National Academy of Sciences in a recent study, "The Growth of U.S. Population," "the burden of unwanted children among impoverished and uneducated mothers . . . is much like that experienced by mothers in underdeveloped countries."

Since the poor cannot contribute their share of the mounting costs of education, medical care, public housing and similar necessary government enterprises, the money must be supplied by the rest of the population through taxation. But the most painful loss is not measured in dollars but in human resources. And one measure of the potential loss is the fact that one-fourth of America's children are the offspring of poor parents.

Belatedly, we are helping poor couples who need and want financial and medical help in family planning. The White House Conference on Health in November gave high priority to birth control as part of Federal efforts to halt the cycle of dependency and poverty. Tax-supported activities in 40 states, combined with such large-scale private efforts as Harvard's Center for Population Studies and the $14.5 million grant by the Ford Foundation for basic research by the Columbia-Presbyterian Medical Center and the Population Council, herald new progress in a long-neglected field.

We tend to patronize the poor by preaching to them about birth control; though poverty-stricken parents with four, five or six children are the most publicized aspect of population growth, they are by no means the most important numerical aspect of the problem. As a matter of simple arithmetic, the four-fifths of the nation's families who earn more than the poverty-line income of $3,000 a year — and who can afford two, three or four children—produce a greater total of children than the one poor couple out of five which may have six youngsters.

In fact, the latest census information reveals that though poor families may have more children than do better-off families, the difference is much smaller than many people believe. According to the National Academy of Sciences analysis, in 1960 married women 40 to 44 years old in families with incomes below $4,000 and above $4,000 differed in the average number of children by less than one. The postwar baby boom, for example, was more pronounced among middle- and upper-income families than among the poor.

Thus, these relatively well-off families are the ones mainly responsible for our rapidly rising population curve. They and their children are the ones who will account for most of the 100 million additional Americans by the end of the century.

How many children a couple should have is a decision only they should make; a government inducement or deterrent —a tax, for example—is morally repugnant and politically impossible. We cannot penalize the poor in order to limit the size of their families while we allow more prosperous parents to have as many children as they want. The large majority of middle- and upper-class parents need no birth-control help from government, nor will they welcome outside advice on so personal a matter. Yet it is this group of families who will want to have three, four or more children for the very natural reason that they like children and can afford to suppport them. The question is, can the *country* support them?

Any notion that The Pill or some other scientific device is the sole and complete answer is very dubious. At a symposium on birth control not long ago, Dr. Stephen J. Plank, a professor in the Harvard School of Public Health, cautioned against "the facile assumption . . . that we may be able to contracept our way to the Great Society." Birth control, he said, is a question of motivation rather than technology alone.

THE neglected arithmetic of the population problem facing us is depressing. Look at this table showing the birth and death rates over the past quarter-century in the United States:

Year	Births	Rate (per 1,000 pop)	Deaths	Rate (per 1,000 pop)
1940	2,360,399	17.9	1,417,269	10.8
1945	2,735,456	19.5	1,401,719	10.6
1950	3,554,149	23.6	1,452,454	9.6
1955	4,047,295	24.6	1,528,717	9.3
1960	4,257,850	23.7	1,711,982	9.5
1964	4,027,490	21.0	1,798,051	9.4

Although the birth rate has been declining since the mid-50's, while the death rate has remained relatively stable, the drop in the birth rate is too little and too late to prevent an oversized population. The surge in the number of births over deaths continues (2.3 million were added to the population in 1964).

Or examine these low and high population projections prepared by the Census Bureau:

	Low	High
1970	206,000,000	211,000,000
1985	248,000,000	276,000,000
2010	322,000,000	438,000,000

The high figure would be reached if birth rates returned

Fecund Future

At the estimated 1965 U.S. birth rate of 19.5 per 1,000 of population, a woman who reaches the age of 45 will have an average of three children. To achieve a stationary population, in which parents only replace themselves, the average number of children would have to drop to about 2.1. If childbearing gradually declined to this level by 1980 —a highly unlikely possibility — the U.S. population would then be about 250,000,000, and by 2020 the population would hit 300,000,000 and remain unchanged thereafter. At that point the birth rate would have declined to 14 per 1,000 and the death rate would have climbed to 14 per 1,000 (because a nongrowing population includes a much higher percentage of the aged).

On the other hand, if present fertility and mortality trends continue, a long-range projection by the National Academy of Sciences foresees that in about 650 years there will be one person per square foot throughout the United States, and in less than 1,500 years the weight of the U.S. population will exceed the mass of the earth — that is, 6,588,000,000,000,000,000,000 tons!

to the levels of the early 1950's. The low estimate — enormous as it is—is based on the possibility that the rates may decline by 1985 to the comparatively low levels of the early World War II years.

One theoretical way out of the dilemma would be to say that since America can no longer sustain complete "family freedom," some form of compulsory birth control is, regrettably, necessary. It would not be the first time in our history that government intervened to restrain individual impulse in the name of collective welfare. Yet, where children and parents are concerned, I do not believe we can yet advocate the sacrifice of one freedom for the sake of preserving another. Such a "solution" would make no sense at all, theoretically, practically or ethically.

Government policies and private programs must make plain the kind of life we all face if economically comfortable families reproduce at rates they personally can afford. With equal urgency we must make plain the dangers if poor families have children in numbers they cannot afford.

OBVIOUSLY, a stationary population—one in which the birth rate matches the death rate—is out of the question for many years to come. It is probably not feasible, nor even desirable. All we can hope to achieve is a slower rise in the size of our population rather than the present steep increase. What is needed is a far more drastic cut in the birth rate—a voluntary curtailment of the right to breed. It is needed, but I have no great conviction that it will happen.

For though scientific ingenuity may be able to solve many of the technological problems we are only beginning to understand people always change more slowly than technology. It is easier, after all, to design a new industrial process than redesign a cultural tradition. Yet that is the order of change we face if we are to preserve life's dignity and quality. Confronted by the crisis of population growth, we must, at present, appeal to private conscience for the sake of the general good.

An address by JAMES F. OATES, JR.,
Chairman of the Board
The Equitable Life Assurance Society
of the United States

The Businessman's Stake in the Population Problem

1/

Delivered at the
National Industrial Conference Board
Conference on Population and Growth
New York City, June 28, 1966

COVER: These unusual symbols, portraying the saga of family life, were used in earliest times by primitive peoples of the world.

I. Introduction

Today, I am the lonely, single person on the program who is not an expert on population. As you know, I am in the life insurance business, an enterprise which seeks to ameliorate the consequences of the great uncertainties of life—uncertainty as to the time of death, and other uncertainties which affect the well-being and material status of people.

Needless to say, we keep such basic matters as the course of population changes under careful and constant scrutiny. Indeed, we have in our company an office of Social Research headed by a well known and experienced sociologist, a friend of many of you, Dr. John W. Riley, Jr., who keeps us in touch with many dimensions of social change. For example, the Equitable is presently cooperating with the Bureau of the Census and the Social Science Research Council in developing the so-called Census Monographs, a series of studies in depth of various aspects of the population of the United States. In the light of the rapidly increasing public interest in demography, we sponsored with great pride and satisfaction the Equitable Demograph at the recent New York World's Fair. Social, cultural, and demographic changes obviously carry important implications for our business.

We live in an age of spectacular social change, and businessmen must be concerned, not only with such changes which directly affect their own businesses but also with those changes which substantially affect the welfare of entire communities and the nation itself. Population change is a prime example. Consider the fact that our World's Fair population counter revealed and continuously recorded a net increase to the population of the world of two persons every second. Such a rate of increase is potentially self-destructive and cannot continue indefinitely, if only for the fact that the area of the world is a fixed quantity.

While these preliminary remarks may establish the legitimacy of my concern, they also aggravate my sense of ignorance. Therefore, I must ask you to bear with me, as I speak during the intermission of learned discussion of this impressive program, not as an expert on demographic problems, but rather as a businessman who sees the population problem as one of the central problems of our time.

II. The Importance of A World Perspective

THE ECONOMIC SIGNIFICANCE OF DEMOGRAPHIC TRENDS.

Today we continually seek a better insight into "systems analysis." This has taught the lesson that we live in an interdependent world; imbalance in any part affects the rest of the system. Since divergent rates of population growth in different countries produce economic consequences which

necessarily have world-wide significance, the immediate results of human reproduction no longer are solely the concern of the two persons involved, their immediate families and the communities, or even of the nation of which they are citizens. The demographic development of the human race has brought the world to the point where the rate of reproduction in any part of the globe affects the *economic stability* of the whole, to say nothing of the health and welfare of the rest of the world's population.

Since businessmen by definition are committed to the profitable production and distribution of goods and services, we are inevitably concerned with population problems and policies.

THERE ARE ALSO HUMANITARIAN CONSIDERATIONS.

I believe that many businessmen would agree that it is of very dubious moral acceptability or economic health for some countries to enjoy a high level of living while others fight a losing battle against deprivation and suffering. Our humanitarian instincts are aroused. We are currently required to recognize and deal with the moral as well as economic implications of a situation where man has demonstrated his skill at saving the lives of large numbers of people who would not have survived in the past, but who now seem destined to survive in poverty, ignorance, and sickness.

This posture of events has been dramatically revealed in the recent report of the Food and Agricultural Organization which discloses that the increase in food production in 1963-64 was too small to offset world population growth, despite record output of several agricultural commodities. Furthermore, the 1963 Food and Agricultural Organization World Survey found that at least sixty per cent of the people in the less developed countries are undernourished and *that one half of the world suffers from hunger, malnutrition, or both.* 3/

On Monday, June 20, 1966, there was quoted in *The Wall Street Journal* the following comment of an important grain broker: "Some people have lost sight of the fact that the world grain situation has completely changed. Asia, Africa and Latin America were all net exporters of grain prior to World War II. Now they are importers. One of the most alarming facts of the population explosion is that a major portion of the increase is developing in the very regions that are least equipped to feed themselves."

This morning the outgoing president of the American Medical Association was quoted in *The New York Times* as saying that "because of the likely health hazards resulting from overpopulation, 'birth control is a vital part of preventive medicine and comprehensive health care.' "

It is submitted that such a situation cannot be allowed to worsen or persist.

THE REVOLUTION OF RISING EXPECTATIONS: AN ESTIMATE OF WHERE WE ARE.

Obviously this situation also involves potentially serious political implications. In the developing countries it seems likely that the desire for more goods and services will, for some time, grow more rapidly than the local means for satisfying them. Our means of communication are steadily growing in scope and effectiveness. As knowledge grows of how people in industrialized countries live, feelings of deprivation are enhanced among peoples in the developing countries. Rapid population growth in many of these countries—even when accompanied by slight increases in per capita income—may, therefore, threaten the basis of our civilization because of its revolutionary potential. James Reston, writing in *The New York Times* on June 10, 1966, respecting "The Politics of Birth Control," said: "It would be impossible to overstate the anxiety felt here about the political trouble ahead for the overpopulated and undernourished countries of the world."

The concern of the businessman is consequently real. He can no more ignore world conditions than he can hold himself aloof from the problems of the community in which he lives and works. He has, in short, an important stake in the complex relationship between demographic trends and economic development. It is thus of first importance that businessmen strive mightily to understand better and better the truth about the relations between population growth and economic strength and development.

III. Population and Economic Development

A SIMPLE FORMULA.

Population has long been recognized as an important factor in any equation of economic development. But the theories are complex and often contradictory. We are present at this conference in an attempt to unravel some of the issues. A basic formula which I am advised that Professor Philip Hauser often uses in approaching this question has a self-evident authenticity. The formula declares:

if "L" equals the level of living, with "O" the aggregate output, and "P" population, then $L = \frac{O}{P}$.

In other words, the level of living cannot rise unless output increases more rapidly than population. There are, however, three factors of special significance in the relationship between P and O.

These are:

1. the changing age composition of the population,
2. the supply of investment capital, and
3. the availability of natural resources.

Let us consider each of these factors very briefly.

THE BURDEN OF YOUTH DEPENDENCY.

A high and growing birth rate in low income countries, by generating a population with a higher and higher proportion of the very young, creates an imbalance between consumers and producers and thus economic development is effectively impaired. Furthermore, as infant mortality rates are reduced, the proportion of children in the population increases still more. Approximately forty per cent of the populations of underdeveloped countries now typically consists of persons under fifteen years of age. Thus, a continuation of high fertility creates a rising ratio of youth dependency, rather than moving in the opposite direction. There are more mouths to feed but fewer hands proportionately to produce.

THE RELATIVE LACK OF INVESTMENT CAPITAL.

This condition necessarily reduces savings and adversely affects the capacity of a country to generate capital investments in productive equipment.

It is appalling, as well as discouraging, to consider how the pattern of population growth in the world today serves to nourish the existing imbalance between population distribution and the distribution of wealth and natural resources. A recent NICB study reported that although the total income of many less developed countries had increased at a faster rate than that of many industrialized nations during the last six years, the gap in per capita income between the two groups had actually widened. 5/

IMBALANCE BETWEEN POPULATION AND NATURAL RESOURCES.

The depletion of natural resources is an ever present influence which inhibits the development and expansion of a country's productive capacity. Per capita food production has begun to decline in many countries.

Some geologists see the basic problem of resources as a death struggle between people and salt, because of the pressure which increasing populations exert upon the limited natural resource of water. To be sure, nuclear-powered desalinization plants have been proposed as an answer to this problem; but even if these were to become economically feasible, scientists warn against the consequences of the amounts of atomic waste which would be discharged.

THE CONCERN OF BUSINESS.

Let us now return briefly to a reconsideration of the stake that the businessman has in the problem of world population. He has, of course, a direct or indirect interest in world trade, in the balance of payments, and in the development of world markets. In addition, he has an important stake in foreign aid, if only as a taxpayer. He feels deeply that foreign aid cannot be successful in the long run in raising living standards unless population growth levels off. Indeed, in many countries where foreign aid programs have been most highly organized, annual per capita product has begun to decline. As we have seen, the dollar gap between incomes in the developing and industrialized countries is widening.

The businessman sees the need for a broad-based and effective program for improving the level of living in various parts of the world. When we return to the basic formula with which we began, ($L = \frac{O}{P}$) we clearly recognize that the population component is out of line. To the extent that foreign aid permits the survival of millions of people, without actually raising their levels of living, we are engaged in an essentially ineffective, inhumane, and uneconomic enterprise.

Programs for the control of population growth, which are acceptable on moral, cultural, and religious grounds, are obviously indicated. And such programs should be devised and implemented without further delay.

IV. Is There A Population Problem in the U. S.?

There has been a decline in the U.S. rate of natural increase since the mid-1950's. In the mid-1930's there were approximately 2½ million births per year; but during the baby boom which followed the war, the annual birth class approximated 4 million infants. Only during the past year did the number of births fall below that figure, for the first time in twelve years.

Meanwhile, it has become painfully obvious that even moderate rates of population increase seem to exacerbate social and economic problems in our own and in other highly populous and industrialized societies.

THE PROBLEM OF EMPLOYMENT AND UNEMPLOYMENT.

One area of concern is the fact that the labor force will continue to expand sharply for the next twenty-five years (quite apart from changes in fertility). By 1980, the U.S. labor force is expected to be in the neighborhood of 100 million people. It has been correspondingly estimated that we will have to produce over 1 million new jobs each year for the next fifteen years in order to absorb these new workers.

Quite apart from the ability of the economy to create new jobs, we must also take into account the effect of fertility differentials between economic levels. Many of the new workers will come from culturally disadvantaged groups. The established high relative fertility of groups enjoying limited educational advantages will continue to have a significant effect on unemployment. It is estimated, for example, that about 7½ million youngsters will have left school without a high school diploma during the 1960's alone. Increasing numbers of dropouts, in a labor market which is constantly upgrading its educational and technical requirements, spells a serious dilemma indeed.

PROBLEMS OF URBANIZATION.

Other "costs" of population growth are found in the rapid process of urbanization: slums and overcrowding, inadequate educational facilities, congested traffic conditions, air and water pollution, the deleterious effects of increased internal migration on intergroup relationships—just to list a few examples.

To ignore the problems of our cities, or to close our eyes to such issues as chronic unemployment or rising welfare costs, could well be the road to economic suicide. As businessmen, we must participate actively in constructive programs on all such fronts. This participation will prove to be helpful only if we approach these problems armed with the facts. That's why the proposed research in depth on population problems by the National Industrial Conference Board appeals to me so strongly.

RAPID POPULATION GROWTH NOT NECESSARY TO ECONOMIC HEALTH.

One point should be heavily emphasized. A rapidly growing population is not a necessary precondition for the continued development of our economy. A declining birth rate need not have an adverse effect on business. Although the traditional assumption in this country has been that a rapidly growing population leads to increased demand and, hence, stimulates investment, a careful analysis of the world situation, as set forth above, shows that rapid population growth may and frequently has operated to inhibit economic development.

If it is surmised that there will be developed a twenty per cent increase in purchasing power during the next five or ten years (certainly not an outrageous assumption), the effect on the growth of the economy would offset a considerable decrease in the rate of population growth. To be sure, rapid population growth in our own economic history and in the history of the West in general seems to have stimulated economic development. But in these instances, unlike the situation in many

developing countries, the man-land ratio was low and a greater population was needed to achieve the economies of large-scale production. Today, however, the situation is very different. We no longer live in a traditional frontier society. We are living, however, on an entirely new kind of frontier.

The American business system will continue, most assuredly, to be characterized and propelled by inventiveness, imagination and enlarged appetites and interests. Mankind has thousands of unmet needs and, in the future, we will learn to express and fulfill needs of which we are at present unaware. Increasing productivity to meet such new and diversified needs is the future to which we should look. Our economy no longer requires the stimulation of rapid population growth to keep it healthy.

V. The Importance of Human Values

In closing, I respectfully submit that business should never become so involved with statistics as to lose sight of the importance and dignity of the individual.

Whether we are talking about population problems here in the U.S., in the developing countries, or in the world at large, we must never forget that we cannot measure progress simply by aggregate statistics reflecting per capita living standards. We must also strive to see that each person is assured the opportunity to possess the ingredients of a full and satisfactory life. These include not merely the basic necessities such as food, housing, health, and education, but also the satisfaction of those political, cultural, and spiritual needs that are fundamental to all men. Only in this way can we meet the need and responsibility to supply moral leadership in a tormented world.

If we truly accept this responsibility and sincerely and thoughtfully become concerned with the quality of life, we have no choice but to be also concerned with the quantity of life. Since we are growing to believe in the right to die with dignity, perhaps we will eventually espouse a comparable belief in the right to be born with dignity. It seems that we might well endorse the current proposal to add a fifth freedom—freedom of the right of everyone to make intelligent choices as to parenthood and the birth of children.

Whatever may prove to be the ultimate resolution of this essentially moral question, we in the business community must work together with government and private groups to forge a common point of reference in this most sensitive area of human behavior. We must find a high and feasible principle which can be embraced by all people regardless of economic or ethnic background and religious belief. In all probability we will not live to see this work fully completed, but we will know that it has been begun.

National Industrial Conference Board. A
few additions have been interpolated and
figures have been brought up to date.

IMPLICATIONS OF POPULATION CHANGE FOR BUSINESS

by
Joseph J. Spengler
Duke University

"The true cause of their [the Americans'] superiority . . . is wholly attributable to their moral and intellectual qualities."

Alexis de Tocqueville,
Democracy in America, II, chap. 10.

Crabbed old Thomas Carlyle once remarked that if you wanted an economist you had only to teach a parrot to say "Supply" and "Demand." I am going to use these words, but I hope I shall use them with more meaning than old Carlyle's parrot. After all, the price of capital, the profits of the individual firm, the level of employment, and the state of a nation's international balance depend upon what happens both on the supply and on the demand side.

How important is the role that population growth plays in generating demand for goods, services, and capital, and in facilitating their supply? This role is much smaller in a technologically dynamic land like the United States than in one with a low rate of growth of output per capita. In discussing this role I

shall simply assume that other conditions affecting demand and supply stay put. For these conditions may be numerous and quantifiable only within an elaborate econometric model. I shall concentrate upon the economic effects of a decline in the rate of population growth, since a decline is more probable than an increase in the national rate. I shall not touch upon consequences of the population implosion, a sequel to the so-called "population explosion," although the population implosion is currently a greater source of difficulties than the population explosion.

I. Aggregate Demand and Supply

A decline in the rate of population growth affects both the availability of capital and the growth of aggregate demand and supply. I shall consider these in order and then turn to particular effects of declines in the rate of population growth.

(1) Population growth absorbs resources which might otherwise be used to increase the rate of capital formation per head. Addition of an individual to a population calls for a stream investment in his own education and development and for equipping him with science and culture as well as industrial, household, and public capital. While we have no precise estimates of this capital cost we may note the order of magnitude. If we suppose that it costs the equivalent of 4-5 per cent of the national income to cover all the costs of a rate of population growth of one per cent per year, we may assume that our recent annual rate of population growth of about 1.0 per cent per year costs something like $31-39 billion. This mode of estimating fails, of course, to allow for

all forms of capital -- for all forms of expenditure today which increase tomorrow's income stream. Another mode of estimating is possible; let us put the costs of adding an average person to the population of productive age at $15,000 and $20,000; then the annual cost in the past 15-20 years would have fallen within a range of $30-40 billion. The annual cost estimated in these ways is quantitatively equivalent to something like one-third of gross private investment. These estimates probably are on the low side.

It is evident, therefore, that if the rate of population growth in the United States should decline from 1.0 per cent to zero per cent, the rate at which capital per head was formed could and would rise. Savings within families would rise, since rearing and educating children would absorb a smaller fraction of given incomes in families averaging close to 2.11 children instead of three or more. Corporations might be able to form more capital, since they would probably be taxed somewhat less if the rate of natural increase were appreciably lower than recently. This might be true also of unincorporated enterprise. We may assume, therefore, that the American economy could increase capital or physical wealth per head at a rate of 1-1½ percentage points above the present rate. It does not follow, however, that such increase would result. More likely, half or more of the potential savings made possible by a decline in natural increase would be devoted to consumption and to shortening the average work week.

In the late 1930's and early 1940's it was feared that, because of the decline in natural increase, ex ante savings at full employment would exceed ex ante investment and result in an underemployment economy. This is a possibility, but a highly improbable

one; for with the vast information we have and great scope for intelligent cooperation between private enterprise and government, it should be possible to hold unemployment down to 4-5 per cent or less, particularly if unemployment-generating wage and labor-cost props (e.g., uneconomic minimum wage legislation) are done away with. A decline in interest rates, if consequent upon a decline in the rate of population growth, would help balance savings and investment by reducing the incentive to save and by rendering feasible investments not so at higher interest rates.

(2) The growth of potential aggregate demand is governed as is that of potential aggregate supply by the sum of the rate of growth of population and the rate of growth of output per capita. In the United States, with population growing around 1.0 per cent per year and average output growing 2-3 per cent, the potential aggregate would grow about 3.0 to 4.0 per cent per year. The realized aggregate would grow at about the same rate unless there were a decrease or an increase in the employed proportion of the population of working age and desirous of employment.

II. Two Sides to the Question

When we take an aggregate view we become aware of two implications. (a) A decline in the rate of population growth does not greatly reduce the rate of growth of gross or net national product. (b) Much of the importance that some writers attach to population growth as a stimulator of profits at the firm level is discovered to be without foundation. In order to illustrate my point I am going to compare two populations, one growing faster than the other.

It is essential to keep in mind, however, that it takes time for the effect of a decline in the Gross Reproduction Rate to become nearly complete, since 20-25 years must pass before all persons born now enter the labor force, and since even more years must pass before all important adjustments have been made.

Suppose for purposes of illustration, however, that population is growing one per cent per year, and per capita income, two per cent per year; then aggregate demand for goods and services as a totality is growing roughly three per cent per year. Should the annual rate of population growth decline from the assumed one to zero per cent, the rate of growth of aggregate demand would fall less than one-third, less than from three to two per cent, for the resources formerly absorbed by the one-per-cent rate of population growth -- equal to about four per cent of national income -- could be used to increase capital per head and average income at a faster rate. Moreover, output could increase also because of improvement in the producer-dependent ratio, in the amount equivalent to about one per cent of the national income. In short, the non-growing population would have available on a per capita basis potential additional savings equivalent to about five per cent of national income. If these were invested to yield 10 per cent, they would elevate the rate of growth of output per capita from 2 to 2½ per cent. Were only one-half of the 5 per cent saved, investment of these savings would raise the rate of growth of output per capita to 2¼ per cent. Had we started with a 2 per cent rate of population growth and then have assumed it to fall to zero, we would have

found the rate of growth to fall roughly from 4 per cent to between 2½ and 3 per cent.

We may make a more general statement. A decline of one percentage point in the rate of population growth tends to produce a decline of between ½ and 3/4 of a percentage point in the rate of growth of both aggregate demand and aggregate supply. Furthermore, the higher the rate of growth of output per capita, the less important is the contribution of population growth to aggregate demand and supply.

(b) In much of the more popular business literature we find stress upon the demand effect of changes in the rate of population growth, but neglect of the supply effect. Yet, at the aggregate level, both demand and supply correspond to Gross National Product and hence to each other, and so therefore does the incidence of a change in the rate of population growth. (That is $\underline{D}'$ = [$\underline{p}'$ plus $\underline{y}'$] = $\underline{S}'$ = [$\underline{p}'$ plus $\underline{y}'$], where $\underline{D}'$, $\underline{S}'$, $\underline{p}'$, $\underline{y}'$ represent respectively the rates of growth of aggregate demand, aggregate supply, population, and output or income per capita.) What I have just said used to be put very simply: With every mouth God sends a pair of hands and a set of tools. The mouth stands for demand, and the hands and tools stand for the supply that balances demand. It is a bit more complicated, of course. Yet, what I have just said suggests that a mere increase in population, or in its rate of growth, will not by itself make a firm's sales prospects better or worse. There will be more buyers, of course, but there will also be more suppliers, and in small communities they will often displace small established

firms. As a rule, prospective demand and supply tend to increase in about the same proportion and in such manner as to have little if any influence upon profit margins. Phrased otherwise, population growth is unlikely to increase "profit" per unit of output in the absence of the emergence of economies of scale or scarcity rents, or of increase in the imperfection of competition.

III. Labor-Force Allocation

If a population and labor force is growing, the annual gross number of recruits to the labor force will consist of the increase in the labor force each year plus replacements for those withdrawing from the labor force because of death, disability, or retirement. It is mainly through the distribution of these recruits to the labor force that an optimum inter-occupational balance is preserved. These recruits flow mainly into new or expanding industries and occupations. Some writers believe that it would be much harder to preserve an optimum balance if a population were stationary and the ratio of recruits to the labor force were decidedly lower, perhaps only about half as high as in a population growing 1½ per cent. Given our extensive current market information, however, together with our increasing capacity to retrain and adjust shifting workers, this belief seem dubious. Labor mobility is probably increasing, and it certainly could be made to increase. The allocation task would not be seriously changed, of course, for nearly two decades. Should the number of births decline enough to reduce the rate of population growth from, say, 2 to 1 per cent, nearly 20 years would

pass before the rate of growth of the labor force began to decline as a result.

IV. Demand for Specific Products

The rate of growth of demand for any one specific product is conditioned by the rate of population growth but seldom is dominated thereby. In general, the growth of demand for a product depends upon the rate of population growth, the rate of increase in average income, the income elasticity of demand for this product, and changes in tastes or technology. The rate of population growth in the United States remained above 1.5 per cent between 1946 and 1962, mainly because the rate of natural increase was close to this level; it has since fallen below 1.5 per cent because the birth rate has fallen and, despite a prospective upsurge in natality in the later 1970's and 1980's, is unlikely to return to the 1.5 per cent level. Between 1955 and 1965 when unemployment levels were similar Gross National Product increased about 3½ per cent per year; output per member of the civilian labor force, just over 2 per cent; and membership in the civilian labor force, just over 1 3/8 per cent compared with a rate of population growth of about 1 5/8 per cent. The income elasticity of demand for most categories of products probably falls within a range of just below ½ and just over 2. Accordingly, given a rate of increase of 1 per cent in population and 2 per cent in average income, aggregate demand for categories of products would usually grow between just over 2 per cent per year and nearly 5 ½ per cent.

Two qualifications are in order. First, data on the actual growth of demand for specific products show that population growth has played a very minor role. Between 1948 and 1965 population grew about 1 3/4 per cent per year and Gross National Product per capita, about 2 per cent per year. Yet, according to the Department of Commerce, the average annual rate of growth of output of selected products and services ranged from over 25 per cent to minus 15 per cent and lower. The demand for services of all sorts rose enough to supply most of the increase in employment in 1948-65. These widely ranging changes are not so much the result of changes in income and population as of changes in tastes and technology. Technological change introduces new and displaces old products. Tastes adjust to technology, and change for other reasons as well. We live in an age of discretionary time and income. Most people have some time and income which they can dispose of any way that suits them. Under these conditions tastes are volatile, especially when new opportunities to spend are continually being created.

Second, population growth becomes the main source of increase in demand for a product or a set of intersubstitutable products when income elasticity of demand for this product (say potatoes or cereals) or set is very low and individual demand becomes saturated. Suppose a new type of product is innovated and variously imitated until it has become one of a set of substitutes. The sale of this set will grow more or less logistically until the market has become saturated, given the existing income structure. For a time thereafter demand will approximate replacement of a

portion of the stock in use, itself a growing quantity, plus additional consumption which grows somewhat less rapidly than the sum of the rate of population growth and the rate of increase of per capita income. Eventually, however, as income elasticity of demand at the individual level approaches zero, the growth of total demand, consisting of replacements and additions, will be dominated by the current and the recent rate of growth of the population, or of the number of households if the product is household-oriented.

In view of the statistical evidence regarding the behavior of demand and the importance of technological change, rising discretionary income, and changing and volatile tastes, most business firms serving national markets are unlikely to attach much importance to population growth as a major source of increase in demand. A firm will rely upon rising per capita income and its own capacity to supply better or novel goods and services, confident that population growth is not multiplying its competitors. The exceptions will consist in business firms supplying only or mainly products, the individual income-elasticity of demand for which is very low; and relatively few firms answer closely to this description.

This argument is less valid for firms serving regional or localized markets. For in general, the smaller a regional or a more localized town or small-city market, the higher may its population growth rate be and hence the more important this rate as a determinant of the rate of growth of demand. Here, however, we are dealing with the redistribution of population in space rather

than with the rate of growth of a nation's population. This redistribution, while not independent of the rate of growth of the total population, is affected by many other circumstances as well.

V. Composition of Demand

A decline in the rate of population growth will affect the composition of demand. Until a population's age composition becomes stable, such a decline will reduce the rate of growth of those under five and then of those in their teens but not correspondingly those aged over 19 or over 65. Since the demand for some products is age-connected, the composition of aggregate demand will shift somewhat in "favor" of those over 19, over 65, and against those under 19. When a population becomes stable, this or analogous shifts will end; then all age groups grow at the same rate. Let us, however, examine the changes in prospect.

The rate of growth of the teenage market will decline. Between 1950 and 1965 the population aged 5-9 increased about 3 per cent per year, but it will increase very little if at all in 1975-1985. The number aged 10-19 increased 3½ per cent per year in 1950-65, but it will decline 8½ per cent between1970 and 1985. These declines reflect the slowing down in recent and expected natality. The total number of births rose to 4.3 million in 1958-61 from 2.4 million in 1935-39 and 3.6 million in 1946-49; it descended to about 3.6 million in 1966-69 but it will probably rise to between 4.5 and 5 million in 1975-85 as the number of females aged 20-29

increases, 25 per cent in 1970-80 and 4 per cent in 1980-85. Even on the assumption that expenditure per teenager rises at least as fast as median family income -- 2 3/4 per cent per year in recent years -- it is likely that the teenage market will grow less than half as fast over the next 15 years as in 1950-65 when it grew around 6 per cent.

The population 65 years and over will grow not over one per cent per year between 1970 and 2000 unless cracking the age barrier and extending life expectancy should significantly augment the rate. Average income of the older population could grow somewhat faster than average per capita income, particularly if persons in their 60's and early 70's are permitted to work if they wish, even at substandard remuneration when necessary, instead of being pushed out by trade-union, corporation, and government bureaucrats. Care of the aged, especially if highly subsidized as under Medicare, will augment aggregate demand for medical and related service beyond our capacity to meet it unless efficient and increasing use is made of paramedical personnel. With inflation persisting at around 5 per cent per year or more, while a seemingly helpless government dawdles and makes undeliverable promises, it may now be expected that most aged will be pressed into dire poverty. Over the past ten years the purchasing power of the dollar has been reduced by about one-fourth, and it is now falling faster.

The degree to which the composition of demand changes is traceable in part to the durability of goods and to how remote they are from consumers. The demand for every good consists in a

demand for replacements plus a demand for additions to the total stock. Services and goods of short-life must be replaced almost entirely and at once whereas durable consumer goods and producer goods are replaced only in part in any given year and sometimes not at all. It follows that a given fluctuation in the rate of population growth may produce considerable fluctuation in the demand for durable consumer goods, or for producer goods, but relatively little fluctuation in the demand for services and goods of short life.

Suppose the rate of population growth declines to (say) 0.5 per cent and stays there. The economy would then tend to become more stable should capital formation play a reduced role and fluctuate less. Greater stability would be assured also by the accompanying shift of labor to personal services in whose production physical capital often plays a lesser role. Today less than half the labor force is engaged in producing goods, and this fraction is still falling. In consequence there will be less variation in replacements of the sort associated with goods production, since personal services are much more subject to direct than to derived demand.

The decline in the rate of population growth could somewhat accelerate the rate at which per capita income rises and thus accentuate trends associated with income growth and increasing opulence. For example, as per capita income rises, the shift to services or to what is predominantly services, may increase. It has been estimated that G.N.P. must increase over three per cent per year

to permit any increase in employment in goods production; otherwise employment must be sought in services. These services can be supplied by private enterprise, even by large corporations if they learn how to develop what remains and is likely to remain a field especially suited to small scale enterprise, though currently handled with often shocking inefficiency. Some services may have to be supplied mainly by private collectivities such as foundations, or by agencies of the state. It follows, therefore, that if further and continuing expansion of the role of the state and concentration of power in Washington is not to result, alternative arrangements will have to be made. I have mentioned foundations as alternatives to private enterprise because often, at least up to now, private enterprise cannot effectively and economically provide various services currently in demand. This is the case when pronounced externalities are present, or the services in question yield indiscriminate benefits. Foundations remain under private auspices; they are or should be cost conscious even though not essentially profit-oriented; and their multiplication keeps power dispersed instead of increasingly concentrated in the hands of our state and public bureaucracy which even at best will probably have large responsibilities in service production or distribution.

VI. International Considerations

It is difficult enough to assess the economic impact of a decline or an increase in the rate of population growth at home. It is far more difficult to assess the effects here of changes in the growth of population abroad. No great change is anticipated

between now and the year 2000 in the rate of growth of the population of the developed world, outside the United States, constituting about one-fourth of the world's population living outside our borders. Between 1970 and 2000 this population will grow about 1¼ per cent per year; if its average income should grow 2 per cent per year, its total income would expand about 3¼ per cent per year. Around 1960 about seven-tenths of the world's population lived in the less developed parts of the world; much of this population is likely togrow 2-3 per cent per year between 1970 and 2000. If, as is possible, its average income should grow 1 to 1½ per cent, its total income would grow over 3 and possible close to 4½ per cent per year. It must be remembered, however, that per capita incomes are very low in these countries and long will remain low.

The significance of these trends for our foreign trade is hard to determine. Our real market should continue to be in Europe, Oceania, Canada, Japan, several of the Latin American countries, and in time perhaps in the Soviet Union and its European satellites should those countries convert their swords into plowshares. In all these countries rising per capita income will be the main determining factor. When, however, we turn to the underdeveloped world, we are forced to question if important markets are to be found in countries whose economic progress is prevented or at least hampered by population's growing about 3 per cent per year. They will be short of capital and skilled personnel, anxious for foreign aid or loans, but incapable of earning much of the hard currency needed to pay for imports. They may experience political

instability, always a deterrent to economic progress. Should current emphasis on unrequited foreign expenditure continue, it will of course absorb a part of the capital released by decline in American natural increase, but at the expense of the tax payer and often without much real economic or political benefit to the American polity. Sooner or later, however, the American taxpayer will demand an end to all such expenditure that fails to produce a proven capacity for self-help and long-run improvements.

VI. Historical Perspective

In the nineteenth and early twentiety century, Kuznets's findings show, growth of population and growth of national income were positively correlated in the developed world. It does not follow, however, that growth of population was the prime mover; if anything, heightened technological progress made possible the higher rates of population growth. Indeed, there is no evidence that population growth appreciably accelerated the growth of income per capita even though there may have been some scope for increasing returns. In the United States savings were inadequate at times to meet both the needs of population increments and the needs of the existing population. Population growth per se is seldom if ever capable of generating the additional capital required to meet the needs of the resulting stream of increments to the population.

In the present-day underdeveloped world, even in Africa and Latin America, population growth is a deterrent to the acceleration

of average income. It absorbs capital, and by preventing average income from keeping pace with rising expectations, may make for political instability and thus retard economic progress. Mexico, India, and Pakistan are cases in point; estimates have been made which reveal the great gains to be had from low natality. Even where additional population is beneficial, it had best be achieved through low rather than high rates of growth; then release could be given more effectively to the advantages that could be associated with greater density in some countries, particularly if some of the non-viable smaller countries were consolidated into larger and hence economically more viable units.

In the future, economic growth will depend mainly upon invention, innovation, technical progress, capital formation, and institutionalized growth-favoring arrangements. Population growth will play an even smaller role than I have assigned it in earlier discussion. It is high time, therefore, that businessmen cease looking upon the stork as a bird of good omen and as means, along with progressive inflation, of liquidating poor judgment, weakness, inflexibility, and capitulation to greed.

Ceus

ADDRESS to the UNIVERSITY OF NOTRE DAME

METROPOLITANISM a minority report

Somewhere in the middle of all that is happening in our cities is the Negro, the Mexican American, or other minority group person. What is his stake?

Think of the multitude of ways City threatens and enhances Man.

CITY. Not just so many square miles of buildings and streets marked off by boundary lines. But the complex interplay and interdependence of a myriad of forces: some ordered, some out of control; millions of lives each seeking its own way to a better life; decayed inner cores; insulated suburbs; an explosion and implosion of peoples; an opportunity and a trap.

This totality of City in America has a name, METROPOLITANISM.

Metropolitanism is a phenomenon of modern society, not exclusively American, encompassing our major social issues, yet little understood by the majority of Americans. Those groups of minority background, Negroes, Mexican Americans, Indians, and Puerto Ricans, may very well be the least aware of how this new force affects the quality of their lives.

The first step toward understanding what this concept is and means to people is to see in it a view of what is happening in our metropolitan centers that considers the many elements of City in relation to each other.

For the uninitiated, the term metropolitanism may sound, on first hearing, like the latest sociological catchword. It may be in the sense that the word is an umbrella casting many shades of meaning. From the standpoint of the physical growth of City, metropolitanism refers to the increase of air, water, and land pollution; burdened transportation systems; inadequate public services; relentless suburban sprawl, the whole range of physical problems which affect a much publicized cosmopolitan complex such as New York or a once-suburban boom city such as in the Anaheim-Santa Ana-Garden Grove region in Southern California. The boundless problems of physical growth alone can be imagined from the estimate that in 50 years a megalopolis of 70 million people will stretch from New England to Virginia.

Metropolitanism refers, most importantly, to the manner in which City is governed and its problems resolved, but does not mean a single approach or form of government. It does imply the development of different political processes capable of devising programs, making decisions, using resources, and resolving conflicts on a metropolitan scale. Metropolitan areas may include a variety of political systems and many, sometimes overlapping, jurisdictions of government. The question then becomes one of the adequacy of a particular system to respond to specific social needs while fully adhering to democratic principles.

To satisfy needs and at the same time conform to our democratic sense of values, metropolitanism suggests, for example, that a slum ghetto can be neither understood nor its problems resolved except through strategies that utilize resources equitably throughout a region. A housing program for low income families, for instance, must relate to the location of jobs and to improvements in the transportation system. But it is important to note that metropolitanism can take place without regard to minority group interests.

But surely, somewhere in the middle of all that is happening in our cities, or perhaps more realistically, off to the side, is the Negro, the Mexican American, or other minority group person. What is his stake in metropolitanism? How does he grasp the concept, make it his own, profit or lose by it? Is it simply beyond his capability to do or say anything about the whole matter?

On the premise that metropolitanism does concern vitally the minority group person and his aspirations for a better life, the Civil Rights Digest posed the same questions to a number of persons for their opinion. The questions generated a variety of responses. No two people approached the subject quite the same way, yet a number of common areas of agreement and concern did develop out of their remarks.

The most dominant strain of thought was that the minority person, the black, the Mexican American, the American Indian, the Puerto Rican, was still the victim, the larger society, the victimizer. In the sometimes purposeful, but most often willy-nilly shifting of governmental centers, of redistribution of resources, and of political power plays, the man of color or cultural difference tends to be the loser.

Diluting Black Majorities

"If economic opportunity existed in a vacuum, a metropolitanism which led to better transportation systems between the residential areas of the inner city and the industrial properties would benefit minority groups," begins Dr. G. James Fleming, founder and former director of the Institute of Political Education at Morgan State College, Baltimore, Maryland. "But when it gets to political involvement, I would say that when it looks like Negroes are becoming a majority in a city, whites will quickly find a way to bring about metropolitan units of government."

A professor of political science at Morgan State, a predominantly Negro college, Dr. Fleming suspects that a clear relationship exists between the greater at-

tention being paid by whites to achieving metropolitan systems and their desire "to water down the rising majorities of Negroes in the cities." Yet Negroes, he cautions, cannot blindly oppose metropolitanism without fully considering its prospects for them because they may find themselves in the position of opposing a good thing. He points out that the achievement of the "cake" of open housing holds some dangers for blacks because they will simultaneously lose the political advantage of concentrated numbers: "While more Negroes may have movement out of the ghetto, they will not have the political power of the ghetto."

"As a political scientist and in studying Toronto, and Dade County, and all other voluntary plans (of metropolitanized government)," Dr. Fleming asserts, "I think metropolitanism of some kind is inevitable whether informally or formally established. But it should be formal and legalistic to merit support by the people."

He suggests that Congress has already accelerated the restructuring process by approving reapportionment, "another kind of metropolitanism". "Those who supported reapportionment thought it would liberalize the legislatures, by taking the votes away from the rural districts, but the votes went to the suburbs where we have a different kind of conservative, the one who is keeping out the Negro. Metropolitanism looks good and technologically can't be avoided," Dr. Fleming says, "but it won't necessarily bring anything better in the case of the Negro."

Another perspective to this unfamiliar verbal terrain comes from Richard Scammon, vice-president of the Governmental Affairs Institute in Washington, D.C. He says, "Metropolitan takes place without reference to civil rights or race. Normally there is little relation between the phenomena. Urban decay would still occur in a city of half a million population even if it were all white with no non-Caucasians. We have an entirely difficult enough problem in the city, but it is complicated when race becomes a part of the picture."

Scammon, who is director of the Elections Research Center, an affiliate of Governmental Affairs Institute, served as head of the Bureau of the Census during the Kennedy Administration. He maintains that the harm or benefit to be derived from metropolitanism must be decided by the people in the area where metropolitanism becomes an issue. In any city where some kind of metro-government is proposed, Scammon suggests, "if the Negro people think its purpose is to diminish their political role, it is logical for them to view metropolitanism as harmful." On the other hand, white leaders might not want new structures of government for fear that Negroes might get involved, he points out. Apart from the race issue, suburbs have usually desired independence anyway, he explains, so that suburban whites faced with the added personal threat that some of their institutions might be taken over by Negroes, might also reject metropolitanism as harmful.

While there have been increasing moves toward cooperation on a wider than city or suburb scale for sewage disposal, airport planning, pollution controls, "the most ticklish issues still are the schools and police." "Opinion is split," Scammon believes, "between the need for smaller or larger structures" in regard to sewage disposal, pollution, transportation, but on the matter of schools and police, he sees a trend toward smaller units. "The smaller the unit to be governed, the better for the minority group," Scammon states.

But the dynamics of community control cannot be confined only to minority group interests according to Scammon. Blacks may feel they benefit from local control in the school districts of New York City. Affluent whites may also take up the community control banner, for example, as in the case of recent elections for the first elected school board in Washington, D.C., which resulted in a majority black membership. Residents in the predominantly white upper N.W. section of the District, who had previously been in the minority only in numbers, but not in influence, might opt for local control in school matters to offset the apparent loss of influence on the school board. Blacks, Scammon observes, would still face a dilemma. They could not make decisions wholly oblivious of white interests and risk the increase of the white exodus from the District unless they were willing to lose that degree of integration.

"If metropolitanism tends to deny a balance of control and services and ignore the needs of the people does this exacerbate the problems of the urban area? —it most certainly does. We are faced with the problem that if his own situation does not improve, the minority person may be left in control, but control of what, the slums?"

Survival for the Cities

That rhetorical and somewhat ominous question is taken up by George Schermer, head of a Washington human relations consulting firm which bears his name: "Strictly from the point of view of political involvement, in gaining political experience and sophistication, black people have nothing to gain in metropolitanism. One would be hard put to justify a drive for

metropolitanism in terms of civil rights or welfare of the minority group. But there are many, many arguments from the point of view of the *city*. Our major central cities may not survive except through some system of metropolitanism."

A former director of the Philadelphia Human Relations Commission, Schermer adds that on the basis of equal opportunity, if metropolitan government could incorporate the development of "rational transportation systems" which would provide equal access to all jobs to Negroes, Mexican Americans, and others, he would welcome its advent.

On the issue of school integration, Schermer posits that a metropolitan form of government would be useful toward developing a totally new approach such as the education park which is designed to distribute Negro and white children proportionately throughout a school system. Taking Philadelphia as an example, Schermer points out that since its public schools are more than half Negro, "any program to develop meaningful racial integration is likely to be impossible, impractical without a metropolitan basis." A better quality education for Negro children may depend on creating a milieu in which integration can be promoted, he proposes, or it may require a milieu in which Negro parents through political power can make increasingly meaningful demands upon the authorities for better quality schools.

Schermer's comments emphasize a recurring theme, expressed in some way by every respondent, of contradictory movements: an apparently inexorable metropolitanization as against a decentralization seemingly based on self-interested aversion to the former. In other words, metropolitanism has its opposite, particularly in relation to minority groups' aspirations to full recognition and participation in the social and political scheme of American society.

Developing Sub-communities

The Negro, Schermer indicates, is in the predicament of choosing between longterm and shortterm goals. While he himself would consider metro-government necessary for the "overall viability of our cities," the Negro, he believes, "would want to work toward achieving maximum power within the existing system." The Negro has no way of knowing what kind of government will evolve or what role he will have in it. At the same time according to Schermer, the urban turmoil which is symptomatic of a rejection of the existing system, is occurring without apparent determination.

"We seem to be moving in the direction, first of all, of a metropolitan system that will serve metropolitan-wide needs—transportation, pollution controls, waste disposal. Yet, when we put the management of local affairs on such a large scale, the individual gets lost," he observes. "That kind of community is too big to belong to; you have got to belong to something smaller than that, and therefore, I have an idea that we will be creating substructures, sub-communities. People want to feel that management of community affairs is within their grasp. Therefore, cities the size of Washington, or Philadelphia, will become eventually broken down into community units, maybe 40-50,000, but something less than hundreds of thousands."

Minority groups, Schermer foresees, will have to undergo a period of adjustment to the concept and evolution of metropolitan-wide systems of government. "It is very important for minority groups to have some sense of controlling their own destiny. It takes a few decades of experience to get to the point where simply exercising your authority as a particular ethnic group is no longer so important as having a good life. Two decades from now a number of communities that have been self-consciously very Negro in handling their affairs will find that the good life is not found in the framework of separatism. They will find that there are so many problems that have to be resolved on a scale which involves all people at the metropolitan level and at the national level."

A case in point is the picture of Atlanta provided by Julian Bond, Democratic member of the Georgia State House of Representatives, who is in the thick of a political power struggle between black and white Atlantans over the proposed establishment of a county-wide government. The young Congressman who led the Student Nonviolent Coordinating Committee in its early days, declares: "Always, metropolitanism contributes to the diminution of black political power. I see this from what I know of Nashville, Jacksonville, and Miami (where forms of metro-government have developed). Some people in Atlanta want metropolitan government. I think it's evident that a great many city fathers are less worried of the decreased tax base than about the prospect of a black dominated government."

The issue of metropolitanism in Atlanta will take shape in the elections this summer when candidates for mayor will be asked to take a stand on the subject, Bond forecasts. Some city leaders would like to annex the many white bedroom communities around the city while others propose the dissolution of city govenment into a county-wide government, Bond reports. There are already public service links with outlying commu-

nities, such as police and fire department assistance, he adds.

Black office holders have been fighting annexation attempts for the last two years in the Atlanta-Fulton County environs, but it has not been solely a black effort, Bond points out. The black community is not a monolith in philosophy or action; many different groups compete against each other. In this regard, and on this issue only, have black legislators coalesced with certain white lawmakers whose suburban constituencies fear metro-government for one reason or another.

Form Coalitions That Count

So that blacks can fend off metropolitanization, Bond cites a State requirement that works to the advantage of Atlanta's black community: governmental revisions must eventually be subject to a vote of the senators or representatives of the political districts to be affected. Fulton County consists of 26 representatives and senators. Nine are black, but a two-thirds majority is required to approve governmental realignment. "We don't have the power to pass much legislation, but in this case, we can certainly block it," the Georgia legislator states.

Of the basic concept of broadened political controls, Bond speaks favorably—with some ifs. "If there were no racial consideration, metropolitanism would be desirable, but black people have to fight it until they can get certain guarantees of equitable representation. We couldn't allow any county-wide elections now. Atlanta is 48 percent black, but if government were extended to the county area, our representation would drop to about 27 percent." By guarantees, Bond means elections by wards rather than at large for city offices or school board. The Atlanta Board of Education now consists of three black and 14 white members, while only one black man sits on the Board of Aldermen. Bond has recently introduced a bill in the Georgia legislature that would require elections for the Board of Aldermen be held on a ward basis. If passed, Bond estimates the new law could increase to seven or eight the number of Negro Aldermen in Atlanta.

The "semicities" in Georgia, Bond feels sure, would like to establish a metropolitan form of government for reasons similar to the ones in Atlanta. Bond recommends to Negro groups throughout the State, and by inference to minorities generally, to engage in coalitions where they do not have majorities and depending on the specific issues, shift coalitions as he and his colleagues have done to benefit the minority community. Civil disobedience is likely in those cities where the minority populace cannot otherwise defend itself against possibly harmful governmental change, and "in some cases, it is an acceptable means," says Bond. Atlanta, however, is not at this time a likely place for such actions because of the legal leverage black legislators command. Black Atlantans, Bond indicates, are generally aware of the pros and cons of metropolitanism, the accessibility to blacks of rapid transit facilities and the functions and makeup of the rapid transit authority was a controversial issue in the elections only two years ago.

By and large, most of the respondents indicated that minority groups are not aware and could be kept in the dark about metropolitanism as it might affect their region. Dr. Ernesto Galarza, an economist living in San Jose, California, suggests that the very complexity and seeming abstractness of the issue are critical barriers for the Mexican American and other minority peoples.

Western Trend Toward Regionalism

"The ability of communities, especially Mexican American ones, with which I'm particularly concerned, to identify as communities is being attacked. We have a growing tendency in the West toward the creation of sub-regional governments. In the San Francisco-Oakland Bay area, there is a very strong movement to establish a sub-regional government of nine counties taking over certain functions, pollution control, transportation, and so forth. If this happens, the ability of the Mexican American neighborhood to make itself felt politically will be tremendously watered down. If metropolitanism continues, it will increase rather than decrease their problems in civil rights. Dilution of the Mexican American vote is the practical result," concludes Dr. Galarza.

Long a resident of San Jose, Dr. Galarza has also seen the metropolitan forces at work as recently as last spring. Alviso, a small town near San Jose, virtually disappeared when it was annexed by its big neighbor. The Mexican American population which comprised a majority of the eligible voters nevertheless was unable to muster enough votes to defeat annexation. "They were well on their way to becoming a power in that community, a power for change. Before the election, city hall was no more than a few blocks from any residence. Now most Mexican Americans have to travel 13 miles to make themselves heard on any issue which relates to Alviso. These are people who don't have enough money for gas.

"The minority person does not know how to deal with governmental agencies as it is," Dr. Galarza continues, so metro-government would be adding another

layer of confusion to their troubles. "Who will explain to the people what is going on?" he asks. "What is there to assure the Mexican American a voice in the development of these new forms or structures? In the Bay area, the Mexican American is being crowded out. All devices being discussed in order to make the metropolis more manageable are not addressing themselves to minority groups. The fundamental issue is one of structural content. From the technological and broad social standpoint, something's got to happen in the cities, pressures will increase; metropolitanism is possible but whether it is humanly practical is another matter."

Forces which advocate metropolitanism can operate in such a way that the kind of input Dr. Galarza desires for Mexican Americans and other minority groups becomes virtually impossible, suggests Karl Gregory, assistant to the chancellor for urban affairs at Oakland University, Rochester, Michigan. "The larger the area of decision-making, the more problems there are in communicating what is taking place; the more unequal the distribution of power, the more advantage the advantaged have to use the media, so the more an unequal distribution of power and opportunity is reinforced."

Issue By Issue Analysis

As a consequence of this cycle of informational deprivation, Gregory remarks, "Only decision-making by those who already have the resources is metropolitanized, equal opportunity is not really being metropolitanized." Therefore, says Gregory, who serves as president and chairman of the board of Accord, Inc., a housing rehabilitation corporation, as well as resident agent for a black bank, the First Independent National Bank in Detroit, minority groups who seek self-determination are moving toward decentralization. Gregory is apprehensive that blacks may end up with political control over less resources, although he is quick to note that this is no argument against decentralization or local control. Decentralization is in effect a reaction, he believes, to racism and to the institutions that are failing blacks. However, Gregory points out, decentralization can be established without community control: the white power structure can parcel out pieces of power and "let the natives fight over it," he says, because control of the purse strings is not affected.

Minority groups have to learn to confront metropolitanism and/or decentralization issue by issue and this requires an understanding of two major distinctions: a) how is the public service financed; and b) who makes the decisions. Metropolitanism, he asserts, "doesn't make much sense unless a new tax apparatus is developed for a wider taxing jurisdiction." Even then, massive Federal assistance may be necessary to make open housing, for example, a realistic goal. But in terms of making decisions about where housing is needed and setting up housing standards, a lot of room for decentralized input by minorities is a probability, Gregory argues.

In regard to law enforcement, the financing and decision-making concerning a program to combat the narcotics traffic or organized crime might be too large a conglomerate, in Gregory's phrasing, for other than a metropolitanized approach of broader taxing jurisdictions and combined Federal and State authorities. Only problems of police-community relations, of protecting school grounds or children going to and from school might be more easily addressed on a local community level, he says.

At any rate, Gregory, an associate professor of economics at Oakland University, feels community control is a solution that only buys time: "I see nothing in existence now that begins to solve the problems of minority groups. All the money being spent in Vietnam each year would be needed to make a significant dent in the ghetto. We can overcome the problems but I just don't see the commitment in the country to do it." As long as black people suffer the effects of

racism and don't have political or economic power, Gregory says, echoing the thoughts of other respondents, "they need to organize politically and form alliances, something on which to build."

There begins to develop a sense of urgency for minority groups to become aware of the advent of metropolitanism in whatever form it may take and to take the matter apart, "issue by issue," as Gregory urges. Minority groups need to ascertain how metropolitanism will affect them. As Schermer noted, no one is quite sure what is being created out of the Nation's urban turmoil, but by the same token, it cannot be allowed to occur haphazardly. Certainly, in every way possible, the respondents indicate, the minority communities must exert every force at their command to have some part in the evolution of the metropolitan age.

Housing An Explicit Ingredient

"Two seemingly irreconcilable concepts and processes," black political self-determination and metropolitan-wide decision-making, must be reconciled in metropolitanism, according to Arnold Schuchter, author of the recently published book, *White Power/ Black Freedom,* which deals with the issue of the white and black power struggle in the cities. "The extent to which Negroes gain political power, economic opportunity, and social justice through new forms of metropolitan institutions will depend upon the following: the goals of the institutions; their specific organizational structure and decision-making process in relation to emerging political and community development instruments in black communities; the provisions for Negro involvement, with a *disproportionately influential role,*" Schuchter emphasizes, "in the establishment and operation of these institutions; and the quality of the people who can be attracted to design and implement these new instruments of government and community development."

That Negro participation in the evolvement of new governments must be a prerequisite to their implementation is central to Schuchter's thinking. He also insists that such a metropolitan-wide political and developmental process must include as an explicit and controlling goal, the desegregation of housing. A specific means of assuring an open housing market, Schuchter believes, is creating communities designed to attract and house people of all races and income. Another necessary ingredient in achieving responsible systems and processes of government, says Schuchter, a specialist in urban planning for the management consultants firm of Arthur D. Little Company, in Cambridge, Massachusetts, in regard to "this unchartered political universe of metropolitan regions," are "persons with insight, judgment, and competence, black and white." He adds that "without a sustaining sense of confidence among Negroes in the good faith and capabilities of the public and quasi-public institutions shaping urban community life, the prevailing sense of victimization by white society will escalate along with frustration and animosity."

A National Metropolitanism

Dual strategies are required to check the trend toward "separate but unequal central city and suburban societies"; 1) Conscious and deliberate preparation of Negro administrators and technicians to manage and develop black ghettos and to govern the increasing number of almost wholly black cities; 2) Unified national land, housing, and migration policies to create hundreds of new multi-racial cities, incorporating new systems of political, educational, social, and economic development, and able to house about one-sixth of the Nation's population by the year 2000.

"The form of metropolitanism," Schuchter specifies, "should support both decolonization of the ghetto and dispersion opportunities for Negroes, for instance, to house about 40 percent of the urban Negro population in the year 2000 (or about 12 million Negroes). Accomplishing this goal will require a national commitment to create new communities to house as many as 50 million people over the next 30 years."

The scope of the problems and the horizonless demand for solutions with respect to minority group needs suggest to Schuchter a kind of national metropolitanization in terms of program strategies, policies, and standards, and the comprehensive utilization of Federal and State funds and incentives. His specific recommendations, presented briefly here but well detailed in his own writings, include a National Urban Resources Development Corporation, federally-chartered and quasi-public, to serve as a Council of Urban Advisors to the President in the formulation of national urban policies and programs and to foster governmental reform and new city development; Metroregional Development Corporations to collaborate with voluntary metropolitan councils of governments to plan and carry out metropolitan-wide revisions and technical aid programs; New City Corporations to build and manage new communities; Community Development Corporations to rehabilitate and control inner-city areas; and Urban Grant Universities to provide training and technical services in devising political and economic entities for local control, and educa-

tional opportunities for all age groups integrated with inner city community development projects and with creation of new communities.

Schuchter's schema for the future city follows the pattern of human need which Schermer outlined when he said that an individual finds it impossible to belong to too big a community, that he must have a feeling that he can at least grasp some control over his own government and destiny. Schuchter foresees metropolitanism and decolonization (his term for the withdrawal, voluntary or not, of white political and economic control) as emerging concurrently. "Minority groups, especially Negroes, already are building some of the new political and economic development organizations, developing a power base for the bargaining process that will have to take place in order to establish relative shares of power in the new forms of metropolitan institutions." To enhance their control or leverage, he stresses, Negroes "must develop effective leadership, administrative talent, entrepreneurial and business management skills."

Destroy The Slum System

Meanwhile what of the trapped ghetto dweller, Schuchter asks. "The only hope for a large percentage of urban Negroes to achieve decent housing," he states, "is for them to ruin ghetto housing as a profitable real estate commodity by disrupting the slum housing system in a manner that will result in a massive transfer of ownership from absentee-landlords to black owner-occupants. If necessary, widespread civil disobedience (to echo Julian Bond's words) should be directed at municipal governments to force them to exercise their legal responsibility for maintenance of housing standards."

New litigation and new legislation that would place the responsibility for coordinating the development of metropolitanism and assuring a voice to the minority groups where it belongs, with the States, are key recommendations from James Gibson, a staff associate with Potomac Institute, a privately financed research and consultant agency on civil rights in Washington, D.C. Formerly a member of the President's Advisory Committee on Rural Poverty, Gibson estimates that present trends in court suits related to school system inequities in California, Michigan, Texas, and Virginia indicate that metropolitanism might develop through a metropolitan taxation system to provide equitable funding for all schools on a regional basis rather than "pro-rated on the basis of concentrations of wealth".

The stimulus of court decisions in this field, a long-term struggle of perhaps 15-20 years, according to Gibson, could move legislatures to accelerate or initiate legal steps to establish metropolitan forms of government. "It would take legislatures less time to set up the new instruments of government, but legislatures would have to present a formula that is not destructive of the quality of schools in general." States will fight such metropolitan litigation, Gibson is sure, but in this field, as in regard to legislative reapportionment, desegregation of schools, and legal protection for the accused in law enforcement, a litigative impetus can result in progress in the protection of the rights of minority groups. Gibson advances his view of a need for minority group pressure along the legal route because, he asserts, "a real civil rights basis exists for requiring redistribution of tax revenues on a regional level."

Federal-State Roles

According to the Constitution, Gibson asserts, those services of society and those responsibilities of government toward its citizens remain in the hands of only two entities, Federal and State government; local government has no Constitutional prerogatives. He says that on the issue of school district inequities, for example, in a State where priorities and concern are suburb-directed, allocation of school district funding on an equitable basis should be required by the courts and by Congress. "If public schools are inadequate anywhere in a State, the State is responsible; therefore the State constitution which permits an inequitable situation is unconstitutional—I think we will see a considerable development of litigation in this direction," he says.

On the point of financing, George Schermer supports Gibson's views, stating that "the real property tax is not a very good base for supporting public eduation; we need new forms, new sources for taxation. The State today has the basic power for the public welfare, the basic responsibility for public education, under the U.S. Constitution and its own Constitution. We dilute the political power of Negroes when we enlarge the bounds of the city government and reduce the amount of influence that they would have to bring about the necessary decisions for increased taxes to support public education." Even now on a diluted basis, Schermer advises, Negroes have power to force the State to bring about equitable reform.

"Because we do in fact have minority concentrations in the cities," Gibson continues, "minority groups have to press for having political controls placed more equitably in the hands of non-whites." Therefore greater local control of schools and other public institutions

should follow, and an insistence be made, in economic terms, on establishing new ownership patterns.

"There are dangers in following this route," Gibson warns, "in that such redistribution of power along racial and ethnic lines will increase the self-interest of minority groups and the continuation of a separatist movement without reducing the *utimate dependence* of the minority upon the majority community."

Gibson observes that apart from seeking to control or influence metropolitanism on a group basis, the minority person's other recourse is to seek "individual equity, power, wealth, and mobility" which means that minority persons must be fairly distributed throughout the metropolitan region. Thus schools and other public services are not identifiable as Negro schools or Negro services, Gibson says. "To affect the minority person through the majority self-interest, which would have to shortchange itself to shortchange the minority person, is an argument for equal distribution of minorities." Gibson, whose special field is community economic development and rural poverty, also sees grave dangers along this way, although ideally "good for society," dispersal would not necessarily change the majority's opposition. The minority might still be refused jobs, services, civil rights, political office. Again, Gibson stresses, "we would not necessarily rid ourselves of racism nor of the *ultimate dependence* of the minority upon the majority."

Establish Independent Control

Gibson reasons that "self-determination does not provide the ultimate solution for black communities," that "the desirable thing is for blacks to evolve a conscious step to ultimate integration. Racism must be addressed by efforts to purge racial superiority feelings, that is the ultimate solution," he declares.

The whole question of metropolitanism is relatively new. Only recently have public officials and lawmakers begun to think and make decisions with a metropolitan interest in mind. In terms of new structures of government to replace obsolete city halls; new cities to house, economically and decently, the new millions of people and some of the old; new regional programs to solve the logistics of waste disposal, reclamation of the environment, and transportation: metropolitanism is no doubt a necessary stage in the evolution of the Nation. Many of the respondents shared the thought that a balance may still have to be struck between the regional complex and smaller units of community. Thus, even this phenomenon which we are now seeking to comprehend may evolve toward another level.

At any rate, it is quite understandable why minority groups may sense a real threat in this new elaboration of politics and government. They may lack a political power base or fear losing one; they may certainly be dubious of fulfilling their needs through existing or proposed formulations of government. Regionalism in the governmental processes may be vigorously and successfully opposed by minorities in areas where, on the whole, metropolitanism of some kind is vitally needed. The trend among minority groups will no doubt be toward establishing as quickly as possible independent community control of certain public institutions, through political or militant means. Possibly, then, minority political strongholds may be able to gauge their view of metropolitanism with greater confidence. However, many of the persons who answered the Digest's queries warned that minority groups might end up in control of less and less resources with less and less real power.

To recall Dr. Fleming's comment that equal opportunity does not develop in a vacuum, it is obvious that neither does metropolitanization of regional problems nor their resolution. Metropolitanism is also a phenomenon of man and one would hope that man could still influence its evolution. In this regard, it would seem possible to include equal opportunity as a meaningful objective and by-product of the metropolitan age. Provision of an adequate transit system should take into account the job needs of both suburbanites and inner city dwellers. Provision of a quality education to all children may require new school patterns, new schools, and, more than likely, new systems of taxing and equitable revenue distribution governed either on an area or State-wide basis.

Transportation, education, and other problems may be so vast, extending over more than one State in some instances as to require Federal and State collaboration. The Urban Affairs Council established by the new Administration would seem to be the kind of body to deliberate the issues and initiate action on Federal-State involvement. The Digest's respondents made it very clear that Federal and/or State solutions are necessary and quite feasible but that in every case, the interests of the whole community, especially of its minority elements, must be taken into consideration.

Should metropolitanism be erected on existing patterns of segregation and isolation, already known to have caused strife in our cities and not yet resolved, then it would further reduce the chances for an integrated society and for a peaceful resolution of domestic inequities. It will be a metropolitanism built on sand. □

ARMANDO RENDON

Every year schools, Government, corporations, and professional organizations squander one billion dollars on producing films which promote social inequities. Viewers who see these noncommercial educational and industrial films gratis pay a hidden price in the misconceptions they see.

Noncommercial films can reinforce and promote social inequities by using biased casting procedures. School children, college students, consumers, and industrial trainees who view these films see only white actors in lead roles, because minority persons are shunted to walk-on parts, if they're not completely excluded. Some Negroes, Orientals, Mexican Americans, and Puerto Ricans have complained about these biased practices, but their grievances are not popular.

The importance of casting minority persons in educational and industrial movies is multiple: job opportunities are more widely distributed; minority viewers identify with the roles; an affirmative image of minority persons is established; and majority members get a positive view of interracial society.

The New York State Division of Human Rights recently reiterated these themes during its hearings on job opportunities for minorities in the film industry. College professors added another valid reason for including minorities in educational films: students sometimes base career decisions on the films they see. If an Oriental, Negro, or person of Spanish origin never sees his counterpart practicing law, installing electronic equipment, or supervising other employees, he may be convinced that those careers are closed to him. Further, when ma-

BIAS IN NON-COMMERCIAL FILMS

jority group members see only white persons portraying key positions in business and society, beliefs in white competence and white superiority are reinforced.

Professors who use audio-visual materials were interviewed by Dr. Philip Harris of Bernard M. Baruch College, New York, who conducted the bias in film casting study. A survey was made of 131 films shown 1,634 times in different departments of three colleges and universities from 1965 to 1968. Some professors who showed films with integrated casts to their classes could not recall seeing minorities when the movie ended. This kind of response indicates the role minorities play in education films is usually so trifling as to go unnoticed.

College professors and high school teachers said 18 percent of the educational films they used had integrated casts, and most of these are directed toward special interests or designed for nonwhite audiences. If educational films are to present society positively, special interest films are not the entire answer; however, they do serve one beneficial need. Films about Puerto Ricans in New York City, Korean immigrants adjusting to American life, or an anthropological study of Borneo, inform students about subjects which most textbooks otherwise leave uncovered.

Of the billion dollars annually spent for noncommercial films, about half goes for educational movies. This sum is followed by business and industrial films which contribute more than one-third; Government spends about 10 percent, and community, religious, and medical associations spend 2 to 3 percent each. The 1966 industrial film market shows business used 63 percent of the films for sales; 14 percent for training; 11 percent for public relations; 8 percent for advertising, and 4 percent for other purposes.

The industrial film business is highly competitive, and producers say they must yield to the demands and prejudices of their clients in order to survive. This means clients can tell producers to omit minorities from certain productions without meeting much resistance.

The New York State study of casting patterns in industrial films reveals that two kinds of people are hired for parts—actual employees and professional actors. When the employees in a client's factory or office are used, the manufacturer and not the producer, is responsible for biased casting, because the actual situation—of

Delta population and future

6-24-70

The preliminary census figures for the second and fourth congressional districts have been released. Both districts lost population since 1960. Figures for the first district, which includes much of the mid-Delta including Washington County, will probably be released by next week. It is not hard to predict that we in Greenville might as well throw those old Chamber of Commerce population projections out the window and count ourselves lucky if the city did no worse than hold its own over the last decade.

The prediction is not made for the sake of argument. If anything, it is advanced to save some of the shock we expect will be forthcoming when this district's figures are released. Mississippi State University's population research experts have been saying for five years that the county's population was declining significantly, and the Board of Supervisors' recent county-wide study which preceded redistricting indicated that Greenville had not grown in the past ten years.

This isn't very hard to understand when we remember a few facts and figures. Full mechanization on the farms was accomplished during the 1960s, as was the widespread use of chemical herbicides. The need for hand labor, except in special cases, dropped by at least 75 per cent. Industrial and business growth, on the other hand, grew during the same period, but nowhere near as fast as the revolutionary automation of agriculture. Too many people and too few jobs added up to the same result they have for decades: Exodus to urban areas elsewhere.

At the same time, most of the residential growth in the Greenville area was outside the city limits to the south and southeast. That growth is still largely outside the city limits, because legal maneuvers have stalled the city's annexation plan. In the meantime, within the city the housing code has brought down almost 1,000 substandard homes in less than 10 years. There has been no corresponding addition of new housing inside the corporate limits.

An educated guess is that the county overall lost about 10 per cent of its population between 1960 and 1970. (In other districts, Meridian and Yazoo City both lost about that much population in the same decade, as did several Delta counties.) Another, better-educated projection from Mississippi State is that the black percentage of the total county population either went up or stayed about the same as it was in 1960. That means that whites as well as blacks left the county during the decade, seeking better conditions elsewhere. In both cases, we expect the majority of those who left were in the most productive age categories, while a majority of those who remained were either school-age or older citizens.

This is not an encouraging picture, although we believe it will prove to be an accurate one. But it is nothing to panic about either. We have known, subconsciously if not consciously, that changes in agriculture were having a profound impact on this region. Most of those changes have now been thoroughly accomplished insofar as their effect on population is concerned. Future growth, and future emphasis by this area's leadership, must come in industrial development, in exploitation of our river location, and the stimulation of goods and service concerns. The 1960s were a time of near-traumatic economic change. The 1970s could and should be a time of exciting economic growth.

El Dorado Protests Census Figures

EL DORADO (UPI)—Mayo I. L. Pesses of El Dorado Thursday released a letter sent to the Census Bureau complaining of preliminary figures that show the city's population dropped by 2,000 persons between 1968 and 1970. ARK. GAZETTE.

A 1968 enumeration paid for by the city and conducted by the Census Bureau showed 26,176 persons lived in El Dorado. Preliminary figures for 1970 list 24,140 residents. 6-5-70

Pesses said he did not understand how any city could lose that many people in two years.

The letter was signed by W. H. Baker, El Dorado public works director. He asked that the Bureau check to make sure an eight-square-mile section annexed to the city in 1968 was included.

The 1968 census was made in an effort to secure more turnback funds from the state.

Selma Mayor Asks for Resurvey As Census Shows Population Loss

6-7-70

& Pop.

Montgy. Adv.

By COLIN (Buster) MacGUIRE
Advertiser State Editor

SELMA — A preliminary census report that shows a population loss of 1,442 residents here since the 1960 survey has caused considerable alarm, and has caused the mayor to make an urgent request for a resurvey.

Shocked by the report, and fearful that its adoption would sharply curtail state and federally shared revenues, Mayor Joe T. Smitherman immediately petitioned the regional director at Atlanta for immediate consideration of his plea.

In a conference here Friday, Smitherman said he had been proceeding under the assumption that there were some 35,000 residents in the city. The report reduced the 1960 figure of 28,383 to 26,941.

He bolstered his argument with figures reflecting an actual count of 15,588 registered voters within the city and the registration of some 8,000 school children in the city schools.

"Combining these figures," Smitherman said, "we come up with a total of 23,588, and this does not include any of those between the ages of 17 and 21 who do not attend school — to say nothing of those who have not registered to vote."

Smitherman said he was dumbfounded by the report, and was seriously concerned about the possible future of his city, if the requested reevaluation should be disallowed.

Arguing his case further, the mayor said that new construction and the installation of gas and water meters, combined with a count of the building permits issued "cause me strongly to believe our population to stand at a minimum of 32,000."

He said further that the city-operated recreation program, and the YMCA program, together have the greatest number of young people participating that those programs have ever had.

In his request to the regional director, Thomas McWhirter, Smitherman pointed out that more than half the city's population is of the Negro race, which migrated into the city from rural areas, "many of whom pay little or no revenue for city services."

The deprivation of additional state and federally shared funds, which are based on a per capita basis, "would cause Selma to lose income at a time when it urgently needs additional revenues," Smitherman said.

The mayor said he was aware that documentation to support his contentions would have to be produced, and that he was prepared to make such information available.

Re: Census Data

~~Eric Hill Associates have~~ been designated a Census Summary Tape Processing Center. They will be engaged in the selling of data. Presently, data files are being designed in order that a potential user would be able to order sets of tables by telephone. A Harvard library program is being acquired to provide graphic display of data. The firm has plans to form an Atlanta Planning Information Center. Such a center is envisioned as a means of getting potential or regular users of census data together to determine what kind of data should be kept at the Processing Center. Presently, means of updating data on a regular basis are being developed. Plans also call for certain cross-correlations of data that the Census Bureau doesn't ordinarily perform.

Even with today's low birth rates, the population is growing fast enough to double in seventy-two years. Someday it will have to stabilize.

U.S. Population Growth: Would

PAGINATION INCORRECT

which was so anxious to unload that it sold the property, 185 acres of land, ways, buildings, and machinery, for only $5 million. G.D. was apparently dazzled by that price; Lewis and other executives still talk about how cheaply they got the yard when they discuss the logic behind the purchase of Quincy. It is not clear at all that equal thought was given back in 1963 to the working capital and managerial talent that would have to be tied up in the operation or to the risks that might have been expected to accompany G.D.'s entry into a relatively unfamiliar business.

Quincy is Lewis' Achilles' heel. He bought the yard originally because the Groton facility did not lend itself to expansion, and because he believed generally in the future of shipbuilding and, specifically, in the future of sophisticated ships to whose construction G.D. could apply systems techniques that it had polished at Electric Boat and in the aerospace industry. He still sees great promise in shipbuilding, to the point that he expects his decision about Quincy eventually to be vindicated. But meanwhile he is stuck with the knowledge that the yard has so far been a lemon, and that all of the sourness seeping from it has undeniably been the product of his administration, and his alone.

Had there been a proxy fight, Quincy might well have kept the G.D. management from winning; it surely prodded Lewis toward the "understanding" with Crown. It cannot please Lewis to recall that Crown, though he ultimately made the G.D. board's decision unanimous by voting for the Quincy purchase, had right up to the last argued against the move. When asked recently about reports that he had opposed the Quincy purchase, Crown was drawn to admit that indeed he had. He could not help looking a little smug.

An uncollectable profit

The F-111 is a far different problem from the shipyards. Lewis once said of the F-111 contract that the only thing worse than having it would be not having it. That wry remark aptly sums up the situation. Probably no corporation has ever had a bigger public-relations problem, yet without the acquisition of that contract in 1962, G.D. might not have been able to pull itself back together.

The current news about the F-111 is, as usual, bountiful. One body of information concerns the condition of the fleet and begins with the fact that at the end of 1969, General Dynamics had delivered 230 of the planes. That score still stands, for at the moment the Air Force is not accepting, or for that matter, flying (except in a few special cases), any F-111's. Instead, in reaction to a crash in December that was found to be caused by a flaw in a metal part of one of the plane's wings, it is putting each of its existing F-111's through an extraordinary testing procedure designed to identify any other such flaws that might exist.

The testing program has put the squeeze on G.D. in a variety of ways. For one thing, if the Air Force's view prevails, the company will have to pay 15 percent of the cost of the testing, which is expected to run to $35 million. For another, the money for the testing is slated to come from funds that would otherwise be available for the procurement of F-111's, with the result that G.D.'s production run will apparently be cut by three or four planes. Finally, though the Air Force continues to make progress payments to G.D. for the planes the company is making but not delivering, these payments are limited to 90 percent of G.D.'s costs. That leaves the company, for the time being, stuck with the remainder of its costs and, beyond that, unable to collect its profit. (However, in line with accepted accounting procedures, G.D. continues to "book," or include in earnings, profits on the program just as if deliveries were proceeding normally.) Partly because of this situation and partly because of its more general financial woes, G.D. has since the end of the year increased its short-term bank borrowings from $62 million to nearly $150 million and was recently seeking to raise its line of credit by another $50 million.

Most of the other items of F-111 news have been coming

PAGINATION INCORRECT

Slower Be Better?

by Lawrence A. Mayer

The movement to curb population growth in the U.S. has come into prominence, curiously enough, at a time when the birth rate is close to its all-time low. The actual low in the U.S. birth rate came in 1968, at 17.5 per thousand. While the rate rose a bit to 17.7 last year—the first increase in more than a decade—it was still lower than at any point during the great depression of the Thirties. And though the number of births last year was up 2 percent to 3,570,000, that total was about 700,000 below the all-time peak reached in 1957.

The U.S., then, appears to have already moved in the direction that proponents of population stability advocate. But it's not at stability yet. Even at the recent reduced birth rates, the population has been growing 1 percent a year, and that is enough to double it in a single lifetime of seventy-two years. Moreover, birth rates are now bound to go higher, at least for some years to come. One important reason has to do with the changing numbers of women aged twenty to thirty-four, who account for about three-quarters of all births. The size of this group remained practically constant at about 18 million between 1955 and 1965, but from 1965 to 1970 it grew by three million, and in the next fifteen years it will increase ten million more. This wave of younger women is the result, of course, of the baby boom that followed World War II.

While the number of young women began to increase markedly in the years following 1965, the number of births did not. The women who had reached at least the age of twenty-five by around 1965 had borne most of their children by that time, and births to them naturally slowed down drastically thereafter. At the same time, women who were then just moving into the child-bearing ages delayed having children (see "Why the U.S. Population *Isn't* Exploding," FORTUNE, April, 1967). This delay should partly be made up at later ages, however, and meanwhile the ranks of the twenty- to thirty-four-year-olds will increase rapidly. These two factors virtually guarantee that there will be a rise in births during the years directly ahead.

How boomy this baby boom will turn out to be is a question that perplexes demographers. Those at the Census Bureau who made four alternative population projections in 1967 have already discarded the highest as virtually impossible (see chart, opposite). What's more, it has become clear that the second highest is improbable. Up to this moment, it is the lowest that is on target with a figure of 205 million for 1970*. At any rate Census will soon issue a new, lower set of projections.

In the present era of changing mores and social upheavals, it is even more difficult than usual to forecast the probable course of U.S. population growth. Just about everything known, however, suggests to Census demographers that a range of projections for the year 2000 should at the outside be no higher than 325 million (the old Census high was 361 million). Even the 300 million people still commonly said to be inevitable by 2000 are no longer inevitable at all.

Some distance from zero

Population projections have to be built on many assumptions. One key assumption has to do with how large a family the average woman eventually will have. And nobody knows what that figure will be for the young women who will soon begin to bear children, or have recently begun. Surveys have shown that women expect what averages out as about 3.2 children. Demographers largely agree that at present it looks as if today's young women would have fewer children than that. But it would take a drop all the way down to an average of 2.1 children per woman (a bit more than 2.2 per married woman) to bring population growth to a halt. The 2.1 figure is sometimes referred to as the "zero population growth" rate. Obviously it takes two children to replace a set of parents. The extra 0.1 compensates for the girls who die before maturity and takes account of the fact that fewer girls than boys are born. (The 2.1 figure ignores net immigration, which has been contributing 0.2 percent a year to U.S. population growth.)

An important clue to future family size is the total fertility rate. This is the combined rate at which, in any particular year, women of all reproductive ages bear children. The figure for 1969 suggested women were building families at a rate that, if sustained, would give them an average of about 2.5 children by the end of their child-bearing careers. This rate is very close to that underlying the present Census low projection. But the total fertility rate at any point in time may be an unreliable indicator. For example, the rate hit 3.7 per woman in the late 1950's, a figure demographers rightly suspected was too high to

**If this year's Census picked up the number of people thought to have been missed in the Census of 1960, the official figure for 1970 will finally be reported as about 210 million.*

A slowdown in growth has already outdated the Census Bureau's high projection, only a few years old. Population is now following the bureau's low projection. The other curves shown were worked out by economist Stephen Enke of General Electric-TEMPO. The one labeled "recent family size" assumes that today's young women will have an average of 2.9 children, and that women will continue in that pattern. The "zero population growth" line assumes that, starting in 1975, the average per woman declines to 2.1 children—i.e., just enough for replacement. Because of the present age structure, growth would not reach zero for about sixty-five years. Both of Enke's projections assume some increase in life expectancies.

last. Many experts think the present 2.5 is too low to last.

Donald J. Bogue, a demographer at the University of Chicago, argues that the present fertility rate is *not* misleading. The rise in fertility that followed World War II, he believes, was merely a prolonged interruption of the decline in the U.S. birth rate that got started early in the nineteenth century. He thinks it quite significant that by 1968 white women were bearing children at a rate of only 2.37 per woman, 1.26 fewer than in 1957 and not so very far from the stability rate of 2.1. Childbearing by black women (who account for about 17 percent of all births) has come down by about the same proportion, and was at a rate of 3.2 per woman in 1968. Moreover, Bogue thinks the black rate may go below the white rate by the end of this century. He points out, for example, that the percentage of black women who bear five or more children has halved since 1957. Moreover, college-educated black women expect fewer children than college-educated white women expect.

Accordingly, Bogue sees comparatively moderate growth in the U.S. population by the year 2000. The low of about 280 million in the Census Bureau's 1967 projection is the top of Bogue's high range. Bogue's low goes down to 220 million.

The big little difference

A view quite different from Bogue's is advanced by Arthur A. Campbell, a widely respected government demographer now at the National Institutes of Health. He believes that the total fertility rate is probably giving off a false signal. He takes the depression years, when all measures of births were extremely low, as his bench mark. At that time, women born in 1909 were in their peak childbearing years. By age twenty-six (in 1935) they had given birth to but 1.05 children on average, and they finally produced the smallest American families on record, 2.23 children. By contrast, when women born in 1943 were twenty-six years old (in 1969), they had already averaged 1.57 children. It now looks as if these younger women would eventually have an average of close to three. Recent patterns suggest that 90 percent of today's young women will have at least one child; in contrast, nearly 25 percent of the women born in 1909 never had any children at all.

In short, Campbell believes that much of the recent decline in birth rates reflects a delay in childbearing by young women. And even though such delays tend to reduce the eventual size of families ("Later means less," demographers say), he still thinks current reproductive behavior is consistent with an average of 2.8 children per woman rather than 2.5. This seemingly insignificant difference has large implications. If sustained over thirty years to 2000, the higher figure would mean 25 million more Americans.

As surer means of birth control come into use, it becomes more important for demographers to know how many children people really want. One kind of information bearing on this question is what proportion of births represents unwanted children. In a recent paper, Professors Larry Bumpass of Wisconsin and Charles F. Westoff of Princeton maintain that 16 percent of the births to women who were nearing the end of their childbearing years in 1965—when the last national fertility survey was taken—were unwanted. They conclude that these women, on average, would have had only 2.5 children if they had been able to exercise perfect control over their fertility.

This is astounding, since whenever surveys have directly asked women how many children they wanted or expected, the average has always come out a little over three. Bumpass and Westoff, however, went back over the 1965 questionnaires to ascertain what parents said about wanting *each successive child.* In this way the two

Variations on the Population Profile

These charts illustrate how changes in rates of population growth affect not only total numbers but also the age structure. The present profile reflects both the marked rise in births beginning in the 1940's and the leveling out and decline in births since 1957. If women continue to have families of present (or recent) size, the population will grow 50 percent by the year 2000 and will shift to a still younger age structure. But if family size declines to the "zero population growth" level by 1975, there will be similar numbers of people in all age brackets up to about fifty by the year 2000. (Data from Stephen Enke of G.E.-TEMPO.)

demographers arrived at their 2.5 figure. And this result could well be conservative. It can be imagined that parents find it difficult to describe children who may literally be sitting in the adjoining room as "unwanted."

By extending their analysis to the entire population, Bumpass and Westoff conclude that in the 1960's one-fifth of all births were unwanted—meaning about 700,000 annually in the past few years. The extra births are more widely spread among social classes than might be supposed. The poor and near-poor, of course, contributed more than their proportionate share, *but more than half* of the unwanted children were born to parents who were not considered poor. (A family of four that had an income of at least $4,000 in 1964 was classified as "nonpoor.")

The implications of these findings are quite far reaching. If the number of children that couples really want averages 2.5 rather than three or so, it might not require very extensive social alterations to attain population stability, assuming the availability of perfect contraception.

The "popullution" problem

A sense that population growth is becoming a burden rather than a boon has taken hold in the U.S. with surprising swiftness. Last July, only a year after President Johnson's restrained advocacy of family planning and his hesitant mention of "population change," President Nixon spoke out forthrightly about the "pressing problems" associated with population growth. In keeping with Mr. Nixon's request, Congress has established a Commission on Population Growth and the American Future.

All the attention to population has arisen from several interwoven concerns having to do with crowding, pollution, and deterioration of the environment. The U.S. is confronting a "popullution" problem, observes S. Fred Singer, Deputy Assistant Secretary of the Interior and director of that department's research on environmental quality. Also, it is disturbing to some that the U.S. is chewing up a disproportionate share of the earth's limited stock of natural resources.

Population growth, of course, is not the only villain in these matters. Under present arrangements, the nation's productive system provides high levels of consumption but also throws off inordinate amounts of pollution, waste, and discomfort. The uneven distribution of the population also affects the quality of life.

It is often said that the U.S. doesn't really have a population problem, because there are only fifty-five people per square mile (sixty-five excluding Alaska). Density in some European countries runs more than ten times as high. But the over-all density figure for the U.S. is misleading, because two-thirds of the population lives in metropolitan areas, where density is much greater. And nearly half of the people in metropolitan areas live in central cities, where the density averages around 7,000 per square mile (and a lot higher than that in city cores). It is true that these urban areas are becoming decentralized, but the continuing helter-skelter growth of suburbs is causing new problems of traffic, water supply, and pollution.

If the U.S. rationally altered the distribution of people, it is often contended, there would be no reason for concern about the size of the population. This is more easily proposed than done. Schemes to distribute the population differently are up against what appears to be an iron law of urbanization: in a technologically advancing society the bigger cities tend to grow in perpetuity. Public authorities have tried over the years to halt the growth of London, Paris, Tokyo, and Moscow. None has succeeded, not even the authoritarian government of the U.S.S.R.

Another often-mentioned possibility is to build new towns. Britain has carried out the largest endeavors along this line, having started twenty-seven new towns—new cities, really—since 1946. But they contain only about 1 percent of the total population. Most observers give Britain's new towns at least passing marks, in large part because they have preserved a lot of open space, especially around London. However, the towns have failed to improve conditions within London; the inferior housing that was evacuated filled up again with newcomers.

Only a few communities that really qualify as new towns have been built in the U.S., and those few are not very populous. Recently the federal government gave its first real support to a new town in more than thirty years by issuing a loan guarantee to Jonathan, about twenty miles from Minneapolis. The location of Jonathan supports those who contend that new towns can succeed only within the ambit of established cities. If that is true, then although new towns prevent haphazard development, they don't really do much redistributing. A number of experts think some redistribution could be accomplished if new towns were built around existing ones and used facilities already in place. They have in mind cities in the Middle West that could stand revival—cities with 20,000 to 40,000 people that have stopped growing or are losing population.

One way to try to get new cities built is for the federal government to grant tax incentives to business, an approach that a number of studies and some bills in Congress advocate. Other measures that Washington or local governments could try include selective placement of procurement contracts, provision of inter-area job information, and special channeling of assistance to home building. This spring the Nixon Administration was considering several alternative approaches to a new-town program.

Romantic nonsense

Many economists take a quite different approach to the problems of population distribution. Attempts to use subsidies and special assistance to get people and companies to relocate in less crowded parts of the country are "romantic nonsense," according to Dick Netzer, an urban-economics specialist at New York University. Of the many underlying reasons, perhaps the most important is that the key decisions about location are ordinarily not made by individuals seeking amenities, but by business organizations that cluster together in places they find economically advantageous.

The sensible way to change present patterns of distribution, Netzer and other economists maintain, is to make organizations and individuals pay the full costs of their activities. The argument is that if business, for one, was forced to pay for all the pollution, waste disposal, and traffic congestion resulting from its activities, and for all the benefits it gets from airports, highways, and other public facilities, the distribution of industry and people would be a lot different and the condition of the environment a lot better. In other words, the costs of producing and distributing goods and services should reflect the "externalities." The additional costs would, in many cases, be passed on to consumers. (See "The Economics of Environmental Quality," FORTUNE, February.)

Another way to reduce adverse effects of population growth on the environment is to reduce standards of consumption. It has been calculated that an attempt to get

continued page 164

U.S. Population Growth: Would Slower Be Better? *continued from page 83*

pollution in 1965 back to the levels of 1940 would have required reductions of 50 percent in the number of cars on the road, 50 percent in consumption of paper, 70 percent in generation of electric power, and 87 percent in the use of nitrogen fertilizer.

Still another set of troublesome questions connected with population has to do with the future adequacy of resources. The answers are by no means certain, though judging by the past alone there is nothing much to worry about. Important new materials such as petroleum and aluminum have been brought into use in the past century, and others, such as synthetic fibers and plastics, have emerged from laboratories. Additional reserves of minerals and fuels keep coming along. Better conservation methods have also added to supplies, as in the case of lumber. And improved technology has in some instances played an important role in holding down the consumption of materials. In 1968, electric utilities burned 480 million tons of fuel, measured in coal equivalents; Hans H. Landsberg of Resources for the Future calculates that 740 million tons would have been burned if the technology of 1940 had still been in use.

In principle there are only four real resources: the earth and its minerals, air, water, and fossil fuels. The first three can be constantly repurified or recycled in one way or another, maintains Roger Revelle of Harvard. But the fossil fuels —coal and petroleum—are irrecoverable once consumed, and are bound to run out within a few hundred years. However, most energy experts expect that, before the present century is over, breeder reactors to supply energy will be available, and some believe that controlled fusion will also prove feasible (see page 94).

The world, of course, is a long way from ideal utilization and recycling of materials. Moreover, if one extrapolates demand on the assumption that most or all countries will become industrially advanced, then it is possible to arrive at enormously large estimates of future global requirements for resources. Changes in technology and patterns of resource use will temper these requirements, but even so, demand for materials will certainly rise far above present levels.

The U.S. is already a large user and importer of a long string of raw materials from antimony to zinc. With only 6 percent of the world's population, the U.S. gobbles up about one-third of the world's materials. At present the high U.S. rate of imports helps provide underdeveloped countries with badly needed foreign exchange, but as they achieve a high degree of industrialization they may ration their exports of resources.

An eventual halt

It seems feasible, in theory at least, to mitigate problems arising from the distribution of population, environmental pollution, and scarcity of resources by altering government regulations, taxes, and subsidies, re-allocating costs, and adopting different technologies and life styles. But such measures, even if society is willing to accept the costs, will not enable the U.S. to postpone indefinitely facing questions about population growth. Eventually, growth will have to come to a halt. Though no one can formulate them with any precision, there must be limits to how many people the earth, or any nation, can hold. Accordingly, it might be wise to begin thinking now about ways to stabilize the population. If society waits until limitation becomes a matter of desperate urgency, it may be too late for humane, noncoercive policies, and in any event the quality of life will have been severely and perhaps irreparably impaired.

The economic and social consequences of population stability merit a great deal more research and thought than they have received. Still, it is possible now to foresee some of the effects. Whether the effects seem beneficial or not depends to some extent on individual values and tastes; at any rate, a lot of things would be different.

It was once believed by businessmen and by many economists that population growth was necessary to sustain national prosperity. Nowadays hardly any economist would argue in favor of that view. Despite a widely held assumption to the contrary, big business seems to have swung around too. A FORTUNE-Yankelovich survey of chief executives of the 500 largest corporations (February) showed that almost eight in ten favor some sort of effort that would curb further population growth.

The size of the gross national product would be smaller with population stability than with continued growth. More women would presumably go to work if there were fewer children, but once employment of women reached a ceiling there would be no further growth in the labor force. From then on the economy could grow only as fast as the average output per worker. This means that if productivity is still rising at 3 percent or so a year with the population stabilized, the economy's potential rate of growth would be 3 percent a year rather than the present rate of more than 4 percent.

THE U.S. APPETITE FOR RESOURCES

U.S. Consumption as Percent of World Production

NATURAL GAS	67%	GYPSUM	29%
SILVER	58	MERCURY	28
MOLYBDENUM	50	CHROMIUM	28
SULPHUR	48	ANTIMONY	27
MAGNESIUM	43	ZINC	27
COBALT	41	CRUDE PETROLEUM	26
LEAD	37	TIN	26
PLATINUM	35	NICKEL	25
BAUXITE	30	COAL	21
COPPER	29	IRON ORE	21

The average standard of living is nevertheless likely to be higher with population stability. When population is rising, some proportion of national product must go to provide consumer goods and services and social overhead for additional people. With stability, the U.S. could use the freed resources to increase both private and public investment per capita. Because each member of the labor force would then be working with a larger or more advanced stock of capital, there would be more output and income *per worker*. And since workers would, on average, belong to smaller families, income *per person* would rise even faster. The income position of young families—with fewer children living at home than their counterparts of today—would benefit the most. It thus turns out that businessmen are confronted with a trade-off: a growing population would mean larger markets, and a stationary population would mean richer markets.

Markets would also be affected by the changed age composition of the population. By the year 2000, as the chart on

continued page 166

page 82 shows, a population moving toward stability would have roughly the same number of people of each age up to about fifty. Several decades later, with population growth actually zero, all age groups except the very old would be approximately the same size. On the particular assumptions used to construct that chart, people under twenty-five would constitute one-third of the population compared to more than 45 percent at present, and the median age would be thirty-eight compared to twenty-eight. The market would thus be far more oriented toward older people and far less toward younger ones than is the case today. Apart from the different marketing strategies this implies, some industries would stand to gain, relatively, and others to lose.

With higher incomes and fewer children, young families could afford to spend more for travel, recreation, adult clothing, and home goods. The businesses that, on the whole, would presumably do worst are those with a kind of fundamental dependence on growth in numbers of people. Purveyors of goods and services for infants, producers of staple foods such as bread, sugar, and canned goods, bottlers of beer and soft drinks, construction, building-supply, and real-estate companies; and manufacturers of such tobacco products as are still being sold—all these could very well be stuck with relatively stagnant markets.

Population stability would also bring with it a somewhat less flexible economy, though it would not necessarily be less efficient. A growing population makes it easier to maintain opportunities for members of all occupations, and for business to make adjustments to changing tastes and technologies. Because markets grow faster, marginal investments are more likely to succeed and obsolete industries to hold on.

Stability is not likely to entail higher production costs. The U.S. market is already large enough to make it possible for most industries to enjoy maximum economies of scale, or it certainly will be by the time population growth levels out. At least one burden would grow, however. Social-security taxes and pension costs are bound to go up as stable population conditions are reached, because of the increase in the ratio of people receiving benefits to those paying.

Will youth be disserved?

Among the social benefits of population stability would be some reduction in poverty because there would be few large families. And smaller families would make for more education per child. That, in turn, implies a more highly skilled labor force and enhanced ability to innovate or to cope with advanced technology. The less the population grows, the less the need for increases in governmental expenditures in such areas as education, health, recreation, and water supply. Indeed, there would be less need for government regulation or intervention of many kinds. With relatively fewer young people around, there would presumably be less juvenile delinquency. With fewer drivers on the road, control of traffic would be less onerous. With fewer families looking for homes, there would be less pressure to alter the zoning of land.

Some people who have considered the matter maintain that population stability would bring some social disadvantages. Ansley Coale of Princeton has pointed out that when there are about as many older as younger people, the average age of those who run things will be greater, and advancement in business, in politics, or in any other form of organized activity will perforce be slower, a situation that will be frustrating to oncoming generations. Things might not work out quite that way, however: a relatively smaller demand for the services of young people would be partially balanced by a relatively smaller supply. In general, it may be misleading to project today's attitudes into tomorrow's world. A changed population structure would have many interacting consequences that might affect the morale and outlook of both young people and their elders in ways difficult to foresee. At any rate, it is not certain that youth would be served any less well in a stable population than it is now.

The most sweeping attack on population stability comes from the pen of Alfred Sauvy. This distinguished French demographer's textbook has finally been published in English (*General Theory of Population,* Basic Books), and may well play an important role in future debate about population. Sauvy presents a long catalogue of social, cultural, and economic ailments that France has experienced from early in the nineteenth century to the present, and he attributes them largely or exclusively to the virtual stagnation of the population during most of that time. The argument is long and rich, but cause and effect are scarcely ever conclusively demonstrated, and there is a noticeable absence of the statistical analysis one might expect. Sauvy's main explanation is that when population stops growing, society loses a sort of creative pressure that stimulates and adds healthy ferment to all of its aspects. This sort of generalization is perhaps more persuasive to French readers than to others, for concern over slow population growth is widespread in France and has been of long-standing concern to the government. Surely there are other reasons for difficulties that the French are bothered about. Coale likes to point out, for example, that just as the Industrial Revolution in England was getting under way, France, under Napoleon, was undertaking a series of ultimately unproductive military adventures.

Assigned to motherhood

A society that wants to stabilize its population runs up against the puzzle of how to go about doing it. One difficulty is that little is known in any systematic way about the psychological and social motivations that impel people to become parents or to have large families. For example, to what degree are decisions to have children consciously arrived at and to what degree are they subconscious? Knowledge about such matters may be an important prerequisite for devising a population policy that would work.

Of course, if Bogue is correct that the U.S. is already moving toward a halt in population growth, there isn't any puzzle to solve. Or if Bumpass and Westoff are correct that the number of children women really want averages out to around 2.5, then perhaps a reasonably uncontroversial program might be able to reduce that number to 2.1. Such a program would include an educational campaign about the long-run consequences of continued population growth; a system for making means of contraception available to all women; elimination of obstacles to abortion; and greatly intensified research efforts to discover more reliable and acceptable contraceptive methods. (At the moment, research is under way on some three dozen or so.) These steps would amount to a broadening and intensification of present family planning. Complete freedom of choice would be left to the individual.

But suppose Bumpass and Westoff are wrong, and people really still want three children? Then intensified family planning, though helpful, would be insufficient. Family planning in the U.S. has traditionally been put forward as a way of widening individual options, not of implementing a population policy. Some claim that family planning is incapable of

continued page 168

fulfilling the latter role. The heart of the argument is that what demographers call "pro-natalist" influences are far too strong and deeply embedded to be counteracted solely by voluntary family planning.

Government tax and subsidy policies are at least implicitly pro-natalist. The examples that come to mind most easily are tax exemptions for children and, because of the split-income provision, higher tax rates for single than for married people. FHA and VA assistance to buyers of single-family homes has done a great deal to encourage the growth of all those child-centered suburbs. In many ways, customs and social arrangements operate to favor motherhood—a situation that some women are now vigorously protesting. Many people who advocate smaller families maintain that childbearing cannot be reduced substantially until women have real and satisfying alternatives to motherhood as a primary role. Perhaps nothing would do more to ensure the prevalence of small families than widespread success for the "women's liberation movement."

It will, of course, be somewhat easier to make a go of any limitationist policy once biologists learn just how to predetermine the sex of a child. In the U.S., as well as in other countries, many couples with one or more daughters decide to have additional children in the hope of having a son. However, if choosing the sex of children were to bring an appreciable change in the ratio of male to female births, that would not only enormously complicate population policy, but would also have other far-reaching social consequences.

A problem never faced before

There is some question whether a government can deliberately curtail a nation's population growth. Official approval apparently contributed to the postwar decline in Japan's population growth, but otherwise there is no direct evidence that government policies work. And the indirect evidence is negative. Some countries have consciously tried *pro*-natalist policies—France for the past thirty years, Germany under Hitler, Italy under Mussolini—with little success.

A great many proposed methods, some of them quite fanciful, have been put forward. Bernard Berelson, president of the Population Council, has listed twenty-nine different proposals to limit population growth apart from family planning. (Some really apply only to underdeveloped countries.) They include adding temporary sterilants—as yet undevised—to water-supply systems; licensing childbearing through permits that could be bought and sold on the open market, raising the legal age of marriage, and, of course, changing the tax system. The difficulty is to devise programs that are both feasible and effective. Measures that rank high on ethics, such as educational campaigns, might not be very effective. Deliberate changes in social institutions might eventually work, but they could have unforeseen side effects and would be hard to bring about.

Everyone who thinks about these matters is groping for answers to a problem that no democratic society has squarely faced before. The root question is how to reconcile long-run collective interest in limiting the growth of population with the desires of those who want to have more than two children. Uncomfortable choices will be involved if at some point society decides that it is desirable to curtail freedom to reproduce in order to preserve other freedoms or to preserve valued amenities.

Until recently almost all Americans took it for granted that the right to have as many children as one wants should not be abridged in any way. The number of people who openly disagree is a lot larger now than it was a few years ago, as is evidenced by the sudden emergence of the Zero Population Growth movement. The right to have children is not absolute, argues Judith Blake Davis, chairman of the department of demography at the University of California. She points out that much of the cost of the satisfaction enjoyed by families with many children is willy-nilly subsidized by others who must pay for the additional schooling and public services. The freedom to have children, she says, does not exist in a vacuum but in a context where the tax laws, the status of women, and various other social arrangements have a pro-natalist bias.

Symbolic commitment

It seems obvious that any population policy would have to meet certain ethical criteria. It should permit a maximum of individual freedom and diversity. It should not in any way impair the welfare of "extra" children. Also, it should not be used to practice selective coercion against any special group within the population.

The history and ways of Americans suggest that the fiscal system, which is impersonal and has long been used to accomplish social and economic ends, would come into play early in any effort to limit population growth. For example, there might be some form of bonus for not having more than a specified number of children. Or various kinds of tax disincentives might be enacted.

A proposal along these lines has been introduced in Congress by Senator Robert Packwood of Oregon. The bill would take effect in 1973 and would provide exemptions of $750 each for a family's first two children and none for any subsequent children. (Those born before the effective date of the act would not fall under this limitation, nor would adopted children.) Under tax provisions that were enacted last year and will take full effect in 1973, a family of four will get exemptions of $3,000 and a standard deduction of at least $1,000, so families below the poverty line won't be paying federal taxes anyway. The Packwood bill would therefore have no impact on large families among the poor. Nor would it have much impact on the well-to-do. The effect on people in middle-income brackets is uncertain, and Packwood, among others, suspects it wouldn't be great. "I don't regard a tax incentive per se as a key to population stabilization," he declares. "The important thing is that a tax-incentive bill, if passed, is a government commitment to make an effort to achieve stabilization. It would be symbolic."

Whatever the time or the circumstances, any policy of deliberately limiting population growth should be suffused with respect for the quality of individual life. This view was well expressed by Catherine S. Chilman, dean of the faculty at Hood College, in a paper recently presented at the New York Academy of Sciences. "We must care as a society," she said, "about the fulfillment and well-being of individuals as whole people, not just as potential reproducers. . . While a humane population policy would recognize the need to motivate people to have no or very few children, it would lead from a social and psychological base rather than one that is exclusively material and technological. It would emphasize that there are many ways of being a respected, successful person other than having a large family; that there are many benefits, other than economic ones, alone, to be gained from controlling family size. It would build on and enhance the human need to love, cherish, nurture, and protect." END

Dear Emory:

We have done a little research into the 1970 census and are sending you a statement on what we can do. We will have more specific information which we can discuss later in the week. While we realize you don't want to make a big thing of your inquiry (and neither do we), we would prefer being specific about what you will get if you want us to get it. Please consider the following:

We will provide:

1. A listing of the data obtained in the 1970 census compared to the data obtained in the 1960 census by percent sample. This will tell you what information is to be available from the 1970 census; whether there is an historical base in the 1960 data; how extensive actual survey data was for each item (relative safety of using it for generalizations) and what data is new with this census or eliminated from this one.

2. An approximate estimate of when each kind of data will become available so you may plan timing of your studies.

3. Cost of data tapes from the Census Bureau, approximate going rates for programmers, approximate cost of computer time. This should give you a rough idea of what data grinding will cost if you do a lot of work yourself, but you will have to guess at the time required.

4. Information from one or more "data grinding" companies in Atlanta as to approximate costs of running correlations of data by specific geographic areas (i.e. the southeast, state, county, metro-area, and sub-areas); cost of "computer graphics" (computer drawn maps); and any indication we can get of costs of packages of services (feasibility of a given study plus data grinding, print-outs suitable for direct publication and mapping.)

5. A list of the seventy-one recognized "summary tape processing centers," by location and whether commercial, university-based, or governmental.

6. Terms and conditions under which institutional (e.g. university) computer centers might be used in lieu of commercial houses.

7. A list of ten questions or problems related to housing that might be researched through EDP use of 1970 data with or without additional field research or hand tabulating. For example, the question, "Who lives in old housing?" could be gotten at by correlating structures built, say 25 years or more ago, with these characteristics of occupants:
   income,
   race,
   persons per bedroom (overcrowding),
   tenure (recent emigrants),
   occupation, and/or
   class of worker.

   Each question will have to be analyzed in order to determine whether the data can be obtained directly from the computer.

We can deliver all the above within two weeks after you say "go" at a price of $600.00 We are open to negotiating the price downward if you want to eliminate work items. Major time consumers are items 3, 4, 6, and 7.

I will call you Thursday or Friday to get your reaction.

Sincerely,

C. Bron Cleveland

Census Reflects 'People Menace'

By Claude Sitton

Elbow room. The words have a comfortable ring for Americans. Tradition favors the broad reach and the big sky, be it mountain, plain or strand. Even Manhattan's cliff dwellers pay them homage. That is why the tentative 1970 census returns now dribbling out of Washington give North Carolinians reassurance. The state is rural, small town and small city. Only 37.3 per cent of its population is urban. The bigger-is-better boys in the chambers of commerce don't like it. The people do, those who stop to ponder.

Sitton

But North Carolina is atypical. No less than 68.5 per cent of all Americans live in metropolitan areas. Further, and more disturbing, the number of rural and urban Americans is growing rapidly. Once servicemen, transients and others are added to the 1970 count, the total is expected to pass 204 million. But that total already is five months old. Census experts estimate the population as of midafternoon on Sept. 1 at 205,730,682. And it is gaining at the rate of one person every 15½ seconds.

The United States accounts for only 6 per cent of the world's population. And when the skyrocketing growth of all peoples is considered, the looming crisis becomes apparent. Some demographers say the present world population of 3.5 billion will double in 30 years. By 2050 — less than a century away — more than 30 billion will inhabit the earth, according to their estimates. That means 10 bodies for every one existing today, a mind-boggling prospect.

Necessary as it seems, population control is freighted with controversy. Some groups oppose it on religious grounds. Even those who favor it disagree as to how it can be achieved. One school advocates voluntary measures — contraception, sterilization or abortion. Another discounts the voluntary approach. Its members point out that India's 10-year campaign for control has not stemmed the rising tide of people. They argue instead for compulsory measures such as the injection of drugs that create temporary infertility into food and water.

Without control world crisis seems inevitable. Famine already is prevalent in a few developing nations where population has outdistanced food supply. Hunger is by no means the only threat. Overpopulation could wipe out supplies of other resources — metals, minerals, fuels, chemicals and construction materials. Stewart L. Udall, former Interior Secretary, has estimated that the United States alone uses 35 to 50 per cent of the world's annual consumption of irreplaceable materials. Moreover, this nation does more to disrupt and destroy the environment than poorer countries with more people.

A more subtle menace may confront a world of wall-to-wall people — "The Sardine Syndrome." Two British social biologists, Dr. W. M. S. Russell and his wife Claire, describe it in an article under that title in the August issue of "The Ecologist," a new British monthly. They contend that recent violence stems essentially from overpopulation.

The Russells concede the disagreement over the causes of human aggression that lead to crime, riots and war. "Some people have said that human aggressiveness is human nature, an innate disposition in man," they observe. "Other people have taken the view that human aggression is a response to intolerable frustrations; that violence is a reaction to stress, notably the stress of shortage of food." The Russells agree that stress touches off violence. But they cite recent studies of both animals and man to demonstrate that the fatal stress is caused by overcrowding.

The Russells' conclusions may seem farfetched. Nevertheless, the population crisis is upon us. And, while man may not have developed a sardine syndrome, that crisis will certainly rob him of far more than elbow room.

Number of Inhabitants—Series PC(1)-A

During the period September 1970 through April 1971, the Bureau of the Census will publish a series of reports presenting final population figures from the 1970 Census of Population. This series is designated as PC(1)-A and is entitled, "Number of Inhabitants."

The series consists of 58 reports — one for the United States, one for each State, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, Canal Zone, and Trust Territory of the Pacific Islands.

The reports will contain final official population counts for States, counties by urban and rural residence, standard metropolitan statistical areas, urbanized areas, county subdivisions, all incorporated places, and unincorporated places of 1,000 inhabitants or more.

The 58 reports in this series will be assembled and issued (about July 1971) in a clothbound book, designated as Volume I, Part A. A publications order form for this book will be issued in the spring of 1971.

FURTHER INFORMATION

An outline of the 1970 census publication program may be obtained free of charge from the Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

Additional announcements on 1970 census publications will be made at later dates describing the various series of other reports.

HOW TO THINK ABOUT POPULATION GROWTH

Lawrence A. Mayer

Board of Editors
Fortune

HOW TO THINK ABOUT POPULATION GROWTH

I

The politics, the economics and the social system of the U.S. are all undergoing reassessment today. It would be surprising if, there had not been some rethinking about U.S. population trends as well and, of course, there has. Moreover, something more than rethinking has been going on: there have been revisions in laws, actions and attitudes.

In these circumstances it is to be expected that ~~some~~ many changes are taking place that ~~are not specifically aimed at~~ will ~~can~~ have major effects on population trends. ~~perhaps, but undeniably have an effect on those trends.~~ Changes in divorce laws, marriage customs, the spread of the contraceptive pill, the growing efforts to make contraception more readily available, the new state laws which permit women to have abortions much more freely than before, all now have -- or ultimately will have -- effects on the future size of the U.S. population. These developments, plus new initiatives by government: for example, attempts to influence the places where new population centers should spring up, to provide increased manpower training, and to guarantee

minimum family incomes, are beginning to add up to a population policy. I don't believe anyone, officially or publicly at least, has begun to put all these ~~things~~ factors together in order to determine what they mean for the growth and distribution and character of the U.S. population. But, obviously, there are a lot of strands present that would go into a population policy if we were consciously setting out to formulate ~~such a policy.~~ one.

In one sense there is nothing new here. It can be said that, implicitly at least, the U.S. has always had a population policy. In earlier years the Homestead Act, the abolition of child labor, the denial of abortion, the laws affecting immigration, and many other legislative acts, as well as social attitudes, constituted at least the bones of such a policy.

In another sense, however, there is something new. While certain laws or rules of personal conduct -- at times even economic circumstances -- have affected population growth, the nation's underlying commitment seems always to have been to sustain or nourish population growth. Now, that commitment is in doubt. I would even venture to say that the U.S. has begun to embark on a policy of slowing population. Something like that notion can

at least be read between the lines of President Nixon's message requesting that a "Commission on Population Growth and the American Future" be organized -- a commission now in being and at work. More than that, the recent reproductive behavior of the American people suggests that they may want slower population growth and are succeeding in producing such a slowdown.

The facts of that slowdown are available in detail elsewhere,[1] so I shall merely sketch in the barest data here. As we all know, there was an enormous baby boom after World War II. Older couples, among whom child-bearing had been interrupted while husbands went off to the war, began having the babies they had previously been forced to skip, and young couples who got married after the war had a great many children and had them early. The result was that in 1957 women in the reproductive years,(that is, those aged 15-49) were averaging 3.7 children each. This was an unusually high number. No group of women had borne that many children during their entire reproductive span since before the turn of the century, and average family

---

1. For example, in Mayer, Lawrence A., "Why The U.S. Population Isn't Exploding," FORTUNE, April 1967, and "U.S. Population Growth: Would Slower Be Better?" FORTUNE, June 1970.

size soon started to come down. It came down as older women finished catching up on delayed child-bearing, and as younger women completed their child-bearing early in life. Right now, says George H. Brown, Director of the Bureau of the Census, the current level of fertility is down to about 2.5 children per woman.

As the levels of fertility have changed in the drastic fashion just outlined, the net growth of population in the U.S. has slowed from 1.7% a year to 1.0% a year -- with about .2% of these increases due to immigration. We can only guess at why fertility is now down to 2.5 children per woman. The availability of the pill is, of course, one factor. Another plausible reason is that young married women are delaying having their children until they have worked for a while and helped accumulate a nest egg for their family. Or, for whatever reason, they would rather start to have children at, say, age 25 rather than age 20. Moreover, the average age of marriage has been rising. Since a woman who delays having children will probably wind up with a smaller family than she would have otherwise, it is now a better guess that today's average young woman will wind up with about 2.8

children at most, rather than the figure of 3.0 to 3.2 that many demographers previously assumed the figure would settle at. But this 2.8 ~~figure~~ may also be too high. On the basis of present trends, the average young woman of today will have only 2.5 children over her life span, and no one can be sure that the number won't finally turn out to be even less than that.

One is not splitting hairs when talking about the difference between 2.8 and 2.5 children per woman. The Census Bureau tells us that by the year 2000 the larger figure would mean 300 million Americans -- a full 20 million more than the lower figure. By the year 2020 the difference would be 50 million: 385 million compared to 335 million.

A couple of decades or so ago these trends would have caused serious misgivings on the part of the businessman. Isn't economic growth, after all, in some good measure dependent on rapid population growth? This argument doesn't seem to carry nearly the weight it once did. In fact, a poll of leading business executives, published in the February 1970 issue of FORTUNE, showed that almost eight out of ten executives favored some sort of curb on future population growth. The late George Terborgh, in his now

dimly remembered book, "The Bogey of Economic Maturity," made a formidable intellectual assault on the need for population growth in order to produce economic growth, an assualt that has been reinforced and continued most notably by Professor Joseph Spengler, of Duke University.

Recent economic history, although not conclusive, also contains a suggestive rebuttal of the growth proposition. While U.S. population was still increasing rapidly in the late 1950's and early 1960's, there was much worry about the slow growth of the economy. Since 1965, however, the worry has been about inflation, or over-rapid economic growth, at the same time that the rate of population increase fell about 40%. We may tentatively draw the inference that budgetary policy, monetary policy and the policies of business itself can -- in the short run at the very least -- overcome any negative effects of slowing population growth.

But when <u>should</u> population growth be slowed down, or even stopped? In other words, what, for a given country, is the optimum size of population? This raises a mare's nest of questions. One is what should be the criterion of optimum size: growth of per capita income, military power, personal

serenity, social harmony, or what? The optimum population can be theoretically defined as that point where neither an increase nor a decrease in the number of people can improve the maximum achievement of the particular criterion that has been chosen.[2]

So, in brief, runs the theory of optimum population. But in practice it is very difficult to put precise numbers on the optimum, so much so that Professor Spengler suggests[3] we think of an optimum population zone within which the true optimum may lie. That, too, is not easy to determine, and may change with time. While there is not too much we can say factually about the optimum size of population, we can express certain feelings about the matter. Let me put mine in the form of a question. Is it likely that the U.S. would have a larger per capita income (if that is our criteria of the optimum) if it had more people than it has now? Not really very likely, I would guess. It is this sort of opinion that helps some people say we have ~~are~~ already passed ~~past~~ the optimum -- which they estimate may perhaps be 150 million

---

2. See International Encyclopedia of the Social Sciences, Vol. 12, page 358. In general, see pages 349-362.

3. Ibid, page 362.

rather than the 200 million or so of today.

It would seem then that what the optimum size of population should be is, to a large extent, a matter of taste, and for at least two reasons. One is that the choice of the criterion or criteria is a matter of taste. The second is that objectives that fall within a given criterion can themselves be a matter of taste. Take population density as a criterion: some peopler prefer the excitement that usually attends a high density of population in a large metropolitan area, while some prefer the greater relaxation that usually attends a low density of population further out in the country.

It has been suggested that more important than determining the optimum size of population is determining the optimum rate of population growth, ~~as~~ an idea in order put forward in the writings of the distinguished French demographer, Alfred Sauvy.[4] Among the reasons he advances is that the correction of economic imbalances can take place more easily if population is growing. Another is that economic progress and changing technology is helped if growing population

---

4. See Part 1 of his "General Theory of Population," Basic Books, New York: 1969, and see International Encyclopedia of the Social Sciences, Vol. 12, pages 354-357.

brings many young people, who are presumed to be more adaptable, into the labor force in greater numbers.

For Western Europe Sauvy has put the optimum rate of growth between 0.5% and 1.0% in recent years.[5] This is apparently Sauvy's personal or offhand judgement; he does not back it up with rigorous analysis. So after reading Sauvy, what we are left with is an interesting and just possibly plausible idea. The actual situation is more complicated than Sauvy implies, however. Germany, Sweden and Switzerland have shown strong economic growth, but they have had to rely quite a bit on imported labor. Finland and Italy also have good growth records, but they have been suppliers of labor to other prospering European countries.

---

5. International Encyclopedia of the Social Sciences, Vol. 12, page 356.

II

The growth of population in the U.S. is bound to speed up somewhat during the next years simply because a great many young people are now entering, or soon will be entering, the prime ages of child bearing. But since it seems that smaller families are coming into fashion, it appears that all those increased marriages and births will not expand the rate of population growth very much -- it may gradually climb from the present 1% annually to around 1.2% a year in the mid-1980's. That is, to repeat, if presently observable trends in fertility continue.

Even so, because of the large number of young marrieds, the number of births will go up from 3.5 million now to about 4.7 million in the mid 1980's. However, such a rise should be looked at in perspective. The previous all-time peak in births was about 4.3 million in the years around 1960. That number then represented 2.5% of our total population (in other words, the birth rate was about 25 per thousand). In 1985, however, 4.7 million births will represent only 1.95% of the population (a birth rate of 19.5%). Of course, an increase from the recent level of

3.5 million births to one of 4.7 million will do much to expand markets for baby foods, children's furniture and clothing, toys and the like. But this increase will have a relatively smaller impact on business as a whole than did the similar-sized absolute increase in births between 1945 and 1960. Not only will the increase in births comprise a smaller share of the population, but many of the facilities that had to be built in previous years to accommodate all the added children, such as elementary and high schools and children's hospital beds, are already in place. Naturally, some of them will prove badly located for where the children of the future will live, but the general point holds.

Now, what will slower population growth mean for the economy in the long run? In order to put matters sharply, let us ~~put them into boldest relief and~~ simply assume that population growth will actually come to a halt. The first thing to understand is that due to the way the arithmetic of population works out, even if the average woman now started to bear only enough children to replace herself and her consort[6],

---

6. That would involve only a modest decrease in fertility from the currently observed 2.5 children per woman to 2.1.

population growth wouldn't stop for about seventy years. The Census Bureau has calculated (assuming, for simplicity, that there is no further net immigration) that population would not stabilize until the year 2037. At that point it would total 275 million -- roughly 70 million, or 35%, more than the present population.

Since the full effects of reaching a zero point of population growth won't be felt for 70 years, it is all the more worth examining the consequences in some detail, because they throw light on the tendencies which appear when population growth decreases from a rapid to a moderate or a slow rate.

There is no question but that Gross National Product would be smaller if population stopped growing. Since GNP is conventionally thought of as a result of the rise of productivity plus the rise in labor force, if the labor force stopped growing althougher -- as it would if population did -- then the economy would grow less. If the rate of productivity gain had previously been 3% and that of labor force growth 1%, the advance of GNP would be reduced from 4% to 3%. The average standard of living is nevertheless likely

to be higher with population stability than with growth. When population is rising, some proportion of growing national product must go to provide consumer goods and services and social overhead for additional people. With stability, the U.S. could use the freed resources to increase both private and public investment per capita. Because each member of the labor force would then be working with a larger or more advanced stock of capital, there would be more output and income per worker, even though a total GNP would be smaller.[7] And since workers would, on average, belong to smaller families, income per person would rise even faster. The income position of young families -- with fewer children living at home than their counterparts of today -- would benefit the most.

Another way of expressing these sorts of benefits is to say that the so-called "dependency ratio" would decline. In calculating this ratio it is generally assumed that people in the ages from 21 to 64 economically support those who are below 21 and over 64. If the U.S. reached a stable population

---

7. See Enke, Stephen, "Zero U.S. Population Growth -- When, How and Why," Tempo - General Electric Company, Center for Advanced Studies, Santa Barbara, California, January 1970.

in 2037, the proportion of old and young depending on support would decline from 47.5% now to 43% in the future.[8]

A quite specific advantage a lower dependency ratio would give us is that we would not have to spend as great a proportion of our educational outlays on simply educating more children in the rudiments of knowledge. It is widely claimed that technology will be changing the nature of jobs so fast in coming years that many people will have to be retrained several times in the course of a lifetime in order to keep up. If this proves to be the case, then if we spend less on educating young children we will be able to afford to spend more on the training and retraining of our grown-ups.

The existence of fewer children per couple would have other effects on the labor force. With smaller families more women would find themselves able to work -- at least part time. And since few will presumably have small children as they approach middle age, more women will be able to take full time jobs -- if they wish -- earlier in life than they have been.

---

8. Calculated from U.S. Bureau of the Census, Current Population Reports, Series P-25, No. 448, August 6, 1970, page 50.

The average age of the total labor force will naturally be higher. With fewer young people arriving on the labor market, older workers will become more dominant. Such a development may prove double edged. Older workers may be more reliable, experienced and stable, but the advantages of youth -- mobility, adaptability, and receptiveness to new ideas -- will be in shorter supply.

An older age structure will have large effects on the markets of business. They would be far more oriented toward older people and far less toward younger ones than is the case today. Apart from the different marketing strategies this implies, some industries would stand to gain, relatively, and others to lose. With higher incomes and fewer children, young families could afford to spend more for travel, recreation, adult clothing, and home goods. The businesses that, on the whole, would presumably do worst are those with a kind of fundamental dependence on growth in numbers of people. Purveyers of goods and services for infants, producers of staple foods such as bread, sugar, and canned goods, bottlers of beer and soft drinks, construction, building-supply, and real-estate companies, and manufacturers of such

tobacco products as are still being sold -- all these could very well be stuck with relatively stagnant markets.

A fair summation of the marketing importance of a stationary population in an industrialized society would, I think, be as follows: business would be trading a larger market for a richer one. In other words, the GNP would grow more slowly, and therefore total sales would be commensurately less, but, it is important to note, the number of firms in existence would also be fewer. And, all other things being equal, they would be selling more complex and expensive goods and services. The familiar dictum of marketing men holds here: the less that needs to be spent for necessities the more is left over for discretionary spending. This may be no mean bargain for business.

A number of other, non-market advantages of population stability, or near stability, deserve mention. The growth of traffic and population densities, which are of concern to citizens living in many areas today, would be lessened. With smaller waves of young people coming on the scene, their political activity may be less intensive, and some Americans may judge this a good thing. Slower population growth will also give the United States a better

chance to remedy its pollution problems, which threaten to grow worse anyway as affluence gains and the economy grows -- even without the extra complication of increasing population. And with fewer people than otherwise, it may be easier to pay more attention to where and under what conditions people live rather than just housing them anywhere.

There could be a number of disadvantages to population stability, of course. Alfred Sauvy argues that France has suffered grievously from its slow population growth starting early in the 19th century.[9] His main argument is that when population stops growing society loses a sort of creative pressure that stimulates and adds healthy ferment to all its aspects.

Some people who have considered the matter maintain that population stability would bring some social disadvantages. Ansley Coale[10] of Princeton has pointed out that when there are about as many older as younger people, the average age of those who run things will be greater, and advancement in

---

9. "General Theory of Population," Part 2 and Part 3.

10. "Should the United States Start a Campaign for Fewer Births," Population Index, October 1968.

business, in politics, or in any other form of organized activity will perforce be slower, a situation that will be frustrating to oncoming generations. Things might not work out quite that way, however: a relatively smaller demand for the services of young people would be partially balanced by a relatively smaller supply. A changed population structure would have many interacting consequences that might affect the morale and outlook of both young people and their elders in ways difficult to foresee. At any rate, it is not certain that youth would be served any less well in a stable population than it is now. And, there are lots of reasons for thinking we may all be better off if population grows less rapidly or levels off here as well as in the rest of the world.

Atlanta, Georgia

Dear Dr. Via:

I wish to thank you for your attendance and contribution at the informal breakfast meeting of persons interested in regional population research which was held on October 23, during the Conference on Population and Industry. Hopefully you found this meeting as informative and valuable as we did.

One of the important purposes of this meeting was to bring together persons from a variety of places who share an interest in 1970 Census data on the Southern Region. This exchange of ideas and plans was intended to open lines of communication, so rather than attempt to summarize the morning's discussions, the following list of persons present at breakfast is provided for your own special use:

Mr. Angell A. Beza
Institute for Research in
Social Science
University of North Carolina
Chapel Hill, North Carolina

Mr. Bobby M. Bowers
Division of Research and
Statistical Services
State Budget and Control Board
Columbia, South Carolina

Dr. George Brown
Director
Bureau of Census
Washington, D. C.

Dr. Ralph Kniseley
Associate Chairman
Oak Ridge Associated Universities
Oak Ridge, Tennessee

Dr. Everett S. Lee
Social Science Research Institute
University of Georgia
Athens Georgia

Dr. George C. Myers
Department of Sociology
Duke University
Durham, North Carolina

Dr. C. H. Hamilton
Carolina Population Center
University of North Carolina
Chapel Hill, North Carolina

Dr. Ali A. Paydafar
Carolina Population Center
University of North Carolina
Chapel Hill, North Carolina

Dr. Daniel O. Price
Department of Sociology
University of Texas
Austin, Texas

Dr. Thomas E. Steahr
Carolina Population Center
University of North Carolina
Chapel Hill, North Carolina

Mrs. Therese H. Ramsey
State Planning Division
North Carolina Dept. of
Administration
Raleigh, North Carolina

Dr. Emory Via
Director
Resources Development Center
Southern Regional Council, Inc.
5 Forsyth St., N.W.
Atlanta, Georgia

Dr. Richard Rockwell
Institute for Research in
Social Science
University of North Carolina
Chapel Hill, North Carolina

Dr. George Wilber
Department of Sociology
University of Kentucky
Lexington, Kentucky

I hope I represent the consensus of the group in encouraging you to make use of this list of names in keeping up with the growing plans for the Census data use. Through such communication we can stimulate further research in the area of regional analysis.

Sincerely,

Thomas E. Steahr

Thomas E. Steahr

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

SUPPLEMENTARY REPORT

Negro Population in Selected Places and Selected Counties

This report presents a compilation of statistics from the 1970 census on the distribution of the Negro population in selected places and selected counties across the Nation. Data are shown only for those places with a total population of at least 25,000 and a Negro population of 10,000 or more. Tables 1 and 2 contain statistics on the distribution of Negroes in those cities with a Negro population of 50,000 or more in 1970. The cities are listed according to the size of the Negro population in 1970. In table 3, 50 places with the highest proportion of Negroes in 1970 are presented in rank order. The 50 places were selected from table 4, which contains 1970 and 1960 statistics for 200 places that had at least 10,000 Negroes and a total population of 25,000 or more in 1970. In table 4, the places are ranked nationally and within each State by size of the 1970 Negro population. Data for counties are presented in tables 5 and 6, corresponding to that shown for cities in tables 1 and 3.

Statistics from the 1970 census show that, among the 50 selected places with the highest proportion of Negroes, there has been a dramatic increase in the number that have at least as many Negroes as whites. The count is now 16. Five places, in rank order, which now have Negro population proportions of 60 percent or more are as follows:

Willowbrook, Calif. (U)	82.3 percent
Westmont, Calif. (U)	80.6 percent
Washington, D.C.	71.1 percent
Compton, Calif.	71.0 percent
East St. Louis, Ill.	69.1 percent

Six of the 16 cities with 50 percent or more Negroes are in the South. Most of the top 16 cities have experienced sharp increases since 1960 in the proportion of the population which is Negro. In all of the 50 selected places, Negroes comprised over one-third of the city population and the Negro population ranged in numbers from 10,196 to 660,428 (table 3).

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 20 cents.
Stock Number 0301-2285

Over half of the 50 places with the highest percentage of Negroes are relatively small. Thirty-two of the places have a total population of less than 100,000; for 19 places, the total population is less than 50,000. Even among the 16 places which are more than 50 percent Negro, those of the smaller size predominate; 12 have a total population of less than 100,000.

The 50 places with the highest percentage of Negroes by size of place is as follows:

Size of place	Number	Negro population 50 percent or more
Total	50	16
500,000 and over. . .	7	1
250,000 to 499,999.	3	2
100,000 to 249,999.	8	1
50,000 to 99,999. . .	13	3
25,000 to 49,999. . .	19	9

Of the 50 selected places, only three—Washington, D.C.; Bessemer, Ala.; and Charleston, S.C.—had more Negroes than whites in 1960. During the decade, the proportion of Negroes declined for both Bessemer and Charleston, with the percent for Charleston decreasing below the 50 percent mark. In 1950, only four of the 50 places had a Negro population which comprised 50 percent or more of the total population.

Over the last three decades, New York City, Chicago, and Washington, D.C. have maintained their first, second, and fifth ranks, respectively, among the cities with the largest Negro population. Detroit has displaced Philadelphia as the third ranking place. In over one-half (26) of the 48 places with a Negro population of at least 50,000 in 1970, the Negro population has more than doubled since 1950. At each census since 1950, all of the other cities except three have shown a substantital increase in the number of Negroes. The exceptions were three cities in the South whose Negro gains during the 1950-60 decade did not continue during the 1960-70 decade. In Birmingham, Ala., a decrease occurred between 1960 and 1970; Savannah, Ga., had only a negligible increase; and Mobile, Ala., had very modest gains in the Negro population (table 1).

Migration was a major factor contributing to the growth of Negro population in those cities which experienced the largest numerical increase in Negroes during the last 10 years. Net migration gains of over 100,000 persons contributed to the very large Negro population increases in New York City, Chicago, and Los Angeles. Eleven additional cities showed sizable Negro population gains through net inmigration of 25,000 or more persons. Of the 13 cities which had a net outmigration, only one, Birmingham, Ala., actually had a decline in the Negro population due to outmigration (table 2).

There are 200 places (including Washington, D.C.) in 37 States which have a population of at least 25,000, and 10,000 or more Negroes. The Negro population in these places ranges from 10,008 to 1,666,636. About half of the places are located in the South; however, California has the greatest number (21 such places). North Carolina and Virginia each has 13; Texas and Florida each has 12 (table 4).

According to statistics from the 1970 census, there are 75 counties, or their equivalents, with a Negro population of at least 50,000. Over half of the counties are found in the Southern States. Thirty-two counties (including three independent cities) have at least 100,000 Negroes who are generally concentrated in the central cities. Only five of the 75 counties experienced a loss in Negro population from 1960 to 1970 and four of them are in the South (table 5).

All of the 103 counties with at least 50 percent Negro population in 1970 are in the South, with Macon County, Ala., having the higest percentage (81.1). The five highest ranking counties are as follows:

Macon County, Ala. . . . . 81.1 percent
Lowndes County, Ala. . . . . 76.9 percent
Greene County, Ala. . . . . 75.4 percent
Jefferson County, Miss. . . . 75.3 percent
Claiborne County, Miss. . . . 74.6 percent

The 103 counties also had more Negroes than whites in 1960 (table 6).

In this report "Negro and other races" is used to describe persons of all races other than white.

A summary of data for all counties will be presented in a forthcoming report in this series. Another report in this series, PC(S1)-1, contains two maps that show the geographic distribution of the Negro population by counties of the United States in 1970. Information on certain demographic characteristics of Negroes are now being issued in the 1970 Population Census PC(1)-B series of State reports. National data on the social and economic characteristics of Negroes in the United States will appear in a report in the Current Population Reports, Series P-23, which is to be published in July.

The figures shown in this report for counties and places in New York State do not reflect the recent revisions in the 1970 census tabulations for the State; these revisions will be shown in the Series PC(1)-A and B Final Reports to be issued during the next several months.

...key resources on Census '70

1970 Census Users' Guide Part 1 and Part 2

The 1970 Census Users' Guide is a two-part publication designed to furnish most of the information data users will need for effective access and use of 1970 census data products.

Part 1 of the **Guide** (standard, paper-bound publication) includes the text and three appendixes. The text covers such subjects as the collection and processing of 1970 data, data delivery media (computer tapes, microfilm, and printed materials), maps and information on how to obtain census materials. The appendixes are:

1970 Census Users' Dictionary - defines concepts associated with population and housing tabulations and geographic areas relevant to the collection and publication of data.

Comparison of Printed Reports and Summary Tapes summarizes and compares the contents of the reports and tapes.

Glossary - defines many terms used in connection with collecting, processing, and publishing census data, and lists many abbreviations relevant to the census.

Part 2 of the **Guide** (prepunched for 3-ring binder) contains appendixes specifically related to the use of census summary tapes and the Address Coding Guide.

Technical Conventions and Character Set - present information on the physical characteristics, format, and languages associated with tapes released by the Bureau.

1st-4th Count Technical Documentation - describes the arrangement of geographic codes and census data on the first four series of summary tapes.

Address Coding Guide Technical Documentation - furnishes information on the format and content of ACG's.

Many data users will find both Parts 1 and 2 of great value. Part 1, with its comprehensive coverage of the decennial census program, data products, and related services, is an important instructional and reference tool. Part 2, concerned exclusively with computer tape products, is designed particularly for those who plan to obtain tapes or who want complete information on the data content of the summary tapes.

population growth & america's future

an interim report
prepared by the commission
on population growth
and the american future

One of the most serious challenges to human destiny in the last third of this century will be the growth of the population. Whether man's response to that challenge will be a cause for pride or for despair in the year 2000 will depend very much on what we do today. If we now begin our work in an appropriate manner, and if we continue to devote a considerable amount of attention and energy to this problem, then mankind will be able to surmount this challenge as it has surmounted so many during the long march of civilization.

COMMISSION ON POPULATION GROWTH AND THE AMERICAN FUTURE
726 JACKSON PLACE, N. W.
WASHINGTON, D. C. 20506

March 16, 1971

To the President and Congress of the United States:

I have the honor to transmit for your consideration this Interim Report of the Commission on Population Growth and the American Future, pursuant to Sec. 8, PL 91-213.

In this report, we discuss the population situation in the United States, and outline the questions we are raising about the probable impact of future growth.

During the coming year, the Commission will continue to gather and assess information on a wide range of population-related issues. The Commission's program of research and public hearings will examine the relationship between population growth and the quality of life in the United States, and the issues that would be involved if the Nation were to develop an explicit policy on population.

We shall present our findings and recommendations in our Final Report a year from now.

Respectfully submitted for the Commission,

John D. Rockefeller 3rd
Chairman

The President
The President of the Senate
The Speaker of the House of Representatives

The Commission on Population Growth and the American Future

PAGINATION INCORRECT

population in perspective 1

The time has come to ask what level of population growth is good for the United States. There was a period when rapid growth made better sense as we sought to settle a continent and build a modern industrial Nation. And there was a period, in the 1930's, when a low birth rate was cause for concern. But these are new times and we have to question old assumptions and make new choices based on what population growth means for the Nation today. Despite the pervasive impact of population growth on every facet of American life, the United States has never developed a deliberate policy on the subject. There is a need today for the Nation to consider population growth explicitly and to formulate policy for the future.

Our population reached 100 million in 1915; it now numbers something over 200 million; the Nation had better get ready for 300 million; it may soon have to decide whether it wants 400 million. Should we look forward to celebrating the arrival of the third and fourth hundred million as we did the second hundred million? Whether or when we reach these totals will depend on what American couples do in the decades just ahead.

418-865 O - 71 - 2

Such large differences in population size result from small differences in family size. For example, if families in the United States have only two children on the average and immigration continues at current levels, our population would still grow to 266 million by the end of the century; if they have three children, the population would reach 321 million by then. One hundred years from now the two-child family would result in a population of 340 million persons; the three-child average would produce nearly a billion.

The difference is important not simply because of the numbers but because it bears vitally upon a fundamental question about the Nation's future: Do we wish to continue to invest even more of our resources and those of much of the rest of the world in meeting demands for more services, more classrooms, more hospitals, and more housing as population continues to grow? Or should we concentrate our energies and resources on improving the quality of existing services and extending them to large numbers of our people for whom the "quality of life" still means just getting a square meal?

. . . a difference of one . . .

Small differences in family size will make big differences in the demands placed on our society. That difference of only one child per family over just the next thirty years will have important consequences for the educational system.

If families average three children, in the year 2000 elementary school enrollment will be 50 percent above what it would be if families average only two children. Similarly, secondary school enrollment will be 43 percent higher and college enrollment 34 percent higher. In dollar terms, the three-child family implies that total annual costs of education will be nearly $40 billion more (in 1969 dollars) in the year 2000 than for a population resulting from a two-child family. This would mean a 30

HOW MANY CHILDREN WOULD BE STARTING SCHOOL? EFFECT OF 3-CHILD FAMILY vs. 2-CHILD FAMILY.

SOURCE FOR ALL CHARTS, SEE APPENDIX A.

Figure 1

percent higher level of educational expenditures per working member of society. An average of three rather than two children will require more than one million extra teachers just to maintain present student-teacher ratios.

In the health field, the three-child family implies an annual cost of $14 billion more in the year 2000 than the two-child family just to maintain present standards. If health costs continue to rise as they have in the past, the difference would exceed $30 billion. If the three-child family is the norm in the year 2000, the economy will have to produce 20 percent more than would be necessary to provide the two-child family with the same standard of living. This could mean a higher level of resource use and environmental pollution.

The importance of these differences in costs is not that the Nation would be unable to meet the demands of a larger population, but simply that a lower rate of population growth provides more options for the use of our resources.

. . . addressing the issue . . .

We have all heard about a population problem in the developing nations of Asia, Africa and Latin America, where death rates have dropped rapidly and populations have exploded. Only recently have we recognized that the United States may have population problems of its own.

There are differing views. Some say that it is a problem of crisis proportions—that the growth of population is responsible for pollution of our air and water, depletion of our natural resources, and a broad array of social ills. Others point to recent declines in the birth rate and assert that the problem is disappearing. Still others claim that our problems are caused by the way our population is concentrated in metropolitan areas, by the amounts an affluent people consume and discard, by new products and technologies, or by inequities in access to the better things of life.

Our view, at this stage of our inquiry, is that population growth of the magnitude we have had since World War II has aggravated many of the Nation's problems and made their solution more difficult. The point was stated by President Nixon in his Population Message of July 18, 1969, when he said:

> "I believe that many of our present social problems may be related to the fact that we have had only fifty years in which to accommodate the second hundred million Americans."

And, the longer we delay addressing the issue, the more costly and arduous the task becomes because the population—and the number of potential future parents—will have grown that much more in the intervening years. The cumulative nature of population growth requires us to take the long view. The children born in this decade will be parents of most of the children born in the year 2000. What we do now will have real impact then. It is a challenge that Americans have rarely been called upon to face.

We are not saying that population growth continued at current rates portends an immediate crisis for the country. There is little question that the United States has the resources, if it chooses to use them, to meet the demands of a population growing at the current rate as well as to correct various social and economic inequities, as the President's National Goals Research Staff recently indicated. And it is equally true that our social and economic problems would not be solved by the stabilization of population alone. We are simply saying that population growth is important. It makes a difference.

The tension between population and the economy, population and the environment, population and government services, is with us at all times in different forms and degrees. Whether we wish to alter it or to live with it, we cannot afford to ignore it. It is time that population issues were given deliberate, impartial consideration.

This is necessary whether the birth rate is going up or down. Some Japanese leaders are publicly worrying about the low birth rate in their nation. Similar concerns have been voiced by responsible leaders of several eastern European countries. Indeed, if birth rates in the United States were to resume their recent decline, in future years we might be worrying about the same thing.

. . . to confront the problems . . .

In his Population Message to Congress, President Nixon urged the Nation to confront the problems posed by national population growth and to develop means of coping with them. At the President's request, Congress estab-

lished the Commission on Population Growth and the American Future—the first such body ever appointed in the United States—to examine the probable course of population growth and internal migration in the United States between now and the year 2000; to assess the problems this will pose for our government, our economy, and our resources and environment; and to make recommendations on how the Nation can best resolve these problems. (See Appendix C)

A year hence, in our final report, we will present our findings and recommendations. Between now and then, the Commission will be gathering the facts on population and its probable future change, examining how and to what extent this change is likely to affect the quality of life in the United States, conducting public hearings, reviewing the policy alternatives open to us, and deciding which courses to recommend.

It is our purpose in this Interim Report to encourage a rational discourse on population matters among the American people. In the remainder of the report, we outline the population situation in the United States and the issues it poses, the questions we are raising about the probable impact of future population growth and distribution, and how we are going about finding answers to these questions. Finally, the report reviews some of the issues which would be involved if the Nation were to develop an explicit national population policy.

2 the prospects for population change

Every day in the United States an average of almost 10,000 babies are born, about 5,000 persons die, and over 1,000 more persons enter the country than leave. This adds up to a net increase in total population of about 6,000 a day or over two million persons a year.

These population numbers reflect life and death and new opportunity for the individual. For society, the balance of births and deaths and migration is profoundly important; the effects are long range and the consequences of great significance.

Recent Census Bureau figures indicate that if families average three children over the next few decades and immigration continues at present levels, our population will reach 300 million in 1996, only a quarter-century from now. If we average two children, that day will be postponed another 25 years to the year 2021. We are currently reproducing at a rate roughly midway between two and three children, which would bring us to 300 million around the year 2008.

The Census Bureau figures are not intended to be forecasts. The birth rate changed so rapidly in the past few years that last year the Census Bureau had to revise down-

ward the projections it had issued only three years before. So, it would be possible for the Nation to reach 300 million after these dates, or conceivably before. But it appears highly likely that we **will** reach that figure.

It may seem odd, when we have only recently passed the 200 million mark, to be saying that we are fairly well assured of reaching 300 million. Population growth tends to develop its own momentum which makes it difficult to stop, no matter how hard the brakes are applied. Even if immigration from abroad ceased and families had only two children on the average—just enough to replace themselves—our population would continue to grow until the year 2037, when it would be a third larger than it is now.

This momentum is the legacy of past population growth. Thirty years ago, in 1940, we had a population of 132 million people. After all the births, deaths and new immigrants over the following 30 years were balanced out, by 1970 we had a population of 204 million and a net gain of 72 million. Because of the baby boom, the number of persons now moving into the childbearing ages is much larger than previous generations of parents. In 1975 there will be 5½ million more people in the prime childbearing ages of 20 to 29 than there were last year. By 1985, the figure will have jumped still another 5½ million. This will exert strong pressure toward increasing the number of births.

Right now about 80 percent of our annual population growth results from natural increase—the amount by which births exceed deaths. About 20 percent of our current growth is due to net immigration; the number has been averaging about 400,000 annually. Historically speaking, that is not many. In the years just before World War I, the figures ran to twice that, at a time when the United States had less than half the number of people it has now.

Even so, the long-term effects of immigration are large. This is partly because most immigrants enter the country

in young adulthood, at an age when their childbearing is at its peak. If the average family (including immigrants) had two children, and immigration continued at 400,000 per year, the survivors and descendants of immigrants in the next 30 years would number 16 million in the year 2000, and would have accounted for one-fourth of the total population increase during that period. Over the next 100 years immigrants and their descendants would account for nearly half of the increase in population from 204 to 340 million.

. . . a fourth hundred million? . . .

If it seems odd to be thinking now about our third hundred million, it may seem absurd to raise the question of a fourth hundred million. However, whether we add that fourth hundred million may be determined by what Americans do about family size and population in the next couple of decades.

The children born in this decade will be parents in the year 2000, and they will contribute most of the births occurring in that year. So the number of births thirty years hence depends heavily on the number of children born in the 1970's and the reproductive patterns they follow when they come of age.

An average of three children per family in the future, as unlikely as that appears at the moment, would give us a population of 400 million in the year 2014, less than a half-century away. With an average of two children, we could forget about the fourth hundred million if immigration were not a factor.

When we speak of two or three-child families we are talking about averages which can be made up by many possible combinations of families of different sizes, ranging from childless couples to those with many children.

A vocal group of concerned citizens is calling for population growth to stop immediately. While there are a variety of paths to ultimate zero growth, none of the feasible

418-865 O - 71 - 3

WILL THE U.S. ADD A FOURTH 100 MILLION TO ITS POPULATION?
EFFECT OF 3-CHILD FAMILY vs. 2-CHILD FAMILY.

Figure 2

paths would achieve it immediately. Our past rapid growth has given us so many young couples that they would have to limit their childbearing to an average of only about one child to produce the number of births consistent with immediate zero growth. Ten years from now, the population under 10 years old would be only 43 percent of what it now is, with disruptive effects on the school system and ultimately on the number of persons

entering the labor force. Thereafter, a constant total population could be maintained only if this small generation in turn had two children and their grandchildren had nearly three children on the average. And then the process would again have to reverse, so that the overall effect for many years would be that of an accordion-like mechanism requiring continuous expansion and contraction.

We doubt that such consequences are intended by the advocates of immediate zero population growth.

. . . two-thirds of our people . . .

The growth of population in the United States has been interwoven with the movement of our people across the face of the land.

In 1790, the four million people of the United States occupied a narrow coastal area along the Atlantic. Today, one-third of our people live west of the Mississippi, and our most populous State is on the Pacific coast.

When the United States was formed, 95 percent of our people were rural, living on farms and in towns and villages. Today, over two-thirds of our people live in metropolitan areas and many more live in cities and towns outside metropolitan areas.

In the 1960's more than three-fourths of our Nation's growth occurred in metropolitan areas, with the suburbs absorbing most of it. Suburbanites now outnumber those living in central cities. The farm population dropped from 15 to 10 million, and about one-half of the Nation's three thousand counties lost population. Another one-fourth of the counties had slow growth rates because more people moved out than moved in. Migration patterns continued from mid-country out to coastal areas.

In contemporary discussion of population growth and its effects, we hear the view that the population problems of our society are caused more by the concentration of population in large urban areas than by the size and growth of the total population; that, therefore, we should

AN AVERAGE OF 2 CHILDREN PER FAMILY WOULD SLOW POPULATION GROWTH, BUT WOULD NOT STOP IT SOON BECAUSE THE NUMBER OF PEOPLE OF CHILDBEARING AGE IS INCREASING...

...SO EVEN IF FAMILY SIZE DROPS TO A 2-CHILD AVERAGE...

Figure 3

...THE RESULTING BIRTHS WILL CONTINUE TO EXCEED DEATHS FOR THE REST OF THIS CENTURY...

...SO THE POPULATION WILL STILL BE GROWING IN THE YEAR 2000, BUT AT A DECREASING RATE.

Figure 3 continued

be worried less about the number of people in the United States than about the way they are distributed geographically; and that government efforts should be devoted to achieving greater geographical dispersion of growth.

The issue is not that simple. Many of our largest cities have actually lost population. It is their suburbs and metropolitan areas of intermediate size that have grown rapidly in the past decade. Furthermore, we already are a metropolitan people. Two of every three Americans now live in metropolitan areas and this trend is continuing. This means that the size of the total population and the size of the metropolitan population are becoming increasingly synonymous and that metropolitan population growth will increasingly reflect changes in national birth rates. Over the past decade alone, 70 percent of the growth of metropolitan population occurred as a result of natural increase. If there had been no net migration at all to metropolitan areas, these areas would have experienced most of their growth anyway.

The decline of many rural counties is often cited as cause for concern and indeed it does create many problems. But the numerical impact of this process should not be overestimated. If the 1,100 rural counties that declined in population since 1960 had actually kept pace with the national rate of growth, their population in 1970 would have been only two million greater than it was, and they would have absorbed only nine percent of the Nation's growth for the decade.

The point is that national population growth and geographical distribution cannot be treated as an either-or affair. The distribution of population is problematic in many ways. But the choice among ways to redirect growth does not eliminate the necessity of making a choice about when the Nation could best accommodate 300 million people or whether it should accommodate 400 million.

. . . to know where we are going . . .

Since knowing where we are and have been helps us to know where we are going, the Commission is using the results of the 1970 Census and earlier censuses to gain an understanding of the growth, transformation and redistribution of the population of the United States in this century.

The Commission's research on prospects for population growth includes projections of population and population characteristics and studies of the importance of unwanted childbearing, the demographic impact of immigration, abortion, voluntary sterilization and family planning programs, the future of contraceptive technology, and the level of popular education about population.

With regard to the distribution of population, the Commission is preparing projections of regional and metropolitan growth, examining the implications of economic changes for redistribution of population, studying the ways in which distribution patterns compound national problems, and investigating the factors which influence individual decisions to move.

Appendix B lists the Commission's research projects.

418-865 O - 71 - 4

population and the quality of life 3

Given a likely population of 300 million sooner or later, the questions before us are: Is it in the national interest to reach that level later rather than sooner? What demands are implied by the growth that is to be expected? And, what difference will it make whether we grow to 400 million after that?

Much discussion these days implies that population growth is bad, just as not very long ago one heard, from a different point of view, that it was good. No such simple judgments can be made. To consider population growth or concentration as the root cause of our Nation's social and environmental ills is clearly simplistic. Such an interpretation confuses how things are done with how many people are doing them. For example, rapidly rising levels of per capita consumption, and technological mismanagement, appear to contribute more to environmental pollution than does a gradual rise in total population.

More importantly, population growth matters not in its own right but because of its potential impact on many values that Americans hold about our environment and resources, our economy, our government and our social order. The question is: What does population growth have to do with such values and with the systems necessary for their achievement?

PAGINATION INCORRECT

. . . resources and the environment . . .

There is little reason to believe that population growth will cause food shortages in the United States, but serious questions have been raised about the effects of continued population growth on our own and the world's resources, and on the pollution of our land, air and water. Even though population growth is not the primary cause of environmental deterioration, it may well magnify problems arising from the way we use our resources and technology.

At our present level of consumption, a continually growing population makes demands upon many resources, some of which are in scarce supply. There is a question whether continued growth will cause us to exhaust some important resources, or whether the market system, with a dynamic economy, can develop substitutes for resources in short supply. For some resources, such as wilderness, there are no substitutes. Economists and ecologists have been enlisted by the Commission to determine the effects on the environment of population growth, of technological change and of changes in demand resulting from greater affluence.

To the extent that environmental problems are aggravated by population growth, it is important to determine the environmental implications of the way in which our population is distributed—the effects of local population concentration as well as national growth.

Some contend that the country could easily accommodate more people if our population were spread more evenly. It is not how many people we have, they say, but how they are distributed across the Nation. This is only a partial answer. Clearly, some of our urban problems are due to high concentrations and poor planning. On the other hand, people consume resources wherever they live. Whether in New York City or a small town in the midwest, they still drive an automobile fabricated of steel produced in Pittsburgh using coal mined in West Virginia. In the

process, the air of Pittsburgh is polluted by smoke and the scenery of West Virginia by strip mining. Wherever Americans live, they make huge demands on the Nation's and the world's resources and ecological systems.

People in small towns can despoil their rivers and air just as people in New York have done. A large city might actually be better able to afford ecologically sound solutions to many environmental problems. So simply redistributing the population might not solve many of the population-related problems we face.

Moreover a large population such as ours might not be able to live at its present standard of consumption without high concentrations of people and economic activity. We could not drastically alter distribution patterns without radically altering our way of life. Even so, it may be desirable to slow or stop the growth of very large metropolitan areas. And as we have said, it would be very difficult to do this without slowing the growth of the total population.

. . . the economy . . .

There are several points of view on how different rates of population growth might affect the economy of this country. In the past, some predicted that declining population growth would cause economic stagnation, unemployment, and a lower standard of living. Some contemporary observers maintain that a slower rate of population growth would increase the Nation's prosperity while reducing the costs associated with growth. Still others note that our economy is flexible and has shown many times that it can adjust to changes in demand. They suggest that with proper economic policies the rate of population growth is largely irrelevant to national economic prosperity.

Regardless of the effects of population change on the total economy, it is clear that some industries and businesses will gain and others will suffer as a result of chang-

ing growth rates and shifts in age composition. Various adjustments within the economy will be necessary, as is always the situation with changes in population growth, and we need to know what adjustments are likely to be required.

In addition to affecting the demands for different products, population growth also affects production in other ways. Most importantly, the number of births ultimately affects the size of the labor force and its age composition.

The effect of population growth on various private and public sectors of the economy is being investigated. Some industries with important components in the public sector such as education, health, housing and transportation, are strongly affected by population growth and redistribution. The public expenditures that will be required to accommodate expected growth in the next 30 years are being assessed. Changes in population growth rates can seriously affect certain private sectors of the economy whose markets are geared to particular age groups. Some industries, such as those in children's markets, would be affected very quickly by reduced rates of growth; others would be affected more slowly.

Continued population increase has implications for the delivery of certain social services beyond simply their pocketbook costs. In some fields, further growth may require considerable changes in methods of delivery just to maintain adequate service levels.

For example, even if money were no problem, various constraints affect health care. It is difficult to increase the rate at which doctors are produced. The training is long, difficult, and expensive. Good medical schools require costly equipment and highly skilled faculties commanding top salaries. Because of long training and internship requirements, decisions that will affect the future supply of physicians must be made years in advance. It may also be difficult to expand adequately the supply of nurses and trained technicians. Higher rates of population growth magnify burdens on personnel in short supply, which could lead to further depersonalization of medical care. If health care has deteriorated because of inadequate facilities and overworked personnel, higher rates of population growth can make these problems more difficult to solve. In addition to growth, the increasing concentration of people and medical facilities in metropolitan areas has resulted in some serious imbalances of population and medical services.

. . . government . . .

What are the governmental and political implications of population growth, over and above the costs of public services? Our analysis is concentrated on the possible impact of population growth on the quality of government in the United States in the coming decades, and upon the individual's participation as a citizen.

At the local level, the influence of population growth upon the quality of government seems clear. The quality of metropolitan government is likely to depend on the rapidity of population growth and on the number of different governments attempting to meet public service needs. For example, where court dockets are heavily crowded, justice is not likely to flow in the same fashion as where they are not.

Much of our research effort on the implications of population growth for local government concerns metropolitan areas, where most of our people now live. We are considering the increasing complexity and layering of local government generally found in such areas, the differences between cities and suburbs with regard to public service needs and the resources to meet them, and the problems of governmental response to future expansion of metropolitan areas.

In studying the effects of population growth on Federal and State government there is less to rely on than at the local level. We hope to open several new areas of

inquiry, such as the effects of growth on the role of legislators, on the output of State legislatures, and on the ability of the Nation to unite around a national issue.

There is also a range of questions about the effects of population growth and movement on how individuals participate as citizens. The political attitudes of those who migrate from areas of rural poverty to urban ghettos are not likely to remain the same, nor are their expectations of governmental services. The same is likely to be true of those who move to the suburbs. Place of residence—and hence the relative growth of different areas—may make a profound difference in political attitudes and behavior.

For centuries the size of population and national security have been connected in the popular mind. What is the relationship between population and national security in the modern, technological society? How is this relationship affected by the geographical distribution of the population?

. . . society . . .

The Commission is examining the future of the family in the United States as reproduction comes increasingly under voluntary control. In what ways will the family of the future differ from the family of today? What are the implications for the health and development of children if family size diminishes?

Changes in family size will have far-reaching significance for a variety of social processes, not the least of which is the role of women in our society. Reductions in family size imply that women will spend less time in childbearing and child rearing activities and thus have more time available for work on other interests. Basically, the effect of such a change would be to increase the options available to women; one such option would be to devote more time to fewer children, perhaps improving the quality of parenthood. We are examining the effects of changing birth rates on the size of the female labor

force, opportunities for women to have careers, and greater equality and participation of women in the affairs of the society. And, we are looking at the other side of the coin, the extent to which current levels of childbearing—wanted as well as unwanted births—result from the relatively limited range of roles many women occupy.

Some of the implications of the cessation of population growth for society are being explored. A few other nations that have come close to stabilizing population might serve as models of the future, although cultural differences make such inferences precarious. Certainly one demographic consequence of the decline of the birth rate is the aging of the population. In a population where births equal deaths, at the low levels of mortality prevailing in the United States, the proportion of people over 60 would be the same as that under 15 and the average age of the population would be 37 rather than 28 as at present. The implications of such a difference for rates of social change and opportunities for advancement must be examined.

At local levels such situations can be seen in places that have lost population. The emptying out of rural areas has meant a loss of young adults and a decline in the kinds and quality of services available. The impact of rural-urban migration on those who stay behind and on the communities in which they live is being examined. We are also evaluating the advantages and disadvantages to those who migrate to urban centers and the extent to which rural migrants contribute to the problems of urban areas.

In sum, what are commonly referred to as population problems can be viewed more profitably as environmental, economic, political and social problems that are aggravated by population growth and density. The closest thing to a "population problem" in the pure sense is the speculation that increases in the sheer density of numbers have undesirable effects on social behavior. We regard

population growth, however, as an intensifier or multiplier of many problems impairing the quality of life in the United States.

policy issues 4

The Commission is devoting its second year to a detailed examination of the probable course of population growth and distribution and their environmental, economic, political and social implications. The aim is to determine what population prospects inevitably must be accommodated in the short run, and what kind of national population policy is desirable now for the long run. The concerns of overriding importance are whether population stabilization and redistribution of the population are desirable.

The Commission views population policy not as an end in itself but as a means to facilitate the achievement of other social goals desirable in their own right. Such goals would include improvements in the status of women, in the socioeconomic conditions of disadvantaged minorities, and in the health and opportunities of children born because they were wanted, as well as the easing of pressures on our resources and physical environment, health and educational facilities, and the problems of our cities.

The content of a population policy would not be immutable, but would need to be adjusted over time in the light of emerging developments, increased knowledge, and

changing attitudes of both policymakers and the general public. Thus, the Commission sees national population policy as an evolving rather than a static instrumentality.

. . . freely to choose . . .

A key consideration for population policy is the current level of unwanted childbearing. This information is necessary to determine how much movement toward the cessation of population growth might ultimately result simply from preventing unwanted births. The sum of individuals' real preferences may in fact coincide with the welfare of society as a whole. There is some evidence (from the 1965 National Fertility Study) that the elimination of unwanted births would result in fertility levels ultimately commensurate with near-zero growth. If this conclusion is valid for 1970 (the 1970 National Fertility Study now underway will provide the basis for such a judgment), the policy implications can hardly be overestimated because the national objective could be attained by enabling individuals to achieve their own preferences.

Estimates made in 1965, based on married women's own reports about their childbearing experience, indicated that one-third of the married couples who did not intend to have any more children already had at least one unwanted child. In the period 1960-65 nearly 20 percent of all live births were reported as unwanted by their parents. Only one-fourth of all parents claimed to have been completely successful in preventing both unwanted and unplanned pregnancies.

The 20 percent of births reported as unwanted by their parents represent nearly five million children born between 1960 and 1965 who theoretically would never have been born if their parents' desires had prevailed. Fortunately many of these unwanted pregnancies and births become wanted children. But many do not.

Over and above the demographic significance of current levels of unwanted births, are the serious costs for

HOW MANY BIRTHS ARE UNWANTED?
ONE FIFTH OF ALL U.S. BIRTHS, 1960-65, WERE UNWANTED.

Figure 4

both individuals and society. For many, it means poor prospects for employment and limited opportunities for themselves and their children. For others, the costs are measured in increased family stress and unhappiness, altered life plans, and less time and attention for each child. Unwanted pregnancy sets off a chain of events which acutely forecloses the life-chances of some young people; it leads to dropping out of school, precipitous marriage or an out-of-wedlock birth. Unwanted childbearing is associated with serious health consequences such as increased incidence of prematurity, mental retardation, infant and maternal mortality, and physical and emotional neglect and abuse.

While the incidence—and the consequences—of unwanted births are especially acute among low-income

couples, it would be erroneous to regard the problem as one associated only with poverty. Couples in all socio-economic groups have unwanted pregnancies and experience its costs.

Fortunately, unwanted childbearing is a problem we can do something about. Voluntary family planning has become a prevailing pattern in American life, practiced in some fashion at some time by almost all couples, regardless of income, class, religion, or color. Whether Americans are able freely to choose if and when to have children depends largely on the priority which we as a society are willing to devote to policies, and research and educational programs, to reduce unwanted pregnancy.

In 1970, the Congress, by overwhelming majorities of both House and Senate, adopted the Family Planning Services and Population Research Act of 1970 (P.L. 91-572), a measure signed into law by President Nixon this past December. The Act encourages the birth of wanted children and assists couples in preventing unwanted conception. The Commission endorses this significant advance toward the reduction of unwanted childbearing, and believes that this policy should be implemented promptly.

We shall return to this question in our final report, to estimate the level of governmental and private resources—financial, manpower and institutional—which would be necessary for a comprehensive national effort. We are also examining State laws still in force which impede the dissemination of family planning services to certain classes of individuals, and the impact of other policies and programs on the opportunity for couples to secure modern family planning services.

. . . not an easy task . . .

If it turns out that the prevention of unwanted births should be the main target of a growth policy, the goal would be to maximize popular information and understanding about how to control fertility, and to accelerate the development of more effective techniques and facilities for limiting childbearing. This will involve the Commission in further considerations of family planning services and education, contraceptive technology, adoption and abortion. These all pose moral and ethical complexities which the Commission is considering.

On the other hand, if population stabilization is desirable and its achievement would require more than eliminating unwanted childbearing, then additional measures can be considered, such as changes in tax laws, the elimination of pro-natalist laws and programs, and educational programs. Some of the policy issues that would then be involved are much more difficult and potentially more controversial than those related to the prevention of unwanted childbearing. It would not be an easy task to develop acceptable measures that would lead to a slowing and eventual end of population growth. The best kind of national population policy would be one that serves the general welfare by promoting informed individual choice.

One obvious and fundamental change desirable in its own right, quite aside from its demographic impact, is to increase the opportunities for women to pursue activities other than exclusively domestic and childbearing roles. As the experience of other countries indicates, when women are able to work, birth rates decline.

As we have seen, population growth is also affected significantly by immigration. Should the volume of immigration be reduced? The historical role played by immigration in the growth of this country and our tradition as an open society make this question especially disturbing.

The issues with regard to the distribution of the population arise from the transition of the United States from an agrarian to an industrial and service economy and from a rural to a metropolitan way of life. The Commission seeks to identify the major stress points in this transition—

stresses generated in the process of regional redistribution, metropolitan growth, the rapid expansion of suburbs and the depopulation of large areas of the country.

If it appears desirable to redirect growth, it will be important to know how this might be done. The Commission is studying internal migration and the characteristics of migrants, to find out at what stages in their career and life-cycle people might be responsive to incentives to move or stay.

A principal question is the role that Federal and State governments play in population affairs. Although the Federal government does not have an explicit, comprehensive population distribution policy, many of its policies, programs and statutes seem to have an impact on population distribution incidental to their main objectives. This inadvertent impact may be seen, for example, not only in the Federal Interstate Highway System, but also in the Federal Housing Administration program and federal procurement policies. Others, such as the Economic Development Administration, the New Communities Act and the urban renewal program, are designed in part to redirect growth.

We also have many laws directly or indirectly affecting the growth of population, such as those governing immigration, marriage, divorce, contraception and abortion, which require examination.

Basic to all population policy questions are the underlying legal, ethical and political issues. Constitutionality does not guarantee ethical acceptability, and Americans support a broad variety of ethical views that must be taken into account in any formulation of policy.

This, then, is the way the Commission views its task. We do not take future population trends as inevitable. We believe that there are short-run population trends already in process that simply must be accommodated, but that the longer-run future hangs in the balance. And it is not simply population growth itself that is the issue, but rather

the quality of life that can be influenced so fundamentally by population. We have the challenge, and indeed the responsibility, to prepare for the future of coming generations of Americans.

appendix a

sources of data

The figures on future population in this report are based on the Census Bureau's *Current Population Reports*, Series P-25, No. 448, "Projections of the Population of the United States, by Age and Sex (Interim Revisions): 1970 to 2020," and unpublished extensions of these projections.

The Census Series B projection is used here to show how the population would grow if families had an average of 3 children. The Census Series E projection is used to show population growth if the average were 2 children per family.

Both Census series assume that net immigration to the United States will continue at recent levels of about 400,000 per year. Both assume a slight increase of about 1½ years in the average expectation of life between now and the year 2000. They differ in what they assume about the rate of childbearing.

Series B assumes that in the future women will be giving birth at an "ultimate" rate which works out to an average of 3.1 children per woman over her lifetime. The transition from the 1968 rate of 2.5 to the "ultimate" future rate is not instantaneous in the projections, but most of the transition is assumed to occur by 1980.

PAGINATION INCORRECT

The 3.1 figure is an average for all women, regardless of marital status. In the present-day United States almost all women (95%) marry at some time in their lives, and many of those who do not are exposed to the possibility of childbearing. So the Series B rate of childbearing represents a reasonable approximation to an average family size of 3 children.

Census Series E assumes an ultimate rate of childbearing that works out to an average of 2.1 children per woman over a lifetime. This is the rate at which the parental generation would exactly replace itself. The extra .1 allows for mortality between birth and the average age of mothers at childbearing, and for the fact that boy babies slightly outnumber girl babies.

Different generations born in the twentieth century have reproduced at widely varying average levels, some exceeding three children (as did the women born in 1930-1935) and some approaching two (as did women who were born in 1905-1910). The fact that major groups in our modern history have reproduced at each of these levels lends credibility to projections based on either of these averages.

The sources of data for charts in this report are as follows:

Figure 1

Data are unpublished Census Bureau projections of the number of 6-year-olds enrolled in school each fall. The enrollment rate, or proportion of the 6-year-olds enrolled in school, is assumed to increase from 98.5 percent in 1970 to 99.6 percent in 2000. This assumption is compatible with the trends evident in the enrollment rates since 1950.

The projected numbers of 6-year-olds to which the enrollment rates are applied are consistent with Series B and E as published in the U. S. Bureau of the Census, *Current Population Reports*, Series P-25, No. 448.

Figure 2

Estimates of the total population, 1870 to 1900, are from U. S. Bureau of the Census, *Historical Statistics of the United States, Colonial Times to 1957*. Estimates of the total population, 1900 to 1959, are from the U. S. Bureau of the Census, *Current Population Reports*, Series P-25, No. 311.

Estimates and projections of the total population, 1960 to 2020, are from the U. S. Bureau of the Census, *Current Population Reports*, Series P-25, No. 448. Projections of the total population beyond 2020 are unpublished extensions of these projections.

Figure 3

Estimates of the population 20 to 29 years of age, 1950 to 1967, are from U. S. Bureau of the Census, *Current Population Reports*, Series P-25, No. 311, No. 321, and No. 385.

Estimates of births, deaths, and total population from 1950 to 1960 are from the U. S. Bureau of the Census, *Current Population Reports*, Series P-25, No. 442.

Current Population Reports, Series P-25, No. 448 is the source of estimates and projections of the population 20 to 29 years of age from 1969 to 2000, the total fertility rate (termed "average number of children per family" in this report) from 1950 to 2000, births and deaths from 1961 to 1991, and total population from 1960 to 2000. Data on births and deaths beyond 1991 are from unpublished Census Bureau projections.

Figure 4

Data on unwanted childbearing are from L. Bumpass and C. F. Westoff, "The 'Perfect Contraceptive' Population," *Science*, 169: 1177-1182, September 1970.

appendix b

research projects and papers of the commission

The Commission plans to publish the results of its research in 1972.

projections of population growth, characteristics, and distribution

Projections to the year 2000 of the:

- **Population of the United States**
- **Nonwhite population**
- **Number of persons enrolled in school**
- **Number of households**
- **Income distribution of families**
- **Population of each State**
- **Components of metropolitan/nonmetropolitan population growth.**

appendix c

Public Law 91-213
91st Congress, S. 2701
March 16, 1970

AN ACT

To establish a Commission on Population Growth and the American Future.

Commission on Population Growth and the American Future. Establishment.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Commission on Population Growth and the American Future is hereby established to conduct and sponsor such studies and research and make such recommendations as may be necessary to provide information and education to all levels of government in the United States, and to our people, regarding a broad range of problems associated with population growth and their implications for America's future.

PAGINATION INCORRECT

MEMBERSHIP OF COMMISSION

Sec. 2. (a) The Commission on Population Growth and the American Future (hereinafter referred to as the "Commission") shall be composed of–

(1) two Members of the Senate who shall be members of different political parties and who shall be appointed by the President of the Senate;

(2) two Members of the House of Representatives who shall be members of different political parties and who shall be appointed by the Speaker of the House of Representatives; and

84 STAT. 67

(3) not to exceed twenty members appointed by the President.

84 STAT. 68

(b) The President shall designate one of the members to serve as Chairman and one to serve as Vice Chairman of the Commission.

(c) The majority of the members of the Commission shall constitute a quorum, but a lesser number may conduct hearings.

COMPENSATION OF MEMBERS OF THE COMMISSION

Sec. 3. (a) Members of the Commission who are officers or full-time employees of the United States shall serve without compensation in addition to that received for their services as officers or employees of the United States.

(b) Members of the Commission who are not officers or full-time employees of the United States shall each receive $100 per diem when engaged in the actual performance of duties vested in the Commission.

(c) All members of the Commission shall be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.

80 Stat. 499; 83 Stat. 190.

DUTIES OF THE COMMISSION

Sec. 4. The Commission shall conduct an inquiry into the following aspects of population growth in the United States and its foreseeable social consequences:

(1) the probable course of population growth, internal migration, and related demographic developments between now and the year 2000;

(2) the resources in the public sector of the economy that will be required to deal with the anticipated growth in population;

(3) the ways in which population growth may affect the activities of Federal, State, and local government;

(4) the impact of population growth on environmental pollution and on the depletion of natural resources; and

(5) the various means appropriate to the ethical values and principles of this society by which our Nation can achieve a population level properly suited for its environmental, natural resources, and other needs.

STAFF OF THE COMMISSION

Sec. 5. (a) The Commission shall appoint an Executive Director and such other

personnel as the Commission deems necessary without regard to the provisions of title 5 of the United States Code governing appointments in the competitive service and shall fix the compensation of such personnel without regard to the provisions of chapter 51 and subtitle II of chapter 53 of such title relating to classification and General Schedule pay rates: *Provided*, That no personnel so appointed shall receive compensation in excess of the rate authorized for GS-18 by section 5332 of such title.

80 Stat. 378.
5 USC 101 et seq.
80 Stat. 443, 459.

(b) The Executive Director, with the approval of the Commission, is authorized to obtain services in accordance with the provisions of section 3109 of title 5 of the United States Code, but at rates for individuals not to exceed the per diem equivalent of the rate authorized for GS-18 by section 5332 of such title.

34 F. R. 9605.
5 USC 5332 note.
80 Stat. 416.

(c) The Commission is authorized to enter into contracts with public agencies, private firms, institutions, and individuals for the conduct of research and surveys, the preparation of reports, and other activities necessary to the discharge of its duties.

Contract authority.

84 STAT. 68

84 STAT. 69

GOVERNMENT AGENCY COOPERATION

Sec. 6. The Commission is authorized to request from any Federal department or agency any information and assistance it deems necessary to carry out its functions; and each such department or agency is authorized to cooperate with the Commission and, to the extent permitted by law, to furnish such information and assistance to the Commission upon request made by the Chairman or any other member when acting as Chairman.

ADMINISTRATIVE SERVICES

Sec. 7. The General Services Administration shall provide administrative services for the Commission on a reimbursable basis.

REPORTS OF COMMISSION: TERMINATION

Sec. 8. In order that the President and the Congress may be kept advised of the progress of its work, the Commission shall, from time to time, report to the President and the Congress such significant findings and recommendations as it deems advisable. The Commission shall submit an interim report to the President and the Congress one year after it is established and shall submit its final report two years after the enactment of this Act. The Commission shall cease to exist sixty days after the date of the submission of its final report.

AUTHORIZATION OF APPROPRIATIONS

84 STAT. 69

Sec. 9. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such amounts as may be necessary to carry out the provisions of this Act.

Approved March 16, 1970.

U. S. GOVERNMENT PRINTING OFFICE : 1971 O - 418-865

SELECTED UNITED STATES GOVERNMENT PUBLICATIONS

VANGUARD——A HISTORY

48K. This book deals with the origin, course of development, and results of the first American earth satellite project, one of several programs planned for the International Geophysical Year. Primarily an analysis of the scientific and technical problems in this pioneering venture in the exploration of outer space, the text also examines the organization of an undertaking bound by an inexorably fixed time limit, discusses briefly the climate of American opinion both before and after the launchings of the first Russian Sputniks, and concludes with a somewhat cursory evaluation of what the satellite program contributed to human knowledge. 1970. xvi + 308 p. il.

1K. EXECUTIVE OFFICE BUILDING, HISTORICAL STUDY NO. 3. The recognized need for preserving Federal buildings that enrich the Nation's heritage requires knowledge and understanding of their roles in the corridors of history. The collection of adequate and authentic historical data is an assurance that the buildings of true worth will be preserved. This study, one of a series chiefly concerned with buildings under the management of the General Services Administration, describes the role of a great Washington landmark once known as the State, War, and Navy Building. It starts with President Washington's plans for the Federal city and traces the controversies over the building's design and construction. Anecdotes link every President from Grant to Kennedy to the building and cast new light on contributions of architects, designers, and builders to the National Capital. Introduction

A major portion of the results of the 1970 census will be released on computer summary tapes. Six different tape series, the First through the Sixth Counts, have been planned to date. The first three series of 1970 census computer tapes, presenting tabulations of data from the complete-count or 100-percent items on the census questionnaire, were described in three previous Data Access Descriptions.

First Count Summary Tapes From the 1970 Census of Population and Housing, Series CT-2 (Rev.), DAD No. 13, March 1970--Data are aggregated to block group or enumeration district and larger geographic areas.

Second Count Summary Tapes From the 1970 Census of Population and Housing, Series CT-3, DAD No. 8, August 1969--Census tracts and minor civil divisions (MCD's) are the smallest geographic areas for which data are summarized.

Third Count (Block) Summary Tapes From the 1970 Census of Population and Housing, Series CT-4, DAD No. 9, August 1969--Data are aggregated to city blocks.

The Fourth Count Summary Tapes as described in this Data Access Description, CT-5 Revised, reflect changes which have been made in the tapes since the original Fourth Count Data Access Description was issued in April 1970. Tabulation numbers have been changed to reflect current organization of the tapes; there are several new tabulations, and the descriptions of a few of the tabulations have been modified. Fourth Count Tapes are expected to become available on a State-by-State basis beginning in March 1971, with all of the State tapes available by December 1971.

The Fourth, Fifth, and Sixth Count Summary Tapes will contain information obtained on a sample basis; the Fourth Count, however, will be the primary source of sample data pertaining to small areas.

Contents of the Fourth Count Summary Tapes

This count will contain information secured from the 5- and 15-percent samples of the total population; the commonality of some questions in both samples will also, in effect, create a 20-percent sample. Counts of sample cases are inflated to reflect the estimated actual count in the population. In a tabulation based on the 20-percent sample, for example, all cases have a weight of about 5 (i.e., all figures are multiplied by approximately 5, so that the final figures will be estimates for all the people in an area rather than just 20 percent of them).

The 100-percent items are generally included for the purpose of cross-classification. Also, control totals for the multiplication are obtained from the 100-percent items.

For the sample-based series of summary tapes (Fourth through Sixth Counts) all counts will already have been weighted as the tapes are prepared.

The contents of the Fourth Count Summary Tapes, as described in this Data Access Description, are subject to possible minor revision.

Organization of the Data.--The Fourth Count Summary Tapes will present detailed and cross-classified data for census tracts and minor civil divisions as well as for larger geographic areas. This information, collected on a sample basis and weighted as described above, will be contained in three files:

File A--Tract summaries

File B--Minor civil division (or census county division) summaries

File C--Summaries for the State, counties, places, standard metropolitan statistical areas (SMSA's) and their component parts

Files A and B will each present approximately 13,000 cells of data for each tract or minor civil division, and File C will present about 13,000 data cells for each place and 30,000 cells for each of the larger geographic areas. The greater number of cells of available data in File C result from cross-tabulations for urban, rural nonfarm, and rural farm residence for most of the tabulations in that file.

The population and housing tabulations for each State will be on separate tapes within each of the three files, A, B, and C. The tapes and documentation, therefore, will be available separately for housing and population, a separation not made on any of the previous counts.

Spanish American Tabulations[1]--The term "Spanish Language/Puerto Rican" as used in the 15- and 20-percent sample population and housing tabulations refers to different populations in different areas of the country: (1) In the three Middle Atlantic States of New York, New Jersey, and Pennsylvania, people of Puerto Rican birth or parentage; (2) in the five Southwestern States of Arizona, California, Colorado, New Mexico, and Texas, people of "Spanish language" or of Spanish surname; (3) in the remaining 42 States and the District of Columbia, people of "Spanish language." Any person who reports Spanish as his or her mother tongue, as well as any person in a family in which the head or wife reports Spanish as his or her mother tongue, is considered a person of Spanish language. Tabulations of 5-percent data are for persons of "Spanish descent," i.e., persons who report Spanish American origin or descent as Mexican, Puerto Rican, Cuban, Central or South American, and other Spanish. Spanish descent is ascertained by means of a 5-percent sample question asked for the first time in the 1970 census. Where a data item in either population or housing tabulations is a count of families, households, or housing units, rather than individuals, Spanish American designation as a cross-classifier refers to the household head.

Population Tabulations.--Files A and B will contain complete sets of population tabulations for the total population, whites, and Negroes. In addition, these tabulations will be presented for Spanish Americans. As explained above, the tabulations in File C for all four of these groups will also be cross-tabulated by urban, rural nonfarm, and rural farm residence.

For persons interested in counts of persons in the category "other race," these data can be obtained by subtraction of data for whites and Negroes from data for the total population.

Housing Tabulations.--The housing tabulations described in this Data Access Description will be tabulated for the type of housing unit listed or for the specific groups of housing units designated by the "FOR" listing which accompanies each tabulation. Some of the housing tabulations will be cross-classified by urban, rural farm, and rural nonfarm residence; a set of tabulations will be made for Spanish American households. (See notations in the tabular presentation below.)

Explanation of Terms.--The following information will be helpful in understanding the population and housing tabulations which are described below.

---

[1]Spanish American is not a racial category and therefore is not a consideration in obtaining the "other race" residual in connection with the breakdown by total population, whites, and Negroes.

Aggregates. Along with the relevant counts of units, aggregates will permit the computation of mean values (e.g., average number of rooms, average number of persons per unit, average income, etc.). For population tabulations of aggregates concerning income, a loss is tallied as negative income; the unit receiving such loss is tallied as a unit with income. In the computation of aggregate income deficit, negative incomes are treated as zero.

Poverty level. This term refers to the Social Security Administration's poverty index. Families referred to as "below poverty level" are those below a 1.00 ratio of family income to poverty level. All data summaries concerning poverty level exclude inmates of institutions, members of the Armed Forces living in barracks, and unrelated individuals under 14 years of age.

Value. Value is tabulated for owner-occupied and vacant-for-sale-only one-family houses which are on a place of less than 10 acres and have no business or medical office on the property. Value is not tabulated for mobile homes, trailers, cooperatives, or condominiums.

Gross rent. Gross rent is tabulated for all renter-occupied and vacant-for-rent units except one-family houses on a place of 10 acres or more.

Contract rent. Contract rent is tabulated for all renter-occupied and vacant-for-rent units except one-family houses on a place of 10 acres or more.

Worker. This classification includes members of the Armed Forces for tabulations concerning work status.

Family income. Only the income of family members 14 years old and over is included in family income.

Type of income. Any given tabulation unit may be tallied in more than one income category.

Plumbing facilities. Units with "All plumbing facilities" are defined as having all of the following: Hot piped water, flush toilet for exclusive use, and a bathtub or shower for exclusive use.

Complete kitchen facilities. Units with all of the following are considered to have complete kitchen facilities: A range or cookstove for exclusive use, a sink with piped water for exclusive use, and a mechanical refrigerator for exclusive use.

Direct access. An entrance to a living quarters directly from outside the structure or through a common hall provides direct access.

Population and Housing Tabulation Summaries

In the tabulation summaries which follow, an asterisk in the data items column for a tabulation indicates that some or all of the data for that tabulation are also included in the printed tract reports. In most cases there is much less detail in these printed reports and in some cases the data are presented in a different form (e.g., percentage rather than actual count).

Fourth Count Summary Tapes

Data summaries	Number of data items
POPULATION TABULATIONS	
For data summaries 1 through 99 below, all tabulations in all files (A, B, and C) will be made for the following population groups: Total, white, Negro, and Spanish American. In File C, all tabulations will be cross-classified for urban, rural nonfarm, and rural farm residence.	
1. Aggregate family income of families....	1
2. Aggregate family income and number of families with female head.....	2
3. Aggregate income of unrelated individuals 14 years old and over.....	1
4. Aggregate income and number of female unrelated individuals.....	2
5. Aggregate income of persons 14 years old and over, by sex.....	2
6. Aggregate earnings by occupation of males 16 years and over in the experienced civilian labor force.....	7
Experienced civilian labor force, total	
Professional, managerial, and kindred workers	
Craftsmen, foremen, and kindred workers	
Operatives, including transport	
Laborers, except farm	
Farmers and farm managers	
Farm laborers, except unpaid, and farm foremen	
7. Aggregate earnings by occupation of females 16 years old and over in the experienced civilian labor force.....	3
Experienced civilian labor force, total	
Clerical and kindred workers	
Operatives including transport	
8. Aggregate income by type by family status.....	*12
Family status:	
Family	
Unrelated individual	
Type of income:	
Wage and salary	
Nonfarm, self-employment	
Farm, self-employment	
Social Security or Railroad Retirement	
Public assistance or welfare payments	
All other income	
9. Aggregate income by type and sex..... (See No. 8)	12
10. Aggregate income deficit for families below poverty level.....	*1
11. Aggregate income deficit for unrelated individuals 14 years old and over below poverty level.....	1
12. Aggregate income of specified types received by families below poverty level.....	4
Type of income:	
Total income	
Earnings	
Social Security or Railroad Retirement	
Public assistance or welfare payments	
13. Aggregate income of specified types received by unrelated individuals below proverty level..... (See No. 12)	4
14. Aggregate value of owner-occupied housing units by poverty status of family or primary individual.....	2
Above poverty level	
Below poverty level	
15. Aggregate gross rent of renter-occupied units by poverty status of family or primary individual..... (See No. 14)	2
16. Aggregate income deficit between specified poverty level and total income for families and unrelated individuals.....	4
Specified poverty level:	
Less than 75 percent of poverty level	
Less than 125 percent of poverty level	
17. Age of the total population, by sex..	*54
Under 3, 3-4, 5, 6, 7-9, 10-13, 14, 15, 16, 17, 18, 19, 20, 21, 22-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-61, 62-64, 65-69, 70-74, 75 and over	
18. Household relationship and sex of the total population.....	*12
In households:	
Primary individual:	
Male	
Female	
Family head:	
Male	
Female	

Fourth Count Summary Tapes--Continued

Printed Reports From the Fourth Count Summary Tapes

Three sets of printed reports will be drawn from the Fourth Count Summary Tapes, but none will be as extensive or in as much detail as the tapes themselves. These printed reports, expected to be available about 1 month after the summary tapes for their respective States, are as follows:

Chapter C, General Social and Economic Characteristics, of Volume I, 1970 Census of Population

Chapter B, Detailed Characteristics for States, Cities, and Counties, of Volume I, 1970 Census of Housing

Census Tract Reports, 1970 Census of Population and Housing

The Census Tract Reports will include both sample information from the Fourth Count and 100-percent information from the Second Count. (The tables based on the 100-percent tabulations will be available several months prior to publication of the full report.)

The summaries to be published for census tracts are noted in the tabulation summaries above in order to convey a sense of the relatively smaller amount of information to be presented in the printed reports than on the summary tapes. However, for geographic areas larger than census tracts, additional subject-matter detail will be presented in the printed reports.

Persons interested in the contents of the reports listed above should consult Data Access Description, CEP-4, "Printed Reports From the 1970 Census of Population and Housing."

Use of the Summary Tapes

These computer tapes can be used by the purchaser (user) only if they are compatible with the user's computer. Some of the potential compatibility problems are discussed in Data Access Description, CT-1 Revised, which is available on request. Technical documentation describing tape format and content in detail will be furnished with copies of the tape reels or may be purchased separately for $3 per count, with the following exception: the charge for the population and housing parts of the Fourth Count documentation has been established at $3 each. Content, documentation, and techniques for utilization of summary tapes are also discussed at Summary Tape User Conferences which local organizations and groups of data users sponsor in various parts of the country.

Two test reels for File A (one each for population and housing) of the 1970 Census Fourth Count Summary Tapes are now available. Files B and C have the same format as File A; therefore, only File A is produced as a test reel. The test tapes can be run on 1970 census input and thus enable users to begin planning and testing the procedures they will use to analyze the 1970 census data.

Acquisition of the Tapes

The summary tape series will be prepared as a part of the regular processing of the 1970 census. As a result, the price of these tapes is based on the cost of reproducing copies, plus the cost of the tape reels used and shipping and handling charges. Each reel of tape, including the test tapes, will cost approximately $60. Orders for the test tapes will be filled at once; orders for the 1970 Census Summary Tapes may be placed now and will generally be handled in order of receipt. Information and order forms are available from the Central Users' Service, Population Division, Bureau of the Census, Washington, D.C. 20233. In addition, as the summary tapes for each State become available, they will be listed in Part II of the Bureau of the Census Catalog.

Further Information

Questions and inquiries concerning the Fourth Count Summary Tapes From the 1970 Census of Population and Housing should be addressed to:

Director
Bureau of the Census
Washington, D.C. 20233

(Please refer to Data Access Description, Census Tabulations Available on Computer Tape Series, CT-5, Revised.)

1970 Census Users' Guide Part 1 and Part 2

The 1970 Census Users' Guide is a two-part publication designed to furnish most of the information data users will need for effective access and use of 1970 census data products.

Part 1 of the **Guide** (standard, paper-bound publication) includes the text and three appendixes. The text covers such subjects as the collection and processing of 1970 data, data delivery media (computer tapes, microfilm, and printed materials), maps and information on how to obtain census materials. The appendixes are:

1970 Census Users' Dictionary - defines concepts associated with population and housing tabulations and geographic areas relevant to the collection and publication of data.

Comparison of Printed Reports and Summary Tapes summarizes and compares the contents of the reports and tapes.

Glossary - defines many terms used in connection with collecting, processing, and publishing census data, and lists many abbreviations relevant to the census.

Part 2 of the **Guide** (prepunched for 3-ring binder) contains appendixes specifically related to the use of census summary tapes and the Address Coding Guide.

Technical Conventions and Character Set - present information on the physical characteristics, format, and languages associated with tapes released by the Bureau.

1st-4th Count Technical Documentation - describes the arrangement of geographic codes and census data on the first four series of summary tapes.

Address Coding Guide Technical Documentation - furnishes information on the format and content of ACG's.

Many data users will find both Parts 1 and 2 of great value. Part 1, with its comprehensive coverage of the decennial census program, data products, and related services, is an important instructional and reference tool. Part 2, concerned exclusively with computer tape products, is designed particularly for those who plan to obtain tapes or who want complete information on the data content of the summary tapes.

Census - 1970

Charting America's Changing Face

by Alexander Uhl

The counting part of the 1970 Census is over. It cost the American people just about a dollar per head and the job of evaluating the figures has just begun, so the cost is far from over.

What have we got and what will we get for our money?

Primarily, the 1970 Census showed that we are still a growing nation, although our rate of growth has slackened during the past 10 years.

In 1960, the resident population of the United States was 179,323,175. In 1970 it was 203,184,772 for an increase of 13.3 percent. This was the second largest increase in actual number of people in the history of the United States, but it also was the second lowest rate of increase, second only to the 1930s, when the increase was 7.3 percent.

For the first time, however, the Bureau of the Census counted members of the armed forces abroad, the diplomatic services and their families, so the total population in 1970 was really 204,765,770.

ALEXANDER UHL is an editor of Press Associates, Inc., a labor news service. He is a veteran reporter in Washington, D. C., with extensive experience in covering federal agencies.

While the "population explosion" that grew out of World War II appears over, every indication is that the number of Americans will keep growing during the next decade at least—although at a lesser rate than during the previous 20 years. By the end of the century we are expected to number some 275 million.

A number of conclusions can already be drawn from the statistics, the study of which has only just begun:

- Crucial changes will have to be made in the apportionment of seats in Congress and the redistricting to be done within states as a result of the 1970 statistics;
- Highly important social changes have become obvious in the extraordinary shift of population within the country and in the tremendous growth of the suburbs at the expense of both rural and core city populations;
- Equally important shifts have taken place in the industrial makeup of the nation—shifts that will be of the utmost importance to workers who must go where the jobs are;
- A thousand and one bits of statistical information are available that are of the greatest importance to industry itself; the housing that is still desperately

needed; the changing face of modern life and consequent demands to which industry must respond. In all, it is the vast picture of a population of more than 200 million broken down into the revealing segments of its daily life.

The taking of the 1970 Census was not without its problems. It started with a preliminary battle in Congress. Some viewed the census as presenting an opportunity to make a thorough inventory of the country, its population, its resources and its needs. Others viewed the census as an unnecessary prying into their personal lives and felt that too many of the census questions represented an invasion of privacy.

Long before the census actually began, interested persons and groups presented their ideas at hearings on what kind of information should be sought in addition to the simple tabulation of people by age, birth and similar basic facts. Some of the proposed questions were to become the center of controversy.

One of the questions that aroused a somewhat artificial furor was whether bath showers were shared or not shared. Cartoonists had a good time picturing people sharing a shower and the question finally was re-worded to make sure that no one could misunderstand it—deliberately or not.

The results on this question haven't been tabulated as yet, but preliminary figures in the housing census indicate that shower-sharing can't be too extensive. Delaware, for example, has year-round plumbing units for 165,887 persons while only 8,856 units are lacking some or all plumbing. Whether these facilities are shared to any degree with others has not yet been determined, but it would appear at any rate that the plumbing is there.

One phenomenon of the 1970 Census was the unwillingness of many cities to accept figures which showed them to have lost rather than gained population. Once, such a loss was simply a blow to local pride; that is no longer true. Now many important federal and state programs are related to population and a drop in numbers can cost a city millions of dollars in federal or state aid.

Federal grants in such fields as health, welfare, education, housing and community projects are directly related to population. Hard-pressed governors and mayors are increasingly desperate in their pursuit of revenue to meet larger and larger budgets and consequently have been watching census figures with apprehension.

More than one core city has refused to accept the 1970 Census figures showing population loss. The District of Columbia, for example, sharply questioned census reports that its population has dropped to 756,510, a loss of some 7,500 inhabitants over the past 10 years.

The District called for a recount, but it indicated, if anything, that D.C. had actually lost a few more residents than the census first indicated. So the protest storm died down. The same was true of other protesters who generally accepted the census figures although with reluctance.

Directly related to questioning of population loss is that in 1960, up to 5 million persons throughout the country were "missed" in the count. The District of Columbia, for example, claimed that in 1960 about 50,000 persons were never counted. Either they were missed by census enumerators, deliberately hid out to avoid being counted for fear of the police or the tax collectors, or had no fixed address.

To avoid a repetition of this failure to get a full count, the Bureau of the Census this year launched a special corrective program. Specially trained census takers were sent to urban ghettos where many thousands of persons have been missed in the past. Unusually complete lists of homes, business places and rooming houses were prepared in advance.

This year, the Bureau of the Census insists, the count has been as complete as human ingenuity and computers can make it.

These factors cannot be discussed without mentioning the tremendous technical development that has taken place in the simple matter of tabulating the many questions.

In 1790 federal marshals traveled on horseback to count each family in their district. The count took many months to complete. Originally the final count was posted in public places. By 1850 the original list was retained by the courts in each state, but the federal government in Washington called for the information, too.

By 1870 a "tallying machine" was used to compile the records while 20 years later the modern age of census tabulation really began with the development of a system of punched cards by a census office employe, Herman Hollerith; if you have trouble with

today's punched cards, you can thank Hollerith for starting it all.

In any event, more and more complex tabulating machines have proliferated ever since. By 1951, the Bureau of the Census used its first electronic computer —Univac I. Five years later, the bureau was using electronic scanners which made it possible to record in one minute what it had taken a punch-card operator eight hours to record in 1950. Today this time has been cut to 15 seconds.

Presumably even these 15 seconds will be cut as year-round experimentation continues within the bureau to make the vast amount of census information available to the government and the public in less and less time and, above all, to make sure of its accuracy.

The accuracy of the count, of course, has more implications than a determination of who gets what when the federal government allots funds for state and local programs. Of supreme importance—the very purpose for which the original census in 1790 was made—is apportionment of seats in Congress in accordance with the Constitution and the one-man, one-vote decision of the U.S. Supreme Court.

Each state, no matter how small, has one seat in the House of Representatives to begin with. States with only one are Alaska, Delaware, Nevada, North Dakota, Vermont and Wyoming. After that, each state gets additional representatives based on a district count today of some 450,000 inhabitants. For some states this can mean a gain. For others it may mean a loss, since the House total is fixed at 435.

As a result of the 1970 Census, California will gain five seats for a total representation of 43 members, the largest state delegation in the House. Other gainers will be Florida with three more seats and Arizona, Colorado and Texas with one each.

Losers will be New York, down two for a state representation of 39 and a drop to second place behind California in total delegation size; Pennsylvania, also down two; and Alabama, Iowa, North Dakota, Ohio, Tennessee, West Virginia and Wisconsin, down one each. That loss dropped North Dakota into the one-seat category.

The 1970 Census count also will have a crucial impact on representation by districts within each state. The Supreme Court in its one-man, one-vote decision laid down the principle that each district must be closely matched in population instead of the vast difference in population that once prevailed.

This means that each state affected by census changes must reapportion its districts before the 1972 election if it hasn't already done so. While the states must reapportion closely along population lines, they have considerable freedom in drawing boundaries, which will mean the age-old gerrymander technique can still be used to set up safe party districts within highly flexible boundaries.

It is for this reason that the results of the 1970 state elections were so important. The political complexion and control of state legislatures will largely determine how districts are reapportioned.

The 1970 Census has had equally important impact on the job picture of the United States in terms of population shifts.

For some years population and jobs have been shifting—the one interacting with the other—throughout the United States. Migration patterns have continued to move from the center of the country out to the coastal areas and from rural to urban.

Gainers have been such states as California, Arizona, Colorado, Texas and Florida. Losers have been such central states as Iowa, Wisconsin, Ohio and Ten-

nesee, along with West Virginia, Pennsylvania and New York. Most of the East Coast states have held their own.

This does not mean that these states have necessarily lost population; it does mean they have slipped somewhat in relation to their fellow states.

On a regional basis, the West has been the largest gainer with a population growth of 24.1 percent during the past 10 years. The South has gained 14.2 percent, the Northeast 9.7 percent and the North Central 9.6 percent.

These changes have been influenced mainly by two different thrusts—the growth of industrialization and the development of large retirement centers. California has shared in both thrusts. States like Florida and Arizona have mostly profited from the growth of retirement centers because of their climates.

While the Northeast has begun to give way to other parts of the country in its rate of growth, it is a curious fact that the nation's mightiest concentrations of population still lie within the original 13 states of the union. "Megalopolis" or "Strip City," as some experts call it, embraces nine of the original 13 states from Massachusetts south to Virginia.

Within this area live 36,234,814 persons, an increase of more than 3.6 million over the 1960 Census. No less than seven metropolitan areas of more than 1 million are included in this area. New York, of course, is the largest with 11,528,649. Philadelphia is second with 4,817,914 and Washington, D.C.-Maryland-Virginia third with 2,861,123. Others with more than a million are Boston, the Paterson-Clifton-Passaic area in New Jersey, Newark and Baltimore.

This population is centered in an area 450 miles long and at places 150 miles wide, yet it contains 18 percent of the entire United States population. What's more this giant concentration of people is still growing—at a rate of 11.2 percent over 10 years.

The Washington-Maryland-Virginia area grew the fastest over the 10-year period—37.8 percent—a commentary on the concentration of federal growth and power that has been going on for the past 40 years.

From a population point of view, the past 10 years have opened the way to a new ranking of the states by population. California has shot from second to first, leading New York. Texas has gone from 6th to 4th; Florida from 10th to 9th; Georgia from 16th to 15th; Maryland from 21st to 18th.

Perhaps of most interest to the labor movement has been the industrialization of the South. This is largely, and unfortunately, due to the South's continued low wage, non-union status. The latter has been slowly yielding to persistent organization, but any study of the records of the National Labor Relations Board confirms the immense difficulty of union progress in an area of the country where implacable employers and propagandized residents still predominate.

The states in the South have seen industry coming in while the pattern of the rural life has changed, with great numbers of Negroes continuing to move to other sections of the country in a steady—if somewhat diminishing—stream.

What has not kept pace in the South are wages. True, wages have gone up, but per capita income still lags far behind the rest of the country. As compared with a national per capita income in 1969 of $3,680 a year, most of the southern states showed substandard incomes. Lowest was Mississippi with

a per capita income of $2,192 and the rank of 50th among the 50 states. Arkansas at $2,520 was No. 49; Alabama with $2,567 was 48; South Carolina with $2,580 was 47. Other southern states had equally depressing records. Few of them go above the $3,680 national average.

In addition to the changing regional pattern of the nation, a profoundly important change in the pattern of city and suburb is also revealed by the census. This has been showing itself during the past 20 years, but became particularly important in the 1960s.

The mobility of the population has increased tremendously. Such factors as the widespread increase in automobile ownership, a movement of industry in many cases to raw countryside and the "flight from the cities" have combined to produce a population loss in the core cities and a great gain to the surrounding suburbs.

This has produced the phenomenon of a tremendous growth of metropolitan areas in which the preponderance of development has been in the areas immediately surrounding a shrinking core city.

The City of St. Louis, No. 10 among the largest cities in the country, lost about 17 percent of its population. Yet, its standard Metropolitan Statistical Area, which includes four counties in Missouri and two in Illinois, showed an overall gain of 12.3 percent.

The City of Cleveland is another example. Although Cleveland itself lost 14.3 percent population, the Cleveland SMSA, including a number of small communities in Cuyahoga County and three other counties in Ohio, gained 8.1 percent.

Even among core cities which gained population, the growth of their SMSA has been relatively higher.

The Top Ten Metropolitan Areas

1970 Rank	Area	1970 Population (in millions)	1960 Rank	Percent Change
1	New York	11.5	1	7.8
2	Los Angeles	7.0	3	16.4
3	Chicago	6.9	2	12.2
4	Philadelphia	4.8	4	10.9
5	Detroit	4.2	5	11.6
6	San Francisco	3.1	6	17.4
7	Wash., D.C.	2.9	10	37.8
8	Boston	2.7	7	6.1
9	Pittsburgh	2.4	8	-0.2
10	St. Louis	2.3	9	12.3

For workers this shift of population can have great importance. As the population has moved into the suburbs and even what once was regarded as exurbia, industry and business have followed. In turn, much of industry has abandoned obsolete core city plants and has started afresh in the countryside. It is literally true that where cows grazed a few years ago, modern industrial plants, notably electronic and computer centers, have now sprung up.

The pace of this movement has slackened appreciably during the past year as the Nixon Administration cooled the economy. But there can be little doubt that the pace will quicken once the economy picks up again.

The 1970 statistics are barely cooling in the computers and already census experts are looking forward to what today's figures will tell them about tomorrow. Dr. George H. Brown, Director of the Census, for example, opened a number of possibilities in a recent address.

Dr. Brown estimated that in the next 15 years, the population of the United States will be between 240 and 250 million, or a considerable growth over the current 204 million. Others have estimated a high of 275 million.

"Even with a low fertility rate, the population growth rate will rise for the next decade because the proportion of women in childbearing ages will increase," Dr. Brown said. "On the basis of present information, however, the population growth rate could well return to its present level in the 1980s, or perhaps, even slip below it."

Whether this would represent a social gain or not is the subject of debate among population scientists. Some argue that a slower rate of growth would ease many of the problems in the social order that the United States is now facing. Others argue that a stationary population simply would mean an increase in the average age, so that today's median age of 28

would be 37 and that such an older population would resist change.

Another possible effect on the future is further change in the geographic distribution of the American population. While two out of every three persons now live in metropolitan areas, the differential between national growth and the growth of the metropolitan areas is narrowing somewhat.

In this connection, the historic rush to metropolitan areas from the rural areas may be slowing down. While most non-metropolitan counties in the United States are not sharing in the population explosion, some areas are. These are non-metropolitan counties that are traversed by a freeway and have a moderate-sized urban center of between 25,000 and 50,000 persons.

"The growth in these counties," said Dr. Brown, "contradicts the popular notion that our nation's population is on the high road to engulfing itself in a number of big, densely packed urban centers. In sports page parlance, smaller urban centers have been and are running for daylight."

Counties having such a potential for growth are some that most of us have never heard of. They include Cascade County in Montana or Lubbock County in Texas or Quachita County in Louisiana. Even smaller ones include Campbell County, Wyoming, or Portage County, Wisconsin, or Grand Isle County, Vermont. Gaithersburg, Md., once a rural town outside of Washington, D.C., is now a city of 12,000.

What is causing unusual growth rates in these areas is still under study, but it is clear that while the metropolitan areas continue to grow larger and more populous, some smaller areas are not being left behind in the race.

Census experts are studying the 1970 results for expected changes in such things as the age composition of the country and the number of new households that will be formed. They predict a drastic increase in the number of younger adults from now to 1985 with one-third of the population in the 25 to 34 year group.

A rapid rate of household formation is expected since the next 15 years will become "the era of the young married."

Of vital importance to workers is an expected change in income distribution. On the basis of today's statistics projected into the future, Dr. Brown estimates that average family income will rise from $8,600 today to $15,000 in 1985 measured in constant dollars.

Today about one-third of the families in the United States have a $15,000 income. By 1985 three-fourths will have such incomes with most of the added purchasing power in the 25 to 44 year age group.

"In a few words," Dr. Brown said, "we are heading into a society of an affluent majority."

This prediction, he said in an obvious understatement, "has tremendous economic, social, moral, political and other major implications." An affluent majority, unfortunately, is likely to mean a poverty-stricken, desperate and perhaps hopeless minority.

While the core city and its growing suburbs have grown apart from each other—if not hostile to each other—the reality of today's growth pattern is that the inner city and the suburb are highly dependent on each other and have many problems in common that must be solved in concert.

Core cities, even if decaying as residential and cultural centers, nevertheless are still the magnets for vast economic, social and cultural values and, as such, attract a slow but steady return of many men and women who may have fled it. In addition, traffic problems, pollution, law and order and civil rights are all matters that do not respect boundaries, but overflow in both directions.

As a result, urban experts are calling for a "metropolitan" approach to relieve and correct today's core city ills.

Samuel C. Jackson, Assistant Secretary for Metropolitan Planning and Development, calls metropolitan areas "micro nations."

"They are to some degree economically self-sustaining organisms," he has said. "Their social structure represents the nation's range of family income from poverty to affluence and they mirror all the national patterns of urban frustration, physical disorganization, fiscal disparities and human inequities."

One of the important aspects of the interdependence of the core city and its surrounding suburbs—in time there will be about 50 of them—is the difficulty of transportation for workers who no longer live close to their jobs and must commute considerable distances. This problem affects the affluent suburbanite no less than the Negro housemaid.

More and more, city and suburb quarrel over freeways and parking problems. City people resent the one-car, one-man commuter who monopolizes parking space, congests traffic and adds to pollution. Commuters on the other hand complain of too little parking space and poor traffic control.

The household domestic who must commute to the suburbs has an even worse lot. Mass transportation is sketchy and expensive. She may spend hours traveling by buses that arrive late, are crowded and all too often fail to cover adequate territory.

What the 1970 Census has done, if nothing else, is to tell us that core cities, while losing population, are nevertheless the hub about which great new "city-states" are evolving. Some of them, such as New York, are huge entities that cross county and state boundaries and are more populous than many U.S. states.

The process of evaluating the 1970 Census returns is still in progress. But, already it is clear that even more than the many censuses before it, this one will have tremendous significance because of the pace of change that has occurred during the past 10 years and is continuing.

FORM BC-2217 (AUG.1971)

MICROFICHE

The **NATIONAL TECHNICAL INFORMATION SERVICE** offers you all reports in **SERIES PC(1)-C** and other population and housing final reports on **MICROFICHE.** Microfiche (sheet microfilm) is a major improvement over reel microfilm in storing printed information. The microfiche is **COMPACT.** More than 1,000 average length documents will fit into an ordinary file drawer. Federal Agencies now use a standard size of microfiche—4" x 6" (105mm x 148mm) that contains up to 70 pages on one sheet. **MICROFICHE** is **MORE ECONOMICAL** than paper copies, is **EASIER TO HANDLE,** and may be filed fast! Reproduce **ONLY WHAT YOU NEED** with reader-printers; make enlarged photocopies of any or all pages in a report quickly and easily with **MICROFICHE.**

General Social and Economic Characteristics—Series PC(1)-C

During the period October 1971 through March 1972, the Bureau of the Census will publish a series of reports presenting data from the 1970 Census of Population on social and economic characteristics of the population. The series is designated as PC(1)-C and is entitled, "General Social and Economic Characteristics." It includes 53 reports—one for the United States, one for each State, the District of Columbia, and Puerto Rico.

The reports will include data on age, nativity, place of birth, and parentage; mother tongue; Spanish heritage; year moved into present house and residence in 1965; school enrollment and years of school completed; vocational training; veteran status; marital history; families and their composition; fertility; work disability; employment status; weeks worked in 1969; activity five years ago; place of work; means of transportation to work; occupation, industry, and class of worker; income; and poverty status. Items such as sex and race are also presented for the purpose of cross-classifications. In addition, for areas with Negro and/or Spanish population of specified size, the reports present selected data for these groups.

Statistics will be presented for some or all of the following areas: States (by urban, rural-nonfarm, and rural-farm residence), counties, standard metropolitan statistical areas, and places of 2,500 inhabitants or more.

Information on the printed publications for Series PC(1)-C is shown on reverse side.

PROFESSIONAL HEARINGS ON U.S. CENSUS

The Census Committee of the Information Systems Department was organized last January during the AIP's Government Relations and Planning Policy Conference in Washington. It is a voluntary special-purpose group formed to bring census issues into sharp focus and to propose ways and means to resolve those issues.

At the annual AIP Conference in San Francisco, October 24-28, the Committee will conduct professional hearings which will give the full AIP membership and others an opportunity to express their views on six, specific topics. The principal speaker at each hearing will make an appropriate presentation, after which the discussion will be opened to all in attendance. A representative from Bureau of the Census will participate in each hearing to help answer questions and describe census program activities.

The topics and speakers are:

Census Mapping, Address Coding, and Geo-Coding. . . . . .Mr. Edward T. Kelly

1975 Census of Population and Housing . . . . . .Dr. Doris Halleb

1972 Census of Governments . . . . . Dr. Selma Mushkin

Small Area Data Availability and Use . . . . . .Dr. William Garrison

Census Housing Data . . . . . Mr. Frank Kristof

Census Summary Tape Processing Centers . . . . . .Mr. Britton Harris

Testimony at these hearings is encouraged from persons who are concerned with using the U. S. Censuses of population, housing and governments in the comprehensive planning process. Both oral and written testimony will be accepted. Respondents should send two typewritten copies of their testimony to Mr. David B. Klotz, Delaware Valley Regional Planning Commission, 1317 Filbert Street, Philadelphia, Pennsylvania 19107. Written testimony will be received up to the time of its post conference compilation. Additional information concerning the census hearings is available from Mr. Klotz.

Both criticism and praise are welcome, and will be most useful if supported by a description of the experience which has most dramatically influenced your opinion. Recommendations for changes in national policy are also solicited.

Officers of the Census Committee are David B. Klotz, Chairman, Harold Olsen, Vice Chairman (School of Library and Information Services, University of Maryland), and Leonore Siegelman, Program Coordinator (U. S. Department of Housing and Urban Development). Serving as task force chairman are John Backer, Margaret Breland, Jim Crews, Morris Hansen, Albert Mindlin, Juliet Sabit and David Seidman.

Those assisting the Census Committee as resource persons are Sidney Robertson of the U. S. Department of Transportation Jacob Silver, and Arthur Young and Michael Garland of the U. S. Bureau of the Census. General committee membership includes Glenn Blossom, Robert Jentsch, Josef Nathanson, William Rucker, Robert Stuart, and Robert Vogel.

THE MID-DECADE CENSUS

On June 2, David B. Klotz, Chairman of the Census Committee of the Information Systems Department, testified before the House Subcommittee on Census and Statistics about the urgent need for a mid-decade census of population, housing and employment. His testimony, the present position of the American Institute of Planners in this regard, and the subsequent stance taken by the federal administration are summarized in the following letter which was recently directed to President Nixon.

Dear Mr. President:

The Census Committee of the Information Systems Department of the American Institute of Planners was shocked and deeply disappointed to learn of the opposition of your administration at this time to the proposed mid-decade census of population, housing and employment.

The opinion of the Census Committee of the Information Systems Department of the American Institute of Planners is representative of the Institute's membership of 6 thousand professional planners who are directly employed by or serve as consultants to general and special-purpose governments at local, city, county, regional, interstate and federal levels and by growing numbers of private business and industrial firms. We are concerned that you understand the urgent need and likely consequences of a continuing failure on the part of the federal government ot provide data required for planning of government projects and programs by all levels of government for all the needs of the American people.

As we pointed out in our testimony of June 2, 1971, before the Subcommittee on Census and Statistics of the Committee on Post Office and Civil Service, U. S. House of Representatives, the planners are the guys who roll up their sleeves and dig into the census data in behalf of the hundreds of thousands of elected officials and other government decision-makers throughout the nation.

The metabolism of planning analysis is closely related to the ten-year cycle of census data. From 1 1/2 to as much as three years after each census, we await the release of the data. For the next two to three years, we are busy analyzing the data, calculating changes from previous estimates and forecasts analyzing the implications of the change on current and proposed programs and revising forecasts of future growth and change. Then, for the next five years, we wait for new data. Of course the problems of government don't wait and planners try to respond by making local estimates of current population. But they are almost never satisfactory in any respect except gross counts. The migration rates, the characteristics of people and their occupations and jobs and their housing conditions are seldom accurately estimated in the five-year period before new census data is available.

Bipartisan testimony on the need, value and benefit of a mid-decade census was assembled by Congress at hearings in 1962,1965 and 1967. After the 1967 hearings a bill was reported favorably by the Post Office and Civil Service Committee and approved in the House by a vote of 255 to 127. As Mr. A. Ross Eckler said in his recent 1971 testimony, "There is no reason to believe that if the Senate Post Office and Civil Service Committee had then brought out a similar bill, the current hearings would be unnecessary." To the best of our knowledge all testimony assembled for the current hearings by the House subcommittee was favorable except for testimony of Dr. George H. Brown, Director of the Bureau of the Census, who testified on June 10, 1971, "At this time the Administration does not recommend a mid-decade census."

There may be a great sympathy across the land for your cost-conscience approach to federal government operations but we cannot believe that it applies so broadly that the nation should be denied the basic data so desperately needed for effective governmental management in these times of high population mobility and dramatic urban change. We will be dis-

appointed, indeed, to have to report to the planning profession at its national conference this coming fall your decision to withhold support from a mid-dedecade census of population. We urge you to reconsider the Aministration's decision and assure you of our sincere desire to work with the Bureau of the Census in the planning of a mid-decade census that will meet the urgent need for mid-decade benchmark data at the minimum cost consistent with the need.

Sincerely yours, David B. Klotz, AIP

TASK FORCE ON FEDERAL STATISTICS

Mr. Marvin A. Zentner, President, of Systems Design, Inc. recently agreed to chair a task force on Federal Statistics. Policy issues of concern to planners such as changes to Federal Data Series and Information Systems will be identified. The task force will recommend to the Board of Directors how the Department should organize to respond to such issues on a continuing basis.

USGS/NASA EFFORT TO PROVIDE URBAN AND REGIONAL INFORMATION

The U. S. Geological Survey, in cooperation with the National Aeronautic and Space Administration, is embarking on a new program that should, in time provide valuable information to urban and regional planners. As part of the Earth Resources Observation Satellite (EROS) program, the two agencies will be acquiring, processing, applying, and distributing remote sensor data collected from high-altitude aircraft and spacecraft.

As an initial demonstration project, a portion of the Eastern Seaboard, designated as the Central Atlantic Regional Ecological Test Site (CARETS) will be the subject of a comprehensive environmental survey and analysis. Details of this test program were presented in a June conference designed to explore the posibilities of incorporating the new remote sensor data into existing regional information systems, to invite participation and critical review by representatives of agencies having responsibilities involving resource or environmental problems in the test region, and to discuss plans for continuing development of the program.

The U. S. and NASA also sponsored a Conference on Land Use Information and Classification during the last three days of June. Among the topics discussed was the feasibility of developing standardized classes for land uses which would be usable for inventories taken via satellite remote sensors or through conventional methods on the ground. Minutes of the Conference may be published.

The principle data products will be high resolution photographic imagery at scales of 1:100,000 and 1:250,000, which will be enlarged for a variety of applications. The need for interpreting, coding, and measuring this data so as to provide land use and physical resource information for established social and economic data areas (e.g. census tracts) has been recognized as an integral part of the demonstration. The feasibility of using high-altitude flight imagery has been tested in the Washington metropolitan area by comparison with an existing file of land use information collected on a parcel basis.

The full scope of products and applications of the CARETS program is yet to be defined. The data delivery system to be maintained by a net of regional centers, of which CARETS is a prototype, will be heavily influenced by feedback from users who require data for land use planning, water resources assessment, and environmental management.

THE INFORMATION SYSTEMS DEPARTMENT

The Information Systems Department was created in the fall of 1970. It is a division of the American Institute of Planners, the national organization of professional urban and regional planners in America.

Although the Information Systems Department has the benefit of being heard through AIP publications, legislative, education and conference programs, it is relatively autonomous with its own work program, budget and objectives.

The Department was created to respond to several interests of planners including:

Information Systems. Collection, storage and retrieval of data and information; computerized processing of planning data.

Data Series. The programs of the US Bureau of the Census, land use inventories, employment and other data concerning local and regional economies.

Plan Design and Evaluation. Demographic and econometric models, systems analysis-operations research, planning system models.

INTERIM BOARD OF DIRECTORS

Policy for the Department during its initial organizational stage has been developed and implemented by the Interim Board of Directors listed below.

Chairman

George B. McGimsey, Deputy Director, Regional Planning Council, Baltimore

Vice Chairman

Claude D. Peters, Director
Colorado Land Use Commission

Secretary

Herman G. Berkman, Professor of Planning, New York University

Members of the Board

Robert E. Barraclough
Robert A. Clark
George C. Hemmens
Glenn O. Johnson
Donald D. Lamb
Leonore R. Siegelman

NOMINEES - BOARD OF DIRECTORS (Oct. 1971-1972)

The Department's Nominating Committee (composed of Robert P. Huefner, Hugh J. Calkins and Jacob Silver) has presented the following slate of nominees for the first elected Board of Directors. The Board will be elected in September and will be installed at the Annual Conference in San Francisco.

Chairman

Donald D. Lamb, Chief of Land Use Planning
Southeastern Michigan Council of Governments

Herman G. Berkman, Professor of Planning
New York University

Vice Chairman

Glenn O. Johnson, Chief, Planning Research Division, Los Angeles City Planning Department

John M. Backer, Chief of Research
Baltimore City Department of Planning

Secretary

Kent E. Crippin, Principal, Lawrence-Leiter & Co., Kansas City, Mo.

Charles E. Barb, Jr., Asst. Director Urban Data Center, University of Washington

Members of the Board (six to be elected)

Robert E. Barraclough
Robert A. Clark
Robert W. Cook
Rober L. Creighton
Kenneth J. Dueker
Charles P. Kindelberger
David R. Kiefer
David B. Klotz
George P. Leyland
Claude D. Peters
Allan H. Schmidt
Leonore R. Siegelman

DEPARTMENTAL CONFERENCE COMMITTEE

Robert A. Clark, Chairman
Professor George C. Hemmens
Glen O. Johnson
David B. Klotz

CONFERENCE AGENDA

THE INFORMATION SYSTEMS DEPARTMENT HAS PLANNED AN EXCELLENT GROUP OF MEETINGS TO BE HELD AS PART OF THE ANNUAL AIP CONFERENCE (CONFER-IN WEST). FOR YOUR USE AND INFORMATION THE FOLLOWING IS AN EXTRACT OF THESE MEETINGS. THE CONFERENCE WILL TAKE PLACE IN SAN FRANCISCO, AT THE HILTON HOTEL OCTOBER 24-28,1971.

SUNDAY - MORNING

A. Census Hearing--Geocoding

SUNDAY - AFTERNOON

A. Census Hearings - Summary Tape Processing and Census of Governments.

John F. Kain — B. National Bureau Economic Research Series of Papers (4) on their Urban Simulation Model.

MONDAY - AFTERNOON

A. Census Hearings--Housing Data and small area data

Lawrence Frishman — B. Management Systems for Urban Development Programs.

Barry S. Wellar — C. A Paradigm for the Development of Standarized Data Bases.

Glenn O. Johnson — D. Automated Planning Operations File is Dead but Alive in Spirit

MONDAY - EVENING

A. Census Hearing--1975 Census

TUESDAY - MORNING

Stephen K. Dietz — A. Social Indicators Developed from 1970 Census Data

Leo A. Schuerman — B. The Fourth Count Summary Tape

John R. Hamburg — C. Evaluation of Transportation Impact at the Neighborhood Scale.

Charles P. Carter — D. Development and Application of a Policy - Sensitive Urban Growth Model for Washington, D.C.

Robert C. Stuart — E. Modeling the Group - Goal Component of the Plan Evaluation Process

TUESDAY - AFTERNOON

Ronald E. Crellin — A. An Up-To-Date DIME File: the Results of the Long Beach Experience

Donald F. Cooke — B. Geographic Base Files - Where We've Been, Where We Are, and We're Going

Eric S Hannssen — C. Application of Census DIME Coding in an Integrated Municipal Information System

Richard D. Worrall — D. Extensions and Applications of Urban Growth Models

Douglass B. Lee, Jr. — E. The Future of Models In Transportation Planning

James Hester, Jr. — F. Urban Development Models for Policy Applications: Needs, State-of-the-Art, and Prospects

WEDNESDAY - MORNING

Jack Dangermond — A. Automated Information Processing for Urban and Regional Planning Applications (an Overview of Computer Graphics)

Don Thompson — B. Airborne Remote Sensing

Lane H. Kendig — C. Computerized Guidance Systems as Developed in Bucks Co.

Chris McDonald — D. Tabular Form As A Language for the Planner

Richard S. Bolan — E. A Quantitative Methodology for Analyzing Political Power in Urban Transportation Planning

Alan W. Steiss — F. The Use of Effective necessary Measures in Public Planning

WEDNESDAY - AFTERNOON

Richard L. Ragatz — A. Vacation Homes in rural areas: A Model for Predicting their Distribution and Occupancy Pattern

Byron H. Willis — B. AQUIP - An Air Quality Evaluation System for the Planning Community

Larry Galligan — C. The San Diego Interactive Population and Employment Forecasting Model

join the information systems department

The Information Systems Department of AIP offers membership to both individuals and institutions such as planning agencies, college and university departments, firms research organizations and libraries. Institutional members have the right to appoint five persons as official voting representatives able to take part in all department programs and each receives the same materials as individual members. An individual need not be a member of AIP to join this department; and an institution need not be headed by an AIP member.

Please register me as a member of the AIP Information Systems Department as indicated:

____Individual Member ($10)
( ) AIP Member
( ) Not a member of AIP

____Institutional Member ($50)

(Make checks payable to the American Institute of Planners)

PARAPROFESSIONALS AND THEIR PERFORMANCE

Two intensive studies of paraprofessionals in schools present new data on their work and its effect. A study of aides in the first through fourth grades of the Portland, Oregon, schools found that their use led to *children receiving increased instructional time--from both the aide and the teacher; teacher/aide teams delivered instruction at a lower per hour cost than teachers alone; and the use of paraprofessionals had a favorable effect upon pupil learning.*

--During a five hour day, teachers alone in classrooms spent 92 minutes on instructional activities. With the introduction of an aide, teachers time in instruction rose to 109 minutes with the aide providing an additional 129 minutes of instructional activity.

--Average total costs for an hour of instruction by a teacher/aide team was $8.80, compared with over $16 for a teacher alone. These differences were largely attributable to the additional instruction provided by both teacher and aide and the lower costs of paraprofessionals.

--The program had the greatest effect upon raising achievement levels of Black children. (The study was conducted by Eaton Conant, University of Oregon, under a USOE grant.)

Over 3,500 paraprofessionals in New York City were studied in a project conducted by the Institute for Educational Development. *The key findings related to the substantive instructional work done by the paraprofessionals and the strong positive evaluation given to their work by teachers, principals, and students alike.*

--The most common paraprofessional work activities were talking quietly with a child who is upset or disturbing the class, stopping arguments or fights among students, assisting with learning drills in reading or mathematics, going over a paper with children, and listening to children tell stories.

--More than 90% of the pupils interviewed said that they enjoyed coming to school more since the paraprofessionals were working in the school; principals and teachers said that pupil attitudes had improved and attendance increased; and parents reported that their children were more interested in school work.

--Teachers described the major effect of paraprofessionals as an increase in pupils' academic achievement. In noting the broad range of persons who successfully held the paraprofessional positions, the study states that "there are few limits on the kinds of people who can perform satisfactorily as paraprofessionals."

IT'S TIME TO END THE ROMANCE OF INDIGENIETY

A proposed resolution to the problems faced by indigenous paraprofessionals in traditional agencies itself raises more problems than it solves. Writing in "Social Work," (April, 1971), David Hardcastle proposes that in order to maintain the paraprofessionals' indigenous qualities he be "compartmentalized" within the agency. It would seem that such a resolution fails to see the potential (and need) for changing the agency, assumes that influence is only of the agency upon the paraprofessional and cannot be the other way, neglects the possibility of the development of a "new professional" combining the values of indigeniety and professional practice, and is likely to assure only that the paraprofessional is "compartmentalized" at the bottom.

NEW CAREERS NATIONALLY

In broad testimony presented before the House Education and Labor Committee, which is considering renewal of the Economic Opportunity Act including the "new careers" section, Jacob Fishman outlined progress and problems.

Progress

--Of 15,200 enrollees, 10,700 had either graduated or were in training. This placement and training rate of over 70% compared with 11% rate of the WIN program which enrolled much the same type of participant.

--Over 1,100 human service agencies employed or trained enrollees. A third of the agencies were in education, a third in health, and the remainder scattered in various other areas.

--The average annual wage for a graduate was $4,320, compared to $1,285 for the year prior to enrollment. For premature terminees the average in the year following program participation was $3,590.

--*The total increase in earnings of graduates and terminees 1.9 years after program completion is equal to the total federal cost for the New Careers program.*

--More than 220 institutions of higher education have been involved in the program.

Problems

--State and local agencies are still more concerned with filling quotas than they are in human growth and development.

--Paraprofessionals are often barred from advancement because of formal educational requirements and written tests.

--Salaries in entry-level jobs are often lower than a living wage.

--Colleges continue admissions barriers which are exclusionary and teaching techniques which are inappropriate; and, too often, credits are not transferable.

--The most fundamental problem, though, has been in the administration and operation of the program by the Department of Labor. Despite Congressional direction to the contrary, the New Careers program has been folded into the Public Service Careers Program, New Careers funds have been used for PSC, the full authorization was not requested in the Administration's appropriation bill, and the amount appropriated was not spent for New Careers.

* * *

Testifying before a Legislative Oversight Committee chaired by Congressman Hawkins (D., Cal.) which is studying the implementation of the Economic Opportunity Act, Velma Hill, chairman, Citywide Association of Paraprofessionals, Omaha (Neb.), proposed that the Congressional committee "establish a national board of paraprofessional workers from across the country who could offer assistance and give feedback which, I trust, would be much closer to the truth than that which comes through normal, official channels."

* * *

Vernon James, one of the original trainees in the new careers training program conducted by J. Douglas Grant in the California Men's Prison, has been appointed head of the New Careers Program in NIMH. James is the first paraprofessional to hold a position at the branch level in HEW.

ORGANIZING NEWS

Taking a leaf from chairman Mao, a "let a thousand flowers bloom" pattern seems to be occurring in paraprofessional organizations. Efforts are underway for separate groups, others are working in professional organizations, still others in unions, and yet others in a number of settings simultaneously.

AFT President David Selden has indicated that in cities where locals will not admit paraprofessional workers as equal members, *the AFT will consider chartering separate paraprofessional locals.* Such a situation is present in Detroit and is brewing in Boston.

In Massachusetts, a statewide meeting of paraprofessionals was held. The meeting grew out of the efforts of a Boston-based neighborhood workers association. Although scheduled to be a planning meeting for an October conference, with more than 300 participants, the meeting became a work session around specific issues facing Massachusetts paraprofessionals.

In Chicago, a meeting was held which grew out of organizing efforts which had occurred at last year's meeting of the American Orthopsychiatric Association. Plans were made for another meeting to coincide with the Ortho April convention in Detroit.

Other organizing efforts are going on in North Carolina, Miami, Louisville, Tacoma, Omaha, and New Haven and Storrs, Connecticut.

And, the New Professional group of the American Public Health Association are actively "getting their thing together" in preparation for the APHA National conference, to be held in October, in Minneapolis. The New Professionals are shooting for full section status within APHA, and plan as well to hold sessions around key issues facing paraprofessionals. *Julian Bond has agreed to be the key speaker at a session arranged by the New Professionals for the entire conference.*

In Oregon, leaders of a number of new careers programs have come together to form a statewide association. Among those represented on the new body are the community action agency, Head Start program, Career Opportunities Program, the state OEO, the CEP program, the Public Service Careers program, along with representatives of a number of state agencies.

A two-week teachers' strike in San Francisco blocked cutbacks in a number of educational programs and won a 9% wage and fringe benefit increase for paraprofessionals. In the New York City Health and Hospital Corporation, District Council 37 (AFSCME) has won a new title of Family Health Technician as a key worker in ambulatory care from satellite health centers and follow-up care in the patient's home. Training will be provided for those presently employed as Nurse's Aides to prepare for the new post. In the city's schools, the United Federation of Teachers has been recognized as the bargaining agency for paraprofessionals in the classroom, grades 3-12 (the UFT already represents those K-2); the union and the Board of Education are now negotiating the phasing in of previously won contract benefits for these workers.

The Illinois legislature has created an Employment Program Evaluation Commission to study the "feasibility of training program embodying the 'new careers' concept."

COLLEGE PROGRAMS FOR PARAPROFESSIONALS

An Office of New Careers (HEW) study found over seven hundred colleges offering programs for paraprofessionals with the largest number of offerings at the junior college level and the most programs in the health and education fields. Details of the study include:

--1,522 responses of 2,794 colleges surveyed.
--760 institutions reported paraprofessional programs.
--397 junior colleges.
--235 senior colleges.
--128 universities.

An additional finding concerned the enormous number of job titles held by paraprofessionals--273 different paraprofessional job titles in the health area, 180 in education, and 158 in social services.

"HARD" AND "SOFT" MONEY

For a long time commentators on the paraprofessional scene cautioned about the reliance upon federal money as compared with state and local funds--the former being seen as "soft" with the latter considered "hard." In the present period, it seems, the two may have turned around. For example, in New York City where sharp budget constraints on state and city funds have led to cutbacks in personnel ceilings, it is the paraprofessionals--largely paid for from federal funds--who have to date remained relatively unscathed. Not to be sanguine about budget cutbacks from any source, nonetheless, it seems we need to rethink the "soft" and "hard" categories.

FROM VARIOUS FIELDS

There is increasing use of paraprofessionals in the legal area. There is attention to various forms of advocacy: as ombudsmen in prisons, in child advocacy efforts, in court programs, in community work. And training of paraprofessionals in law has raised some of the same problems faced in other fields. Legal educators are asking if the training of paraprofessionals at law schools will "lower standards" at those schools, and whether special training is not a form of "tracking" Black and other minority group students. The issue came to a climax when Columbia University Law School voted to shift a pilot "paralawyer" training program from the University to La Guardia Community College. At the same time questions are being increasingly raised concerning legal training in general. Particular attention is being focused upon the value of the third year of law school with the charge being made that it offers courses of dubious value supplemented by makeshift clinical experience. An Association of American Law Schools study group has proposed that students be allowed to be employed after a second year.

HEW UPS PARAPROFESSIONAL PRIORITY

Secretary Elliot Richardson has designated paraprofessional programs and career development as one of his key priorities for FY 1972. Given the Department's role in setting standards, guidelines, policies, and regulations for health, education, and welfare programs--to say nothing of its significant funding role, effective implementation of this priority could mean a major leap forward.

In implementing this priority, Richardson has designated Don Davies, Deputy Commissioner, U.S. Office of Education, who has given leadership to such efforts as the Career Opportunities Program and the entire implementation of the Education Professions Development Act.

LEGISLATIVE ROUNDUP

Public Service Employment--Despite predictions of a Presidential veto, a major--albeit temporary--public service employment act has been passed. The bill authorizes $2.25 billion over a two year period for government jobs for the unemployed. The program goes into effect whenever national unemployment is over 4.5% for three months; it is now 6.2%. In addition, a special program authorizes funds for local areas were employment exceeds 6% for a three months period.

Apparently the continuing high level of unemployment, particularly among veterans and in the cities, along with strong lobbying efforts of mayors, unions, civil rights groups, and a new Public Service Employment Conference, convinced the president not to veto the bill. Although not as strong as last year's manpower bill, vetoed by the president, the present law is an important breakthrough toward acceptance on the part of the government of the role of employer of first resort.

The establishment of a board based Public Service Employment Conference is an important development in the current scene. The passage of the Emergency Manpower Bill imposes two tasks on this group and others: assurance of the best implementation of the new law and pushing beyond its limited beginning. As to the first, it will be important to assure that jobs--at decent wages under good working conditions with meaningful career opportunities--are made available to those most in need, the long-term inner city poor. There is a danger that slots will be allocated solely or primarily to the unemployed engineers and returning veterans. Second, efforts must begin--by the Public Service Employment Conference and others--to design, draft, introduce and win passage of public service employment legislation which is permanent, is linked to service needs, and incorporates significant training and education for full-blown career development. (Conference convenors include Eli Cohen, Manuel Diaz, Peter Edelman, James Farmer, James Haughton, Wilma Scott Heide, J. Carl Holman, Russell Nixon, Frank Riessman.)

Welfare Reform?--The House has once again passed the Family Assistance Program (FAP). Benefit levels are set at $2,400 for a family of four. All family members will be required to register for work and accept training except those who are ill, aged, incapacitated, a mother with a child under 6 (under 3 after 1974), or a child under 16. Persons may be forced to accept work with salaries as low as $1.20 an hour.

It is expected that the Senate Finance Committee will hold hearings on the bill in the fall with a vote expected toward the end of the year.

Opposition to the House bill was led by supporters of the National Welfare Rights Organization (NWRO), on the one hand, and conservatives, on the other. NWRO has proposed an "Adequate Income Act of 1971" (HR7257) which provides for an annual grant of $6,500 for a family of four, coverage of all persons in need, assurance of full protection for individuals, and no work requirement but strong positive incentives to work.

Office of Education Appropriations

OE's FY 1972 appropriations have been set at $5.1 billion, for 1971. Of particular interest in the Senate action was the stricture to OE that in implementing the Education Professions Development Act funds are to be used to train teaching personnel to meet special needs, rather than training general classroom teachers. Senator Pell's (D.R.I.) successful motion from the floor to provide $500,000 for the "Education for Public Service" title of the Higher Education Act, which had previously been unfunded, was dropped in the Conference Committee.

OEO

The Senate Poverty Subcommittee has completed "marking up" the bill extending OEO programs beyond the present June 30, 1971 termination. Key provisions included by the subcommittee include prohibition of administration "spinning off" of programs without Congressional approval, continuation of the "earmarking" of funds for special programs, incorporation of a new child development title and an independent legal services corporation.

Child Care

The Comprehensive Child Development Act (H_R6748) has been reported out by the Brademas Subcommittee of the House Education and Labor Committee. The bill provides for sponsorship of programs by communities of 100,000 or more, in addition to states. *Of special interest is the incorporation of a requirement for both the employment of paraprofessionals and for a career development plan as part of a comprehensive child care program.*

Health

The House Interstate and Foreign Commerce Committee (sic) reported out a bill to continue and extend the Health Professions Educational Assistance program. Provisions are made for project grants, loans, students grants, awards, and scholarship grants.

LEGAL INSURANCE

Groups of students and workers have worked out arrangements for legal representation. At the University of Texas, Boston University, and on three campuses of the State University of New York, lawyers (or law firms) have been retained to represent students. And in Louisiana, a program to test prepaid group legal services (designed by the Bar Association and funded by the Ford Foundation) has produced a number of surprises. The seven hundred construction workers and their families to whom the legal services have been made available use the program at a much lower level than had been anticipated. Participants see it only as a crisis resource and despite the planners' hopes, do not use it on a "preventive" basis, nor, despite the planners' fears, have the workers become legal hypochondriacs. With the likelihood of health insurance being incorporated into a national plan, unions may seek to replace that benefit (costing about 25¢ per hour per worker) with legal insurance, which probably could be provided at a third the cost.

In Oregon and at the University of California, Berkley, student fees are to be used to fund public interest law groups. The Oregon program, involving students at 21 public and private colleges, will emphasize environmental and consumer protection projects, while the Berkley program will specialize in class action suits.

WHERE IS DANIEL PATRICK MOYNIHAN?

Black illegitimacy rates fell by nearly 15% from 1961 to 1968 while the rate among white women increased by a third.

IS THE TEACHER SHORTAGE REALLY OVER?

Over the past few years there have been periodic announcements of the "end of the teacher shortage." Now, the Senate Appropriations Committee has accepted this notion and recommended that Education Professions Development Act funds not be used for training general classroom teachers.

The subject of manpower supply and demand is a key one, and some of the problems are illustrated by looking at education as an example. Whatever the national pattern, it is clear that a teacher glut does not exist everywhere, in all fields. Thus, for example, there remain shortages in certain geographic areas--inner cities and rural areas; in certain fields--special education, handicapped, bilingual education; among certain population groups--men in elementary education, Blacks, Puerto Ricans, Chicanos and Indians.

As for the predictions of future patterns, they suffer from twin faults growing out of projections of the present into the future. On the one hand present staffing patterns are generally assumed, and on the other present entry patterns are taken as static.

While Office of Education analysts take into account the effect of ESEA on pupil-teacher ratios (although predicting a reduction in pupil-teacher ratios over the next ten years at only one-sixth the rate of the past five years), they do not take into account any other prospective developments. They ignore, for example, possible changes in school staffing patterns--as moving toward the Head Start ratio of one adult for every five children; the effect of various efforts toward individualizing learning; demands of professional groups such as the AFT's "20/20" program which calls for teachers to teach only twenty children per class, for 20 periods a week.

Similarly, estimates of the end of the teacher shortage fail to take into account likely new entry patterns. More women have gone into teaching than any other profession, at least in part, because of the lack of alternative employment opportunities. However, as sexual discrimination is reduced in these other fields, it is likely that far fewer women will be "forced" into teaching.

The entire area of supply and demand of manpower for the human services has been looked at in too narrow a focus. Rarely have these issues been considered in the context of the other issues of the field. It would seem that far more attention must be given to the changing nature of services offered, the availability of funds (for training as well as employment), alternative opportunities available to potential entries into the field.

PEOPLE POWER: NEW FOCUS

A new weapon for consumers has been proposed by former Congressman Richard Ottinger who has proposed that New York City residents withold up to 25% of their monthly telephone payments until service improves. Ottinger has organized Grassroots, Inc., along with Sam Brown, Terry Lenzer, David Brower, Saul Alinsky, George Wiley, and others, to help citizens groups organize local consumer and environmental protection drives.

HEALTH

Training--Northwestern University Medical School will admit, starting in mid-1972, 25 inner-city high school graduates annually to a six year program leading to an MD. The first two years will be at the Central YMCA Community College, to be followed by four years at the medical school. A key feature of the program will be the continuing relationship between the students and their home communities during the six year period.

Mass. General Hospital and Northeastern University are planning a five year program leading to a baccalaureate degree and a position as a Physician's Associate. Unique in the program is the fact that there are a number of plateaus during the five years where an individual could drop out and still have training recognized for a specific job, *viz.* after one year as a Physician's Aide and after two years as a Physician's Assistant.

The University of Miami will admit those with doctorate degrees in the sciences to its medical school to become medical doctors after two years of additional education.

A study of allied health occupations in Boston found that there were significant upgrading or promotional opportunities in clerical, laboratory, technician, and administrative fields but, interestingly, far fewer in the social service fields where special emphasis has been placed upon hiring of poor and minority group members.

Reorganization--The New York state legislature has passed laws permitting the creation of non-profit medical corporations offering comprehensive health services to subscribers, as well as establishing regulations for the positions of physician's and specialist's assistant.

Hill-Burton--Last year's amendments to this key health law contained a number of important provisions. The mandatory priority for rural areas in the construction of new health facilities has been dropped; emphasis is given to construction of ambulatory facilities serving poverty areas, as well as to those facilities offering comprehensive health care. In addition, funds are available to community groups to build ambulatory facilities if back-up hospital facilities are available.

Citizen Role--The prestigious Aspen Institute has endorsed consumer advocates, consumer advisory councils, "and, frequently, consumer control of health facilities." They noted, "Health care is too important to be left solely to the professionals."

Service--More than 165,000 abortions were performed in New York City during the first year of the new state abortion law. This figure represents 950 abortions for every 1,000 live births. In terms of safety, both the medical complications rate and the mortaility rate for those who have had abortions has dropped sharply, and the maternal mortality rate--to which criminal abortions has always contributed heavily--has also dropped by more than fifty per cent since last year. Sixty-four per cent of the women came from outside of New York State; half of all those who received abortions were non-white; and of these women who were New York State residents, over 30% received Medicaid reimbursement for the abortion.

* * *

For the first time in at least fifty years, fewer than half the nation's doctors are dues-paying members of the AMA.

MEASURING THE QUALITY OF LIFE

A stab at some indices of the quality of life, and changes over time, has been developed by the Urban Institute. Single indicators have been developed for fourteen aspects of the quality of life.

Quality of Life	*Indicator*
Poverty	% Low Income households
Unemployment	% Unemployed
Racial Equality	Non-white/white unemployment rates
Mental Health	Suicide rate
Health	Infant Mortality rate
Traffic safety	Traffic death rate
Air pollution	Air pollution index
Income level	Per capita income
Housing	Cost of housing
Social disintegration	Narcotics addiction rate
Community concern	Per capita United Fund contributions
Public order	Reported robbery rate
Education	Draft rejection rate
Citizen participation	Presidential voting rate

Of course, so single set of indices to say nothing of a single indicator can express the complexity of the quality of life. Nor, of course, do figures for a single year express changes over time. Nonetheless, the effort is one long overdue and badly needed.

CIVIL SERVICE IN THE 20th CENTURY

The National Civil Service League has proposed a bold new model for civil service. Incorporated in a new model personnel law for state and local government, the League recommends

--Abolition of the Civil Service Commission.

--Establishment in its stead of a Citizens' Advisory Board to protect the public; a Hearing Officer as an ombudsman to protect public employees; and a Personnel Officer to serve chief executives.

--Offer preferential treatment to disadvantaged and minority group members, as has been true for veterans.

--Legitimize public sector collective bargaining processes.

--Liberalize the political activities permitted public employees.

--Assure culture free validated tests.

--Replacement of the "rule of three" with a pass-fail scoring system.

* * *

"A practical test, an oral interview, a scrutiny of the candidate's past record, education and experience, and trial--or probationary period actually on the job, are used in addition to or even in place of a written test by every good personnel agency."

1937 National Civil Service League Policy Statement.

* * *

The tenant's of Boston's Bromley-Health public housing project have formed the nation's first incorporated tenant body to contract for the operation of their development. Initially the tenant group will maintain 10 of the projects 34 buildings.

TENANTS' RIGHTS

For the first time since the public housing program was begun in 1937, all local housing authorities must adopt minimum federal standards for leases and grievance procedures.

The regulations provide for a fair hearing of tenants' grievances, various due process steps in the conduct of the hearings, and, should local housing authority representatives be appointed to the hearing panel then tenants shall be represented in equal number by tenants elected by the tenant body.

And in Los Angeles, public housing tenants have successfully won HUD withholding of funds sought by the local housing authority for a modernization program due to the absence of tenant involvement in its planning and implementation.

* * *

The National Tenants Organization (NTO) is undergoing a reorganization designed to increase the scope of its work. Jesse Gray, leader of Harlem tenants groups since the 1950s, will become the Executive Director of NTO, while Tony Henry, who had held that post, will now become director of the new National Tenants Information Service, which will be an information arm with NTO concentrating on tenant organizing.

KNOWLEDGE IS POWER

Health consumers in New York City and public welfare clients in Chicago are seeking the information which citizens need to have an impact upon the institutions which effect them. The Chicago welfare rights organization has won access to information concerning Illinois' answers to their allegations that various state welfare regulations were not in conformity with federal law. The regional HEW commissioner, after initially promising to make the answers available to the group, had refused and that provoked the court action.

In New York City, community members of the St. Vincent's Hospital Ambulatory Care Service Advisory Committee have sued the hospital for information concerning decisions made regarding the nature and scope of care to be offered to the community. The Advisory Committee had been set up pursuant to the state's "Ghetto Medicine Law."

DEPRESSION – PEOPLE SAY YES

Nearly two-thirds of those surveyed in a Harris Poll felt that unemployment in their area has gotten worse in the past year, and nearly three-fourths felt inflation had grown in the same time period. It comes as no suprise, then, that 63% felt that we were in a depression, that more people felt the administration's policies did harm than those who felt they did good, and that three times as many had "hardly any" confidence in the administration's economic policy as had a "great deal of" confidence.

Former Assistant Secretary of the Treasury Robert Wallace has made clear some of the broader consequences of unemployment. He points out that while a 6% rate means that 5 million are jobless at any one time, since unemployment turns over, over 17 million will be unemployed in the course of 1971, another 3.5 million will be forced to work part-time although wanting to work full-time, another 1 million will be forced out of the labor force, and yet another 1.5 million will be forced into lower paying jobs. With their families, this totals more than a third of the nation.

DRUGS—ARE EX-ADDICTS THE ANSWER?

There is a current fashion that suggests that only former addicts are capable of working in drug programs. Presumably this is because they have some special knowledge, can empathize more with addicts while at the same time being less likely to be fooled, and, as persons "who have been there and returned" offer effective role models. To a certain extent this has some validity in curative programs, although many ex-addicts have an almost messianic commitment to a particular treatment modality (usually the one in which they participated) and are intolerant of alternative approaches.

It is the area of prevention, however, where the ex-addict may be less effective. Here, of course, he hardly offers an appropriate role model in that whatever strength he now possesses was not sufficient to prevent his addition; indeed, in many instances it appears (and ex-addicts avow) that the strength they now have is as a result of the treatment they underwent to cure the addiction. Thus, the way to their strength is via addiction!

In addition, some observers have noted that the ex-addicts tales of substance use (and abuse) may be enticing to the non-user or dabbler. Further, to some extent the "straight" person is a challenge to the ex-addict who was not able, himself, to avoid addiction.

Finally, of course, the unique characteristic of the ex-addict, namely his status as an ex-addict, encourages him to favor closing employment opportunities to others lacking that characteristic. Similarly, there seems to be little transferability to other fields the experiences and knowledge of the ex-addict.

It would seem more appropriate to develop specific criteria of the skills, knowledge and experience necessary to work in a drug prevention, education or curative program; to make clear where the special experiences of the ex-addict are necessary; and, perhaps, it would be profitable to move toward a team pattern of ex-addicts and others working together.

DRUG TREATMENT: A FIRST

The nation's first comprehensive bilingual drug program has opened in the South Bronx. SERA, as the program is called, offers detoxification, an intensive day care program, and then full-time residence for further therapy and vocational training.

In light of the great need for such programs to reach non English speaking persons, it would seem useful to develop legislation similar to Title VII of the Elementary and Secondary Education Act for bilingual drug programs.

MONEY FOR CURE: WHY NOT PREVENTION

Just as allocation of funds between various programs suggests priorities so, too, allocations between various components of individual program efforts are revealing. In announcing a new expanded drug program effort, President Nixon authorized $150 million in additional funds: 73% is to be spent on treatment of addicts, 20% on efforts to cut off supplies, and 7% on prevention and research.

GARDEN NOTES

When marijuana moved from city to suburbs, "weeds" became "grass."

CULTURAL DISADVANTAGE: TOLSTOY DEBUNKS

"One frequently hears or reads the statement that the home conditions, the rudeness of the parents, the field labor, the village games, and so forth, are the chief hindrances to school education. It may be that they really interfere with that school education, as pedagogues understand it; but it is time to convince ourselves that these conditions are the chief foundation of all education, and that they are far from being inimical and hindrances to the school, but that they are its prime and chief movers. . . . It seems strange that this coarse domestic life should have been able to teach the child . . . difficult things and should all of a sudden become unfit to instruct him in such easy things as reading, writing, and so forth, and should even be injurious for such an instruction."

Leo Tolstoy, "On Popular Education," 1862.

SCHOOLS AND COLLEGES

New York's "college without walls" will open this fall as Empire State College. Starting initially in the Rochester and Albany areas, the school will expand to a statewide enrollment of 7,000 by 1973. Academic credit will be awarded for activities such as correspondence work, the use of packaged instructional material, educational TV courses, on-the-job and community activities, weekend seminars, summer colloquiums, and attendance in regular college courses.

Students may enter the program at any time and "contract" for a period of work. Regional learning centers will be students' main contact point with the college.

* * *

Action, the Administration's new combined program for citizen volunteer work, plans to fund pilot projects at ten colleges in which students would work for a year in community activities and gain college credit. The first grant has been made to the University of Nebraska.

* * *

Pilot three year college programs are to get underway this fall in California and New York, and plans are under consideration at Harvard, Princeton, and a number of other colleges.

* * *

Staten Island Community College will begin a three year baccalaureate program this fall. Staten Island is a member of the 18 college "University Without Walls" consortium.

* * *

The May/June issue of SOCIAL POLICY magazine includes a special section, "Higher Education and the Poor," which raises sharp questions regarding the dangers inherent in the peculiar manner by which higher education programs are being extended to the poor.

* * *

Two more "schools without walls" are to open next fall in Washington, D.C. and Hartford, Conn. This follows upon Philadelphia's Parkway Program and Chicago's Metro High School.

* * *

Gary, Indiana, site of a major performance contracting grant, has after a several months study rejected a proposal for an OEO tuition voucher plan. Second phase planning grants for voucher plans have been made to Alum Rock, Cal., and Seattle, school districts, while Rockland, Maine, received an initial feasibility study grant.

Sixty-seven per cent of last year's graduates of New York City's high schools went on to some form of full-time higher education. This figure represents a 10 per cent jump over the previous year, largely as a result of the open admissions program of the City University. However, these figures must be seen in the context that the high schools of the city lose nearly 40 per cent of their students between December of their junior year and graduation, with the rate for Blacks and Puerto Ricans twice that of whites.

* * *

TESTS AND DISCRIMINATION: A NEW ERA

The Supreme Court's decision in the *Griggs* case, requiring that tests be related to the job to be done, marks what may be the beginning of a whole new era in selection procedures and perhaps in other areas as well.

The urgency of the need is pointed to by the findings of an OEO-funded study conducted by the National Civil Service League which found that only 54% of all civil service agencies, state and local, validate their tests.

Following on the *Griggs* decision, the federal district court in Florida has ruled that the electrical workers must adopt job-related tests with built-in safeguards to prevent cultural, racial, or ethnic bias.

In New York City, a federal judge ordered the Wood, Wire, and Metal Lathers Union to pay compensatory damages to Negroes deprived of work because of the union's discriminatory recruitment, selection, and placement practices.

And in Mississippi, a federal district court has ruled that a desegregating school system cannot impose test score requirements for teachers which would markedly reduce the number of Black teachers on its faculty. The Columbus, Miss., schools had proposed to require that all of its teachers--following a 1970 court ordered desegregation plan--score 1,000 or higher on the National Teachers' Examination to retain their posts.

A federal district court judge has ruled that the New York City Board of Examiners tests for school principals are biased against Blacks and Puerto Ricans. In a school system with more than 55% non-white pupils, there are only five Blacks and one Puerto Rican among the 1,000 licensed principals.

The judge found that not only did the testing procedure lead to a disproportionately low number of non-white administrators, but the tests failed to measure the abilities essential to the performance of the supervisory positions. He said that the "questions appeared to be aimed at testing the candidate's ability to memorize rather than the qualities normally associated with a school administrator."

The finding in the case was of particular moment in that it is expected -- because of improved pension benefits -- half the current elementary school principals will retire in the next three years. Until the court's ruling, they could not have been replaced on a permanent basis by anyone who had not passed a licensing test.

* * *

A study of the sixty-seven largest California based corporations found that of the 1008 members of their Board of Directors

--None were Black or Mexican-American. And of the 6 women, 4 are either married to a corporation official or related to corporate founders.

Of the 1,268 top officers and executives of these companies

--None were Black or Mexican-American; 6 are women.

1970 CENSUS OF POPULATION AND HOUSING

Final Reports

Employment Profiles of Selected Low-Income Areas PHC(3) Series

U.S. DEPARTMENT OF COMMERCE
Bureau of the Census

DESCRIPTION OF PUBLICATIONS

Employment Profiles of Selected Low-Income Areas—Series PHC(3)

During the period December 1971 through March 1972, the Bureau of the Census will publish a series of reports presenting data on the social and economic characteristics of the residents of selected urban and rural areas located throughout the United States. This series is designated as PHC(3) and is entitled "Employment Profiles of Selected Low-Income Areas."

The series, consisting of 76 reports,* covers selected low-income areas in 51 cities and seven sets of rural counties. The Series includes summary reports of cities where two or more areas were sampled and a United States Summary of the urban areas. Each report provides statistics on employment and unemployment, education, vocational training, job history, income, residential migration, and factors which are problems in job holding or job seeking for the residents of these areas.

***This order form shows the reports for the urban areas only. A second order form for this series presenting 8 reports on rural areas will be issued shortly.**

FINAL REPORTS NOW BEING ISSUED

PC(1)-A	Number of Inhabitants—58 reports
PC(1)-B	General Population Characteristics—58 reports
PC(1)-C	General Social and Economic Characteristics—53 reports
PHC(1)	General Social and Economic Characteristics—53 reports
HC(1)-A	General Housing Characteristics—58 reports
HC(1)-B	Detailed Housing Characteristics—53 reports
PHC(1)	Census Tracts—241 reports
PHC(2)	General Demographic Trends for Metropolitan Areas, 1960 to 1970—52 reports
HC(3)	Block Statistics—278 reports
PHC(R)-2	Data Collection Forms and Procedures—1 report
PC(S1)-1	Distribution of the Negro Population, by County—1 report
PC(S1)-2	Negro Population in Selected Places and Selected Counties, 1970 and 1960—1 report

For an order form for any or all of the series listed above, write to the Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

—FURTHER INFORMATION—

THE REPORTS IN THIS SERIES WILL BE ISSUED ON A FLOW BASIS FROM DECEMBER 1971 THROUGH MARCH 1972. INFORMATION ON THE SPECIFIC MONTH WHEN ANY GIVEN AREA WILL BE RELEASED IS NOT KNOWN IN ADVANCE. THE DETERMINING FACTOR IS WHEN THE CENSUS BUREAU COMPLETES THE DATA PROCESSING FOR THAT PARTICULAR AREA. IT MAY TAKE SEVERAL MONTHS TO RECEIVE THE REPORT(S) YOU ORDER. IF YOU HAVE ANY QUESTIONS CONCERNING THE AVAILABILITY OF A PARTICULAR REPORT, PLEASE WRITE TO THE PUBLICATIONS DISTRIBUTION SECTION, BUREAU OF THE CENSUS, WASHINGTON, D.C. 20233.

INFORMATION on the availability of MICROFICHE

All reports in Series PHC(3) and other population and housing final reports will be available for purchase on microfiche, individually, or by entire sets. Microfiche (sheet microfilm), in a standard size 4" x 6" (105mm x 148mm), contains up to 70 pages on one sheet, to be read on a microfiche reader. ORDER FORMS and/or FURTHER INFORMATION on MICROFICHE may be obtained from:

DESCRIPTION OF PUBLICATIONS

General Social and Economic Characteristics—Series PC(1)-C

During the period November 1971 through May 1972, the Bureau of the Census will publish a series of reports presenting data from the 1970 Census of Population on social and economic characteristics of the population. The series is designated as PC(1)-C and is entitled, "General Social and Economic Characteristics." It includes 53 reports—one for the United States, one for each State, the District of Columbia, and Puerto Rico.

The reports will include data on age; nativity, place of birth, and parentage; mother tongue; Spanish heritage; year moved into present house and residence in 1965; school enrollment and years of school completed; vocational training; veteran status; marital history; families and their composition; fertility; work disability; employment status; weeks worked in 1969; activity five years ago; place of work; means of transportation to work; occupation, industry, and class of worker; income; and poverty status. Items such as sex and race are also presented for the purpose of cross-classifications. In addition, for areas with Negro and/or Spanish population of specified size, the reports present selected data for these groups.

Statistics will be presented for some or all of the following areas: States (by urban, rural-nonfarm, and rural-farm residence), counties, standard metropolitan statistical areas, urbanized areas, and places of 2,500 inhabitants or more.

See further information on reverse panel.

HOW TO ORDER

To order the full set of reports, mark the quantity desired on the Order Form (see below). To order separate reports, make the appropriate entries on the list for ordering individual reports and also on the Order Form.

—FURTHER INFORMATION—

THE REPORTS IN THIS SERIES WILL BE ISSUED ON A FLOW BASIS FROM NOVEMBER 1971 THROUGH MAY 1972. INFORMATION ON THE SPECIFIC MONTH WHEN ANY GIVEN STATE WILL BE RELEASED IS NOT KNOWN IN ADVANCE. THE DETERMINING FACTOR IS WHEN THE CENSUS BUREAU COMPLETES THE DATA PROCESSING FOR THAT PARTICULAR STATE. IT MAY TAKE SEVERAL MONTHS TO RECEIVE THE REPORT(S) YOU ORDER. IF YOU HAVE ANY QUESTIONS CONCERNING THE AVAILABILITY OF A PARTICULAR REPORT, PLEASE WRITE TO THE PUBLICATIONS DISTRIBUTION SECTION, BUREAU OF THE CENSUS, WASHINGTON, D.C. 20233

For descriptions of **FINAL REPORTS** now available on the 1970 Census of Population and Housing, write to the Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce Field Office.

These reports are also available on **MICROFICHE**. For further information on **MICROFICHE**, write to the National Technical Information Service, Springfield, Virginia 22151

FORM BC-2223 (DEC. 1971)

MICROFICHE

The **NATIONAL TECHNICAL INFORMATION SERVICE** offers you these reports and other 1970 Census of Population and Housing final reports on MICROFICHE. Microfiche is COMPACT. More than 1,000 average length documents fit into an ordinary file drawer. Federal agencies now use a standard size microfiche—4" x 6" (105mm x 148mm) that contains up to 70 pages on one sheet. MICROFICHE is economical, is easy to handle, and may be filed fast! Reproduce copies with reader-printers. Make enlarged photocopies of any or all pages quickly and easily with MICROFICHE.

Description of reports

Together, these **Indexes** present the industrial and occupational classification systems developed for the 1970 Census of Population. The industrial classification categorizes approximately 19,000 industry descriptions into 215 industry categories, whereas the occupational classification presents more than 23,000 titles arranged into 417 categories.

1. The **Alphabetical Index of Industries and Occupations** shows the thousands of titles, in alphabetical order, to facilitate locating in coding and classification activities. (A code is assigned to each title, which identifies the proper category.)

2. The **Classified Index of Industries and Occupations** arranges the titles within each of the respective categories. The grouping of titles comprising a category may be considered its definition. The **Classified Index** is used primarily for comparing this classification system with earlier ones and/or comparing it to other systems. The texts of the two **Indexes** presents the Industry and Occupation Classification Systems along with general instructions on the use of the **Index**.

For descriptions of **FINAL REPORTS ISSUED PREVIOUSLY on MICROFICHE**, write to the National Technical Information Service, Springfield, Virginia 22151.

For information on printed publications, write to the Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

REPORTS ON MICROFICHE WILL BE SHIPPED WHEN AVAILABLE

Prepayment is required by check or money order made payable to the **NATIONAL TECHNICAL INFORMATION SERVICE, NTIS** prepaid microfiche coupons, or charge to **NTIS** Deposit Account. When ordering individual reports by **NTIS** prepaid microfiche coupon, please type the complete order number and title on coupon.

Final Reports

Census Tracts
PHC(1) Series

If your name is on several of our mailing lists, you may receive more than one copy of this order form.

FORM BC-2220 (DEC. 1971)

U.S. DEPARTMENT OF COMMERCE
Bureau of the Census

DESCRIPTION OF PUBLICATIONS

Census Tracts—Series PHC(1)

During the period December 1971 through April 1972, the Bureau of the Census will publish a series of reports from the 1970 Census of Population and Housing designated PHC(1) and entitled, "Census Tracts." Both population and housing subjects are covered in the reports. The series includes one report for each of 241 tracted standard metropolitan statistical areas in the United States and Puerto Rico.

The population subjects included in these reports are race, age, relationship to head of household, family composition, marital status, nativity, parentage, country of origin, school enrollment, years of school completed, fertility, residence in 1965, place of work, means of transportation to work, employment status, occupation, industry, class of worker, and income.

Housing subjects include tenure, vacancy characteristics, plumbing and kitchen facilities, number of rooms, number of persons, persons per room, units in structure, year structure built, year moved into unit, heating equipment, basement, equipment, automobiles available, value, and rent.

In addition, for census tracts with Negro and/or Spanish population of specified size, the reports present data on selected population and housing subjects for these groups.

See further information on reverse side.

FINAL REPORTS NOW BEING ISSUED

PC(1)-A	**Number of Inhabitants**—58 reports
PC(1)-B	**General Population Characteristics**—58 reports
PC(1)-C	**General Social and Economic Characteristics** – 53 reports
HC(1)-A	**General Housing Characteristics**—58 reports
HC(1)-B	**Detailed Housing Characteristics** —53 reports
HC(3)	**Block Statistics**—278 reports
PHC(2)	**General Demographic Trends for Metropolitan Areas, 1960 to 1970**—52 reports

For an order form for any or all of the above series, write to:

Publications Distribution Section
Bureau of the Census
Washington, D.C. 20233

INFORMATION on the availability of MICROFICHE

All reports in Series PHC(1) and other population and housing final reports will be available for purchase on microfiche, individually, or by entire sets. Microfiche (sheet microfilm), in a standard size 4" x 6" (105mm x 148mm), contains up to 70 pages on one sheet, to be read on a microfiche reader. ORDER FORMS and/or FURTHER INFORMATION on MICROFICHE may be obtained only from:

U.S. DEPARTMENT OF COMMERCE

FURTHER INFORMATION

THE REPORTS IN THIS SERIES WILL BE ISSUED ON A FLOW BASIS FROM DECEMBER 1971 THROUGH APRIL 1972. INFORMATION ON THE SPECIFIC MONTH WHEN ANY GIVEN REPORT WILL BE RELEASED IS NOT KNOWN IN ADVANCE. THE DETERMINING FACTOR IS WHEN THE CENSUS BUREAU COMPLETES THE DATA PROCESSING FOR THAT PARTICULAR AREA. IT MAY TAKE SEVERAL MONTHS TO RECEIVE THE REPORT(S) YOU ORDER. IF YOU HAVE ANY QUESTIONS CONCERNING THE AVAILABILITY OF A PARTICULAR REPORT, PLEASE WRITE TO THE PUBLICATIONS DISTRIBUTION SECTION, BUREAU OF THE CENSUS, WASHINGTON, D.C. 20233.

A UNITED STATES DEPARTMENT OF COMMERCE PUBLICATION

1970 CENSUS OF POPULATION AND HOUSING

December 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

PUBLICATION AND COMPUTER TAPE PROGRAM

The results of the 1970 census are being released as soon as they are tabulated and assembled. Two major media are utilized: (1) printed reports and (2) magnetic computer tapes, including microfilm and print-outs therefrom.

For the printed reports, descriptive announcement and order forms become available from the Publications Distribution Section, Bureau of the Census or any U.S. Department of Commerce Field Office shortly before publication of the particular series of reports is initiated. After publication, census reports are on file in many libraries and also are available for examination or purchase at any Commerce Field Office. (A list of these offices appears on page 8 of this leaflet.) All final reports will be placed on microfiche (sheet microfilm) and made available for sale by the National Technical Information Service (NTIS), Springfield, Va. 22151. Further information and order forms for reports on microfiche may be obtained by writing to NTIS.

The publication program is described in four sections: (1) population census reports, (2) housing census reports, (3) joint population and housing census reports, and (4) additional series of reports. It should be noted that a number of the population reports will contain some housing data and a number of housing reports some population data.

Following the description of the publication program are sections on the computer tape program, certain further information on the 1970 census data, and a list of the subject items included in the 1970 census.

Inquiries concerning any phase of the data dissemination program of the 1970 census may be addressed to the Director, Bureau of the Census. The content and timing of the program outlined in this leaflet are subject to change. Revised versions of the leaflet will be issued as necessary.

Population Census Reports

Preliminary

Series PC(P1)
Series PC(P2)
Series PC(P3)

Three series of preliminary reports were issued between May and November 1970, based on preliminary population counts as compiled in the census field offices. Series PC(P1) consisted essentially of separate State reports presenting preliminary population counts for each county and each incorporated place of 1,000 inhabitants or more. Series PC(P2) consisted of a report for each standard metropolitan statistical area, giving its preliminary population count. Series PC(P3) consisted of three reports summarizing the preliminary counts for congressional districts, cities of 25,000 inhabitants or more, and standard metropolitan statistical areas. The figures in all the preliminary reports are superseded by those in the advance and final reports.

Advance

Series PC(V1)
Series PC(V2)

Two series of advance reports were issued between September 1970 and March 1971 presenting selected data prior to their publication in the Series PC(1)-A and B final reports. Each series consisted of a report for each State and the District of Columbia, as well as a U.S. summary report. Series PC(V1) reports contain final population counts for the State, counties, county subdivisions, all incorporated places, and unincorporated places of 1,000 inhabitants or more. Series PC(V2) reports contain selected data on age, sex, race, and relationship to head of household for the State, SMSA's, counties, and places of 10,000 inhabitants or more.

Population Census Reports--Continued

Final

Volume I. Characteristics of the Population. This volume will consist of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, Canal Zone, and Trust Territory of the Pacific Islands. For each of the 58 areas, the data will first be issued in four separate paperbound chapters, designated as A, B, C, and D. The four chapters will then be assembled and issued in a hard-cover "part." These parts will mostly be issued in the first half of 1972. The 58 chapters A will be assembled and issued in early 1972 in a hard-cover edition, designated as Part A. (For the outlying areas other than Puerto Rico, all the data on characteristics of the population will be included in chapter B.)

Series PC(1)-A
To be issued:
Oct. 1970-
Dec. 1971

Number of Inhabitants. Final official population counts are presented for States, counties (by urban-rural residence), SMSA's, urbanized areas, minor civil divisions, census county divisions, all incorporated places, and unincorporated places of 1,000 inhabitants or more.

Series PC(1)-B
To be issued:
May 1971-
Jan. 1972

General Population Characteristics. Statistics on age, sex, race, marital status, and relationship to head of household are presented for States, counties (by urban-rural residence), SMSA's, urbanized areas, minor civil divisions, census county divisions, and places of 1,000 inhabitants or more.

Series PC(1)-C
To be issued:
Nov. 1971-
May 1972

General Social and Economic Characteristics. These reports focus on the population subjects collected on a sample basis (see page 7 of this leaflet). Each subject is shown for some or all of the following areas: States (by urban, rural-nonfarm, and rural-farm residence), counties, SMSA's, urbanized areas, and places of 2,500 inhabitants or more.

Series PC(1)-D
To be issued:
Feb.-Aug.
1972

Detailed Characteristics. These reports will cover most of the population subjects collected on a sample basis, presenting the data in considerable detail and cross-classified by age, race, and other characteristics. Each subject will be shown for some or all of the following areas: States (by urban, rural-nonfarm, and rural-farm residence), SMSA's, and large cities.

Series PC(2)
To be issued:
Apr.-Dec.
1972

Volume II. Subject Reports. Each report in this volume will concentrate on a particular subject. Detailed information and cross-relationships will generally be provided on a national and regional level; in a few reports, data for States or standard metropolitan statistical areas will also be shown. Among the characteristics to be covered are national origin and race, fertility, families, marital status, migration, education, employment, unemployment, occupation, industry, and income. There will also be a report on the geographic distribution and characteristics of the institutional population.

Supplementary

Series PC(S1)

Supplementary Reports. This open series of reports will present miscellaneous types of population data, such as special compilations which cannot be accommodated in the regular final reports and selected tables from large reports to permit distribution of the particular figures in an inexpensive format.

Housing Census Reports

Preliminary

Series HC(P1)

This series, issued between June and October 1970, consisted essentially of a report for each State presenting preliminary housing unit counts for each place of 10,000 inhabitants or more, as compiled in the census field offices. These figures are superseded by those in the advance and final reports

Advance

Series HC(V1)

This series, issued between September 1970 and March 1971, consisted of a report for each State and the District of Columbia, as well as a U.S. summary report. The reports contain selected data on housing characteristics for the State, SMSA's, counties, and places of 10,000 inhabitants or more, prior to publication of the data in the Series HC(1)-A final reports.

Housing Census Reports--Continued

Final

Volume I. Characteristics for States, Cities, and Counties. This volume will consist of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, Canal Zone, and the Trust Territory of the Pacific Islands. For each of these 58 areas, the data will first be issued in two separate paper-bound chapters, designated as A and B. The two chapters will then be assembled and issued in a hard-cover "part." These parts will mostly be issued in early 1972. (For the outlying areas other than Puerto Rico, all the housing data will be included in chapter A.)

Series HC(1)-A
To be issued:
Apr. 1971-
Jan. 1972

General Housing Characteristics. Statistics on 100-percent housing subjects (see page 7 of this leaflet) are presented for States, counties, SMSA's (by urban-rural parts), urbanized areas, and places of 1,000 inhabitants or more.

Series HC(1)-B
To be issued:
Nov. 1971-
May 1972

Detailed Housing Characteristics. These reports focus on the housing subjects collected on a sample basis (see page 7 of this leaflet). Each subject is shown for some or all of the following areas: States, counties, SMSA's, urbanized areas, and places of 2,500 inhabitants or more.

Series HC(2)
To be issued:
Feb.-Aug.
1972

Volume II. Metropolitan Housing Characteristics. These reports will cover most of the 1970 census housing subjects in considerable detail and cross-classification. There will be one report for each SMSA, presenting data for the SMSA and its component large cities, as well as a national summary report.

Series HC(3)
To be issued:
May 1971-
Jan. 1972

Volume III. Block Statistics. One report for each urbanized area showing data for individual blocks on selected 100-percent housing and population subjects (see page 7 of this leaflet). The series also includes reports for the communities outside urbanized areas which have contracted with the Census Bureau to provide block statistics from the 1970 census.

Series HC(4)
To be issued:
Nov.-Dec.
1972

Volume IV. Components of Inventory Change. A series of reports for the United States and each of 15 SMSA's based on a sample survey conducted in late 1970 and the first half of 1971. Data on the disposition of the 1960 inventory and the source of the 1970 inventory will be shown (new construction, mergers, demolitions, etc.).

Series HC(5)
To be issued:
Dec. 1972

Volume V. Residential Finance. A national report based on a sample survey conducted in 1971. Data will be presented on the financing of privately owned nonfarm residential properties (mortgage characteristics, homeowner expenses, etc.).

Series HC(6)
To be issued:
Dec. 1972

Volume VI. Estimates of "Substandard" Housing. Data on "substandard" housing units for counties and cities, based on the number of units lacking plumbing facilities combined with estimates of units with all plumbing facilities but in "dilapidated" condition.

Series HC(7)
To be issued:
Aug.-Dec.
1972

Volume VII. Subject Reports. Each report in this volume will concentrate on a particular subject. Detailed information and cross-classifications will generally be provided on a national and regional level; in some reports, data for States or SMSA's may also be shown. Among the subjects to be covered are housing characteristics by household composition, housing of minority groups and senior citizens, and households in mobile homes.

Supplementary

Series HC(S1)

Supplementary Reports. This open series of reports will present miscellaneous types of housing data, such as special compilations which cannot be accommodated in the regular final reports and selected tables from large reports to permit distribution of the particular figures in an inexpensive format.

Joint Population-Housing Reports

Series PHC(1)
To be issued:
Dec. 1971-
Apr. 1972

Census Tract Reports. One report for each SMSA, showing data for most of the population and housing subjects included in the 1970 census (see page 7 of this leaflet). Some tables will be based on the 100-percent tabulation, others on the sample tabulation. For each SMSA, the former will be prepared several months prior to publication of the full report. Copies of these tables will be purchasable at the cost of reproduction as they are prepared.

Series PHC(2)
To be issued:
Feb.-Nov.
1971

General Demographic Trends for Metropolitan Areas, 1960 to 1970. This series consists of one report for each State and the District of Columbia, as well as a national summary report, presenting statistics for the State and for SMSA's and their central cities and constituent counties. Comparative 1960 and 1970 data are shown on population counts by age and race and on such housing subjects as tenure, plumbing facilities, value, and contract rent.

Series PHC(3)
To be issued:
Dec. 1971-
Mar. 1972

Employment Profiles of Selected Low-Income Areas. This series will consist of 75 reports, each presenting statistics on the social and economic characteristics of the residents of a particular low-income area, as well as a United States summary. The data, derived from sample surveys conducted during latter 1970 and early 1971, relate to low-income neighborhoods in 54 cities and seven rural areas. Each report will provide statistics on employment and unemployment, education, vocational training, availablity for work, job history, and income, as well as on value or rent and number of rooms in the housing unit.

Additional Reports

Series PHC(E)

Evaluation Reports. This open series will present the results of the extensive evaluation program conducted as an integral part of the 1970 census program, and relating to such matters as completeness of enumeration and quality of the data on characteristics.

Series PHC(R)

Procedural Reports. This open series will present information on various administrative and methodological aspects of the 1970 census, and will include a comprehensive procedural history of the 1970 census. The first report, issued in April 1971, focuses on the forms and procedures used in the data collection phase of the census.

PLEASE NOTE

Report series identified in this program schedule as "To be issued" should not be ordered until the appropriate Announcement–Order Form is released. This program listing of such publications constitutes only an advance announcement of publishing plans.

Computer Tapes

The major portion of the results of the 1970 census will be produced in a set of six tabulation counts. These counts will yield the statistics to be presented in most of the above-mentioned reports. To help meet the needs of census users, these counts are being designed to provide data with much greater subject and geographic detail than it is feasible or desirable to publish in printed reports. The data so tabulated will be available—subject to suppression of certain detail where necessary to protect confidentiality—on magnetic computer tape (and in some cases on printouts and microfilm) at the cost of preparing the copy. (As the balance of the data dissemination program is developed, additional computer tapes will be made available on a similar basis.)

The first three counts relate to the subject items collected on a 100-percent basis in the census. The second three counts relate to the subject items collected on a sample basis in the census, but also generally include the 100-percent items for purposes of cross-classification. The respective sets of subject items are listed on page 7 of this leaflet.

Except for the fifth count, the tapes will be arranged so that individual States can be readily purchased. The cost per reel is $60 (tape included).

The term "cells" is used below to indicate the scope of subject content of the several counts. This term refers to each figure or statistic in the tabulation for a specific geographic area. For example, in the Third Count, there are six cells for a cross-classification of race by sex: Three categories of race (white, Negro, other race) by two categories of sex (male, female).

Completed — First Count--approximately 400 cells of population and housing data for each of about 250,000 enumeration districts.
- Source of the PC(V1), PC(V2), PC(1)-A, HC(V1), and PHC(2) reports.
- File A contains the data for enumeration districts (one to ten reels of tape per State);
- File B contains summations by place, county, etc. (one or two reels per State).

Completed — Second Count--approximately 3,500 cells of population and housing data for each of about 35,000 tracts and 35,000 census county subdivisions.
- Source of the PC(1)-B, HC(1)-A, and a part of the PHC(1) reports.
- File A contains the data for tracts (one to 10 reels per State); File B contains the data for county subdivisions and the summations by place, county, etc. (one to nine reels per State).

Completed — Third Count--approximately 250 cells of population and housing data for each of about 1,500,000 blocks.
- Source of the HC(3) reports.
- The file contains one to 21 reels per State.

To be available: Dec. 1971-Mar. 1972 — Fourth Count--approximately 13,000 cells of population and housing data for each of about 35,000 tracts and 35,000 census county subdivisions; also about 30,000 cells of data for each county.
- Source of the PC(1)-C, HC(1)-B, and a part of the PHC(1) reports.
- File A will contain the data for tracts, File B the data for county subdivisions, and
- File C the summations by place, county, etc. The population data will appear in File A on one to 17 reels of tape per State, in File B on one to 11 reels, and in File C on one to six reels; the housing data will appear in File A on one to 23 reels of tape per State, in File B on one to 15 reels, and File C on one to six reels.

To be available: Apr. 1972 — Fifth Count--approximately 800 cells of population and housing data for 5-digit ZIP code areas in SMSA's and 3-digit ZIP code areas outside SMSA's.
- Available only on tape.
- One reel will contain all data for all 3-digit ZIP code areas (inside and outside SMSA's); 12 reels will contain all the data for the SMSA 5-digit ZIP code areas.

To be available: Mar.-June 1972 — Sixth Count--approximately 260,000 cells of population and housing data for each State, SMSA, and the larger cities and counties.
- Source of the PC(1)-D and HC(2) reports.
- The population data will appear on one to 12 reels per State and the housing data will appear on one to six reels per State.

Further Information

Many of the publication series and tabulation counts will include separate subject distributions for Negroes and for persons of Puerto Rican, Mexican, or other Spanish origin.

A number of descriptive publications prepared mainly for the users of computer summary tapes, but also of interest to other users of census data, are issued periodically by the Census Bureau. These documents provide information about the computer summary tapes; associated programs, products, and services; and the availability and costs of the various data products. The publications include Summary Tape User Memoranda, Data Access Descriptions, and Small-Area Data Notes. Also available is the 1970 Census Users' Guide, of which the first part provides information on the decennial census program, data products, and related subjects, and includes a glossary of technical terms used in connection with collecting, processing, and publishing census data. The second part of this publication, designed specifically to aid the summary tape user, describes the computer tape products in terms of format, language, and content.

Geographic areas on the summary tapes are represented by numeric codes. The Master Enumeration District List (MEDList) shows each geographic area name and its numeric code. Also included on this list are population and housing unit counts for individual enumeration districts and block groups. Copies are available on a State-by-State basis on computer tape, microfilm, or paper copy.

To use the summary tape information for tracts, enumeration districts, blocks, etc., it is necessary to have the maps which show the location and boundaries of particular areas. Census maps are available for purchase showing boundaries for blocks, enumeration districts, wards (where appropriate), congressional districts, tracts, incorporated and unincorporated places. county subdivisions, and counties.

Several packages of user-oriented materials have been developed by the Census Use Study—a research group concerned with exploring current uses and future needs for small-area statistics and data-handling and display techniques. The materials currently available include ADMATCH, a computer program used to assist in the assignment of geographic codes to computerized data records containing street addresses, and GRIDS and DIME, programs which relate to other geographic coding and mapping technique systems.

The Census Bureau will make available for purchase certain sample tape files containing population and housing characteristics as shown on individual census records. These files will contain no names or addresses. There will be six files, each containing a 1-percent national sample of persons and housing units; three files will be based on the census 15-percent sample and three on the census 5-percent sample. Each will provide a different type of geographic identification such as large SMSA's, States, and size of place.

(Percents indicate size of sample for which the question is asked; 100 percent is complete coverage)

Population items

100 percent.	Relationship to head of household
	Color or race
	Age
	Sex
	Marital status
20 percent.	State or country of birth
	Years of school completed
	Number of children ever born
	Employment status
	Hours worked last week
	Weeks worked in 1969
	Last year in which worked
	Occupation, industry, and class of worker
	Activity 5 years ago
	Income in 1969
15 percent.	Country of birth of parents
	Mother tongue
	Year moved into this house
	Place of residence 5 years ago
	School or college enrollment (public or private)
	Veteran status
	Place of work
	Means of transportation to work
5 percent.	Mexican or Spanish origin or descent
	Citizenship
	Year of immigration
	When married
	Vocational training completed
	Presence and duration of disability
	Occupation-industry 5 years ago

Housing items

100 percent.	Number of units at this address
	Telephone
	Private entrance to living quarters
	Complete kitchen facilities
	Rooms
	Water supply
	Flush toilet
	Bathtub or shower
	Basement
	Tenure
	Commercial establishment on property
	Value
	Contract rent
	Vacancy status
	Months vacant
20 percent.	Components of gross rent
	Heating equipment
	Year structure built
	Number of units in structure and whether a trailer
	Farm residence
15 percent.	Source of water
	Sewage disposal
	Bathrooms
	Air conditioning
	Automobiles
5 percent.	Stories, elevator in structure
	Fuel--heating, cooking, water heating
	Bedrooms
	Clothes washing machine
	Clothes dryer
	Dishwasher
	Home food freezer
	Television
	Radio
	Second home
